1-3 PEORIA GAS AND ELECTRIC COMPANY
vs.
CITY OF PEORIA. } No. 288. Chancery.

Record.

4 Pleas in the circuit court of the United States for the northern district of Illinois, southern division, at a regular term of said court begun and held at the United States court rooms in the city of Peoria, in said district, on the third Monday of October, being the nineteenth day of said month, in the year of our Lord one thousand nine hundred and three, and of the Independence of the United States the one hundred and twenty-eight- year.

The Honorable William R. Day, presiding justice being absent,
The Honorable Peter S. Grosscup, circuit judge being absent,
The Honorable Christian C. Kohlsaat, district judge being absent
The Honorable J. Otis Humphrey, district judge being present by assignment in writing as follows:

Circuit Court of the United States, Northern District of Illinois, Northern Division.

By virtue of the authority vested in me by law, and because in my judgment the public interest so requires, I do hereby designate and appoint the Hon. J. Otis Humphrey, judge of the district court of the United States for the southern district of Illinois, to aid the judges of the circuit and district courts of the United States for the northern district of Illinois, at Chicago and Peoria, in said district, in holding the circuit and district courts of the United States for the northern district of Illinois at Chicago and Peoria aforesaid, with all the powers conferred upon him by the acts of Congress in the premises.

P. S. GROSSCUP,
Circuit Judge, Seventh Circuit.

Hon. S. H. Bethea, U. S. attorney, being present
Hon. John C. Ames, U. S. marshal, being present by S. O. Tripp, his deputy
Hon. Marshall E. Sampsell, clerk, being present by F. C. Howe, his deputy.

5 Be it remembered that heretofore to-wit on the eighteenth day of September A. D. 1900 there was filed in the office of clerk of said court a certain bond for costs, which said bond is in words and figures following to-wit:

6 UNITED STATES OF AMERICA, } ss:
Northern District of Illinois, Northern Division, }

Circuit Court, May Term, A. D. 1900.

PEORIA GAS AND ELECTRIC COMPANY }
vs. } In Chancery.
CITY OF PEORIA. }

I enter myself security for costs in this cause, and promise to pay all costs which may accrue to the opposite party in this action, or to any of the officers of this court; and in default of payment by the complainant of any costs ordered or adjudged to be paid by complaint- hereby agree and stipulate that execution may issue against my property for all costs not exceeding two hundred dollars taxed against complaint-.

Dated this 18th day of September A. D. 1900.

JOHN R. WALSH,
Residence 2133 *Calumet Ave., Chicago.*

Acknowledged before — this — day of —— 1900.

——— ———,
Clerk U. S. Circuit Court, Nor. Dist. Ill.

I, John R. Walsh a surety on the annexed bond, being duly sworn, depose and say that I am worth in real estate, situate in the northern district of Illinois, the sum of -our hundred dollars over and above my just debts and liabilities.

JOHN R. WALSH.

Sworn to and subscribed before me, this — day of —— 1900.

——— ———, *Clerk.*

Endorsement: "Filed Sept. 18 1900. S. W. Burnham, clerk."

7 And afterwards, on the same day, to-wit, the eighteenth day of September, A. D. 1900, there issued out of the office of the clerk of said court in said cause a chancery subpœna, which said subpœna is in words and figures following, to-wit:—

8 Form No. 186.

UNITED STATES OF AMERICA, } ss:
Northern District of Illinois, Northern Division, }

The United States of America to City of Peoria, State of Illinois, Greeting:

We command you and every of you, that you appear before our judges of our circuit court of the United States of America for the

northern district of Illinois, at Peoria, in the northern division of said district, on the first Monday in the month of November next, to answer the bill of complaint of Peoria Gas and Electric Company, this day filed in the clerk's office of said court, in said city of Peoria, then and there to receive and abide by such judgment and decree as shall then or thereafter be made, upon pain of judgment being pronounced against you by default.

To the marshal of the northern district of Illinois to execute.

Witness the Hon. Melville W. Fuller, Chief Justice of the United States of America, at Peoria aforesaid, this eighteenth day of September, in the year of our Lord one thousand nine hundred and of our Independence the 125th year.

[COURT SEAL.] S. W. BURNHAM, *Clerk.*

Memorandum.

The above named defendant is notified that unless it shall enter its appearance in the clerk's office of said court, at Chicago aforesaid, on or before the day to which the above writ is returnable, the complainant's bill will be taken against it as confessed, and a decree entered accordingly.

S. W. BURNHAM, *Clerk.*

9 Which said subpœna was afterwards, to-wit, on the twenty-six day of September, A. D. 1900 returned into the office of the clerk of said court returned by the marshall endorsed in words and figures as following, to-wit:—

I have served the within writ within my district in the following manner to-wit:—

Upon the city of Peoria, State of Illinois, by personally delivering a true copy of the same to Henry W. Lynch, mayor of the city of Peoria, State of Illinois, at Peoria, Illinois, this 19th day of September A. D. 1900.

JOHN C. AMES,
U. S. Marshall,
By S. O. TRIPP, *Deputy.*

Endorsement #288 Original #77 Marshal's No. 1461. Term No. — General No. 288 so. div. Circuit court United States northern district of Illinois, northern division. Peoria Gas and Electric Company *vs.* City of Peoria. Chancery subpœna. Returnable to rule day, first Monday in November A. D. 1900 S. W. Burnham, clerk. W. T. Irwin and Hatch & Ritcher complainant's solicitor. Filed Sept. 26th 1900 S. W. Burnham, clerk.

10 And afterwards on the same day to-wit the eighteenth day of September 1900, there was filed in the office of the clerk of said court a bill of complaint which said bill is in words and figures following, to-wit:—

11 In the United States Circuit Court, Northern District of Illinois, Southern Division

To the Honorable Peter S. Grosscup, judge of the United States circuit court for the northern district of Illinois, southern division, in chancery sitting:

Your orator, The Peoria Gas and Electric Company, respectfully represents unto your honor, that it is a corporation organized under the general incorporation laws of the State of Illinois, on the 21st day of March, A. D. 1899, with its principal office and place of business in the city of Peoria, in the county of Peoria, in said State of Illinois, and is an inhabitant of the district aforesaid; that in and by its said charter, it is authorized and empowered to construct and erect gas plants and works for the manufacture of gas; to construct, lay and maintain gas mains, pipes and conduits for the distribution of gas and to sell and deliver the same to consumers for light, heat and power purposes; and also other powers specifically set forth and named in said articles of incorporation.

That it was originally incorporated on the date aforesaid under the name and style of the "People's Gas & Electric Company," but afterwards on the 13th day of February, 1900, at a special meeting of the stockholders of said company called for that purpose as provided by the laws of the State of Illinois, the name of said corporation was changed to the "Peoria Gas and Electric Company" and has since, and is now conducting and carrying on its business

12 under said last name.

Your orator further represents that the city of Peoria, a municipal corporation of the said county of Peoria and the State of Illinois, and an inhabitant of the district aforesaid, by its city council on the 18th day of April, A. D. 1899, in pursuance *to* a petition from your orator and a majority of the owners of the property fronting upon certain streets, avenues, alleys and highways in said city duly passed and adopted a certain ordinance granting to your orator, its successors and assigns the right to construct, erect and maintain and operate gas works, together with the right to lay and maintain mains and pipes in and through the several streets, avenues, alleys and public places in said city and sell and deliver gas to the said city of Peoria and the inhabitants thereof, for light, heat and power purposes; which said ordinance is as follows:

"*An Ordinance.*

An ordinance granting the People's Gas and Electric Company the right to lay gas mains and pipes and distribute gas in and along the several streets and highways in the city of Peoria, Illinois.

Be it ordained by the city council of the city of Peoria:

SECTION 1. Subject to the terms and conditions of this ordinance, there is hereby granted to the People's Gas and Electric Company, a corporation created and existing under and by virtue of the laws of the State of Illinois its successors and assigns, the right to construct, repair, maintain and operate gas works in the city of Peoria, together with the right of way along, upon and under all the avenues, street-, alleys, highways and public places in said city, for the purpose of placing, operating, repairing and maintaining one or more lines of gas mains and pipes and all necessary feeders, service pipes, branches, cutoffs and manholes in connection therewith, for the distribution of natural or manufactured gas for light, fuel,
13 heat and power purposes.

SECTION 2. That in pursuance *to* the petition of the owners of the land representing more than one-half of the frontage on the streets, avenues and public highways hereinafter named, the right and authority is hereby granted to said People's Gas and Electric Company, its successors and assigns to construct, lay and maintain gas mains, pipes, branches, feeders, service pipes, cut-offs and manholes, in under and along the following named streets, avenues, and highways in the said city of Peoria, Illinois, for the purpose of furnishing the said city and the inhabitants thereof with gas for light, fuel, heat, and power, viz:

Persimmon street, from Grove street, the initial point, to Spencer street.

Spencer street, from Persimmon street, the initial point, to Elizabeth street.

Elizabeth street, from Spencer street, the initial point, to city limits.

Saint James street, from Elizabeth street, the initial point, to University street.

University street, from Saint James street, the initial point, to Moss avenue.

The alley dividing the blocks and lying between Adams street and Warner avenue, from Persimmon street, the initial point, to Monson street.

Prairie street (or alley) from Monson street, the initial point, to Adams street.

Adams street, from Prairie street (or alley) the initial point to Franklin street.

Franklin street, from Adams street, the initial point, to Seventh avenue.

Perry avenue, from Franklin street, the initial point, to Main street.

Main street, from Water street, the initial point, to University street.

The alley dividing the blocks and lying between Adams street and South Jefferson avenue from Franklin street, the initial
14 point, to Fulton street.

The alley dividing block ten (10) in the original town of Peoria and lying between Main street and Fulton street, from Adams street, the initial point, to Jefferson avenue.

The private alley running through lot seven (7) in block ten (10) original town of Peoria, from Fulton street, the initial point, to the main alley in said block.

Knoxville avenue, from Main street, the initial point, to Nebraska street (city limits).

The alley dividing the blocks and lying between Fredonia avenue and Barker avenue, from University street (formerly Bradley street) the initial point, to Western avenue.

The alley dividing the blocks and lying between Fifth avenue and Sixth avenue from Spencer street, the initial point, to Franklin street.

The alley dividing the blocks and lying between First avenue and Second avenue from Spencer street, the intial point, to Franklin street.

Also the right and authority to connect the same with mains, pipes, feeders and service pipes that may be laid or maintained
22 in and along any other streets, avenues or public highways in said city for the purposes aforesaid.

SECTION 3. The grantee herein shall enter into a bond in the penal sum of one thousand dollars ($1000.00), with sufficient surety (which surety may be a corporation organized to do a surety business) the same to be approved by the mayor and comptroller, conditioned to keep the city harmless from all damages of every kind and nature occasioned by the said grantee and to indemnify all persons or corporations damaged or injured by reason of the negligent acts of said grantee in and about the exercise of the rights and privileges herein granted.

SECTION 4. This ordinance is granted upon the condition that said company shall, within six (6) months from the date of the acceptance of this ordinance, begin the construction of gas works within the city of Peoria, and shall, within eighteen (18) months from the date of the acceptance of this ordinance, begin to manufacture and supply gas hereunder; provided, however, that the time during which any legal proceedings shall be pending, whereby the said company, its successors or assigns, shall be prevented from or delayed in complying with the requirements of this section, shall not be taken or deemed any part ot the time specified.

Said company shall, within thirty (30) days from and after the passage of this ordinance, deposit with the city treasurer of the city of Peoria, the sum of five thousand dollars ($5000.00) as security for its faithful compliance with the provisions of this section of this ordinance, which sum so deposited shall be returned to said company when it shall have expended the sum of fifty thousand dollars ($50,000.00) in and about the purchase, construction and erec-
23 tion of its said gas works. Should said company fail to commence the erection of said gas works, or fail to supply gas within the time mentioned herein, then the city council may, by *by* resolution, declare the said sum of five thousand dollars ($5,000.00) forfeited to the said city of Peoria.

SECTION 5. Said company shall, when so ordered by a majority vote of all the aldermen elected, extend their mains on any street, avenue or other public highway contiguous to the mains of said company at that time in use and operation provided, however, that said company shall not be required so to extend its mains until said company shall receive a good and sufficient guarantee that the amount of annual revenue to be derived by said company from such extension shall not be less than the sum of one hundred dollars ($100.00) per five hundred (500) feet of main extension so ordered.

SECTION 6. Said company shall do no permanent injury to any street, sidewalk, alley or public place, and when said company shall open ground in any street, it shall forthwith restore the street pavement and sidewalk to a condition equally as good as before, at the expense of said company. Where the streets and avenues in said city of Peoria have been permanently paved prior to the laying or placing of any gas mains therein by the said People's Gas and Electric Company, its successors or assigns, said People's Gas and Electric Company, its successors or assigns shall, when, in its judgment the same shall be practicable, lay all such gas mains in and through the alleys, thereby so far as practicable avoiding the necessity of disturbing said permanent pavements; and when in the judgment of said company, its successors or assigns, it shall be deemed necessary to make any extension in any street, avenue or public place, which shall be permanently improved either by paving or macademizing, the said company shall first secure a permit for that purpose from the commissioner of public works of this city.

24 Whenever any street is about to be permanently improved by paving or macademizing the commissioner of public works shall notify said company of such proposed improvement, and within sixty (60) days after such notification, said company shall lay its mains, including all service pipes and connections to the curb line at its own cost and expense.

SECTION 7. The rights and privileges hereby granted by this ordinance are granted for the term of ninety-nine (99) years from and after the acceptance of this ordinance.

SECTION 8. This ordinance shall take effect and be in force from and after its passage and the acceptance thereof by said company and the filing and approval of the bond herein required.

Passed in council this 18th day of April, A. D. 1899.

JOHN WARNER, *Mayor.*

ROBERT M. ORR, *City Clerk.*

Your orator further shows unto your honor that said ordinance was duly approved by the mayor of said city, and thereafter duly accepted by your orator, in writing, filed with the city clerk of said city on the 20th day of April, A. D. 1899, according to the terms thereof; which said agreement of acceptance is as follows:

Agreement of Acceptance.

This agreement witnesseth: That whereas, the city council of the city of Peoria, Illinois, on the 18th day of April, A. D. 1899, duly adopted an ordinance entitled, "An ordinance granting the People's Gas and Electric Company the right to lay gas mains and pipes, and distribute gas in and along the several streets and highways in the city of Peoria, Illinois;" and

25 Whereas, it is provided in and by section 8 of said ordinance that the same shall take effect and be in force from and after its passage and the acceptance thereof by the said People's Gas and Electric Company" and the filing and approval of the bond as in said ordinance required: Now therefore

In consideration of the premises and in further consideration of the rights and privileges in and by said ordinance granted to said People's Gas and Electric Company, and in further consideration of the mutual benefits to accrue to the said city of Peoria and the said People's Gas and Electric Company by virtue of the rights and privileges in said ordinance granted, the said People's Gas and Electric Company hereby accepts said ordinance, subject to all the terms and conditions thereof as therein set forth, and agrees to carry out and perform all the stipulations and requirements on its part to be kept and performed, as in said ordinance designated.

In witness whereof, the said People's Gas and Electric Company has caused this agreement to be executed in its corporate name by its president and countersigned and sealed by its secretary, all done at the city of Peoria, Illinois, this 20th day of April, A. D. 1899.

[SEAL.] PEOPLE'S GAS AND ELECTRIC COMPANY,
By S. R. CLARK, *Its President.*"

Attest: THEO. J. MILLER, *Secretary.*

Your orator further represents, that also on the said 20th day of April, A. D. 1899, it filed its bond with the said city of Peoria in the penal sum of one thousand dollars ($1000.00), conditioned as in said ordinance required, with good and sufficient securities thereon, which was thereupon duly approved by the mayor and comptroller of said city as required by said ordinance, which said bond is as follows:

26 Know all men by these presents, that the People's Gas and Electric Company, a corporation, as principals, and Robert D. Clark and George H. Littlewood as sureties, are held and firmly bound unto the city of Peoria, a municipal corporation, of the county of Peoria and State of Illinois, in the penal sum of one thousand dollars ($1000.00) lawful money of the United States of America, to be paid to the said city of Peoria, which payment well and truly to

be made, we bind ourselves, our heirs, executors, and assigns, firmly by these presents.

In witness whereof, the said People's Gas and Electric Company has caused this bond to be executed in its corporate name by its president and countersigned and sealed by its secretary, and the said Robert D. Clark and George H. Littlewood have hereunto set their hands and seals this 20th day of April, A. D. 1899.

The condition of the above obligation is such, that

Whereas, the city council of the city of Peoria, Illinois, did, on the 18th day of April, A. D. 1899, duly pass and adopt a certain ordinance entitled, "An ordinance granting the People's Gas and Electric Company the right to lay gas mains and pipes, and distribute gas in and along the several streets highways in the city of Peoria, Illinois," and

Whereas, it is provided in and by section three (3) of said ordinance, that said People's Gas and Electric Company shall enter into a bond in the penal sum of one thousand dollars ($1000.00) with sufficient surety (which surety may be a corporation organized to do a surety business) the same to be approved by the mayor and the comptroller, conditioned to keep the city harmless from all damages of every kind and nature, occasioned by the said People's Gas and Electric Company, and to indemnify all persons, or corporations damaged or injured by reason of the negligent acts of said company in and about the exercise of the rights and privileges in said ordinance granted.

Now, if the said People's Gas and Electric Company shall
27 keep the said city of Peoria harmless from all damages of every kind and nature occasioned by the said People's Gas and Electric Company, and indemnify all persons or corporations damaged or injured by reason of the negligenct acts of the said People's Gas and Electric Company in and about the exercise of the rights and privileges in said ordinance granted; then this obligation shall be void. Otherwise to remain in full force and virtue.

PEOPLE'S GAS AND ELECTRIC COMPANY,
By S. R. CLARK, *Its President.*

[SEAL.] ROBERT D. CLARK. [SEAL.]
GEO. H. LITTLEWOOD. [SEAL.]

50 cts. U. S. revenue stamps.

Attest: THEO. J. MILLER, *Secretary.*

Approved:
M. D. MEISSER,
Comptroller.

Approved:
JOHN WARNER, *Mayor.* [SEAL.]

Orator further shows that within the thirty (30) days mentioned in section 4 of said ordinance, it deposited with the city treasurer of said city, the sum of five thousand ($5000.00) dollars as security for its faithful compliance with the provision of said section of said ordinance. And that said sum of five thousand ($5000.00) dollars was afterwards returned by said city to your orator, upon its full compliance therewith as therein provided.

Your orator further shows unto your honor, that upon the passage and approval of said ordinance by said city; the filing of the acceptance thereof, together with the bond and money deposit so made by your orator, as aforesaid, the same became and is a binding contract between said city of Peoria and your orator upon the terms and conditions therein set forth.

That at all times since the consummation of said ordinance
28 contract, your orator has at all times complied with, carried out and performed all the terms and conditions therein contained to be by it kept and performed. That as soon as practicable, and within six months, after the passage and acceptance of said ordinance, and the consummation of said contract as aforesaid, your orator proceeded to exercise the rights and privileges therein granted. That it purchased factory grounds and erected a large and modern gas manufacturing plant in said city, with gas tanks, holders and other equipments sufficient to manufacture, store and supply gas to meet the requirements of said ordinance contract for some years to come: That it has constructed and laid in along the several streets, avenues, alleys, and public places, a large and complete system of gas mains and pipes connected with its said gas plant, to suitably and conveniently convey and deliver gas to the different parts of said city and the inhabitants thereof: That it has already about twenty-six and one-half (26½) miles of gas mains laid in and along said several streets, avenues, alleys and highways named in said ordinance contract. That said gas plant has been erected, and all of said gas mains have been laid in accordance with the rules and regulations of said city. That, relying upon the validity and good faith of said ordinance contract with said city, it has laid out and expended large amounts of money in the securing of said factory site, construction and erection of said gas plant, and the laying of said gas mains and pipe system through the streets and highways of said city; that the amount already expended and paid in the construction and erectian of said gas plant and pipe system by your orator, in pursuance to said ordinance contract with said city, is about the sum of four hundred and seventy-five thousand ($475,000.00) dollars; that your orator, by the prosecution of its rights and privileges under said ordinance contract, and the judicious expenditure of said large amount of money is now possessed of a large and valuable gas plant in said city of Peoria, in every respect equal to or exceeding such plant as contemplated by any of the parties interested at the time of the granting of said rights named in said ordinance contract, and that it began to manufacture and supply gas

within 18 months from the date of the acceptance of said or-
29 dinance and is now delivering gas to the inhabitants of said city of Peoria, through more than two thousand gas meters placed for the proper measurement of gas for consumption, with a growing business, that without the unwarranted interference hereinafter set out, would eventually award fair returns to those having invested said large amount of money in the establishment and development of said gas plant. That your orator after taking into consideration the large expense of said gas plant, its operation and development, fixed the price of gas to consumers, — one dollar and twenty-five cents per thousand cubic feet for illuminating purposes, with a discount of ten cents (10 cts.) on each one thousand cubic feet of gas furnished on all bills paid on or before the 10th day of the month following that for which gas has been furnished. And to develop and encourage the use of gas for fuel purposes, which is generally used by consumers during the day time, when little gas is used for illuminating purposes, your orator has fixed the price to consumers at the rate of eighty-five cents per one thousand cubic feet for fuel purposes, allowing a discount of ten (10) cents on each one thousand cubit feet of such fuel gas furnished on all bills therefor, paid on or before the 10th day of the month following that for which such gas has been furnished, making an average net price for gas furnished of abont 95 cents per one thousand cubic feet.

That your orator also furnishes and lays, free of charge, to the consumer, all service pipes from its gas mains into the premises and buildings of the consumer, and also furnishes and sets free of charge all gas meters for the proper measurement of gas furnished. That such prices for gas of the character so furnished by your orator is most reasonable and below the ordinary and usual price charged for such gas in cities of the size and character of the said city of Peoria and do not at present, and has not since the commencement of the operation of said gas plant, furnish or yield any fair or reasonable income upon the amount of said investment. But your orator believes, that with judicious and economic management, and with-
out the unwarranted interference hereinafter set forth it
30 would in time, with proper and energetic development of its said business, yield fair and reasonable returns upon the capital so invested, and to be invested in the future and further development of said plant and business, at the prices so fixed by it as aforesaid.

Your orator further represents, that the said city of Peoria, through its city council, in violation of the said contracts rights of your orator, and without right or power so to do, on the 4th day of September, A. D. 1900, passed and adopted the following ordinance, namely:

An Ordinance.

An ordinance regulating and fixing the maximum price of gas in the city of Peoria.

Be it ordained by the city council of the city of Peoria:

SECTION 1. That the maximum price of gas furnished the city of Peoria, and the citizens thereof, and all consumers of gas therein, shall not exceed the sum of seventy-five cents (75 cts.) per thousand cubic feet; such gas so furnished to afford a light of not less than eighteen (18) candle power, to be measured and ascertained at the place of consumption in said city, by the most modern appliances know- to science for measuring the candle power of illuminating gas; and the Peoria Gas Light & Coke Company, and the Peoria Gas & Electric Company, and any other company, corporation, person or persons who are now — may hereafter furnish gas to consumers in the city of Peoria, are hereby authorized and empowered to charge all consumers of gas in said city a sum not in excess of seventy-five (75 cts.) per thousand cubic feet.

SECTION 2. That any company, corporation, person or persons who shall, in violation of the provisions of the preceding section, charge or require the city of Peoria, or any citizen thereof, or any consumer of gas therein to pay for gas furnished to it or them, or either of them, a sum in excess of seventy-five cents (75 cts.) per thou-
31 sand cubic feet, or who shall furnish to said city of Peoria, or any citizen thereof, gas less than eighteen (18) candle power, shall be subject to a penalty of not less than twenty-five ($25.00) dollars, nor more than two hundred ($200.00) dollars for each and every offense.

SECTION 3. That any company, corporation, person or persons, who shall remove any meter or meters from the house, store, factory or premises of any consumer of gas in the city of Peoria, against the will and consent of any such consumer of gas who is willing to pay for gas furnished him, it or them by any company, corporation, person or persons, the price established and fixed in section one (1) of this ordinance shall be subject to a penalty of not less than twenty-five dollars, nor more than two hundred ($200.00) dollars for each and every offense: Provided, however, that any company, corporation, person or persons furnishing gas to consumers in the city of Peoria, shall have the right to remove any meter or meters for the purpose of repairing the same, on condition that such meter or meters so removed shall be replaced or a new one substituted in its place within twenty-four (24) hours of the time of removal of any such meter or meters.

SECTION 4. This ordinance shall be in force and effect from and after its passage and due publication, as provided by law: Provided, that nothing herein contained shall impair the obligation of any

contract in existence between the city of Peoria and either of said gas companies above mentioned.

SECTION 5. All ordinances or parts or ordinances in conflict with this ordinance, are hereby repealed, subject to the proviso contained in section four (4) of this ordinance.

Passed in council this fourth (4) day of September, A. D. 1900.

HENRY W. LYNCH, *Mayor.*

Attest: ROB'T M. ORR, *City Clerk.*

32 That said ordinance was, thereafter, on the 6th day of September, 1900, by said city duly published, so as to give the same the effect of a penal ordinance, and said city, through its mayor and other executive officers threaten to enforce same against your orator and inflict upon it the penalties therein designated, should it refuse to comply with all the terms and requirements thereof.

Your orator represents, that the city council of said city had no power or authority to pass said last named ordinance fixing the price at which your orator or others should charge for gas furnished to consumers. That no such power or authority has ever been delegated to said city by the legislature of the State of Illinois, and that the passage of such ordinance was an assumed power on the part of said city, regardless of any rights vested in it by the sovereign power of the State, and the same is void.

That said ordinance is also invalid as against your orator because the price for which gas could be sold your orator hereby alleges was arbitrarily fixed by the city council of said city in the passage of said ordinance, without any investigation or method or inquiry to ascertain whether seventy-five cents per one thousand (1000) cubic feet of gas furnished was a reasonable rate or charge, or that such rate would enable your orator to maintain its existence, or to make a reasonable profit on the large amount of money invested in its said plant. And your orator states the fact to be, that the rates fixed in such ordinance is an unreasonable low rate, and that its enforcement would bring ruin and destruction to the property and business of your orator, and have for its effect, the confiscation of its said property to an amount far exceeding the sum of two thousand dollars. That it cannot manufacture and deliver gas to consumers of the quality manufactured by it or of the quality required by said ordinance at the prices fixed by said ordinance, that such price is so unreasonably low that your orator would, if compelled to furnish gas according to its requirements, be unable to meet its fixed
33 charges and expenses, and would in time be rendered insolvent.

That said ordinance is also void, for the reason that the penalties therein provided your orator hereby alleges are unreasonable, exorbitant and void as said city had no right, power or authority vested in it by law to prescribe the same for any reason therein stated.

Your orator further represents, that said ordinance is unreasonable and invalid, in that it is impracticable and impossible to be complied with according to its terms: That gas of a uniform 18 candle power, at the place of consumption, cannot be furnished through a pipe system in a city of the size and character of the said city of Peoria, for the reason that gas manufactured and placed in the tank or holder of 18 candle power light, will vary from one to three candle power when forced through the gas mains throughout the said city, according to location, elevation, size and condition of the pipes and mains: And also for the further reason that the gas piping at the point of consumption is the property of the consumers, and frequently of a character that entirely changes the candle power of gas supplied through the mains of the manufacturer. Also the character of fuel may largely influence the candle power of gas, as well as the price thereof. And for the reasons aforesaid and others, said ordinance is unreasonable, impracticable of compliance therewith and invalid as against your orator.

That said ordinance is also invalid, in that it is an attempt to impair the rights of contract between your orator and said city as above set forth. That it is an attempt to take the private property of your orator for public use without just compensation That the enforcement thereof would deprive your orator of its property without the due process of law; and denies to your orator the equal protection of the laws, in violation of the provisions of the Constitution of the United States and the State of Illinois. And complainant also alleges that the amount in controversy in this cause far exceeds the sum of two thousand dollars exclusive of costs.

34 Your orator further represents, that the said arbitrary and unreasonable action of the city council of the said city of Peoria in the passage of said invalid ordinance as aforesaid, and the determination of the mayor and other executive officers of said city to enforce the same against your orator will, unless restrained and enjoined by the order and injunction of this honorable court, bring irreparable injury and loss to your orator and its said property and business, as well as to so harrass and annoy its officers and employés as to render it impracticable to conduct and carry on its business and protect its property. That the nature of the business of your orator is such, the large number of its consumers whose relation with your orator will be affected by the enforcement of said ordinance, render the courts of law inadequate to furnish your orator, its said property and business, the protection and relief from said invalid ordinance to which it is entitled, and that the attempted enforcement of said ordinance would result in innumerable suits and a multiplicity of actions.

Forasmuch therefore, as your orator is without remedy in the premises, except in a court of equity, and to the end that the said city of Peoria, which is made party defendant to this bill of complaint may be required to make full and direct answer to the same, to the next return day of said court, but not under oath, answer

under oath being waived, that on the filing of this bill of complaint, the usual writ of injunction may issue forthwith against the said city of Peoria, restraining and enjoining its mayor, chief of police, and other executive officers from in any way enforcing, or attempting to enforce said ordinance, entitled: "An ordinance regulating and fixing the maximum price of gas in the city of Peoria," passed by the city council of said city of Peoria, on the 4th day of September, A. D. 1900, or any of the provisions thereof against your orator, or from in any way interfering with your orator or its said property, or business, by reason of anything in said ordinance contained until the further order of the court herein.

35 And that upon a final hearing hereof, the said ordinance of September 4th, A. D. 1900, may be adjudged and declared invalid, null and void, and that the said city of Peoria, its mayor, chief of police and other executive officers may be permanently enjoined and restrained from enforcing, or attempting to enforce the same, or any of the provisions thereof against your orator, or from in any way interfering with your orator, its property or business, by reason of anything in said ordinance contained. And that your orator may have such other and further relief in the premises as equity may require and to your honor may seem meet.

And may it please your honor to grant the usual summons in chancery directed to the said defendant City of Peoria, commanding it to be and appear before said court on the next return day thereof, and then and there answer this bill, etc. And that said writ of injunction may be ordered forthwith on the filing of this bill of complaint as above prayed for.

County of Cook, } *ss:*

F. W. Little, being first duly sworn, on his oath states that he is vice president and general manager of The Peoria Gas & Electric Company, the complainant in the foregoing bill of complaint, and that he has read the foregoing bill of complaint and knows the contents thereof, and that the same are true.

F. W. LITTLE.

Subscribed and sworn to, before me, this 18th day of September, A. D. 1900.

[NOTARIAL SEAL.] CHARLES HUNTOON.

Endorsed: " Filed September 10, 1900. S. W. Burnham.

37 And afterwards on to-wit the 10th day of October A. D. 1900, there was filed in the office of clerk of said court in said cause the answer of the defendant, which said answer is in the words and figures following, to-wit:

38 The United States Circuit Court, Northern District of Illinois, Southern Division.

THE PEORIA GAS & ELECTRIC COMPANY
vs.
CITY OF PEORIA. } In Chancery for Injunction.

The Answer of The City of Peoria, Defendant, to the Bill of Complaint of The Peoria Gas & Electric Company, Complainant.

This defendant now and at all times hereafter saving to itself all and all manner of benefit or advantage of exception or otherwise that can or may be had or taken to the many errors, uncertainties, and imperfections in the said bill contained for answer thereto, or to so much thereof as this defendant is advised it is material or necessary for him to make answer to, answering says:

Respondent admits that complainant is a corporation organized, existing and doing business under the general incorporation laws of the State of Illinois with its principle office in the city of Peoria and that it is an inhabitant of the northern district of Illinois as alleged in said bill; and further admits that this defendant is a municipal corporation and inhabitant of said northern district of Illinois as alleged in said bill.

Respondent further admits that by the terms of its charter the said complainant is authorized and empowered to construct and erect gas plants and works for the manufacture of gas; to construct and lay down and maintain gas mains, pipes and conduits for the distribution of gas and to sell and distribute the same to consumers for light, heat and power purposes, as alleged in said bill.

Respondent further admits that said gas corporation was incorporated under the name and style of People's Gas & Electric Company, and that it thereafter changed its name to Peoria Gas & Electric Company and that it now conducts its business under said
39 last named title. It further admits that at or about the date specified in said bill it obtained the consent of the majority of the owners of real estate having frontage upon certain streets and

avenues specified in said bill, to the laying down of pipes in said streets and avenues and that on or about the eighteenth (18) day of April 1899 it obtained an ordinance from the city of Peoria of which a substantial copy is set forth in said bill; and that it substantially complied with the terms and provisions of said ordinance on its part to be kept and performed as alleged in said bill.

Respondent further admits that complainant obtained factory grounds, and erected thereon a modern gas plant, and that it laid down pipes and mains in said city, and possessed the necessary machinery and equipments for the manufacture, distribution and delivery of gas in the different portions of said city, and to the inhabitants thereof, as alleged in said bill. Respondent believes it to be true that complainant has laid out and expended a large sum of money in the construction of its gas plant and distributing system in said city; but as to the amount so laid out and expended this defendant has no knowledge and can form no approximate estimate. Respondent has no knowledge of the mileage of the pipe laid down by complainant but admits that respondent has erected and constructed and has now a large and valuable gas plant in said city; and that it has connection with, and facilities for the furnishing of gas to, many of the residences and places of business in said city and vicinity.

Respondent alleges and shows to the court that at the time the said complainant applied to the city council of the city of Peoria for said ordinance and for the rights and franchises thereby granted the said city and inhabitants were being supplied with illuminating gas by another corporation known as the Peoria Gas Light & Coke Company which has and possessed a special charter from the State of Illinois and granted by the legislature thereof in the year 1835 and had ever since last named year been supplying the said city and inhabitants with gas for illuminating, heating and fuel purposes. That said Peoria Gas Light & Coke Company had a large and extensive plant in said city with mains and pipes extending through all the streets and avenues of said city and that no indebtedness existed against said plant, and that it had been conducted with great profit to its stockholders for more than fifty years prior to the date of said application of complainant; and that all inhabitants of said city had ample and convenient means of being supplied by said last named corporation with all the gas required by them for their consumption. Respondent shows that the uniform price charged by said Peoria Gas Light and Coke Company at the date of said application by complainant for its charter was one dollar ($1.00) per one thousand (1000) cubic feet for illuminating purposes, and seventy-five (75 cts) per one thousand (1000) cubic feet when used for heating purposes. That said Peoria Gas & Electric Company in order to obtain the consent of the owners of real estate fronting on the streets and avenues of said city, and in order to induce the city council of the said city, to grant it the rights and franchises provided for in said ordinance, gave out and represented that

the maximum price then being charged by the said Peoria Gas Light and Coke Company for gas which was one dollar ($1.00) per thousand (1000) cubic feet was entirely to- high and extortionate; and promised and agreed that if the owners of real estate fronting on said streets and avenues, and the city council of the said city, would grant to it permission to lay down mains and distributing pipes in said streets and avenues and to exercise the franchises provided for in said ordinance, it would compete with said Peoria Gas Light and Coke Company and would reduce the price of gas to reasonable rates.

Your respondent shows that by the certificate of organization of said Peoria Gas and Electric Company of record in said county of Peoria it appeared that the following parties were the sole and only stockholders in said Peoria Gas and Electric Company, namely: S. R. Clarke, B. Warren, Jr., H. Sandmeyer, C. C. Clarke, George H. Littlewood, Chauncey D. Clarke, O. J. Bailey, Ferd. Luthy, Philo B. Miles, Robert D. Clarke, F. T. Corning, and Theo. J. Miller;
41 and that the following named persons were directors thereof namely; S. R. Clarke, B. Warren Jr., G. H. Littlewood, Ferd. Luthy, O. J. Bailey, Philo B. Miles, F. T. Corning and Theo. J. Miller.

Respondent shows that said stockholders were all persons of large means residing in the city of Peoria, being composed of bankers, capitalists and persons holding positions of trust in said city and well regarded by the citizens thereof. That during the time said ordinance was being considered by the city council of said city, in order to induce the city council to grant the same, said stockholders presented a communication to the said city council which was received by said city council and read in said council meeting on the eighteenth (18) day of April 1899, in words and figures as follows:

APRIL 18, 1899.

'To the honorable mayor and city council of Peoria.

GENTLEMEN: We have today filed with the city clerk additional petitions addressed to your honorable body asking you to grant to the Peoples' Gas and Electric Company the right to lay, construct and maintain gas mains and electric wires in the streets and alleys of Peoria mentioned in the petitions. The petitions which we have filed to date present the frontage on more than fifty-two (52) miles of streets and in aggregate more than three-fourths (¾) in value of the real estate situated within the city limits of Peoria.

The signers of these petitions believe that competition will reduce the price of gas and result in saving thousand- of dollars yearly to the public of Peoria. That this view is correct is proven by the fact that the mere threat of competition has reduced the price of gas for light 20 per cent., and actual competition will do much more.

We ask for the Peoples' Gas and Electric Company only the right to do business on equal terms with the old company. We propose

to build a modern, first class, strictly up to date plant, the work of construction of which will begin at once, when the ordi-
42 nances now before you have been passed. If favorable action is taken now we shall be prepared to furnish gas to the Peoria public before Thanksgiving day.

The necessary financial arrangements have been made and every detail arranged for beginning work at once.

Thousands of dollars are ready to be paid out to Peoria workingmen, manufacturers, and dealers in supplies. We will in all cases give our home people the preference in the employment of labor and the purchase of material required in the erection of our plant.

This application for the favorable action of your honorable body is made in absolute good faith, and the right, if granted to us, will not be for sale.

As the work for erecting our plant must be done out of doors, and before freezing weather, and as the ordinances are now before you for final action, we respectfully ask an early and favorable consideration of them.

Respectfully submitted,

S. R. CLARKE,
B. WARREN, JR.,
H. SANDMEYER,
C. C. CLARKE,
GEORGE H. LITTLEWOOD,
CHAUNCEY D. CLARKE,
O. J. BAILEY,
FERD. LUTHY,
PHILO B. MILES,
ROBERT D. CLARKE,
F. T. CORNING,
THEO. J. MILLER,
Stockholders Peoples' Gas and Electric Co."

which communication was signed by the stockholders and directors of said Peoria Gas and Electric Company, then known as the Peoples' Gas and Electric Company.

Respondent says that it was owing to repeated assertions, promises and avowals of said Peoples' Gas and Electric Company, its officers, directors and agents that the amount then being charged for gas by said Peoria Gas Light and Coke Company was extortionate, and that said Peoples' Gas and Electric Company would compete with the said Peoria Gas Light and Coke Company, and fur-
43 nish gas at a much lower and reasonable rate, that said Peoples' Gas and Electric Company secured consent from the owners of real estate fronting on said streets and avenues, to the laying down of its pipes in said streets; and with like statements and inducements as in said communication above set forth presented to the members of the common council of the said city of Peoria, induced said common council to grant to said Peoples' Gas and Elec-

tric Company the franchise contained and set forth in said ordinance.

Respondent shows that said city and its inhabitants had no demand for further gas service in addition to that furnished by the Peoria Gas Light and Coke Company, except that it might obtain gas at lower and reasonable terms, as expressed in said communication. That said city did not invite said Peoples' Gas and Electric Company to come into the city, but that said corporation came on its own motion well knowing that said Peoria Gas Light and Coke Company was abundantly able to furnish and provide many times the amount of gas required for the consumption of said city and its inhabitants. Respondent alleges that the officers and agents and stockholders of said Peoples' Gas and Electric Company claimed to be well posted in regard to the cost of manufacturing and supplying gas and gave out and asserted that said maximum price of one dollar ($1.00) per thousand (1000) cubic feet charged by said Peoria Gas Light and Coke Company for illuminating purposes was extortionate.

Respondent further answering admits that said complainant completed its work and commenced the furnishing of gas to its customers within one year after the passage of said ordinance. That after the completion thereof it gave out and advertised in diverse newspapers of the city, that it would furnish gas of the character prescribed in said ordinance at the uniform rate of thirty (30) cents per thousand (1000) cubic feet; that upon such promises and assertions it gained many customers and patrons in said city, and that said complainant did in compliance with its said advertisements
furnish gas to its patrons at the rate of thirty cents (30c.)
44 per thousand (1000) cubic feet from about the — day of December 1899 to the first day of August 1900.

Respondent further says that the said Peoria Gas Light and Coke Company likewise reduced its price for gas to the uniform rate of thirty cents (30c.) per thousand (1000) cubic feet, and further advertised and gave out, that it would furnish gas at the said price, and would enter into contracts with consumers to furnish gas for one (1) year at said price, and did enter into many written contracts for service at said price. It further gave out that it would enter into contracts with patrons and consumers that the maximum price for gas for five (5) years should not exceed fifty cents (50c.) per thousand (1000) cubic feet, and it entered into many contracts with diverse consumers of that character; that it entered into a contract with the county of Peoria, which was, and is, as respondent is advised and believes, the largest consumer of gas in said city, to furnish gas to said county for one (1) year at the rate of twenty-five cents (25c.) per thousand (1000) cubic feet.

Respondent further shows upon information and belief that during the time gas was selling at said price in the city of Peoria, many shares of stock in said Peoria Gas Light and Coke Company were sold at prices greatly above the par value thereof.

Respondent is advised and believes that within the past year a great majority of the stock of said Peoria Gas Light and Coke Company has changed hands at prices in excess of 200% of its par value.

Respondent shows that in the month of July 1900 said Peoples' Gas and Electric Company whose title had previously been changed to Peoria Gas and Electric Company, in violation *to* its agreement and understanding that it would be a competitor of said Peoria Gas Light and Coke Company in the sale of gas to the said city and its inhabitants, entered into a contract and agreement with said Peoria Gas Light and Coke Company and said corporations did then and there agree that from and after the first day of August A. D. 1900, they would no longer compete for the sale and delivery of gas, and that they would sell no gas for illuminating purposes at a less rate than one dollar and twenty-five cents ($1.25) per thousand (1000) cubic feet, but would sell the same gas for heating and fuel purposes at the rate of eighty-five cents (85c.) per thousand (1000) cubic feet, and said corporation did on the 31st day of July 1900 insert in the daily papers of said city notices of their said agreement in words and figures following:

Gas for light $1.15 net.
Gas for fuel, 75 cents net.
Gas bills falling due September 1, will be rendered at the following rates
For gas used for light $1.25 per thousand cubic feet.
For gas used for fuel, registered through a separate meter, 85 cents per thousand cubic feet.
A discount of 10 cents per thousand cubic feet will be allowed on all bills paid before September 10, making the net rates:
Lighting gas, $1.15
Fuel gas, 75 cents
Customers now using gas for light and fuel, where only one meter is set on the premises, will please call at the office of the company and arrange for an additional meter.

PEORIA GAS LIGHT & COKE COMPANY,
127 *N. Jefferson Avenue.*

Gas for light $1.15 net.
Gas for fuel 75 cents net.
Gas bills falling due September 1, will be rendered at the following rates
For gas used for light $1.25 per thousand cubic feet.
For gas used for fuel registered through a separate meter, 85 cents per thousand cubic feet.
A discount of 10 cents per thousand cubic feet will be allowed on all bills paid before September 10, making the net rates:
Lighting gas $1.15
Fuel gas 75 cents.
Customers now using gas for light and fuel where only one meter is set on the premises will please call at the office of the company and arrange for an additional meter.

PEORIA GAS & ELECTRIC COMPANY,
420 *Main Street.*

Respondent further states upon information and belief that an agreement and understanding now exists between said corporations that they will not compete for the sale of gas, and that the prices therefor shall be determined only upon mutual agreement, Respondent charges that said agreement was entered into at the special request of said Peoria Gas and Electric Company, and after the said Peoria Gas and Electric Company, or persons interested with said Peoria Gas and Electric Company in monopolizing the gas business in said city, had purchased at many times more than the par value thereof, the controlling interest in the capital stock of said Peoria Gas Light and Coke Company.

Respondent charges that said agreement and combination was, and is in direct violation of the representations and agree-
46 ments of said Peoria Gas and Electric Company, with the citizens of said city of Peoria, and the common council of said city, when said ordinance was obtained; and by virtue of which said ordinance, *and* the franchises thereunder were granted to the Peoria Gas & Electric Company; and respondent shows that said Peoria Gas and Electric Company by reason of its deceptive promises and false and fraudulent representations, was enabled to obtain the right of way and lay down its pipes in the streets and avenues of said city, to excavate and damage its pavements and improvements, and to practically close out and prevent any other gas company from obtaining access to the consumers of gas in said city, and has destroyed the confidence of the said city and inhabitants to such a degree that an honest public corporation will hereafter have trouble to procure a franchise in said city.

And respondent charges that said corporation, instead of being an advantage to the said city and its inhabitants as its stockholders and officers claimed and represented would be the case, has in fact been, and is, and will continue to be, a great and permanent detriment and damage to said city and its inhabitants.

And respondent charges that the promises and statements of said Peoria Gas and Electric Company that if given a franchise it would be a competitor of said Peoria Gas Light and Coke Company and would reduce the price of gas, and that the franchises granted under said ordinance would not be for sale, were false and fraudulent and made for the purpose of securing the passage of said ordinance, and so respondent charges that said ordinance was obtained by the use of false and fraudulent representations and pretenses and that complainant is not entitled to any equity in its behalf, on account of the passage of said ordinance, as claimed in and by said bill.

Respondent further answering admits that the common council of the said city at the time stated in said bill, passed the ordinance in said bill set forth fixing the maximum rate of gas at seventy-five cents (75c.) per thousand (1000) cubic feet as alleged in said bill.

Respondent states that said ordinance was passed after the
47 said combination had been entered into between complainant and the said Peoria Gas Light and Coke Company; and that it was passed in good faith and for the protection of said city and its inhabitants against the illegal acts of oppression and extortionate discrimination of the Peoria Gas Light and Coke Company and Peoria Gas and Electric Company in combining and fixing the price of gas as set forth in said notices.

Respondent shows that at the time of the passage of said ordinance and at the present time, gas is being supplied by the said gas companies above named to the county of Peoria at the rate of twenty-five cents (25c.) per thousand (1000) cubic feet and to various citizens of said city at thirty cents (30c.) per thousand (1000) cubic feet; to other consumers in said city under contracts made during

the present year and running for five (5) years at the rate of fifty cents (50c.) per thousand (1000) cubic feet; to other citizens for heating and for fuel purposes at the rate of seventy-five cents (75c.) per thousand (1000) cubic feet, while the general public who did not prior to July 21st, 1900, enter into special contracts with said companies, or one of them, is compelled to pay $1.25 for such gas as may be required for illuminating purposes. Respondent shows that gas furnished on all the above contracts and to all citizens whether for heating or illuminating purposes, is one and the same gas, supplied through the same distributive system, and at the same cost to the company furnishing the same; and respondent alleges that it was for the purpose of preventing extortion and of requiring that gas should be furnished to all consumers within said city at fair and reasonable terms and without discrimination that said ordinance under the police power of said city was passed.

Respondent further answering says that as to the allegation in said bill that said ordinance is void for want of power in the city council of said city to pass the same, respondent can neither admit or deny such statement, but alleges that said ordinance was passed in good faith by said common council and in the belief that
48 it had power to pass ordinances for the promotion of the welfare of the inhabitants of the said city and to prevent acts of wrong, injustice and extortion from being practiced against said inhabitants.

And respondent is willing, or does hereby offer, to submit in a test case to the proper State courts of the State of Illinois, the question as to whether under the rights and franchises to it granted by the legislature of the State, it had authority to pass said ordinance and as to whether it is a valid exercise of its police power granted by the State. Respondent denies that it has any desire whatever to oppress complainant by a multiplicity of suits as stated in said bill, or that a multiplicity of suits, or more than one suit will be necessary to determine the validity of said ordinance; and further alleges that it has no desire to prosecute any suit or suits should it be determined by the court of the said State that said ordinance is invalid for want of power to pass the same, as alleged in said bill.

Respondent denies that the maximum rate for gas fixed by said ordinance is an unreasonable rate for gas, as charged in said bill; but alleges that the same is a reasonable rate, and that it can be furnished to consumers within said city at a much less rate and with profit to the company furnishing the same. And further alleges that the complainant well knew when it applied to respondent for its franchise that it would be compelled to compete with an old and well established gas company in said city which was entirely out of debt and had its plant fully paid for, and which could afford to sells its gas at reasonable rates, and at a less rate, than the maximum rate fixed by said ordinance. And respondent alleges that complainant is estopped to deny that the said maximum rate fixed by said ordinance is reasonable for the reason that gas was furnished

at said price by said Peoria Gas Light and Coke Company when complainant applied to said city for its franchise, and before it had expended any money thereon.

Respondent is advised and believes that at least one-half ($\frac{1}{2}$) of the gas sold by plaintiff is supplied for heat and fuel pur-
49 poses for which it has voluntarily fixed the net price at the maximum rate fixed by said ordinance. And respondent further shows that by its said action in combining and confederating with the said Peoria Gas Light and Coke Company to raise the price of gas as hereinbefore shown, and in violating the agreement and understanding with the citizens of Peoria and the common council thereof, by which it was enabled to secure its franchise of laying down its mains and pipes in said city, complainant alienated the friendship of said citizens and consumers of gas to such an extent that complainant is unable to receive the patronage which it would have had otherwise. And if it be true that it is impossible for complainant to furnish gas at said maximun price it is owing to its own representations under and by reason of which it prourred its franchise, and its violation thereof as aforesaid.

For further answer*ing* defendant alleges that if it be true as alleged in said bill that said ordinance of the city of Peoria fixing the maximum price for gas within said city is invalid and of no effect whatever against the complainant and for the reason that said city has no right power or authority vested in it by law to prescribe the same, as alleged in said bill, then this suit between the citizens of the same State and district does not really and substantially involve a controver-y properly within the jurisdiction of this court, and this court should proceed no further therein, and that the same should be dismissed.

And for further answer defendant says that for all the supposed grievances, wrongs and injuries set forth in said bill and for the attempted enforcement of an invalid ordinance as alleged in said bill complainant has a complete and adequate remedy at law, and that a court of equity has no jurisdiction thereof.

And further answering defendant alleges that there is no equity in said bill, or sufficient reason therein shown, for the interposition of a court of equity to enjoin the said city and its inhabitants from the enforcement of said ordinance.

50 Wherefore and for divers other causes apparent on the face of said bill, complainant prays that complainant may be denied the relief therein sought and that said bill be dismissed.

And this defendant denies all and all manner of unlawful action wherewith it is by the said bill charged, without this, there is any other matter, cause or thing in the said bill of complaint contained, material or necessary for this defendant to make answer unto, and not herein or hereby well and sufficiently answered, confessed, traversed and avoided or denied, is true to the knowledge or belief of this defendant; all of which matters and things this defendant is ready and willing to aver, maintain and prove, as this

honorable court shall direct, and humbly prays to be hence dismissed with its reasonable costs and charges in this behalf most wrongfully sustained.

THE CITY OF PEORIA,
By HENRY W. LYNCH,
Mayor of the City of Peoria.

W. V. TEFFT, *City Att'y.*

53 Endorsement: Gen. No. 288. In the circuit court of the United States, northern district of Illinois, southern division. Peoria Gas & Electric Company *vs.* City of Peoria. Notice. "Filed October 22, A. D. 1900. S. W. Burnham, clerk. W. T. Irwin and Hatch & Ritsher, attorneys-at-law, 100 Washington street, Chicago.

54 And afterwards, to-wit on the twenty-second day of October, A. D. 1900, the same being one of the regular days of the regular October A. D. 1900 term of said court among others, proceedings were had in said court and entered of record in the words and figures following, to-wit:—

55 In the Circuit Court of the United States, Northern District of Illinois, Southern Division.

MONDAY, *October 22nd, A. D.* 1900.

By direction of Hon. Christian C. Kohlsaat, district judge.

PEORIA GAS & ELECTRIC COMPANY } 288.
vs.
CITY OF PEORIA. }

This matter coming on now to be heard on the motion of the complainant herein for leave to amend its bill of complaint herein

without prejudice to its right for relief, and injunction as prayed for in its said bill and it appearing to the court that due notice of said motion has been served upon the defendants herein, it is ordered that leave be and hereby is given to said complainant to amend its bill instanter without prejudice to its right for relief, and injunction as prayed for in its said original bill of complaint.

It is further ordered by consent of counsel for complainant and defendant that the answer heretofore filed to the original bill of complaint by said city of Peoria, stand as the answer of said city of Peoria to the bill of complaint as amended.

56 And afterwards on the same day to-wit the 22nd day of October A. D. 1900, there was filed in the office of the clerk of said court in said cause an amendment to the bill of complaint, which said amendment is in the words and figures following, to-wit:

57 UNITED STATES OF AMERICA, } ss:
Northern District of Illinois, }

In the Circuit Court of the United States, Northern District of Illinois, Southern Division.

PEORIA GAS & ELECTRIC COMPANY
vs.
CITY OF PEORIA. } Gen. No. 287.

Amendment to the Bill of Complaint.

Now comes the complainant in the above entitled cause and by leave of the court first had and obtained, amends its bill of complaint herein, as follows, without prejudice to its rights for relief and injunction as prayed for in its said bill:

On the 22nd page of said bill, strike out the 2nd paragraph thereof, which reads as follows:

"Your orator represents, that the city council of said city had no power or authority to pass last named penal ordinance fixing the price at which your orator or others should charge for gas furnished to consumers. That no such power or authority has ever been delegated to said city by the legislature of the State of Illinois, and that the passage of said ordinance was an assumed power on the part of said city, regardless of any rights vested in it by the sovereign power of the State, and the same is void."

In lieu thereof, insert the following: "That the said city council of the said city of Peoria, passed and adopted said last named ordinance under the supposed authority granted to it by the legislature of the State of Illinois as contained in *clause thirteen* sec. 1, art. V; chap. 24 of the Revised Statutes of Illinois of the general incorpora-

tion act for cities, towns and villages in said State, which is as follows:

58 "To regulate the openings therein for the laying of gas or water mains and pipes, and the building and repairing of sewers, tunnels and drains, and erecting gas lights: *Provided, however*, That any company heretofore organized under the general laws of this State, or any association or persons organized or which may be hereafter organized for the purpose of manufacturing illuminating gas to supply cities or villages, or the inhabitants thereof, with the same, shall have the right, by consent of the common council (subject to existing rights), to erect gas factories and lay down pipes in the streets or alleys of any city or village in this State, subject to such regulations as any such city or village may by ordinance impose."

It is also claimed and insisted by said city that it also had the right, power and authority to pass and enforce said ordinance as against your orator by virtue of the general police powers delegated to it by the legislature of the said State of Illinois.

Your orator represents that the only power or authority vested in said city to pass such ordinance, if any, was that set forth in said clause of the statutes of the State of Illinois aforesaid; that the power to pass ordinances or regulations as set forth in such clause of said statute above set out, does not furnish or authorize said city to prescribe such exorbitant and extreme penalties as set forth in said ordinance, nor do the general police powers of the State delegated to cities, to legislate for the promotion of the good order, health and welfare of the general public, authorize or empower said city to adopt said ordinance, or prescribe and enforce such penalties as therein prescribed, and that said ordinance is therefore an attempt to impair the rights of contract between your orator and said city as above set forth; that it is an attempt to take the private property of your orator for public use without just compensation; that the enforcement thereof would deprive your orator of its property without due process of law; and said ordinance denies to your orator the equal protection of the laws, in violation of the provisions of the Constitution of the United States and the State of Illinois.

Your orator therefore prays that its said bill of complaint may be amended as aforesaid, without prejudice to its rights to the relief and injunction as therein prayed for.

59 PEORIA GAS & ELECTRIC COMPANY,
By W. T. IRWIN, *Its Solicitor.*

HATCH & RITSHER, *Of Counsel.*

STATE OF ILLINOIS, }
County of Peoria, } ss:

F. W. Little, being duly sworn, on oath states that he is the vice president of the above named complainant, and that he has read the

foregoing amendment to the original bill of complaint on file in said cause, and knows the contents thereof, and that the same is true. And also states that the matters and things as set forth in said original bill of complaint on file in this proceeding as above amended are true as therein stated.

F. W. LITTLE.

Subscribed and sworn to before me, this 19th day of October, A. D. 1900.

61 In the Circuit Court of the United States, Northern District of Illinois, Southern Division.

THURSDAY, *October 25th, A. D.* 1900.

By direction of Hon. Christian C. Kohlsaat, district judge.

PEORIA GAS & ELECTRIC COMPANY
vs.
CITY OF PEORIA. } 288.

The court having considered the motion of the defendant to dismiss for want of jurisdiction and being fully advised in the premises, denies said motion.

62 And afterwards, to-wit on the twenty-ninth day of October, A. D. 1900, the same being one of the regular days of the regular October A. D. 1900 term of said court, among others, further proceedings were had in said cause and entered of record in the words and figures following, to-wit:—

63 In the Circuit Court of the United States, Northern District of Illinois, Southern Division.

MONDAY, *October 29th, A. D.* 1900.

Present: Hon. Christian C. Kohlsaat, district judge.

PEORIA GAS & ELECTRIC COMPANY
vs.
CITY OF PEORIA. } 288. In Chancery.

On motion of complainant ordered that injunction issue upon the complainant giving bond in the sum of ten thousand dollars.

64 And afterwards to-wit on the 1st day of November A. D 1900, there was filed in the office of the clerk of said court in said cause, an injunction bond, which said bond is in the words and figures following, to-wit:

65 Know all men by these presents, that the *Peoria Gas and Electric Company*, a corporation organized and existing under the laws of the State of Illinois, as principal, and the National Surety Company of New York, a corporation organized and existing under the laws of the State of New York, as surety, are held and firmly bound unto the City of Peoria, a municipal corporation, for the use of said city and such inhabitants thereof as are consumers of gas furnished by said Peoria Gas and Electric Company, in the penal sum of ten thousand (10000) dollars, good and lawful money of the United States of America, well and truly to be paid to said city for the use aforesaid.

In witness whereof the parties hereto have caused this obligation to be executed by their proper officers this twenty-ninth day of October, A. D. 1900.

The condition of this obligation is such, that whereas the said Peoria Gas and Electric Company heretofore filed in the United States circuit court for the northern district of Illinois, southern division thereof, its bill of complaint as amended, praying for an injunction against the said City of Peoria, restraining and enjoining said city from enforcing a certain ordinance entitled "An ordinance regulating and fixing the maximum price of gas in said city of Peoria," passed by the city council of said city on the fourth day of September, A. D. 1900, and

Whereas an injunction has been ordered issued as prayed for in said bill of complaint as amended,

Now if the said Peoria Gas and Electric Company shall
66 well and truly pay and refund to the said City of Peoria for the use of such inhabitants thereof as are consumers of gas furnished by the said Peoria Gas and Electric Company all damages

that may accrue to said city and said consumers of gas by reason of the wrongful suing out of said injunction in the event that the complainant's bill as amended shall fail and said injunction shall be dis-olved, together with such costs and attorney's fees as may be adjudged by the court, then this obligation shall be void; otherwise to remain in full force and virtue.

PEORIA GAS AND ELECTRIC COMPANY,

[CORPORATE SEAL.] By F. W. LITTLE, *Vice President.*

Attest:

67 Endorsement: Gen. No. 288. S. D. In the circuit court of the United States, northern district of Illinois. Peoria Gas and Electric Company *vs.* City of Peoria. Bond. Filed November 1, 1900. S. W. Burnham, clerk.

68 And afterwards on the same day to-wit the first day of November, A. D. 1900, there issued out of the office of the clerk of said court in said cause, an injunction writ, which said writ is in the words and figures following, to-wit:

69 Circuit Court of the United States of America, Northern District of Illinois, Southern Division, *ss:*

The United States of America to City of Peoria and to your counselors, attorneys, solicitors, trustees, agents, clerks, employés, servants and workmen, and to each and every of you, Greeting:

Whereas, it has been represented to the judge of our circuit court of the United States for the northern division of the northern district of Illinois in chancery sitting, on the part of Peoria Gas and Electric Company, complainant in its certain bill of complaint, exhibited in our said circuit court, on the chancery side thereof, before the judges of said court, against you the said City of Peoria, to be relieved touching the matters complained of. In which said bill it is stated, among other things, that you are combining and confederating with others to injure the complainant touching the matters set forth in said bill, and that your actings and doings in the premises are contrary to equity and good conscience. And it being or-

dered that a writ of preliminary injunction issue out of said court, upon said bill, enjoining and restraining you, and each of you, as prayed for in said bill; we, therefore, in consideration thereof, and of the particular matters in said bill set forth, do strictly command you, the said City of Peoria, your counselors, attorneys, solicitors, trustees, agents, clerks, employés, servants and workmen, and each and every of you, that you do absolutely desist and refrain from, enforcing a certain ordinance entitled "An ordinance regulating and fixing the maximum price of gas in the said city of Peoria," passed by the city council of said city on the fourth day of September A. D.
70 1900, until this honorable court, in chancery sitting, shall make other order to the contrary. Hereof fail not, under the penalty of what the law directs.

To the marshal of the northern district of Illinois, to execute, and return in due form of law.

Witness, the Honorable Melville W. Fuller, Chief Justice of the United States of America, at Chicago, in said district, this 1st day of Novemberin the year of our Lord one thousand nine hundred and of our Independence the one hundred and twenty-fifth year.

[COURT SEAL.] S. W. BURNHAM, *Clerk.*

And afterwards said writ was returned in to the office of the clerk of said court on the third day of November, A. D. 1900, with the return of the marshal indorsed thereon, in words and figures following to-wit:

I have served the within writ within my district in the following manner to-wit:—

Upon the City of Peoria therein named by personally delivering a true copy of the same to Henry W. *Hynch*, Esq., mayor of the city of Peoria, Illinois, at Peoria, Illinois, this 2nd day of November A. D. 1900.

71 And afterwards to-wit on the fifth day of November A. D. 1900, there was filed in the office of the clerk of the said court in said cause a replication, which said replication is in the words and figures following, to-wit:

72 In the United States Circuit Court, Northern District of Illinois, Southern Division.

THE PEORIA GAS AND ELECTRIC COMPANY vs. CITY OF PEORIA. } In Chancery. Gen. No. 287.

Replication of The Peoria Gas and Electric Company, Complainant, to the Answer of City of Peoria, Defendant.

This repliant saving and reserving unto itself all and all manner of advantage of exception to the manifold in sufficiencies of the said answer, for replication thereunto says: That it will aver and prove its said bill as amended to be true, certain, and sufficient in the law to be answered unto; and that the said answer of the defendant is uncertain, untrue and insufficient to be replied unto by this repliant; without this, that any other matter or thing whatsoever in the said answer contained material, or effectual in law to be replied unto, confessed and avoided, traversed or denied, is true; all such matters and things this repliant is and will be ready to aver and prove as this honorable court shall direct, and humbly prays as in and by its said bill as amended it has already prayed.

PEORIA GAS AND ELECTRIC COMPANY vs. CITY OF PEORIA. } 288. In Chancery.

Now come the parties by their solicitors and by agreement in open court, it is hereby ordered that Mr. I. C. Pinckney, of the city of

Peoria, in said district and division, be, and he is hereby appointed a special commissioner to take the proofs herein and report the same with his findings and conclusions herein with all convenient speed.

75 And afterwards, on, to-wit, the twenty-fourth day of April, A. D. 1902, there was filed in the office of the clerk of said court in said cause a notice for rule on defendant to close proofs; which said notice is in the words and figures following, to-wit:

76 UNITED STATES OF AMERICA, } ss:
Northern District of Illinois, }

In the District Court of the United States, Northern District of Illinois, Southern Division.

PEORIA GAS AND ELECTRIC COMPANY
vs.
CITY OF PEORIA. } In Chancery. #288.

To Henry Mansfield, city attorney, and F. H. Tichenor, of counsel:

Please take notice: That on Thursday, the 24th day of April, 1902, at the hour of 2 o'clock p. m., or as soon thereafter as counsel can be heard, before the Honorable J. Otis Humphreys, judge of the said court, in the room usually occupied by him as a court room in the city of Peoria, Illinois, we shall move the court to enter an order in the said cause, requiring the defendant herein to close its proof by a short day to be fixed by the court, at which time you may be present if you see fit.

E. C. RITSHER,
W. T. ABBOTT,
W. T. IRWIN,
Solicitors for Complainant.

Received a copy of the above notice this 24th day of April, A. D. 1902.

F. H. TICHENOR.

Endorsed: "Filed April 24th 1902, Marshall E. Sampsell, clerk. F. C. Howe, deputy clerk." E. C. Ritsher—W. T. Abbott & W. T. Irwin compl't's att'ys.

77 And afterwards, on, to-wit, the twenty-fourth day of April, A. D. 1902, there was filed in the office of the clerk of said court in said cause a motion for order on defendant to close proofs by short day to be fixed by the court; which said motion is in the words and figures following, to-wit:

78 UNITED STATES OF AMERICA, } ss:
Northern District of Illinois, }

In the Circuit Court of the United States, Northern District of Illinois, Southern Division.

PEORIA GAS AND ELECTRIC COMPANY
vs.
CITY OF PEORIA. } In Chancery. # 288.

And now comes the complainant herein, by W. T. Irwin, E. C. Ritsher and W. T. Abbott, its solicitors, and moves the court to enter an order herein requiring the defendant herein to close its proofs within a short day to be fixed by the court.

E. C. RITSHER,
W. T. ABBOTT,
W. T. IRWIN,
Solicitors for Complainant.

Endorsed: "Filed April 24th 1902, Marshall E. Sampsell, clerk, by F. C. Howe, deputy clerk."

79 And afterwards on to wit the twenty-fourth day of April, A. D. 1902, there was filed in the office of the clerk of said court in said cause, an affidavit of E. C. Ritsher in support of motion for rule on defendant to close proofs, which affidavit is in the words and figures following, to wit:

80 UNITED STATES OF AMERICA, } ss:
Northern District of Illinois, }

In the Circuit Court of the United States, Northern District of Illinois, Southern Division.

PEORIA GAS AND ELECTRIC COMPANY
vs.
CITY OF PEORIA. } In Chancery. # 288.

Edward C. Ritsher, being first duly sworn, on oath says, that he is one of the solicitors for the complainant in the above entitled cause.

Affiant further says, that the bill of complaint herein was brought for the purpose of enjoining the City of Peoria from enforcing an ordinance fixing the price of gas at seventy-five cents per one thousand cubic feet delivered to consumers, and that a temporary injunction issue in said cause.

Affiant further says, that said suit was begun in month of September, 1900, and that negotiations for an amicable settlement of the litigation were in progress at different times until the month of August, 1901.

Affiant further says, that it becoming apparent in the month of August, 1901, that the suit must be tried, application was made to the Honorable Isaac C. Pinkney, (special commissioner, to take testimony in this case) to set down said cause for the taking of testimony immediately after the summer vacation, and thereupon said cause was set down for hearing by said special commissioner, for November 8th, 1901.

Affiant further says, that the taking of testimony on the part of the complainant herein was prosecuted with all diligence
81 and that said complainant closed its examination in chief on January 8th, 1902, having fully completed the same within the period of sixty-five days after commencing to put in its proofs.

Affiant further says, that twenty-four days out of said sixty-five days were occupied in hearing and necessary time for travel, without taking into account adjournments from day to day at Peoria, and without taking in to account any time for travel between Peoria and Chicago.

Affiant further says, that during the 108 days which elapsed since complainant closed its case in chief, that the defendant has occupied an aggregate of ten days in putting in its proof, and that forty-two days have elapsed since the last proof was offered.

Affiant further states, that the complainant company has invested about the some of five hundred thousand dollars in cash in its plant and business in Peoria, and that the pendency of the present litigation works a serious injury to said company, and renders it impracticable for it to extend its mains or enter into any contracts for the improvement of its property by reason of the uncertainty as to its income,—the same depending upon the final decision of the court in this case.

EDWARD C. RITHSER.

Subscribed and sworn to, before me, this 24th day of April, A. D. 1902.

FRIDAY, *June 27th, A. D.* 1902.

Present: Hon. J. Otis Humphrey, district judge.

PEORIA GAS AND ELECTRIC COMPANY
vs.
CITY OF PEORIA. } 288. In Chancery.

This day this cause coming on to be heard by the court, on exceptions to the ruling of the special master herein denying the defendant's application to compel the production of certain books, records and documents of the Peoria Gas Light and Coke Company sought to be obtained, through a *subpœna duces tecum* served upon one H. W. Bicknell, an employee of said company, dated June 25, A. D. 1902, and the special master having denied the application of the defendant to compel the production of said books, records and documents upon the affidavit of Henry Mansfield, city attorney of the city of Peoria and counsel for the defendant; and upon exception being duly taken to the said ruling and the said cause being referred to the court, and the court having heard the arguments of counsel and being fully advised in the premises, doth order, adjudge and decree that the said ruling of the said special master upon such application by the defendant, The City of Peoria, be and the same is hereby fully sustained, and the exceptions to the said ruling be and the same are hereby overruled.

86 And afterwards, to-wit on the twenty-first day of October, A. D. 1902, the same being one of the regular days of the regular October A. D. 1902 term of said court, among others, further proceedings were had in said cause and entered of record in the words and figures following, to-wit:

87 In the Circuit Court of the United States, Northern District of Illinois, Southern Division.

TUESDAY, *October* 21*st*, *A. D.* 1902.

Present: Hon. J. Otis Humphrey, district judge.

PEORIA GAS & ELECTRIC COMPANY vs. CITY OF PEORIA. } 288. In Chancery for Injunction.

This day this cause coming on to be further heard upon the motion of I. C. Pinckney, special master in this cause, to whom the same was referred by agreement of counsel for the respective parties, to take testimony and report the findings of fact and conclusions of law herein, for an order of this court fixing his compensation as said special master for taking the testimony and hearing the oral arguments of counsel for the respective parties; and the parties to said cause being now present in court by their respective counsel, and the court being fully advised in the premises, doth order and decree, that the said special master's compensation for his services aforesaid, be, and the same is hereby fixed at the sum of twenty-five dollars per day ($25.00), and that the said sum be paid to the said master by the respective parties to this cause for the time occupied by them, each respectively, in the taking of testimony and the oral arguments of counsel in said cause before said master, the amount so paid to said master under this order to abide the final judgment of the court herein.

The court hereby expressly reserves for further consideration the compensation to said master in said cause, of all matters not herein expressly provided for.

88 And afterwards on the same day, to-wit the twenty-first day of October, A. D. 1902, the same being one of the regular days of the regular October A. D. 1902 term of said court, there being present as before, among others, further proceedings were had in said cause and entered of record in the words and figures following, to-wit:—

89 In the Circuit Court of the United States, Northern District of Illinois, Southern Division.

TUESDAY, *October* 21*st*, *A. D.* 1902.

Present: Hon. J. Otis Humphrey, district judge.

PEORIA GAS & ELECTRIC COMPANY
vs.
CITY OF PEORIA. } 288.

For good cause shown the time for the master to hear final argument herein is hereby extended to November 10th, next.

90 And afterwards on to-wit the twelth day of November, A. D. 1902, there was filed in the office of the clerk of said court in said cause, a motion for order fixing master's compensation, which motion is in the words and figures following, to-wit:

91 The United States Circuit Court, Northern District of Illinois, Southern Division.

THE PEORIA GAS & ELECTRIC COMPANY
vs.
CITY OF PEORIA. } In Chancery for Injunction.

Now on this day, comes I. C. Pinckney, special master in this cause, to whom the same was heretofore referred to take and hear the proof of the respective parties thereto, and report the same together with his conclusion of law and fact therein, to the court, and moves the court for an order herein fixing his compensation as said special master, for and including the time expended by him in the hearing and taking of said proofs of the respective parties, and also including the time of the arguments of counsel before said special master.

——— ———,
Special Master in said Cause.

Endorses: "Filed November 12, 1902. Marshall E. Sampsell, clerk."

92 And afterwards on to-wit the third day of June, A. D. 1903, there was filed in the office of the clerk of said court in said cause, the special master's report, which said report is in the words and figures following, to-wit:

93 Circuit Court of the United States, Northern District of Illinois, Southern Division.

PEORIA GAS & ELECTRIC COMPANY, Complainant,
vs.
CITY OF PEORIA, Defendant. } In Chancery for Injunction, &c.

Special Master's Report.

To the honorable the judge of said court:

Pursuant to the order of reference made in the above entitled suit on the 20th day of May, 1901, and by stipulation of the parties hereto, the hearing of this cause was commenced before me on the 5th day of November, 1901, in the city of Chicago, Illinois. Thereafter, at the instance of complainant, testimony was taken at the cities of St. Paul, Minneapolis and Duluth, Minn., also at Kansas City, Missouri, and Peoria, Illinois. Testimony was also taken at the instance of the defendant in the cities of Syracuse, N. Y. and Chicago and Peoria, Ill., at which last named place the complainant closed its evidence in the rebuttal on the 20th day of October, 1902, as will more fully appear from the report of the stenographer thereof and transcript of the testimony filed therein.

At said hearing Mr. W. T. Irwin, Mr. E. C. Rit*h*ser and Mr. W. T. Abbott appeared for the complainant, and on the hearing of the complainant's evidence in chief Mr. Mansfield appeared for the defendant, and thereafter, and until the close of the hearing, Mr. F. H. Tichenor also appeared for the defendant, The City of Peoria.

94 After having heard the evidence and oral arguments of counsel for the respective parties, the case was taken under advisement until this date, and now being advised of the evidence and the law relating thereto, I find and state the following facts, and conclusions of law:

Facts.

1.

Complainant is a corporation, duly incorporated under the general incorporation laws of the State of Illinois, on the 21st day of March, A. D. 1899, having its principal office in the city of Peoria, in said State.

2.

That under its charter powers it is authorized to construct gas plants for the manufacture, sale and delivery of gas for light, heat and power purposes.

3.

That on the 3rd day of March, 1899, it made application to the city council of the city of Peoria, Illinois, for permission and authority to construct and operate gas works in the city of Peoria, and to enter upon the public streets and highways therein for the purpose of laying pipes, mains and feeders in and through which it could deliver gas to consumers for any of the purposes specified in its charter.

4.

That said application was, by the city council referred to a standing committee of its body, known as the committee on streets, alleys and bridges, and on the 18th day of April, thereafter, the
95 ordinance under which complainant occupies the public highways of the city of Peoria, and conducts its business of manufacturing and distributing gas, for light, fuel, heat and power purposes, was adopted by the city council.

5.

The conditions precedent fixed by this ordinance were all met and observed by complainant. It purchased a site centrally located, and built on such site its manufacturing plant for the manufacture of coal gas. This plant consists of a retort house containing seven (7) benches of nine (9) retorts to each bench, with a maximum bench capacity of from six hundred (600) thousand to six hundred and fifty (650) thousand cubic feet of gas per day of twenty-four (24) hours, a purifying house, boiler and pump house, meter house, office, store-room, repair shop, coal and coke shed, gas storage holder, ammonia and tar wells.

6.

Complainant entered upon the public highways of the city of Peoria, where by its ordinance it was authorized, and laid twenty-six and one-half (26½) miles of cast-iron mains for distribution of its gas to consumers for heat and illuminating purposes. These mains consist of— 1758 feet of 16 inch

20760	"	"	12	"
482	"	"	10	"
20229	"	"	8	"
12874	"	"	6	"
80452	"	"	4	" and
260	"	"	2	"

mains, and about the 1st day of May, 1900, commenced to deliver gas to its patrons, through the same, and has since continued so to do.

7.

On September 1st, 1900, complainant had also installed about two thousand service pipes for conveying gas from its main pipe
96 system to the premises of gas consumers, and had also set and in use seventeen hundred and fifty-eight (1758) meters, these service pipes being installed, and the meters set without charge to the consumers. The total cost of complainant plant and distributing system as hereinbefore substantially described, including the amount of the purchase price paid for the real estate on which its manufacturing plant is located, and including also the expenses necessarily incident to the organization of the company, and the further expense of procuring the consents of owners of property fronting upon the public highways it is authorized by its ordinance from the city of Peoria, to occupy with its distributing mains, then represented an expenditure, or cost, to the complainant of four hundred thirty-four thousand two hundred fifty-two dollars and thirty-five cents ($434,252.35).

8.

This plant as so constructed, and then in operation, was well designed for the prudent and economical manufacture of coal gas, and represented the highest efficiency, not only for the economical production of gas, but also for the production of the valuable bi-products known as coke, coal tar and ammonia liquor, the sale of which tends to reduce the net cost of the manufacture of coal gas, and for which bi-products there is as a rule a ready market.

9.

The ordinance of the city of Peoria, passed April 18th, 1899, to complainant, under which it now occupies the public highways therein for the purpose of its distributing mains, contains no provisions regulating the price it may charge consumers, or takers of gas manufactured by it, nor does such ordinance contain any reservation of power, or authority to the city, to at any time thereafter fix such price. At the time complainant company presented its
97 application to the city council for a license to construct its plant, and occupy the public highways of the city, for the purpose of distributing gas to its citizens, and for many years prior thereto, substantially the same territory of the city complainant is by its ordinance authorized to occupy, the Peoria Gas Light & Coke Company were in possession of, and actively engaged in the same business, and until complainant had completed and put in operation its plant, the Peoria Gas Light & Coke Company held an unmolested field therein, for the sale of its gas. Up to the year 1897, and from time to time prior thereto this last named company had reduced the price of gas to consumers, and on or about the first of the year 1897 its prices were, for illuminating gas $1.35 gross, or $1.25 net, per

thousand cubic feet, if paid on or before the 10th day of the month next following, and $.75 per thousand cubic feet for fuel gas. These prices continued up to April 1st, 1899, at which date the price charged by it for gas used for illuminating purposes was reduced to $1.00 net per thousand cubic feet. In April, 1900, a further reduction was made, the price being $.30 net, per thousand cubic feet for all gas used for light or fuel purposes. August 1st, following, prices were again changed by both companies to $1.15 net, per thousand cubic feet for illuminating, and $.75 net for fuel gas, and on January 1st, 1901, the old company fixed the price at $1.00 net per thousand cubic feet for gas used for either lighting or heating purposes. About September 1st, 1901, complainant established the same rates.

Following the change in rates made on August first (1st), 1900, on to-wit, the fourth (4th) day of September, 1900, the city council of the city of Peoria, adopted an ordinance, entitled "An ordinance regulating and fixing the maximum price of gas in the city of Peoria," said ordinance reads as follows:

98 Be it ordained by the city council of the city of Peoria:

SECTION 1. That the maximum price of gas furnished the city of Peoria, and the citizens thereof, and all consumers of gas therein, shall not exceed the sum of seventy-five cents (75c.) per thousand cubic feet; such gas so furnished to afford a light of not less than eighteen (18) candle power, to be measured and ascertained at the place of consumption, in said city, by the most modern appliances known to science for measuring the candle power of illuminating gas; and the Peoria Gas Light & Coke Company, and the Peoria Gas & Electric Company, and any other company, corporation, person, or persons, who are now or may hereafter furnish gas to consumers in the city of Peoria, are hereby authorized and empowered to charge all consumers of gas in said city a sum not in excess of seventy-five (75c.) cents per thousand cubic feet.

SECTION 2. That any company, corporation, person or persons who shall in violation of the provisions of the preceding section charge or require the city of Peoria, or any citizen thereof, or any consumer of gas therein, to pay for gas furnished to it or them, or either of *of* them, a sum in excess of seventy-five (75c.) cents per thousand cubic feet, or who shall furnish to said city of Peoria, or any citizens thereof, gas less than eighteen (18) candle power, shall be subject to a penalty of not less than twenty-five ($25) dollars, nor more than two hundred ($200) dollars for each and every offense.

SECTION 3. That any company, corporation, person, or persons, who shall remove any meter or meters from the house, store factory or premises of any consumer of gas in the city of Peoria, against the will and consent of any such owner of gas who is willing to pay for gas furnished him, it or them, by any company, corporation, person, or persons, the price established and fixed in section one (1) of this ordinance, shall be subject to a penalty of not less than twenty-five ($25) dollars, nor more than two hundred ($200) dollars for each and

every offense: Provided, however, that any company, corporation, person, or persons furnishing gas to consumers in the city of Peoria, shall have the right to remove any meter, or meters, for the purpose of repairing the same, on condition that such meter, or meters, so removed shall be replaced or a new one substituted in its place within twenty-four (24) hours of the time of the removal of any such meter, or meters.

SECTION 4. This ordinance shall be in force and effect from and after its passage and due publication, as provided by law: Provided, that nothing herein contained shall impair the obligation of any contract in existence between the city of Peoria and either of said gas companies above mentioned.

SECTION 5. All ordinances or parts of ordinances in conflict with this ordinance, are hereby repealed, subject to the proviso contained in section four (4) of this ordinance.

Passed in council this 4th day of September, A. D. 1900.

HENRY W. LYNCH, *Mayor.*"

99 The bill in this case seeks to enjoin the enforcement by defendant of the provisions of the above ordinance, on the grounds chiefly that, said ordinance is an attempt to impair the rights of contract between it and the defendant, and that the enforcement of its provisions would constitute the taking of the private property of complainant for public use, without just compensation. Further that, the penalties prescribed for a violation of its provisions, are "exorbitant and extreme," and are not sanctioned by the laws of the State of Illinois.

The defendant seeks to justify the provisions of the ordinance relative to the maximum price to be charged for gas, as therein fixed on statements and representations made by certain stockholders in complainant company, to members of the city council of the city of Peoria, and other citizens of Peoria, at the time complainant was seeking the adoption by the city council of its license ordinance, that was passed on April 18th, 1899, under and by virtue of which it engaged in the manufacture and distribution of gas in the city of Peoria, and it claims that it was by reason of these statements and representations that complainant was enabled to obtain its license ordinance from the defendant; that the maximum rate ordinance was passed in good faith, and that the rates fixed therein are reasonable, &c.

It appears from the evidence that statements and representations were made to the members of the council by persons who were at the time, and are now stockholders in complainant company. It does not appear, however that any corporate action taken at any time by complainant, authorized such statements, or representations, nor does it appear that in any such statements or representations any fixed price at which complainant would furnish gas to consumers was stated, the substance of them being that, "the price would be cheapened."

100 These statements and representations, of whatever character they may have been, had much influence with the action subsequently taken by the city council, when complainant's ordinance, giving it permission and authority to prosecute its business in the city of Peoria, and to use and occupy the public highways therein for that purpose, was before that body for consideration. It was with the belief that complainant would become an active competitor of the old gas company, for the gas business in the city of Peoria, and that the price of the same would thereby be cheapened to its citizens, that led the municipal body to grant complainant its license. Complainant sought the privileges therein contained from the city of Peoria. The city held out no inducements to complainant further than those contained in the grant it now occupies, under which it was given the right to compete for the gas business in the Peoria territory, on equal terms with the old established company. Defendant now claims that these statements and representations then made, and which no doubt were largely instrumental in complainant securing its license from the city, constitute an estoppel against complainant's right, to now be relieved against the limitations contained in this ordinance, which complainant claims injuriously affect its interests in the prosecution of the business it was licensed to carry on within the city under its ordinance of April 18th, 1899. The soundness in law of this claim must, and does rest solely in facts, existing at the time the defendant had before it the ordinance in controversy in this cause, relative to the cost of the manufacture and distribution of coal gas in the city of Peoria, and the knowledge, and means of knowledge the city council had, or might have had, of ascertaining the reasonableness and fairness of such legislation.

11.

101 The ordinance in controversy in this case was not passed by the common council of the city of Peoria for about eighteen months after the time that complainant procured its original license from the city. At the time the ordinance fixing the maximum price of gas was pending and before its adoption by the city council, it appears complainant, through one of its officers, stated to the mayor of Peoria, and to some of the members of the city council, that gas could not be made by it, at the maximum price fixed by this ordinance, and the mayor was then requested, either personally, or through any representative of the city he might select, to make an examination of the books of complainant, to determine for the guidance of the council, what it was then costing complainant to manufacture gas, and what would be the probable cost in the future. There is no evidence in the record in this case showing, or attempting to show, that the defendant ever sought the opportunity, or privilege of making any investigation of complainant's books, that had been offered it for the express purpose of guiding its legislative body in fixing, in the ordinance it then had under consideration

reasonable and fair rates, to be charged for gas in the city, nor is there one word of testimony in denial that such an opportunity was tendered it by complainant, nor is there any evidence that defendant had knowledge on this subject from any other source.

12.

The license granted by the defendant, The City of Peoria, on April 18th, 1899, contains no requirements as to the candle power of gas to be furnished by complainant. Neither is it practicable under the present method of conveying gas from the place of manufacture to the point of consumption, to maintain eighteen (18) candle illuminating power at all points of consumption, without the excessive use of enrichers in its manufacture. Where this is attempted by the producer, it results in discomfiture to the consumer, by smoking when ignited, and the giving off of unpleasant orors.

102 13.

The cost of the production of coal gas cannot be determined by any fixed standard. The cost of raw materials necessary to its production, are variable; necessary labor in the successful operation of complainant's plant, including its distributing system, and also its manufacturing plant have no fixed invariable scale, the market value of residuals obtained, is likewise an uncertain feature.

14.

The depreciation of a manufacturing coal gas plant, under the evidence in this case, may be conservatively found to be five (5%) per cent. per annum on the first cost. Some parts of the plant, particularly the retort ovens, depreciate very rapidly, they become burnt out and unfit for further service after two years. These retorts are a necessary part of a plant, under the present known methods of the manufacture of coal gas. They are expensive to install, and more expensive to replace.

15.

The depreciation to the distributing system of complainant's plant is largely due to natural conditions, found to exist in the soil where its mains and service connections are laid. These destructive agencies are found to a greater or less extent in the soils of all cities and vary according to the character of the soil. Complainant's mains are of cast-iron, its service pipes are of wrought iron with connections of lead, each varying in thickness in proportion to size. By reason of these soil conditions the lead pipes depreciate more rapidly than the cast-iron mains, or at the rate of about five (5%) per cent. per annum on the original cost, while the depreciation to the cast-iron mains does not exceed two (2%) per cent. per annum. Consumers' meters, which also form a part of complainant's distributing

system, are likewise subject to an average annual depreciation, due to various causes beyond complainant's control, which under the
103 evidence may be conservatively placed at nine (9%) per cent. per annum on the cost of the total number in use.

16.

Depreciation exists and continues in a coal gas plant, notwithstanding repairs that are necessary to be made, to maintain its working efficiency, and is an expense in the cost of the manufacture and distribution of gas, that is outside of, and in addition to repair expenses. These latter increase as the plant grows older, and at about the periods herein given, notwithstanding repairs, the several parts so far depreciate as to render them valueless and useless for further service.

17.

The first cost to complainant in the manufacture and distribution of coal gas in the city of Peoria, may be said to be covered by the following charges, viz:

Interest at the rate of five (5 %) per cent. per annum on the cost of its manufacturing plant and distributing system, which at the close of the taking of the testimony in this cause was, four hundred thirty-nine thousand seven hundred and twenty-five ($439,725) dollars. This sum represents its fair market value, and only the money then invested therein by complainant: also depreciation at the rate of five (5 %) per cent. per annum on the cost of the manufacturing plant, less the price paid for the real estate on which it is located; five (5 %) per cent. per annum depreciation on the cost of the service connections installed; nine (9 %) per cent. per annum depreciation on the cost of consumers' meters; five (5 %) per cent. per annum depreciation on the amount invested in tools, furniture and fixtures; two (2 %) per cent. per annum depreciation on the cost of distributing mains; also the cost of the material used; necessary labor; repairs to the system; leakage, or unaccounted for gas, as
104 shown by the difference of registration in the station meter register, and consumers' meters; uncollectible accounts, taxes and office expenses.

18.

From the cost as so ascertained should be deducted the value of residuals obtained from each ton of gas coal carbonized. These values are not determinable by any fixed scale, the demand of local markets, *i. e.* the place where produced, having such importance in the prices obtained therefor, and correspondingly as much in fixing the net cost of coal gas to the complainant. The most valuable of these residuals is coke, the demand for which in the city of Peoria, is much below the quantity here produced.

19.

Under present improved methods in the manufacture of coal gas, a ton of gas coal carbonized, yields about ten thousand (10,000) cubic feet of gas. This increase- production over the earlier methods employed, is by reason of the present use of regenerative furnaces for heating the retorts, and the use of oxide in place of lime in the purification process. The residuals produced per ton of coal carbonized, reduce the cost of gas to complainant, about thirty-three (33 %) per cent. The gas manufactured by complainant from Sept. 1st, 1900, up to Sept. 1st, 1901, as shown by the evidence, cost the complainant in the holder, per thousand cubic feet, seventy-seven and nine-tenths (77.9) cents after deducting from the cost of production the market value of all residuals obtained from the coal carbonized. This cost was upon the basis of an output of about fifty-one (51) million cubic feet per year, and does not include the cost of distribution.

In the latter part of October, 1901, complainant entered into a contract with the Peoria Gas Light & Coke Co. to supply it with gas for the use of its consumers and customers. This last named company then, and for many years prior had occupied sub-
105 stantially the same territory that complainant was then occupying with its distributing system, and had in addition about twenty miles or mains in the public highways that complainant did not then, nor does not now occupy. It had also in use about four thousand four hundred (4400) meters. This contract was terminated by the Peoria Gas Light & Coke Company on August 19th, 1902, but during the ten months' period it was in force complainant furnished and delivered into the holders of the Peoria Gas Light & Coke Company upwards of one hundred and four (104) million cubic feet of gas, at a charge to it of seventy-five (75) cents per thousand cubic feet. This gas was delivered by means of a pipe about three hundred (300) feet long laid upon the premises of the two companies, connecting the gas holders of the Peoria Gas Light & Coke Company with the station meter of the complainant, which registered the amount supplied. The difference in quantity between complainant's station meter and the amount as indicated by the consumers' meters, was paid for by the old company at the rate of fifty (50c.) cents per thousand cubic feet. It was delivered by the old company through its own distributing system to its own consumers and at its cost. The gas so furnished and the price charged by complainant therefor, is a question purely of business judgment between private parties, and such price cannot be accepted as conclusively establishing the cost to complainant of gas manufactured by it, where it must also bear the expenses incident to distribution, as is the case in supplying its own consumers throughout the city.

21.

The gas consumption in the city of Peoria is now about one hundred and sixty-five (165) million cubic feet per year, the use of which for illuminating and heating purposes is about equal. Of this total consumption, complainant is supplying about fifty-five (55) million cubic feet per annum to its consumers, through its twenty-six and one-half (26½) miles of mains, and about two thousand four hundred (2400) meters. The Peoria Gas Light & Coke Company supplying the remainder of total consumption. Complainant's manufacturing plant is capable of producing the total quantity of gas now used in the city; its distributing system is, however, much too limited to distribute that quantity of gas, and in order to do so it would require an expenditure of more than double the sum it now has invested in that branch of its system. If complainant's plant was supplying all the coal gas now consumed in the city, it would reduce the manufacturing cost to it, two (2) to three (3) cents per thousand cubic feet, but the cost incident to distribution, as between the present amount furnished by complainant, and the total amount consumed, would be relatively increased.

106

22.

The average consumption of gas per annum, per meter, in use in the city of Peoria, is about twenty (20) thousand cubic feet, which is about the average consumption in cities of like size and character of population. And it appears from the evidence that any material increase of gas consumption, will require of complainant an extension of its distributing mains, service connections and meters; the producing capacity of its manufacturing plant being amply sufficient to meet any reasonable expectations in that respect.

23.

The Peoria territory is rapidly increasing in population, and the quantity of gas required to meet the demands of such increase, together with the more general uses for which gas is now sold and required, justifies the policy adopted by complainant when it constructed its manufacturing plant, of so building as to be in a position, as a producer of gas, to meet such additional demands for its product, and it cannot be said that *it* expenditures for such purpose in the construction of its manufacturing plant, involve a useless and unnecessary investment of capital, which should not be considered in determining the present cost to it of producing coal gas.

107

24.

It is insisted by complainant that the unusual hazards which attach to the gas business, such as natural gas, acetylene gas, elec-

tricity, new and improved methods and appliances, unfriendly and ill-advised legislation, increased demand for gas in territory where mains exist, that requires the substitution of new and larger mains for those in use, changing of grades &c. in public highways, which require the lowering of gas mains therein, &c., should also be considered in determining the question of what would be a fair and reasonable rate to be charged for gas supplied for the use of the public. Complainant has voluntarily engaged in the exercise of its charter privileges, and in so doing it assumed all such hazards, and if any, or all of them are encountered by it in the conduct of its business of manufacturing and distributing gas in the city of Peoria, they are in no sense, proper elements to be considered in determining the reasonableness of the maximum rate fixed by the ordinance of September, 4th, 1900.

25.

It appears from the evidence that complainant company is capitalized at two million ($2,000,000) dollars, on no part of which have the holders of its stock ever received any dividends whatever, nor have any been declared by its managing board. The salaries of its officers do not seem to be extravagant, or in excess of the amount usually paid by others engaged in like business enterprises, the vice-president of the company being also its active business manager. Its working capital, comprised of its bills receivable, and cash on hand, is not in excess of the amount required to enable it to take advantage of favorable market prices in the material entering into the production of coal gas. It is not seeking in this case
108 the right to charge for gas a price that will enable it to pay dividends on its capital stock. Its claims are, that the maximum rate fixed by *by* the ordinance here in controversy, is so unreasonably low, as so prevent it from realizing in the manufacture and distribution of gas in the Peoria territory, income therefrom, sufficient to meet the unavoidable depreciation to its manufacturing plant and distributing system, the making from time to time of necessary repairs thereto, and a normal rate of interest on the amount of money now actually invested therein.

26.

At the close of the taking of the evidence in this cause complainant's manufacturing plant and distributing system were in a high state of working efficiency, as regards the economical manufacture and distribution of coal gas; the management of its affairs, skilful and prudent; yet notwithstanding these favoring conditions, it is conclusively shown by a decided weight of the evidence, that the income it would receive from the sale of gas as shown by consumers' meters in use, at the rate of seventy-five (75c.) cents per thousand cubic feet, together with the market value of all residuals produced per ton of coal carbonized, will not yield an income sufficient to

meet the amount of annual depreciation to its plant, the expenses incident to making of necessary repairs thereto, and a normal interest charge on the amount of money invested in such plant.

27.

The ultimate facts disclosed by the evidence, briefly stated, are:

1. Complainant corporation is orgaaized under the general incorporation laws of the State of Illinois, having charter powers to engage in the manufacture and distribution of gas for light,
109 heat and power purposes.

2. It is in lawful occupancy of the public highways in the city of Peoria for the purpose of distributing gas, under the license granted it by the defendant, April 18th, 1899.

3. Complainant's plant is modern, and well adapted for the economical manufacture and distribution of coal gas.

4. The fair market value of complainant's plant at the close of the taking of the evidence, was four hundred and fifty (450) thousand dollars, exclusive of any value its license from the city of Peoria may have.

5. There was no unnecessary expenditure of money in the construction of its plant.

6. It is economically operated.

7. The material and necessary labor required for its operation, are procured at the lowest cash market prices.

8. A normal rate of interest on the capital invested, and depreciation to its manufacturing plant and distributing system are proper charges to be taken into consideration in determining the cost of the manufacture and distribution of gas.

9. Repairs required to maintain the working efficiency of a gas plant, are an additional expense to be considered in arriving at the cost of gas at the place of consumption.

110 10. The defendant, The City of Peoria, on September 4th, 1900, passed an ordinance limiting the maximum price to be charged consumers of gas therein, to the sum of seventy-five (75c.) cents per thousand cubic feet, and required all "gas so furnished to afford a light of not less than eighteen (18) candle power, to be measured and ascertained at the place of consumption."

11. Defendant adopted the above ordinance in good faith, believing the statements and representations previously made, justified the maximum price as therein fixed.

11. It did not avail itself of the opportunity it then had of knowing the reasonableness of the maximum rate fixed by the ordinance in controversy in this cause, or of the cost to complainant of manufacturing and distributing gas.

13. Complainant's license ordinance contains no limitations as to the price at which it shall furnish gas to consumers, nor is there, so far as the record discloses, any ordinance, or contract between complainant and defendant which contains any such regulations.

14. Under the present known methods, the cost to complainant of manufacturing and distributing coal gas in the Peoria territory is in excess of the sum of seventy-five (75c.) cents per thousand cubic feet, the maximum rate fixed by the ordinance adopted by defendant, which said ordinance is now claimed by defendant to be a valid law of the city of Peoria.

111 *Conclusions of Law.*

1.

The court has jurisdiction of this cause, under the allegations of the bill of complainant herein, and the evidence in the case, as involving a Federal question, irrespective of the citizenship of the parties.

2.

In this case the following Federal question is presented:—Does the ordinance adopted by the defendant on September 4th, 1900, in and by which the maximum price to be charged for gas in the city of Peoria, is fixed, violate the provisions of the Constitution of the United States, wherein it provides, that no person shall be deprived of his property without due process of law, and further, that private property shall not be taken for public use without just compensation.

3.

It is an established principle that any law which deprives a person of the right of any substantial benefit in connection with its use, or if in such use, by reason of the operation of such a law, he is not only prevented from receiving a normal interest return upon his investment, but is required to suffer loss in its use, he is in the eyes of the law, deprived of his property, and the fact that it is employed for the public convenience, and whether the person be artificial or real, in no manner affects the application of the rule.

4.

The City of Peoria (defendant) has the right under the laws of the State of Illinois, to pass ordinances regulating the maximum price to be charged for gas furnished by complainant to its citizens, subject, however, to the well established principle, that such
112 ordinances must be reasonable.

5.

The city of Peoria, on the 4th day of September, A. D. 1900, passed an ordinance fixing the maximum rate to be charged for gas furnished by complainant to its citizens, at seventy-five (75c.) cents

per thousand cubic feet, at the place of consumption. To charge a rate in excess of such maximum price, is made punishable by a fine of not less than twenty-five ($25) dollars, nor more than two hundred ($200) dollars for each offense.

6.

The fact being established that complainant cannot manufacture and distribute gas to the citizens of Peoria, at the maximum rate fixed by the ordinance, it then follows that:—

a. The ordinance is void, because by it the city has gone beyond the powers conferred by the laws of the State of Illinois, which confer upon it the power to regulate the price to be charged for gas. It constitutes the exercise of a lawful right in an unreasonable manner: and

b. The enforcement of the ordinance requiring complainant to furnish gas to the citizens of Peoria, at the point of consumption at the maximum price therein fixed, would constitute the taking of private proprety for public use, without just compensation, and in that respect, is in violation of the provisions of the Constitution of the United States.

7.

A court of equity is the proper forum in which to test validity of the ordinance, and is the only one capable of affording complainant relief against the injury following the enforcement of its
113 unjust provisions.

8.

Complainant is a corporation, its existence, its rights and powers, are derived alone from the State of Illinois. Under the State constitution there is reserved to the State the right to prescribe such regulations in the government of corporations, as it may deem advisable.

9.

The State has conferred upon defendant the right, within its corporate boundaries, to lay out streets, to regulate the use of the same, and to grant complainant the right to occupy the same for the purpose of laying its mains and connecting service pipes for the distribution of gas, subject however, to *such regulations*, as it might *by ordinance impose*.

10.

When complainant engaged in the business of manufacturing and distributing gas in the city of Peoria, and under the license granted by defendant on April 18th, 1899, entered upon the public highways for the purpose of distributing gas, it did so with the knowledge that the city had the right to regulate by ordinance, not only the place

and manner it should use its streets, but also to prescribe reasonable prices to be charged its citizens for gas it distributed for their use. The fact that no regulations as to price, were prescribed in complainant's license ordinance, does not preclude defendant from exercising this right after its acceptance by complainant.

114 11.

On this character of public service corporations, the State has not yet attempted to place any limitations as to the price it may charge for the service it may render, it has delegated that privilege to the legislative branch of cities and villages in this State, to which gas companies apply, for the purpose of engaging in the manufacture and distribution of gas.

12.

The fact, (as found) that the defendant has exercised this delegated power unreasonably, and by ordinance has imposed such regulations upon complainant, in the further pursuit of its business affairs, as to compel it either to abandon its business of manufacturing and distributing gas in the city, or to suffer financial loss and injury in continuing it, tends only to establish the invalidity of this ordinance, and the further conclusion that, by its provisions, the agent of the State, (in this case the defendant) has gone beyond the powers conferred upon it by the State, and when it did so, as it has in this instance, and is assuming to act under such ordinance, void though it be, the fact that it is void, will not oust the courts of jurisdiction to restrain the defendant from enforcing its provisions against complainant, nor is the Federal courts thereby deprived of jurisdiction to grant complainant such relief.

13.

A city ordinance, *of* whatever its character may be, is regarded as a law of the State, and the right of the city council, under authority delegated by the State, to regulate by ordinance the maximum price to be charged for gas furnished its citizens, is subject to
115 the same limitations and restrictions imposed upon the legislature, that is, such right must be exercised in a reasonable manner.

14.

Under the pleadings in this case the burden is on the complainant to prove that the maximum rate fixed by the ordinance in question, is an unreasonably low rate, and that the enforcement of its provisions in that respect would be to its injury.

15.

The question of the reasonableness of an ordinance limiting the price to be charged the public, by any person, company or corpora-

tion, engaging in a business impressed with a public interest, and as to whether such limitations are reasonable, or unreasonable, as between the public and a public service corporation, such as complainant, are for judicial not legislative determination,—and this is the law even though such price be fixed directly by the legislature of the State, or by regulations imposed by those whom it has invested with such authority.

16.

The question of the reasonableness of the maximum rate fixed by the ordinance adopted by the city council of the city of Peoria, on September 4th, 1900, is one of fact to be determined by the evidence in this case.

17.

The test of the reasonableness of this ordinance is,—does
116 the rate as therein limited, operate fairly in respect of the rights of the complainant and the public? If it be found to be unjust and unfair, as respects the rights of either, then the law regards it as unreasonable, and relief may be obtained, when such fact is established, either by the complainant, or the public it serves, and the courts of equity are clothed with ample power to afford relief to the one whose rights would be injured through its enforcement.

18.

The evidence in this record shows that the maximum rate fixed by the above ordinance, is so unreasonably low, as to require complainant to furnish gas to the citizens of Peoria, at a price below the cost of manufacturing and distributing it. The enforcement of it would constitute a taking of its property for public use without just compensation; this is prohibited by the fourteenth (14th) amendment to the Federal Constitution.

19.

In the absence of any ordinance regulations, or restrictions, complainant being engaged in a business impressed with a public interest it is its duty under the law to charge the citizens of Peoria, no more than fair and reasonable prices for gas it manufactures and distributes to supply their demand; but this does not give defendant the right, under the pretense of regulating such price by ordinance, to fix the price so low, as to work a confiscation of complainant's property, necessarily employed in such public service.

20.

The threatened enforcement of this ordinance against complainant, by prosecution under its penal provisions, and the multiplicity of suits that would necessarily follow, and the injury complainant

would suffer in either defending against such prosecutions, or complying with the provisions of the ordinance,—there can be no
117 doubt of the power of a court of equity to grant it relief.

21.

In granting relief against the enforcement of the provisions of an unreasonable ordinance, a power which courts of equity undoubtedly possess, the court will not assume to fix rates. This province belongs to the legislative branch of government, to be exercised by the State, or by those under it to whom it has delegated such authority. The judicial branch of government has, however, the power to determine the reasonableness of such rates, when called in question by those effected thereby, whether the same be fixed by the legislature of the State, or the city council of cities to whom such authority may be delegated.

22.

The defendant having the right under the law of the State of Illinois, to pass ordinances regulating in a reasonable manner, the prices to be charged its citizens for gas furnished them by complainant has equally the right to prescribe penalties to compel observance of such regulations; and if the ordinance here in controversy, was not, for the reasons before given, void, the penalties as therein prescribed would not impair its validity.

23.

Under the facts as found, the estoppel set up by the defendant cannot be sustained. If the rate fixed by the ordinance of September 4th, 1900, had been prescribed in the original license to complainant, a question much more difficult to a correct decision in that regard, would be presented.

118 24.

The uniform doctrine of estoppel *in pais*, has been so frequently announced by the Federal and State courts, that it may be now said to be definitely settled. The one particularly applicable in this case is, that the defendant at the time it had under consideration the ordinance fixing the maximum rate to be charged for gas, was not only without knowledge, as to whether the rate fixed was a fair, just, and reasonable one, but it also had no convenient, or ready means of acquiring such knowledge.

25.

The conclusions of the special master are, that the ordinance in controversy in this case is unreasonable in respect to the price as therein fixed; that the enforcement of its provisions against com-

plainant. would constitute the taking of the property of complainant without due process of law, and in the taking of private property for public use without just compensation; that the ordinance being void, because it is unreasonable, the enforcement of it against complainant should be restrained by the court, and to that end, an injunction should be allowed, perpetually enjoining the defendant, its officers and agents from enforcing, or attempting to enforce, the provisions thereof against complainant, as prayed in and by its bill herein.

Peoria, Ill., May 2nd, 1903.

ISRAEL C. PINKNEY,
Special Master in Chancery in said Cause.

Endorse-: "Filed June 3, 1903. Marshall E. Sampsell, clerk."

119 And afterwards on to-wit the eighth day of June, A. D. 1903, there was filed in the office of the clerk of said court in said cause, a motion to fix compensation of master, which said motion is in the words and figures following, to-wit:

120 In the Circuit Court of the United States, Northern District of Illinois, Southern Division.

PEORIA GAS & ELECTRIC COMPANY, Complainant,
vs.
CITY OF PEORIA, Defendant.
} In Chancery.

Comes now the undersigned special master in said above entitled cause under order of court made and entered herein, on to-wit the 20th day of May, 1901, and moves the court that his compensation as said special master herein, for making his report of his conclusions of fact and law, as by said order of reference is required, be fixed and determined by this honorable court.

ISRAEL C. PINKNEY,
Special Master in said Above Entitled Cause.

Endorsed: "Filed June 8, 1903. Marshall E. Sampsell, clerk."

121 And afterwards, to-wit on the eighth day of June, A. D. 1903, the same being one of the regular days of the regular April A. D. 1903 term of said court, among others, further proceedings were had in said cause and entered of record in the words and figures following, to-wit:—

122 In the Circuit Court of the United States, Northern District of Illinois, Southern Division.

MONDAY, *June 8th, A. D.* 1903.

By direction of Hon. J. Otis Humphrey, district judge presiding by assignment.

PEORIA GAS AND ELECTRIC COMPANY
vs.
CITY OF PEORIA. } 288.

Now on this day this cause coming on to be further heard upon the motion of the special master herein to the court to determine and fix the compensation of such special master for making his report herein, as by said order of reference he is required, and the court having examined said report, of said special master, and the witnesses produced, touching the question of the compensation to be allowed to such special master in that behalf, and being now fully advised in the premises, doth hereby fix and order that such special master be allowed for said services the sum of one thousand dollars. The said sum so allowed is hereby ordered to be paid in equal proportions by the parties to said above entitled cause to the said special master, within thirty days from this date.

It is further ordered that the amount so directed to be paid to the said special master by the respective parties to this cause abide the final order and judgment of the court in relation to the costs to be taxed herein.

123 And afterwards, to-wit on the first day of July A. D. 1903, the same being one of the regular days of the regular April A. D. 1903 term of said court, among others, further proceedings were had in said cause and entered of record in the words and figures following, to-wit:—

124 Circuit Court of the United States, Northern District of Illinois, Southern Division.

WEDNESDAY, *July 1st, A. D.* 1903.

By direction of Hon. J. Otis Humphrey, judge by assignment.

PEORIA GAS AND ELECTRIC COMPANY
vs.
CITY OF PEORIA. } 288.

Upon motion of the defendant it is ordered by the court that the time to file exceptions to the report of the special master herein, be and the same is hereby extended five days.

125 And afterwards on to-wit the first day of July, A. D. 1903, there was filed in the office of the clerk of said court in said cause, exceptions of complainant to master's report, which said exceptions are in the words and figures following, to-wit:

126 In the Circuit Court of the United States, Northern District of Illinois, Southern Division.

PEORIA GAS AND ELECTRIC COMPANY
vs.
CITY OF PEORIA.
} In Chancery. For Injunction, etc.

Exceptions by Complainant to Master's Report.

Now comes The Peoria Gas and Electric Company, the complainant herein, and excepts to the findings of fact and conclusions of law as set forth in the report filed herein of the special master in chancery to whom this cause was referred to take proofs, in the following particulars, to-wit:

First.

Said master erred in his failure and refusal to hold in paragraph 10 of the findings of fact that whatever representations were made by the stockholders, prior to the granting of the franchise ordinance of April 18th, 1899, were merged in the ordinance contract, and that said ordinance having fixed no limitation on the price to be charged for gas, constituted a contract between the city and complainant that the latter would furnish gas at a reasonable price, and that the ordinance of September 4th, 1900, must be measured by the contract of April 18th 1899, to furnish gas at a reasonable prices; and that in connection with said ordinance of September 4th, 1900, there is no presumption that the price therein fixed was reasonable, in view of the fact that the city council did not then have knowledge of the necessary facts relating to the cost of the manufacture and distribution of gas.

127 Second.

Said master erred in his failure and refusal to hold that the allowance for depreciation of the manufacturing coal gas plant to be taken into consideration in determining the cost of gas, under the evidence in this case, should be at least six per cent. (6%) per annum on the total cost of said plant, exclusive of real estate; that such allowance for depreciation should have been found and held by the master as proper, under the evidence of the following witnesses:

F. W. Little, (Record p. 24, Abst. p. 36) testified as follows:—"Taking into consideration the destructive agencies concerning which I have testified, the annual depreciation of the gas plant of the char-

acter and location of the complainant plant would be about six and half per cent. (6½ %), and in my opinion the annual depreciation of the complainant plant in the city of Peoria is about six and a half per cent. (6½ %) of the cost of the propery."

E. G. Pratt, (Rec. p. 350, Abst. p. 196) testified as follows:—"I have made a great deal of investigation and study of the question of depreciation, and I believe that seven per cent. (7 %) on the cost of the manufacturing plant, mains, services, meters (everything excepting real estate) is a proper percentage to be charged off annually on a gas plant like that of complainant company."

H. W. Brown, (Rec. p. 431, Abst. p. 220–221) testified as follows:—"From my experience I am of the opinion that the average annual depreciation of a gas plant, taken as a whole, is from 6 to seven per cent. (6 to 7 %) upon the entire cost of the plant, counting in the cost of everything, from the coal pile to the cash box, but not including real estate."

David Douglas, (Rec. p. 472, Abst. p. 241) testified as follows:—"I am of the opinion that six per cent. (6 %) per annum would be a fair estimate of the amount of money that would be required to set aside from year to year to cover depreciation, said percentage to be estimated upon the entire cost of the plant, leaving out real estate and brick tanks."

128 K. N. Mitchell, (Rec. p. 512, Abst. p. 258) testified as follows:—"This depreciation should be taken into account and covered by a certain sum set aside annually; that sum should be six per cent. (6 %) upon the entire cost of the gas plant, such as the plant of the complainant company. This amount should be computed annual-y upon the total cost of the plant, exclusive of real estate."

I. N. Knapp, (Rec. p. 567, Abst. p. 281) testified as follows:—"The sinking fund which I testified should be laid aside to cover depreciation and renewal is certainly a proper element to be taken into consideration in determining the cost at which gas can be furnished to consumers. I think such sinking fund should not be less than six per cent. (6 %) per annum of the entire cost of the plant, exclusive of real estate."

Third.

Said master erred in his failure and refusal to hold that as a part of the first cost to complainant in the manufacture and distribution of coal gas in the city of Peoria, should be included interest at the rate of ten per cent. (10 %) per annum on the cost (the same not being in excess of its present market value) of the manufacturing plant and distributing system, in view of the hazards of the business, as testified by various witnesses, as follows:—

F. W. Little testified (Rec. p. 24, Abst. p. 36) as follows:—"Taking into consideration the hazards of the business on account of new improvements and competition, concerning which I have testified, in my opinion ten per cent. (10 %) per annum on the cost of the prop-

erty would be a fair return to investors in a gas business enterprise; I mean ten per cent. (10 %) of the construction value of the property, whatever it may be at any time."

E. G. Cowdery testified (Rec. p. 268, Abst. p. 141) as follows:—"From my experience and observation in the management and investigation of gas plants, I think investors in gas properties
129 are entitled to ten per cent. (10 %) on their money invested, taking into consideration hazards of the business aside from depreciation."

J. H. Eustis testified (Rec. p. 305, Abst. p. 165) as follows:—"In my judgment, ten per cent. (10%) annually would be a fair return on the investment in such properties. Ten per cent. (10%) would be a fair return on the total investment in the gas property."

Edward G. Pratt testified (Rec. p. 352, Abst. p. 196) as follows:—"Apart from the question of depreciation, and taking into consideration the hazards of the business from an investor's standpoint, I believe that the gas business should pay from ten to twelve per cent. (10 to 12%) per annum as interest or dividend upon the entire investment, as a reasonable and fair return to investors in such properties."

Harvey W. Brown testified (Rec. p. 435, Abst. p. 224) as follows:—"Referring to what would be a fair and reasonable return to investors upon the cost of a gas plant, taking into consideration the hazards of the investment from an investor's standpoint, I would say that I do not know of any manufacturing business that would be willing to work on a less basis than ten per cent. (10%) I should not want to own any gas property that would not return me at least ten per cent. (10%)."

A. P. Lathrop testified (Rec. p. 502, Abst. p. 225) as follows:—"In my opinion a gas company should be entitled to as large an earning power as any other manufacturing business, and I doubt if anybody would want to engage in any manufacturing business that pays less than ten per cent. (10%). I should say that at least ten per cent. (10%) ought to be expected from a gas property as a return on the investment. This is entirely separate from depreciation account and should be earned after proper deduction for depreciation."

K. N. Mitchell testified (Rec. p. 514, Abst. p. 259):—"I am of the opinion that ten per cent. (10%) per annum would be a fair and reasonable return to investors upon the cost of the plant, taking into consideration the hazards of the business."

130 Leonard Kellogg testified (Rec. p. 537, Abst. p. 267) as follows:—"Among the hazards of the gas business are explosions, person injury, competition by other plants and other systems of lighting, such as electricity, new inventions that make old apparatus worthless, political agitation influencing State and city legislation, etc. These hazards are distinct and separate and apart from depreciation. In my opinion ten per cent. (10%) is a fair and reasonable return upon the cost of a gas plant from the standpoint of an investor, taking into consideration the hazards of the business.

This is in addition to the five per cent. (5%) charged off annually for depreciation."

I. N. Knapp testified (Rec. p. 568, Abst. p. 282) as follows:—"I am of the opinion that not less than ten per cent. (10%) on the total investment, including the real estate, should be derived from a gas plant as a reasonable and fair return to investors."

H. L. Doherty testified (Rec. p. 621, Abst. p. 302) as follows:—"I certainly would not want to put my money into any kind of a quasi-public corporation unless I thought I would make twelve per cent. (12%) on it, if at the same time I could get five or six per cent. (5 or 6%) on mortgages. * * * I would assume that the hazards which any investor must expect on putting his money into a quasi-public corporation are such that he should have at least a double return on his money as compared with a loan on real estate, and in this estimate I exclude the five per cent. (5%) for depreciation."

Fourth.

Said master erred in findings as follows:

"Complainant's manufacturing plant is capable of producing the total quantity of gas now used in the city," and in his failure to find that complainant's manufacturing plant in its present condition is not sufficiently large to enable it definitely, or for any considerable period of time, to manufacture all the gas used in the city of Peoria at the present time.

131 Mr. F. W. Little testified (Rec. p. 2041–2, Abst. p. 840–841) as follows:—"The plant of the Peoria Gas and Electric Company in its present condition is not large enough to make that quantity (the amount it had been making for the previous ten months) of gas indefinitely. It would not be feasible to continue to manufacture that volume of gas in that plant, for the reason that the working capacity of the retort house is about 600,000 cubic feet a day, the maximum being 636,000 feet a day when all the benches are in good condition. Under the contract referred to, last winter, we were compelled to make 680,000 feet per day and it strained the plant; the condensing plant was also forced beyond its capacity, as it was designed, as shown in my testimony, originally as a 500,000 foot plant, and the gas could only be made and furnished while the plant was new and before it became necessary to let down any of the benches for refilling or maintaining extensive repairs. It would require at least three additional benches of nine retorts each, with a house to cover them; an additional air condenser; an additional P. & A. tar extractor; one Chollar washer; two more scrubbers and probably one more purifier. This apparatus would cost, including the foundations, with the necessary building for housing the retorts, somewhere from $40,000.00 to $50,000.00 to enable our plant to furnish continuously the volume of gas manufactured by it during the ten months' period of the contract with the Peoria Gas Light and Coke Company.

Fifth.

Said master erred in his findings that "Complainant has voluntarily engaged in the exercise of its charter privileges, and in so doing it assumed all such hazards, and if any or all of them are encountered by it in the conduct of its business of manufacturing and distributing gas in the city of Peoria, they are in no sense proper elements to be considered in determining the reasonableness of the maximum rate fixed by the ordinance of September 4th, 1900;"

131½ and in his failure and refusal to find that on account of such hazards it should be allowed a larger rate of interest on its investment than prevails in those lines of business where such hazards do not exist, and that such hazards are to be considered in determining the rate of interest to be allowed as a part of the proper cost of gas in determining the reasonableness of the maximum rate fixed by the ordinance of September 4th, 1900.

F. W. Little (Rec. p. 25, Abst. p. 36) enumerated as hazards, natural gas, the by-product oven process, and further on (Rec. p. 769 to 771, Abst. p. 117–118), testified as follows:—"The hazards of the gas business is greatly increased by the action, often ill-advised and hastily considered, of legislatures and city councils. The business is subject to the imposition of restrictive conditions, which, in my opinion, are not often in the interests of the gas company or the public. In this connection I will refer to an ordinance which was vetoed not long since by the mayor of the city of Peoria, which ordinance permitted the gas company to lay mains and supply customers in the southwestern portion of the city, and which, had it become a law, would have added to the consumption of gas, and increased the gross earnings of the company. The ordinance at issue in this suit is another illustration in point, not only with reference to the price, but with reference to the provisions relating to the furnishing of gas at a uniform 18 candle power at the point of consumption.

"Since the ordinance authorizing the complainant company to do business in Peoria, was passed, a like ordinance and license was granted to one Charles V. Newman; the effect of such ordinances is to arouse discontent in the minds of consumers and to create an impression that by waiting possibly lower prices can be obtained, thus retarding the development of the business.

"Other hazards are changes of grades, improved changes in methods of lighting, the invention of burners better adapted for the use of coal oil, and more economical lamps and apparatus for electricity."

132 (The Newman ordinance above referred to is "Exhibit 14" attached at the end of the third volume of evidence.)

E. G. Cowdery testified (Rec. p. 268, Abst. p. 141) as follows:—"The general hazards to gas business are the conditions that exist, so far as competition may effect the business, the constantly new and improved things that are arising in connection with the busi-

ness, which may, at any time, amount to a considerable cost and loss to the company; the instability of the business generally, on account of the interference by legislative bodies, etc. Electric light is also a competitor and is a constant hazard; and natural gas very greatly enters into it in districts where natural gas exists or is likely to be found."

J. H. Eustis testified (Rec. p. 305–306, Abst. p. 165) as follows:—"Aside from general depreciation, there are hazards in the gas business. In the first place, electricity enters into competition, which gas companies have to meet very largely. There are other matters that I might add which enter into its hazards and that is the fact that there is continually going on improvements in the machinery and apparatus for the manufacture of gas. What I mean by improvements is that they must necessarily affect the economical production of gas, and companies equipped with old style apparatus, in order to meet this competition, must necessarily adopt the new machinery, which of course, involves large expense and a waste of money invested in other apparatus."

E. G. Pratt testified (Rec. p. 351, Abst. p. 196) as follows:—"Referring to the hazards of the gas company from the standpoint of an investor, I would say that gas is a dangerous substance, and in its use there are many opportunities for destructive results, by reason of leakage, causing asphyxiation or explosions, not only in the premises of consumers but in and about the manufacturing plant of the company, it being impracticable always to employ men around the works of the highest ability and judgment. Then there is the question of competition with electricity, kerosene, isolated plants in the shape of gasoline generators, acetylene, then the danger from electrolysis, and then the danger which to my mind is more
133 important than any other to-wit, the fact that all corporations are subject to the whims of legislative bodies in States and cities where they are doing business."

H. W. Brown testified (Rec. p. 433, Abst. p. 222) as follows:—"Referring to the hazards of the business from the standpoint of an investor, as distinguished from depreciation, one is an indiscreet city council granting an opposition franchise, and it is a very great hazard too. For illustration take Peoria. There was an old gas company in operation there when complainant company obtained its license. It practically duplicated the plant of the old company, and divided its business. The hazard of such a course to the old company is apparent and such hazard is encountered by every gas company. Moreover, if a merchant goes into business and meets with ruinous competition, he may take his good- to another town and his goods are valuable and he loses nothing but the expense of removal. You cannot take up a gas company however, and move to another town; you either live or die there, and you are ruined either absolutely, totally or partially, as the case may be."

And on Record p. 434, Abst. p. 223, this witness mentions com-

peting lights, kerosene, acetylene, electricity, natural gas, the possibility of explosions, etc., as continuing hazards.

David Douglas, after describing the elements tending to depreciation, testified (Rec. p. 475, Abst. p. 243) as follows:—"Among the hazards of the business I may mention the competition of electric light, the introduction of acetylene gas, the improved electric lamps devised or which may be devised; the natural gas found in certain sections of the country, and competition from other forms of lighting or from other franchises which may be given to other companies, where the gas company has not an exclusive franchise."

A. P. Lathrop testified (Rec. p. 501, Abst. p. 254) as follows:—"Among the hazards of the gas business may be mentioned competition from any other gas company, competition from electricity or gasoline, or any new form of lighting or improvements in kero-
134 sene lighting lamps, etc. Moreover, the business of a gas company is local and confined to one market, which may have its special hazards. In case of disasterous competition, it cannot go to another market and take its goods with it, and in case of disaster its property has only junk value. The fact that a gas company is local makes it peculiarly subservient to local authorities, which to-day constitute a serious menace."

K. N. Mitchell testified (Rec. p. 515, Abst. p. 259):—"Among the hazards of the gas business are explosions, competition from natural gas, legislative agitation by city councils and county courts, competition from electricity, coal oil and new inventions."

Leonard Kellogg testified (Rec. p. 537 Abst. p. 267):—"Among the hazards of the gas business are explosions, personal injury, competition by other plants and other systems of lighting, such as electricity, new inventions that make old apparatus worthless, political agitation influencing State and city legislation, etc. These hazards are distinct and separate and apart from depreciation."

I. N. Knapp testified (Rec. p. 567–8, Abst. p. 281) as follows:—"Among the hazards of the business I may mention a man letting the heat run too high and melting down part of the benches, the danger of losing your seal and allowing the gas to escape in the works, causing an explosion; when you come to the holder, there is an element of danger from tornadoes; there is electrolysis, which is a double hazard, in that it often produces leakage, which may lead to explosion or asphyxiation in houses; then there is the change of grade in streets, damage caused by sewer extensions, personal injury suits, newspaper and political agitation, new inventions, the competition of electric light, oil, with improved methods of burning the same, natural gas hazards, etc.; also the granting of franchises to competing gas companies, and the fact that you cannot remove your investment from one city to another, all of which elements must be taken into consideration when comparing this investment with other forms of investment."

135 H. L. Doherty testified (Rec. pp. 595–597, Abst. pp. 294–5) as follows:—"The most serious hazard to a gas company is

municipal and legislative attack upon all plants of quasi-public corporations; the second hazard is the antiquation of the property by some form of competition. The use of acetylene gas threatens serious competition; the recent development of the incandescent oil burners is even more serious. Natural gas has entirely displaced the use of artificial gas in some localities and rendered the entire investment of an artificial gas plant worthless except for junk. Explosions and accidents generally cost a lot of money, and the gas company must be prepared to take care of them. Accidents are not at all infrequent."

Donald McDonald (Rec. p. 643, Abst. p. 312) testified as follows:—"One of the serious hazards of the gas business is the likelihood of explosions and asphyxiation. A large portion of the investment may be wiped out by explosion. A change in the methods of manufacturing gas is another hazard which may make a whole plant useless. Constant discovery of new methods of lighting and heating may make your product unsalable, even though your plant be still in good order. Natural gas is always a serious hazard, and I may also mention the granting of franchises to other companies, giving rise to severe competition and the destruction of profits, even if the company itself survives."

Sixth.

Said master erred in finding in his report that "It appears from the evidence that complainant company is capitalized at $2,000,000.00," said finding being unnecessary and not involved in the case, as no claim is made by complainant for dividends on the stock or a return upon the capital of complainant outside of a fair rate of interest on the amount actually invested in the gas property.

This appears from "Exhibit 2"—Statement of the cost of complainant's plant at the beginning of the suit, which appears at the foot of volume 1 of complainant's testimony; also "Exhibit
136 48" (Rec. p. 2095) showing the cost of the plant at the time of closing the evidence in the case.

If it be necessary to make any finding in regard to the capitalization of the company, then the master erred in his failure and refusal to find that said capital also covered a large and extensive electric lighting plant and system for the public and private lighting of the city of Peoria, and also an extensive steam heating plant for the heating of public and private buildings in said city of Peoria in addition to the amount invested in the gas plant of the complainant company, the evidence on that point being as follows:—

F. W. Little testified (Rec. p. 193, Abst. p. 84):—"The complainant company has a large electrical plant situated in another block, some distance from the gas plant. It is in nowise connected with the gas plant. It is operated as an entirely different business from the gas business, merging only in the office of the company."

Also (Rec. p. 212, Abst. p. 91):—"The company owns the real

estate where the electric light plant is located at the foot of Liberty street."

(Rec. p. 218:)—"The complainant company purchased the electric light plant about the month of February 1901."

Also, when called as witness for the defendant, Mr. Little testified (Rec. p. 1628, Abst. p. 676):—"I participated in increasing the capital stock of the complainant company. I know the reasons for increasing the stock. It was primarily for obtaining the electric light plant. We acquired the electric light plant in February 1901. The Peoria Gas and Electric Company bought the property of the Peoria General Electric Company. The purchase was made by the company and was authorized by the stockholders of the Peoria Gas and Electric Company. The complainant company prior thereto had been in the electric business in a small way."

Seventh.

Said master erred in his failure and refusal to find that a proper rate of interest on the capital invested, taking into consideration the hazards of the business, is a proper charge to be taken into
137 consideration in determining the cost of the manufacture and distribution of gas, for the reasons and under the evidence more specifically set forth under the third and fifth exceptions above.

Eighth.

Said master erred in his finding that "defendant adopted the above ordinance in good faith, believing the statements and representations previously made justified the maximum price as therein fixed," said finding being unsupported by any evidence in the case.

Ninth.

Said master erred in admitting and considering in his findings of fact in his said report, incompetent, irrelevant and immaterial evidence offered on the part of defendant against the objection of this complainant, and this complainant says that the findings of the master in the particular matters above mentioned, and in each and every one of them, are contrary to the greater weight of the evidence in this case, in all of which particulars aforesaid the complainant objects and excepts to the said report of the said special master and submits that the same ought to be varied and altered accordingly.

Conclusions of Law.

Complainant objects and excepts to the conclusions of law found and reported by said special master in the following respects, to-wit:—

138

First.

Said master erred in his conclusions of law as the same are recited and set forth in paragraph 4 of his said report, because complainant says that under the pleadings and evidence in this case the decision of the point involved in said paragraph 4 was not necessary nor material to a decision in the case; nor in the said finding of the master in conformity with the law, inasmuch as no power has been delegated by the legislature to municipalities to fix the price at which gas may be sold.

Second.

Said master erred in his conclusions of law, as the same are recited and set forth in paragraph 11 of his said report, because complainant says that under the pleadings and evidence in this case that question is not involved, and the ruling therein is unnecessary to a proper decision of the issues in this case; nor is the said finding of the master in conformity with the law, inasmuch as no power has been delegated by the legislature to municipalities to fix the price at which gas may be sold.

Third.

Said master erred in his conclusions of law, as the same are recited and set forth in paragraph 19 of his said report, because complainant says that there is a further limitation upon the right of the defendant to pass an ordinance fixing the maximum rate for gas which is, that the rate established shall not be so low as to require the company to suffer financial loss in the use of its property or to deprive it of the right of any substantial benefit in connection therewith.

Fourth.

Said master erred in his conclusions of law, as the same are recited and set forth in paragraph 22 of his report, because complain-
ant says that under the pleadings and evidence in this case
139 that question was not at issue and is unnecessary to a decision of the case; nor is the said finding of the master in conformity with the law, inasmuch as no power has been delegated by the legislature to municipalities to fix the price at which gas may be sold.

Fifth.

Said master erred in his conclusions of law, in all places set forth and recited in his report wherein he finds that the city of Peoria has the right under the laws of the State of Illinois to pass ordinances fixing the maximum price to be charged for gas furnished by complainant to its citizens, because complainant says that such finding

is on an issue not involved in this case nor raised by the pleadings. The bill alleged that said ordinance was void—

1st. Because the price fixed therein was fixed arbitrarily, without any investigation or inquiry.

2nd. That the rate fixed was unreasonably low, and that its enforcement would have the effect to deprive complainant of its property without due process of law; to take private property for public use without compensation, and to deny it the equal protection of the law, contrary to the provisions of the Federal Constitution; that said ordinance was further unreasonable and invalid in that it imposed obligations upon the complainant in reference to the candle power of gas with which it was not practical or feasible to comply.

3rd. That said ordinance was invalid as impairing the rights of the contract between the company and the city of Peoria.

4th. That the city, notwithstanding the fact that the ordinance lacked all requisites of validity, was proposing to enforce the same, and unless restrained by injunction would enforce it, and bring irreparable injury and loss to complainant.

140 Wherefore, the above named complainant also objects to the conclusions of law as reported and found by said special master, and submits that the same ought to be varied and altered accordingly.

Respectfully submitted,

W. T. IRWIN,
E. C. RITSHER,
W. T. ABBOTT,
Solicitors for Complainant.

Endorsed: "Filed July 1, 1903. Marshall E. Sampsell, clerk."

141 And afterwards, to-wit on the sixth day of July A. D. 1903, the same being one of the regular days of the regular April A. D. 1903 term of said court, among others, further proceedings were had in said cause and entered of record in the words and figures following, to-wit:—

142 Circuit Court of the United States, Northern District of Illinois, Southern Division.

MONDAY, *July 6th, A. D.* 1903.

By direction of Hon. J. Otis Humphrey, judge, presiding by assignment.

PEORIA GAS AND ELECTRIC COMPANY
vs. } 288.
CITY OF PEORIA.

Upon motion of the defendant it is ordered by the court that the time to file exceptions to the report of the special master herein, be

and the same is hereby extended to the first day of August A. D. 1903.

It is further ordered by the court that the hearing of exceptions to the report of the special master herein be set for September first A. D. 1903.

143 And afterwards on to-wit the thirteenth day of July A. D. 1903, there was filed in the office of the clerk of said court in said cause, the defendant's exceptions to findings of master, which said exceptions are in the words and figures following, to-wit:—

141 Circuit Court of the United States, Northern District of Illinois, Southern Division.

PEORIA GAS & ELECTRIC COMPANY, Complainant,	)	In Chancery.
vs.	)	For Injunction.
CITY OF PEORIA, Defendant.	)	

Comes now the defendant, The City of Peoria and excepts to the finding of facts and conclusions of law filed herein by I. C. Pinkney, special master herein, in the following particulars, to-wit:

1.

That while the master in his ninth finding of fact found, "at the time complainant company presented its application to the city council for a license to construct its plant, and occupy the public highways of the city, for the purpose of distributing gas to its citizens, and for many years prior thereto substantially the same territory of the city, complainant is by its ordinance authorized to occupy, the Peoria Gas Light & Coke Company were in possession of, and actively engaged in, the same business, and until complainant had completed and put in operation its plant, the Peoria Gas Light & Coke Company held an unmolested field therein for the sale of gas." Yet the master failed to find that the manufactory and distribution system of the Peoria Gas Light & Coke Company was at all times since its installation of sufficient magnitude to meet the demands of the locality, and that following the growth of population, business and industrial enterprises, and increase of territory available for gas service, the Peoria Gas Light & Coke Company extended its mains correspondingly, and added to its manufacturing equipment and facilities continuously to such an extent as to keep pace with demands, within a reasonable time occupying all new districts where service would result in profit, or where such
145 results might fairly be expected in the near future, and that its system was of ample capacity and fully equipped to furnish the entire Peoria district with gas of good quality and candle power to meet maximum demands, and was never required to shut

down its plant for any period of time, for the purpose of making repairs; and at the time complainant company applied to the city authorities for a license to install its system and operate in the Peoria territory no demand or necessity for another company in the same field existed.

2.

That while the master in his ninth finding — fact found that, "up to the year 1897, and from time to time prior thereto, this last named company, (Peoria Gas Light & Coke Company) had reduced the price of gas to consumers, and on or about the first of the year 1897 its prices were, for illuminating gas $1.35 gross or $1.25 net per thousand cubic feet, if paid on or before the 10th day of the month next following, and $.75 per thousand cubic feet for fuel gas. These prices continued up to April 1, 1899, at which date the price charged by it for gas used for illuminating purposes was reduced to $1 net per thousand cubic feet." Yet the master failed to find that such reduction in the price of gas by the Peoria Gas Light & Coke Company was voluntary on its part, and that at the time complainant company applied to the city council of the city of Peoria, to-wit, on or about the 1st of April 1899, the Peoria Gas Light & Coke Company was selling about one half of its output for $1 per thousand cubic feet and the other half at $.75 per thousand cubic feet, or at an average price for all purposes of 87–½ cents per thousand cubic feet.

146

3.

That while the master in his ninth finding of fact found that, "in April, 1900, a further reduction was made, the price being $.30 net per thousand cubic feet for all gas used for either light or fuel purposes," yet the master failed to find that during the period of time when the price charged for all gas delivered in the Peoria district was $.30 per thousand cubic feet the stock of the Peoria Gas Light & Coke Company sold for 436 per cent. of its par value.

4.

That, while the master in his tenth finding of fact found, "it does not appear, however, that any corporate action taken at any time by complainant authorized such statements and representations, nor does it appear that in any such statements or representations *any* fixed price at which complainant would furnish gas to consumers was stated; the substance of them being that, 'the price being cheapened.'" Yet such finding is erroneous, in so much as it is contrary to the law and the evidence.

5.

That while the master in his twenty-seventh finding, subdivision eleven, found that, "defendant adopted the above ordinance" (maximum rate ordinance passed September 4, 1900) in good faith, be-

lieving the statements and representations previously made justified the maximum price as therein fixed, yet the master failed to find that the statements and representations made by complainant company through its stockholders and duly authorized agents to the members of the city council and public generally, that the rates charged for gas by the Peoria Gas Light & Coke Company were excessive and extortionate, and that gas could profitably be furnished to the city and citizens generally, at greatly reduced rates, were made with full knowledge of all material and pertinent facts touching the subject matter, and for the express purpose of inducing the members of the city council to pass the ordinance granting to complainant company the right to construct and operate a gas manufactory and distribution system in Peoria, and that such representations further stated and represented to the city authorities that the only method by which relief could be obtained from the exorbitant exactions of said old company in the matter of gas rates, was by granting to complainant a license to enter into competition with said Peoria Gas Light & Coke Company in supplying gas, and that from such statements and representations so made to the members of the city council, verbally and in writing, they were justified in believing, and did believe, that the granting of the license asked by said complainant would result in its furnishing gas of proper candle power and good quality to the city and citizens at not exceeding seventy-five cents per thousand cubic feet, and that such rate was a fair and reasonable one, and that it could supply gas profitably at such rate; that the statements and representations of all the stockholders of record of complainant company furnished the initiative for the passage of the maximum rate ordinance of September 4, 1900; that through this channel the council was advised of what was a proper rate to be charged for gas in Peoria, and the information thus given by complainant company, through its duly authorized representatives, fully justified the council's action in fixing a rate at not exceeding seventy-five cents per thousand cubic feet.

147

6.

That while the master in his eleventh finding of fact found that "the ordinance in controversy in this case was not passed by the common council of the city of Peoria for about eighteen months after the time that complainant procured its original license from the city. At the time the ordinance fixing the maximum price of gas was pending, and before its adoption by the city council, it appears complainant, through one of its officers, stated to the mayor of Peoria and to some of the members of the city council, that gas could not be made by it, at the maximum price fixed by this ordinance, and the mayor was then requested, either personally, or through any representative of the city he might select, to make an examination of the books of complainant, to determine for the guidance of the council, what it was then costing complainant to manufacture gas, and

148

what would be the probable cost in the future. There is no evidence in the record in this case showing, or attempting to show, that the defendant ever sought the opportunity, or privilege of making any investigation of complainant's books, that had been offered it for the express purpose of guiding its legislative body in fixing, in the ordinance it then had under consideration, reasonable and fair rates, to be charged for gas in the city, nor is there one word of testimony in denial that such an opportunity was tendered it by complainant, nor is there any evidence that defendant had knowledge on this subject from any other source." Yet such finding is erroneous and contrary to law, for the reason that the statements and representations of all the stockholders of record of complainant company, of date April 18, 1899, characterizing the rates charged by the Peoria Gas Light & Coke Company as extortionate and unjust, relieved the city council of whatever obligation the law, under other circumstances, might have cast upon its members to make investigation as to the reasonableness of the rate proposed to be incorporated in the maximum rate ordinance, passed September 4, 1900. By those statements and representations the city council had been advised long in advance of action, limiting the price to be charged to what was a fair and reasonable rate, no changes material in this proceeding, from April 18, 1899, to September 4, 1900, had made the furnishing of gas more costly to the companies operating in Peoria.

7.

Defendant excepts to the refusal of the master to find the following facts requested by defendant: "That during the pendency before the city council of its franchise ordinance, the duly authorized representatives of complainant company falsely and fraudulently represented to the city council and public generally, that
149 Peoria people alone were interested in the proposed new industry; that such representations had weight and significance in securing the passage of the ordinance."

8.

Defendant excepts to the refusal of the master to find the following facts requested by defendant:

"That the representations and admissions made by all the stockholders of record of complainant company and its duly authorized agents, at the time the franchise ordinance was pending before the city council of said city, estopped the complainant company from afterward denying the fact that gas could be manufactured and sold at seventy-five cents per thousand cubic feet in the city of Peoria, and a reasonable return made on the money invested at that price."

9.

Defendant excepts to the master's twelfth finding of facts that, "the license granted by the defendant, The City of Peoria, on April

18, 1899, contains no requirements as to the candle power of gas to be furnished by complainant. Neither is it practicable under the present method of conveying gas from the place of manufacture to the point of consumption, to maintain eighteen (18) candle illuminating power at all points of consumption, without the excessive use of enrichers in its manufacture. Where this is attempted by the producer, it results in discomfiture to the consumer by smoking when ignited, and the giving off of unpleasant odors," for the reason that it is erroneous and contrary to the evidence.

10.

Defendant excepts to the fourteenth finding of the master that, "the depreciation of a manufacturing coal gas plant, under the evidence in this case, may be conservatively found to be five (5%) per cent. per annum on the first cost. Some parts of the plant, particularly the retort ovens, depreciate very rapidly; they become
150 burnt out and unfit for further service after two years. These retorts are a necessary part of a plant, under the present known methods of the manufacture of coal gas. They are expensive to install and more expensive to replace," for the reason that such finding is erroneous and misleading, and contrary to the greater weight of the evidence in this case.

11.

Defendant excepts to the fifteenth finding of facts of the master that "the depreciation to the distributing system of complainant's plant is largely due to natural conditions, found to exist in the soil where its mains and service connections are laid. These destructive agencies are found to a greater or less extent in the soils of all cities and vary according to the character of the soil. Complainant's mains are of cast-iron, its service connections of lead, each vary in thickness in proportion to size. By reason of these soil conditions the lead pipe depreciates much more rapidly than the cast-iron mains, or at the rate of about five (5 %) per cent. per annum on the original cost, while the depreciation of the cast-iron mains does not exceed two (2 %) per cent. per annum. Consumers' meters which also form a part of complainant's distributing system, are likewise subject to an average annual depreciation, due to various causes beyond complainant's control, which under the evidence may be conservatively placed at nine (9 %) per cent. per annum on the cost on the total number in use," for the reason that the same is erroneous, misleading and not supported by the greater weight of the evidence in this case.

12.

Defendant excepts to the sixteenth finding of fact that "depreciation exists and continues in a coal gas plant, notwithstanding repairs that are necessary to be made, to maintain its working effi-

ciency, and is an expense in the cost of the manufacture and
151 distribution of gas, that is outside of, and in addition to repair expenses. These latter increase as the plant grows older, and at about the periods herein given, notwithstanding repairs, the several parts so far depreciate as to render them valueless and useless for further service," for the reason that it — contrary to the evidence; in so much as it ignores completely consideration of the fact, proven by the evidence, that in most, especially in growing places, the appreciation from a growing business is more than a set-off to the depreciation of the works, and is in direct contradiction to a part of the master's finding of fact #23 that, "the Peoria territory is rapidly increasing in population;" and is in direct contradiction to the finding of the master in his 27th finding of fact, subdivision four, that "the fair market value of complainant's plant at the close of the taking of evidence was $450,000, exclusive of any value its license from the city of Peoria may have."

13.

Defendant excepts to the seventeenth finding of fact that, "the first cost to complainant in the manufacture and distribution of coal gas in the city of Peoria, may be said to be covered by the following charges, viz:

Interest at the rate of five (5%) per cent. per annum on the cost of its manufacturing plant and distributing system, which at the close of the taking of the testimony in this cause was, four hundred thirty-nine thousand seven hundred and twenty-five ($439,725) dollars. This sum represents its fair market value, and only the money then invested therein by complainant. Also depreciation at the rate of five (5%) per cent. per annum on the cost of the manufacturing plant, less the price for real estate on which it is located; five (5%) per cent. per annum, depreciation on the cost of the service connections installed; nine (9%) per cent. per annum depreciation on the cost of consumers' meters; five (5%) per cent. per annum depreciation on
the amount invested in tools, furniture and fixtures; two
152 (2%) per cent. per annum depreciation on the cost of distributing mains; also the cost of the material used; necessary labor; repairs to the system; leakage, or unaccounted for gas, as shown by the difference of registration in the station meter register, and consumers' meters; uncollectible accounts, taxes and office expenses," for the reason that such finding is erroneous and contrary to law.

First, because the master herein determines the rate of interest to be allowed, which would result in the framing of a rate to be charged by quasi-public corporations, and such power is not within the province of the courts in this country.

Second, because the master therein allows depreciation at five (5%) per cent. per annum on the cost of the manufacturing plant, less the price paid for the real estate on which it is located, which is contrary to the evidence and in direct conflict with the master's

finding of fact # 27, subdivision four, that "the fair market value of complainant's plant at the close of the taking of the evidence, was four hundred and fifty thousand ($450,000) dollars, exclusive of any value its license from the city of Peoria may have."

14.

Defendant excepts to that part of the nineteenth finding of facts that, "the residuals produced per ton of coal carbonized, reduced the cost of gas to complainant about thirty-three (33%) per cent.," for the reason that the said finding is erroneous and contrary to the evidence, as the operating statement of complainant company for the year commencing September 1, 1901, and ending August 31, 1902, shows the reduction to have been nearly fifty (50%) per cent.

15.

Defendant excepts to that portion of the nin-teenth finding of fact, that "the gas manufactured by complainant from September 1, 1900 up to September 1, 1901, as shown by the evidence, cost the complainant in the holder, per thousand cubic feet, seventy-seven
153 and nine-tenths (77.9/10) cents, after deducting from the cost of production the market value of all the residuals obtained from the coal carbonized. This cost was upon the basis of an output of about fifty-one million (51,000,000) cubic feet per year, and does not include the cost of distribution," for the reason that the same is misleading, immaterial and contrary to the evidence, and under the law, even were the fact proven, should not be considered in arriving at a judgment in this case, as such cost was based upon the manufacture of only fifty-one million (51,000,000) cubic feet per year, while the total amount of gas consumption in the city of Peoria, according to the master's finding of fact # 21, is one hundred and sixty-five (165,000,000) million cubic feet per year.

16.

Defendant excepts to the refusal of the master to find the following facts requested by defendant:

"That the contract of October 24, 1901, between the two companies providing that complainant should furnish to the Peoria Gas Light & Coke Company gas delivered in the holder of the latter company at $.75 for gas actually consumed and $.50 per thousand for 'unaccounted for' gas, for a period of ten years, was not made for the purpose of furnishing the old company, so called, an opportunity to rebuild or repair its plant; but the same was in pursuance of an agreement or understanding touching the subject of combination between the two companies; that said old company's repairs could have been made while it was in operation, as had always previously been done, and as is done by gas companies throughout the country; that for at least six months after October 26, 1901, nothing

whatever was done by said Peoria Gas Light & Coke Company with reference to repairing or rebuilding any part of its manufactory or system, but during said period it had dismantled and torn down certain parts of it, with no intention of ever rebuilding the same, and the same had not been rebuilt. That at the time said Peoria Gas Light & Coke Company discontinued the manufacture of
154 gas, on or about October 26, 1901, the major part of its manufactory was substantially new and of the latest and best design for the economical manufacture and distribution of gas."

17.

Defendant excepts to the refusal of the master to find the following facts requested by defendant:

"That the gas so delivered under the contract referred to was supplied through a 16 inch main placed wholly at the expense of complainant company; that its length was 800 or 900 feet, and was installed complete prior to the commencement of negotiations terminating in the contract of October 24, 1901, under which complainant com- furnished gas to the Peoria Gas Light & Coke Company from October 26, 1901, to and including August 19, 1902."

18.

Defendant excepts to the refusal of the master to find the following facts requested by defendant:

"That during the time the contract of October 24, 1901, between the two companies was in force the street superintendent of complainant acted in that capacity also for the Peoria Gas Light & Coke Company, and without any additional compensation; that such superintendent in his work for both of said companies was subject to the direction of F. W. Little, the general manager of complainant; that during the same period the works and manufacturing plant of the Peoria Gas Light & Coke Company were in the exclusive charge of complainant's superintendent at the works, who received no additional compensation for his service in caring for such property."

19.

Defendant excepts to the refusal of the master to find the following facts requested by defendant:

"That complainant company, at the time of and prior to the passage of its franchise ordinance, represented to the members
155 of the city council and to the public generally, that it desired to enter the Peoria territory for the purpose of competing with the Peoria Gas Light & Coke Company in the furnishing of gas, and that as a consequence of such competition substantial benefits would accrue to the city and citizens in the reduction of rates; that it proposed to operate independent of the other company. That in the matter of independent operation and competition

with benefit to the public complainant company has violated its pledges; that it has entered into an agreement or combination with said Peoria Gas Light & Coke Company whereby all competition or semblance thereof, has ceased, and that such arrangement has been effective and operative between said two companies since July 31, 1900, if not from an earlier date, and that such being the fact the prices now charged by complainant company *is* in fraud of the rights of the citizens of Peoria, and in violation of the laws of the State of Illinois."

20.

Defendant excepts to the twentieth finding of facts of the master that, "in the latter part of October, 1901, complainant entered into a contract with the Peoria Gas Light & Coke Co. to supply it with gas for the use of its consumers and customers. This last named company then, and for many years prior had occupied substantially the same territory that complainant was then occupying with its distributing system, and had in addition about twenty miles of mains in the public highways that complainant did not then, nor does not now occupy. It had also in use about four thousand four hundred (4400) meters. This contract was terminated by the Peoria Gas Light & Coke Company on August 19th, 1902, but during the ten months' period it was in force complainant furnished and delivered into the holder of the Peoria Gas Light & Coke Company upwards of one hundred and four (104) million cubic feet of gas at a charge to it of seventy-five (75) cents per thousand cubic feet. This gas was delivered by means of a pipe about three hundred (300) feet long laid upon the premises of the two companies connecting the gas holder of the Peoria Gas Light & Coke Company
156 with the station meter of the complainant, which registered the amount supplied. The difference in quantity between the complainant's station meter and the amount as indicated by the consumers' meters was paid for by the old company at the rate of fifty (50c.) cents per thousand cubic feet. It was delivered by the old company through its own distributing system to its own consumers and at its cost. The gas so furnished and the price charged by complainant therefor, is a question purely of business judgment between private parties, and such price cannot be accepted as conclusively establishing the cost to complainant of gas manufactured by it, where it must also bear the expenses incident to distribution, as is the case in supplying its own consumers throughout the city," for the reason that such finding is erroneous and contrary to the law and the evidence, for the following reasons: "That the finding of the master therein that this gas was delivered by means of a pipe about three hundred (300) feet long, laid upon the premises of the two companies, is unsupported by the greater weight of the evidence; and said finding in its entirety, is erroneous and contrary to the law and evidence, for the reason that the evidence shows that previous to the date of said alleged contract the Peoria Gas Light & Coke

Company and complainant company had entered into a combination, and were controlled and worked under the dictation of one management, and that said contract was entered into as a mere makeshift occasioned by the rulings of the court and master, relative to the investigation of the complainant's books, and was prepared and executed by the management of the two companies for the purpose of deceiving the court and master as to the actual relation existing between the complainant company and the Peoria Gas Light & Coke Company, and that under the laws of the State of Illinois the complainant company having so entered into such combination, said company was not empowered under the laws to charge a greater rate for gas than the lowest rate it had charged during the year immediately preceding the time such combination became effective between the two companies."

157 21.

Defendant excepts to the refusal of the master to find the following facts requested by defendant:

"That the disposition made by the Peoria Gas Light & Coke Company of the gas by it purchased from complainant company is immaterial; that during the period said contract was operative it occupied, irrespective of the question of combination, the status of any other consumer, and the price fixed by said contract to be paid complainant company for the gas so furnished is significant in determining the reasonableness of the rate fixed by said 'maximum' ordinance."

22.

Defendant excepts to the 21st finding of facts that, "the gas consumption in the city of Peoria is now about one hundred and sixty-five (165) million cubic feet per year, the use of which for illuminating and heating purpose is about equal. Of this total consumption complainant is supplying about fifty-five (55) million cubic feet per annum to its consumers, through its twenty-six and one half (26½) miles of mains, and about two thousand four hundred (2,400) meters, the Peoria Gas Light & Coke Company supplying the remainder of total consumption. Complainant's manufacturing plant is capable of producing the total quantity of gas now used in the city; its distributing system is, however, much too limited to distribute that quantity of gas, and in order to do so it would require an expenditure of more than double the sum it now has invested in that branch of its system. If complainant's plant was supplying all the coal gas now consumed in the city, it could reduce the manufacturing cost to it two (2) to three (3) cents per thousand cubic feet, but the cost incident to distribution, as between the present amount furnished by complainant and the total amount consumed, would be relatively increased," for the reason that said finding is erroneous and contrary to the evidence in that, (irrespective of the question of combination then existing between the two companies)

the report contained in the operating statement of complainant company during that period, shows conclusively that gas can
158 be manufactured and sold and a reasonable profit obtained, after paying all operating expenses and allowing for depreciation, (if any such allowance should be made) where such gas is sold at seventy-five (75c.) cents per thousand cubic feet. And for the further reason that said operating statement of complainant company, offered in evidence, for the year beginning September 1, 1901, and ending August 31, 1902, when it was manufacturing all the gas in the city of Peoria, shows that the actual cost to complainant company, including cost of distribution and an abnormal charge for legal expenses, loss and damages, was $.465 cents while for the preceding year, according to the finding of the master the cost to complainant company was $.779 cents per thousand cubic feet, exclusive of any charge for depreciation.

23.

Defendant excepts to the twenty-second finding of facts that, "the average consumption of gas per annum, per meter, in use in the city of Peoria is about twenty (20) thousand cubic feet, which is about the average consumption in cities of like size and character of population. And it appears from the evidence that any material increase of gas consumption will require of complainant an extension of its distributing mains, service connections and meters, the producing capacity of its manufacturing plant being amply sufficient to meet any reasonable expectations in that respect," for the reason that said finding is erroneous and immaterial, for that the evidence shows that there is a combination existing between the complainant company and the Peoria Gas Light & Coke Company, and that an increase in gas consumption could and would be supplied through the present system of mains in the Peoria territory.

24.

Defendant excepts to the twenty-third finding of facts that, "the Peoria territory is rapidly increasing in population and the
159 quantity of gas required to meet the demands of such increase, together with the more general uses for which gas is now sold and required, justifies the policy adopted by complainant when it constructed its manufacturing plant, of so building as to be in a position, as a producer of gas, to meet such additional demands for its product, and it cannot be said that its expenditures for such purpose in the construction of its manufacturing plant involve a useless and unnecessary investment of capital, which should not be considered in determining the present cost to it of producing coal gas;" for the reason that at the time complainant obtained its franchise ordinance in the city of Peoria no necessity for another gas company existed in the Peoria field; and for the reason that said plant was installed and constructed for the mere purpose of forcing the Peoria Gas Light

nounced by the Federal and State courts, that it may be now said to be definitely settled. The one particularly applicable in this case is, that the defendant at the time it had under consideration the ordinance fixing the maximum rate to be charged for gas, was not only without knowledge as to whether the rate fixed was a fair, just and reasonable one; but it also had no convenient or ready means of acquiring such knowledge," for the reason that such finding is erroneous and contrary to the evidence and law, as applicable to this case.

36.

Defendant excepts to the twenty-fifth finding of law that "the conclusions of the special master are, that the ordinance in controversy in this case, is unreasonable in respect to the price as therein fixed; that the enforcement of its provisions against complainant would constitute the taking of the property of complainant without due process of law, and in the taking of private property for public use, without just compensation; that the ordinance being void, because it is unreasonable, the enforcement of it against the complainant should be restrained by the court, and to that end an injunction should be allowed perpetually enjoining the defendant, its officers and agents from enforcing or attempting to enforce the provisions thereof against complainant, as prayed in and by its bill herein," for the reason that such finding is erroneous and contrary to the law and evidence, for the following reasons:

1. That the evidence shows conclusively that gas can be manufactured and a fair return obtained, after paying the actual
166 operating expenses incident to the manufacture of all the gas used in the city of Peoria, upon the basis of the sale of gas so used at seventy-five (75) cents per thousand cubic feet.

2. Because the master therein recommends that the enforcement of the ordinance against complainant should be restrained by the court, and to that end an injunction should be allowed perpetually enjoining the defendant, its officers and agents, from enforcing or attempting to enforce the provisions thereof against complainant, as prayed in and by its bill herein; for, in the event said defendant was perpetually enjoined from enforcing the terms and conditions of said ordinance, it would thereby be prevented from ever again passing an ordinance limiting the price to be charged at seventy-five (75) cents per thousand cubic feet, in the city of Peoria, which would be inconsistent with the finding of law made by the master, that the city of Peoria has a right to regulate the price which may be charged for gas in said city.

37.

Defendant excepts to the refusal of the master to find the fol-owing facts requested by defendant:

"That five hundred and eighty thousand ($580,000) dollars does not represent the structural cost of the whole plant of the Peoria

Gas Light & Coke Company, but is the sum total of all expenditures in construction, replacements, additions, extensions, etc., to date."

38.

Defendant excepts to the refusal of the master to find the following facts requested by defendant:

"That since complainant company began to supply gas it has made no extension of mains, except four hundred or five hundred feet of four (4) inch mains in the alley between California and Missouri avenues."

167

39.

Defendant excepts to the refusal of the master to find the following facts as requested by defendant:

"That since May 1, 1900, the Peoria Gas Light & Coke Company has made no extension of mains."

40.

Defendant excepts to the refusal of the master to find the following facts as requested by defendant:

"That the cost of gas manufactured and sold by complainant during the year ending September 1, 1902, including all items properly charg-able thereto, was such, that had its entire output been sold at seventy-five (75) cents per thousand cubic feet, a fair return on the necessary investment would have been realized."

41.

Defendant excepts to the refusal of the master to find the following facts as requested by defendant:

"What it may cost complainant to furnish gas afford- no criterion regarding the price properly charg-able to the public. The primary fundamental question is, whether or not one company, with proper investment covering and supplying the whole of the Peoria district can furnish gas at seventy-five (75) cents per thousand cubic feet and make a profit."

42.

Defendant excepts to the refusal of the master to find the following facts as requested by defendant:

"That no portion of stock of complainant company at the close of the evidence was paid up or that the stockholders of complainant company, or any of them, did not have a dollar invested in the enterprise."

168

43.

Defendant excepts to the refusal of the master to find the following facts as requested by defendant:

"That the requirements of the ordinance of September 4, 1900, imposed no unreasonable or unjust burdens upon complainant company, either in the matter of rates or in the candle-power of gas to be furnished to the city and citizens; its provisions are in harmony with what complainant's representatives declared to the city council and citizens of Peoria generally, would follow from the passage of its franchise ordinance of April 18, 1899, and in fairness and justness complainant has no reasonable ground for complaint."

44.

Defendant excepts to the refusal of the master to find the following facts as requested by defendant:

"That if the Peoria Gas Light & Coke Company had any legal existence at all it was only on sufferance by complainant company, and that it suffered to continue to preserve its technical legal existence, only to subserve private interests, and not to subserve any public interest, nor to perform the public duties imposed upon it by the State; that its duties to the public have been usurped and are now being performed by complainant company; that the latter has absolute control *de facto* of all the property, of which the Peoria Gas Light & Coke Company may have a dry, technical, legal title,—in a word, that *de facto* the complainant company owns, operates and controls the manufacturing plant and distributing system of the Peoria Gas Light & Coke Company which, for purposes of its own, it chooses to operate under the mask of the name of the Peoria Gas Light & Coke Company."

45.

Defendant excepts to the refusal of the master to find the following facts as requested by defendant:

169 "The master failed to find that, since the commencement of this suit, although the exact date or dates are not clearly disclosed by the evidence thus far taken, the officers, directors, stockholders or stockowners of and in the said Peoria Gas & Electric Company, the complainant herein, have, together with the said Peoria Gas & Electric Company, created and entered into, and become a party to, and a part of, an unlawful and secret association, combination, syndicate, pool or trust; and have passed over into the hands of the said unlawful and secret association, combination, syndicate, pool or trust, a majority of the capital stock of the said Peoria Gas & Electric Company, by transferring said majority of said capital stock over into the hands of Sumner R. Clark and John R. Walsh, as managers or trustees of and for the aforesaid unlawful and secret association, combination, syndicate, pool or trust, with the purpose and intent to take out of the hands of the officers, directors, and stockholders or stockowners, in and of the said Peoria Gas & Electric Company, all power or voice in the management, operation or control of the gas rights, interests, business and property of the com-

plainant, in the city of Peoria, and to place the same in the hands of the aforesaid unlawful and secret association, combination, syndicate, pool or trust, to destroy and abolish competition in, and to unlawfully control the manufacture of, and to unlawfully regulate, fix and determine the price to be charged for gas, to be made and supplied to, and to be used and paid for by, the public in the city of Peoria."

46.

Defendant excepts to the refusal of the master to find the following facts as requested by defendant:

"The master failed to find, that the aforesaid Sumner R. Clark and John R. Walsh, as managers or trustees of and for the aforesaid unlawful and secret association, combination, syndicate, pool or trust, for and in consideration of the aforesaid transfer to
170 them, of a majority of the capital stock of the complainant company, in the manner, and for the purposes aforesaid, issued and delivered to the aforesaid stockholders or stockowners, respectively, certain certificates in evidence of such respective transfer, which said certificates were each signed by the said Sumner R. Clark and John R. Walsh, as managers of and for the aforesaid unlawful and secret association, combination, syndicate, pool or trust, and which said certificates were each marked and designated as "trust stock certificates."

47.

Defendant excepts to the refusal of the master to find the following facts as requested by defendant:

"The master failed to find that, pursuant to the aforesaid unlawful and secret association, combination, syndicate, pool or trust, the stook-book or book of capital stock certificates of and pertaining to the complainant company, together also with all the capital stock certificates in and of the said Peoria Gas & Electric Company, transferred over, as aforesaid by the stockowners of the same to the said managers or trustees of the said unlawful and secret association, combination, syndicate, pool or trust, are all held in trust or in *escrow* by the Equitable Trust Company of Chicago, Illinois, for the further purposes of the aforesaid unlawful and secret association, combination, syndicate, pool or trust, and that pursuant to the purposes of the aforesaid unlawful and secret association, combination, syndicate or trust, all transfers of the capital stock in the complainant company, as well also as all transfers of "trust stock certificates," are required to be made in the office of the said Equitable Trust Company."

48.

Defendant excepts to the refusal of the master to find the following facts as requested by defendant:

171 "The master failed to find that, since the commencement of this suit, if in fact not from an earlier date, said Peoria Gas & Electric Company, complainant, has not owned, nor had in its custody, possession or control, any of the gas property, rights or interests in the city of Peoria, which may have at a prior date belonged to it; but that since the date of the making of, entering into, the aforesaid unlawful and secret association, combination, syndicate, pool or trust, and since the aforesaid transfer of a majority of the capital stock of said Peoria Gas & Electric Company to the aforesaid managers or trustees of the said unlawful and secret association, combination, syndicate, pool or trust all the gas property, rights and interests, which the said Peoria Gas & Electric Company may have prior to that time owned in the city of Peoria, passed into the hands of, and into the possession and control of, and became the property of the said unlawful association, combination, syndicate, pool or trust; the name of which, however, if any it has, has not yet been disclosed by the evidence thus far taken in this case, except the names of the aforesaid managers or trustees thereof, to-wit, Sumner R. Clark and John R. Walsh."

49.

Defendant excepts to the refusal of the master to find the following facts as requested by defendant:

"The master failed to find, that since the aforesaid transfer of the capital stock of said Peoria Gas & Electric Company to the said managers or trustees of and for the said unlawful and secret association, combination, syndicate, pool or trust, down to the close of the testimony herein, said unlawful and secret association, combination, syndicate, pool or trust has been exclusively the owner of and in possession, control and operation of all the gas property, rights and interests of the said Peoria Gas & Electric Company of Peoria."

172 50.

Defendant excepts to the refusal of the master to find the following facts *are* requested by defendant:

"The master failed to find, that the complainant which began this suit and which is the only party complainant to it, has no longer any right or interest herein, which can be the subject matter of any decree in its favor; but that the complainant has passed and conveyed to other parties not connected in any way as parties litigant herein, any and all rights and interests which complainant may have had, if any at any time, and that such parties to whom the same has been passed and conveyed are not parties to this suit."

Respectfully submitted,

WALTER H. KIRK,
HENRY MANSFIELD,
Solicitors for Defendant.

Endorsed: "Filed July 30 1903. Marshall E. Sampsell, clerk."

173 And afterwards, to-wit on the twenty-third day of September, A. D. 1903, the same being one of the regular days of the regular April A. D. 1903 term of said court, among others, further proceedings were had in said cause and entered of record in the words and figures following, to wit:—

174 Circuit Court of the United States, Northern District of Illinois, Southern Division.

WEDNESDAY, *September 23d, A. D.* 1903.

TUESDAY, *February* 9, *A. D.* 1904.

Present: Hon. J. Otis Humphrey, district judge.

PEORIA GAS AND ELECTRIC COMPANY
vs. } 288.
CITY OF PEORIA.

Now again come the parties by their solicitors and upon motion of counsel for the complainant leave is hereby given to complainant to file subsequently but as of this date its petition for a rehearing.

181 And afterwards on to-wit the ninth day of February, A. D. 1904, there was filed in the office of the clerk of said court in said cause suggestion of the damages by defendant, which said suggestion is in the words and figures following, to-wit:—

182 UNITED STATES OF AMERICA, *State of Illinois*, } ss:

In the Circuit Court of the United States, Northern District of Illinois, Southern Division, at Peoria.

PEORIA GAS & ELECTRIC COMPANY, Complainant, v. CITY OF PEORIA, Defendant. } In Chancery. For Injunction, etc.

Suggestion of Damages by Defendant.

And now comes the defendant, City of Peoria, by Walter H. Kirk, city attorney, its solicitor, and in pursuance of the statute in such case made and provided, suggests to the court here, that by reason of the wrongful suing out of the injunction in this cause, this defendant has sustained damages in a large sum, to-wit:—fifteen thousand dollars ($15,000.00)

1*st*. By reason of this defendant being compelled to, and having paid out divers sums of money, to-wit: the sum of five thousand dollars ($5,000) for the reasonable fees and charges of its solicitorss and counsel, and for other charges and expenses in and about the procuring of the dissolution of the writ of injunction in said cause, rendered necessary therein by reason of the wrongful suing out of the same; and in a like sum for expenses of witnesses in attending court in procuring said dissolution as aforesaid; and in a

183 like sum for printing abstract of the record and defendant's brief and argument filed herein, together with the further and additional costs and expenses of telegrams, railroad fare and incidental expenses incident to the taking of testimony at various points away from Peoria, and for the services of further and additional clerks and stenographers.

By means of which premises, this defendant has sustained damages to a large amount, to-wit, the sum of fifteen thousand dollars; which said damages remain wholly unpaid to the defendant; wherefore the defendant prays that the said damages may be assessed to it, against the complainant, in pursuance of said statutes.

WALTER H. KIRK,
City Attorney and Solicitor for Defendant, City of Peoria.

Endorsed: "Filed February 9, 1904. Marshall E. Sampsell, clerk."

184 And afterwards on the same day, to-wit the ninth day of February A. D. 1904, the same being one of the regular days of the regular October A. D. 1903 term of said court, among others, further proceedings were had in said cause and entered of record in the words and figures following, to-wit;—

& Coke Company to sell its stock, and for the purpose of entering into a combination with the Peoria Gas Light & Coke Company for the sale of gas in the Peoria territory.

25.

Defendant excepts to the twenty-fifth finding of facts that, "it appears from the evidence that complainant company is capitalized at two million ($2,000,000) dollars, on no part of which have the holders of its stock ever received any dividends whatever, nor have any been declared by its managing board. The salaries of its officers do not seem to be extravagant, or in excess of the amount usually paid by other engaged in like business enterprises, the vice-president of the company being also its active business manager. Its working capital, composed of its bills receivable and cash on hand, is not in excess of the amount required to enable it to take advantage of favorable market prices in the material entering into the production of coal gas. It is not seeking in this case the right to charge for gas a price that will enable it to pay dividends on its capital stock. Its claims are, that the maximum rate fixed by the ordinance here in controversy, is so unreasonably low, as to prevent it from realizing in the manufacture and distribution of gas in the Peoria territory,
160 income therefrom, sufficient to meet the unavoidable depreciation to its manufacturing plant and distributing system, the making from time to time of necessary repairs thereto, and a normal rate of interest on the amount of money now actually invested therein;" for the reason that the same is immaterial, improper and misleading, as a greater weight of the evidence shows that no such sum is invested in the gas business in the city of Peoria, and also shows conclusively that the only assessment ever called for on the unpaid original capital stock of the company amounted to twenty (20 %) per cent. thereof, and that assessment so made was afterwards refunded by the company to the stockholders, with interest thereon at the rate of six (6 %) per cent. from the time the assessment was levied to the date of refunding, and there is nothing in the record to show that the stockholders or the company ever paid a cent or borrowed any money for the purpose of incorporation, or that the said stockholders have at the present time invested any money in such undertaking; and for the further reason that said plant was constructed for the purpose of obtaining control of the Peoria gas field and entering into a combination with the Peoria Gas Light & Coke Company.

26.

Defendant excepts to the twenty-sixth finding of facts that, "at the close of the taking of the evidence in this cause complainant's manufacturing plant and distributing system were in a high state of working efficiency, as regards the economical manufacture and distribution of coal gas, the management of its affairs, skillful and prudent; yet, notwithstanding these favoring conditions, it is con-

usively shown by decided weight of the evidence that the income would receive from the sale of gas as shown by consumers' meters use, at the rate of seventy-five (75) cents per thousand cubic feet, gether with the market value of all residuals produced per ton of coal carbonized, will not yield an income sufficient to meet
61 the amount of annual depreciation to its plant, the expenses incident to making of necessary repairs thereto, and a normal terest charge on the amount of money invested in such plant."

For the reason that the same is erroneous and contrary to the idence and the law, as it eliminates entirely the fact of the combiation existing between the complainant company and the Peoria as Light & Coke Company, and irrespective of such combination iminates from a consideration of the case the rights of the public, nd subjects them to the payment of unreasonable rates in order at the stockholders of complainant company may earn dividends, hen not a cent is invested in the enterprise, and is based upon a le of law not applicable to this case.

27.

Defendant excepts to the finding of the master, contained in subivision four (4) of finding of facts seventeen, that: "the fair arket value of complainant's plant at the close of the taking of the vidence was four hundred fifty thousand ($450,000) dollars, exclive of any value its license from the city of Peoria may have," for he reason that it in direct conflict with the master's finding, that ertain sums should be allowed for depreciation on various items enering into the constructive value of the plant, and in direct conflict with the finding of the master, that "* * * the cost of its complainant's manufacturing plant and distribution system,—at the lose of the taking of the testimony in this cause, was four hundred hirty-nine thousand seven hundred twenty-five ($439,725) dollars; his sum represents it- fair market value."

28.

Defendant excepts to the finding of facts in subdivision fourteen 14), twenty-seventh finding, that "under the present known methods, he cost to complainant of manufacturing and distributing coal gas n the Peoria territory is in excess of the sum of seventy-five (75c.) cents per thousand cubic feet, the maximum rate fixed by
162 the ordinance adopted by defendant, which said ordinance is now claimed by defendant, to be a valid law of the city of Peoria."

For the reason that such finding is erroneous and contrary to the evidence and the law, inasmuch as it eliminates from consideration the fact of combination, and the rights of the people to be charged only reasonable price for gas; and for the reason that the evidence conclusively shows, under the law, that the price of seventy-five (75) cents per thousand cubic feet is a reasonable price to charge consumers for gas in the city of Peoria.

29.

Defendant excepts to the third finding of law, that: "it is an established principle that any law which deprives a person of the right of any substantial benefit in connection with its use, or if in such use, by reason of the operation of such a law, he is not only prevented from receiving a normal interest return upon his investment, but is required to suffer loss in its use, he is, in the eyes of the law, deprived of his property, and the fact that it is employed for the public convenience, and whether the person be artificial or real, in no manner affects the application of the rule."

For the reason that such finding is erroneous and not supported by law, in so much as it eliminates entirely from consideration the fact of combination and the rights of the public to be furnished gas at a reasonable rate, irrespective of the number of gas plants that may be erected, and is also contrary to law to the extent that under the rule found, "What is a normal interest?" must be determined by the court, and such finding indirectly compels the court to establish the price at which gas might be sold, and thus abolishes the distinction between the judicial and legislative branches of government.

163

30.

Defendant excepts to the sixth finding of law that, "the fact being established that complainant cannot manufacture and distribute gas to the citizens of Peoria at the maximum rate fixed by the ordinance, it then follows that:

a. The ordinance is void, because by it the city has gone beyond the powers conferred by the laws of the State of Illinois, which confer upon it the power to regulate the price to be charged for gas. It constitutes the exercise of a lawful right in an unreasonable menner; and,

b. The enforcement of the ordinance requiring complainant to furnish gas to the citizens of Peoria, at the point of consumption, at the maximum price therein fixed, would constitute the taking of private property for public use, without just compensation, and in that respect is in violation of the provisions of the Constitution of the United States." For the reason that such finding is erroneous and contrary to law, because the finding is based upon the conclusion of the master, that gas cannot be profitably manufactured and distributed in the city of Peoria at seventy-five (75) cents per thousand cubic feet, which conclusion is contrary to the evidence in this case.

31.

Defendant excepts to the twelfth finding of law that, "the fact (as found) that the defendant has exercised this delegated power unreasonably, and by ordinance has imposed such regulations upon complainant in the further pursuit of its business affairs as to com-

pel it either to abandon its business of manufacturing and distributing gas in the city, or to suffer financial loss and injury in continuing it, tends only to establish the invalidity of this ordinance, and the further conclusion that by its provisions the agent of the State, in this case the defendant) has gone beyond the power conferred upon it by the State, and when it did so, as it has in this in-
164 stance, and is, assuming to act under such ordinance, void, though it be the fact that it is void, will not oust the court of jurisdiction to restrain the defendant from enforcing its provisions against complainant; nor is the Federal court thereby deprived of jurisdiction to grant complainant such relief." For the reason that such finding is erroneous, because founded upon a fact not proven by the greater weight of the evidence.

32.

Defendant excepts to the eighteenth finding of law that, "the evidence in this record shows that the maximum rate fixed by the above ordinance is so unreasonably low as to require complainant to furnish gas to the citizens of Peoria at a price below the cost of manufacturing and distributing it. The enforcement of it would constitute a taking of its property for public use, without just compensation; this is prohibited by the fourteenth amendment of the Federal Constitution." for the reason that such finding is erroneous as under the law the evidence conclusively shows that seventy-five (75) cents would be a reasonable price to be charged consumers for gas in the city of Peoria, irrespective of the fact that a combination exists between complainant company and the Peoria Gas Light & Coke Company.

33.

Defendant excepts to the twentieth finding of law that, "the threatened enforcement of this ordinance against complainant by prosecutions under its penal provisions, and the multiplicity of suits that would necessarily follow, and the injury complainant would suffer in either defending against such prosecutions or complying with the provisions of the ordinance,—there can be no doubt of the power of the court of equity to grant it relief," for the reason that such finding is er-oneous and contrary to law.

165 34.

Defendant excepts to the twenty-third finding of law that, "under the facts as found, the estoppel set up by the defendant cannot be sustained," is erroneous under the law and evidence in this case.

35.

Defendant excepts to the twenty-fourth finding of law that, "the uniform dostrine of estoppel *in pais* has been so frequently an-

Objected to by complainant as incompetent, immaterial and irrelevant.

Said rule 38, was marked by the master Exhibit "A" and is in the words and figures following, to-wit:

201 Circuit Court of the United States for the Northern District of Illinois.

Rule 38.

Ordered, That hereafter in all cases in chancery before the same shall be heard by the court, the pleadings shall be printed, and before they shall be heard on the final hearing upon the merits an abstract of the proofs shall be printed, and in case the counsel cannot agree upon the abstract of the proofs, the court will, on application, appoint some fit person to *make* such abstract, the expense of such printing or abstract to be taxed as costs in the cause against the party adjudged to pay the same; but the court may by special order obtained six days before the hearing, dispense with such printing or abstract or some parts thereof.

August 4, 1879.

2/20/03.

A true copy.

Attest: MARSHALL E. SAMPSELL, *Clerk*.

202 EZRA F. PARKER, called on behalf of the defendant, City of Peoria, being first duly sworn, deposes and says.

Direct interrogatories by Judge EVANS:

1. State your name to the master?

Ans. Ezra F. Parker.

2. Where do you reside?

A. My residence is at # 1008 East Glen Oak avenue, Peoria, Ill., and my place of business is at # 104 South Adams street.

3. What is your business?

Ans. Printing business.

4. How long have you resided in the city of Peoria?

A. 30 years.

5. How long have you been in the printing business?

A. 30 years.

6. What relation do you occupy to the Peoria Printing & Stationery Company?

Ans. I am its general manager.

7. What is the character of the business carried on by the Peoria Printing & Stationery Company?

Ans. General printing business.

8. Is it engaged in the business of printing abstracts of record?

Ans. Yes sir;

9. How long has it been engaged in that business?

A. Ever since it has been in business.

10. Did the Peoria Printing & Stationery Company print the abstracts in this case filed with the court?

Ans. It did.

11. How many printed pages are there of the abstract of the record in this case that were printed by the Peoria Printing & Stationery Co.?

A. I do not know that I am prepared to answer that except as the abstract itself shows.

12. Have you examined the copies of the abstract that were filed with the court and are in court now before you?

Ans. Yes sir;

13. Examine the abstract and then state how many pages there are?

A. (Witness examining abstract) In volume 1, there are
203 324 pages, including the cover. In volume 2, there are 306 pages of the abstract proper, 73 pages of special master's report and 8 pages of index, making a total of 711 pages.

14. State whether this abstract was printed at the instance and request of the defendant, The City of Peoria, in this case?

Objected to by complainant as immaterial.

A. Yes sir.

15. Has the City of Peoria, the defendant in this case, paid the Peoria Printing & Stationery Company for the printing of this abstract?

Objected to by complainant as incompetent, immaterial and irrelevant; and for the further reason, that whatever may have been paid by the City of Peoria for such printing is not a proper element of damage to be considered in this proceeding.

A. It has.

16. How much did it pay?

Objected to by complainant same grounds as before.

A. $606.05 for the abstract alone.

17. Is that usual and customary price in this county for such printing?

(Objected to by complainant, same grounds.)

A. It is.

18. Is it a reasonable price for such printing?

Objected to by complainant, same grounds as before.

A. It is.

19. When was this printing done?
Ans. During July and Aug. 1903.

Counsel for complainant objects to all the foregoing testimony of the witness Ezra F. Parker, both questions and answers, on the ground that it is incompetent, immaterial and irrelevant; that the matters testified about are not proper elements of damage to be considered in this proceeding, and for the same reason moves the court to exclude the testimony from the record.

204 F. H. TICHENOR, called on behalf of the defendant, City of Peoria, being first duly sworn, deposes and says:

Direct interrogatories by Judge EVANS:

1. State your name and place of residence?
A. F. H. Tichenor; Peoria, Illinois.
2. What is your profession?
Ans. I am an attorney.
3. How long have you been an attorney?
Ans. Some 20 years.
4. Are you an attorney and counselor-at law of the United States circuit court of the northern district of Illinois?
A. Yes sir.
5. For how many years have you been an attorney and counselor of that court?
Ans. About 15 years.
6. You are acquinted with the parties complainant and defendant in this case, are you not?
Ans. Yes sir.
7. You have been counsel for the defendant, The City of Peoria in the litigation involved in this case, have you not?
A. I was for a portion of the time.
8. At what time did you become a solicitor for the defendant The City of Peoria, in this litigation?
Ans. January 8. 1902.
9. How long did you continue as counsel or solicitor for the defendant, City of Peoria, in this suit?
A. With the exception of one item of work done later, my services terminated on the 22nd, of November 1902.
10. What item of work do you refer to that was done later?
A. It was the preparation of suggestions to the special master of claims on the part of the defendant for the basis of his findings.
11. What was the state of the record, or how far had the case proceeded when you first became solicitor for the defendant in this case?
Ans. The complainant had closed its case in chief.
12. Do you mean by that, it had closed its examination of witnesses and putting in of its proof?

205 A. Yes sir; I might say I had been consulted a number of times before that, but I was not actually retained in the case until the date mentioned.

13. What was the general character of your services during the time you were acting as solicitor for the defendant, The City of Peoria, in this case?

Objected — by complainant as incompetent and immaterial.

A. I assisted in determining the policy of the defense; in the location and procuring of witnesses; in the examination of witnesses before the special master; in the preparation of the case for final argument; in abstracting the testimony—in part only—in the argument.

14. Where and at what places was testimony taken at which you assisted in this case?

A. In Peoria, Illinois, in Chicago, Illinois and at Syracuse, N. Y.

15. How much time did you put in taking testimony and rendering services for the defendant, The City of Peoria, in this case?

A. It is somewhat difficult to give a proper answer to that interrogatory from the fact that I worked a great deal at night as well as during the day, and for the major part of the time covered by my services for the defendant, I did a great deal of other work. As nearly as I can state it, I should say that probably it would amount to four months if it were accumulated and it might exceed that.

16. Who was the city attorney at that time?

Ans. Henry Mansfield

17. Was the employment of assistant counsel for him in this case reasonably necessary?

Objected to as incompetent and immaterial.

A. Yes sir; I think it was—decide-ly so.

18. How much of your time did you spend away from the city of Peoria in taking evidence and rendering services as solicitor

206 for defendant, The City of Peoria, in this case?

A. From recollection I think we were in Chicago between 10 days and two weeks; I was in Syracuse, N. Y. from the 17th of August until the 23d, of August, and all the time necessarily detained there; I made two or three other trips, the aggregate time consumed on them was perhaps a week; so far as my recollection at this time extends that was all the time actually spent outside of the city.

19. What was the character in a general way, of the questions involved or issues made by the pleadings in this case?

Objected to by complainant on the ground the pleadings speak for themselves.

A. The bill raised a number of constitutional questions; perhaps I will be unable at this time to state them, owing to the fact I have had nothing to do with the case since the date mentioned; I think

there were three or four of those in all; I think I would prefer to leave those questions to be answered by the bill itself; it has been so long since I have had occasion to consider them I could not recall the exact language in which they were stated.

20. An injunction had already been issued in this case, had it not, by the court restraining the city from enforcing the ordinance mentioned and set out in the bill before you rendered any services as solicitor for the defendant?

Objected to by complainant on the ground the pleadings in the case show for themselves.

A. Yes sir, the injunction had been granted early in September, 1900.

21. The object of the bill and the relief sought by it was to make the injunction perpetual, was it not?

Objected to by complainant as leading, bad in form and not the best evidence.

—. Yes sir. That was the purport of the bill.

207 22. The services rendered by you were all with reference to procuring a dissolution of that injunction on a final hearing, were they not?

Objected to by complainant as leading, suggestive, calling for a conclusion.

A. Fundamentall*h* considered the entire defense was aimed at defeating the injunction, as asked by the bill, and to prevent its being made permanent.

23. Did you render a bill, or statement for your services as solicitor for the defendant, to the city of Peoria?

Ans. I did.

24. Did you also render a bill to the city for expenses incurred by you in rendering such services?

Ans. I did.

25. How much was the amount of your bill for your solicitors' fees for the services rendered by you in this cause as solicitor for the defendant, The City of Peoria?

Objected to by complainant as incompetent, immaterial and not a proper element of damage to be considered in this proceeding.

A. $2500.

26. How much was the amount of the bill rendered by you to the city of Peoria for your necessary expenses in rendering the services which you have mentioned for the city?

Objected to by complainant — same grounds as before.

A. I have not seen that bill since it was receipted but my recollection is *it* that it was $161 and some cents.

27. Can you refresh your recollection from the bill now shown you as to the items of expenses which you rendered to the city?

Objected to by complainant as incompetent and if there was a bill rendered the bill itself is the best evidence.

A. Yes sir, I can.

28. Have you in your hand the itemized bill of the expenses rendered by you to the city of Peoria incurred by you in render-
208 ing the services to it as solicitor in this case?

Ans. Yes sir.

29. Are the items mentioned in that bill in your hands true and correct?

Ans. They are.

Judge EVANS: I now ask the master to mark the bill just identified by the witness "Exhibit B" and I offer the same in evidence on behalf the defendant, The City of Peoria.

Complainant's counsel object to the bill offered in evidence as incompetent, immaterial, irrelevant, no proper foundation laid and because it is not a proper element of damage to be considered in this proceeding.

Said bill marked "Exhibit B" was read to the master in the words and figures following, to-wit:

No. 24847. $100.00.

May 13, 1902.—By order of the city council, State of Illinois.

211 30. What is the total amount of your expenses?

Objected to same grounds as before.

A. $169.49.

31. Are you familiar with the usual and customary fees for services as solicitor such as were rendered by *the* you for the defendant The City of Peoria, in this case, in this county and in the southern division of the northern district of Illinois?

A. Yes, sir, I think so, so far as there is anything of that character.

32. Were the amounts of your bills for solicitor's fee and expenses, which you say you rendered to the city of Peoria, paid to you by the city?

Ans. Yes sir.

33. Was the sum of $2500 the usual and customary charge or fee for reputable attorneys and solicitors in this county and in the southern division of the northern district of Illinois for such services?

Objected to by complainant as immaterial.

A. It was certainly not in excess of the usual and customary fees for such services.

34. Was it then a usual an- customary fee for the services rendered by you?

Objected to by complainant as immaterial.

185 In the Circuit Court of the United States for the Northern District of Illinois, Southern Division.

TUESDAY, *February* 9, *A. D.* 1904.

Present: Honorable J. Otis Humphrey, district judge.

PEORIA GAS AND ELECTRIC COMPANY, Complainant, *vs.* CITY OF PEORIA, Defendant. } 288. In Chancery. For Injunction.

This cause coming on to be heard at this term, having heretofore been presented and argued by counsel and thereupon upon consideration thereof, it is ordered, adjudged and decreed that the exceptions made and filed herein on behalf of the defendant City of Peoria against the failure of the special master I. C. Pinckney to find in his report on file herein that the complainant, prior to the commencement of this suit, had formed, entered into and become a party to an illegal and unlawful combination, pool, trust, combination or arrangement with the Peoria Gas Light and Coke Company (the old gas company) should be and the same is hereby sustained.

And the defendant by leave of the court files herein its suggestions of damages and the court being of the opinion that said injunction was wrongfully sued out, said suggestions of damages by the defendant are hereby referred to F. C. Howe, master in chancery of this court to take proof as to the damages sustained by the defendant by reason of such wrongful suing out of such writ of injunction and to report the same together with his conclusions thereupon for the information and advice of the court.

186 And on the same day to-wit, the twenty-fourth day of February, A. D. 1904, there was filed in the office of the clerk of said court in said cause, objections to taking of testimony on suggestion of damages, which said objections are in the words and figures following, to-wit:

187 In the Circuit Court of the United States, Northern District of Illinois, Southern Division.

PEORIA GAS AND ELECTRIC COMPANY *vs.* CITY OF PEORIA. } In Chancery.

Now comes the complainant, Peoria Gas and Electric Company, by its solicitors, and in addition to such specific objections as it may hereafter make to any questions propounded to witnesses and their respective answers thereto, objects to the taking of testimony and to

ny and all testimony that may be offered by the defendant as to ny damages to be assessed against the complainant herein arising pon the suggestion of damages filed by said defendant in this pro-eeding, for the following reasons, namely:

1st. That said defendant is not entitled to have damages assessed n this proceeding, as sought by the suggestions of damages on file erein.

2nd. That there is no liability against the complainant in this roceeding for damages arising under said cause stated in defend-nt's suggestions of damages on file herein.

3rd. That said suggestions of damages are made up wholly of amages alleged to have been sustained by the defendant which are ot proper elements of damage to be considered under the record in his case.

4th. That it appears from said suggestions of damages that the ttorneys' service rendered and other expenses incurred, as claimed n said suggestions of damages, were each and all rendered and in-curred in the general defense of the suit.

188 5th. That it does not appear that defendant suffered any damage from the issuance of the preliminary injunction erein.

6th. That any testimony offered in support of defendant's sugges-ions of damages on file herein would be incompetent, immaterial nd irrelevant.

PEORIA GAS AND ELECTRIC COMPANY,
By E. C. RITSHER,
W. T. ABBOTT,
W. T. IRWIN,
Its Solicitors.

Endorsed: "Filed Feb. 24, 1904. Marshall E. Sampsell, clerk."

189 And afterwards on to-wit the twenty-fourth day of February, A. D. 1904, there was filed in the office of the clerk of said court, in said cause, motion for rule to file bill of particulars, which said motion is in the words and figures following, to-wit:

190 In the Circuit Court of the United States, Northern District of Illinois, Southern Division.

PEORIA GAS AND ELECTRIC COMPANY
vs.
CITY OF PEORIA. } In Chancery.

Now comes the complainant in the above entitled cause, Peoria Gas and Electric Company, by its solicitors, and moves the court for a rule upon the defendant to file herein forthwith and prior to proceeding to take the testimony upon the suggestions of damages

referred to the master herein, a bill of particulars setting forth in detail the damages alleged to have been sustained by the defendant, as alleged in its several suggestions of damages on file herein, for the following reasons, namely:

First. That this complainant is entitled to have exhibited a bill of particulars showing the several items and sums claimed as damages by the defendant in this proceeding.

Second. That the complainant cannot safely proceed to the taking of testimony herein upon said suggestions of damages without being first informed, by way of a bill of particulars, of the several items claimed by said defendant under said several suggestions of damages on file herein.

191 Third. That the complain- is entitled to have a bill of particulars exhibited herein prior to proceeding to take testimony upon said suggestion of damages, under the rules and regulations governing this court.

Fourth. That said suggestions of damages are indefinite and uncertain and do not sufficiently apprise the complainant of the damages sought thereby to be assessed against it.

PEORIA GAS AND ELECTRIC COMPANY,
By RITSHEL, MONTGOMERY, HART & ABBOTT,
JACK, IRWIN, JACK & DANFORTH,
Its Solicitors.

Endorsed: "Filed Feb. 24, 1904. Marshall E. Sampsell, clerk."

192 And afterwards, to-wit, on the twenty-fourth day of February A. D. 1904, there was filed in the office of the clerk of said court in said cause a motion, which said motion is in the words and figures following, tow-*ti*:

193 In the Circuit Court of the United States, Northern District of Illinois, Southern Division.

PEORIA GAS AND ELECTRIC COMPANY
vs.
CITY OF PEORIA. } In Chancery.

Now comes the complainant, Peoria Gas and Electric Company by its solicitors, and moves the master, on the suggestions of damages herein filed, to report to the court that no damages have been sustained by the defendant, as alleged in its suggestions of damages, under the record in this case, and that no competent evidence can be

offered by the defendant in support of any alleged damages arising under its suggestions of damages on file in this proceeding.

PEORIA GAS AND ELECTRIC COMPANY,
By E. C. RITSHER,
W. T. IRWIN,
W. T. ABBOTT, *Its Solicitors.*

Endorsed: "Filed Feb. 24, 1904. Marshall E. Sampsell, clerk."

194 And afterwards on to-wit the ninth day of March, A. D. 1904, there was filed in the office of the clerk of said court in said cause, the master's report on suggestion of damages, which said report is in the words and figures following, to-wit:—

195 United States Circuit Court, Northern District of Illinois, Southern Division.

PEORIA GAS & ELECTRIC COMPANY
vs.
CITY OF PEORIA. } Chancery. No. 288.

Master's Report.

Pursuant to an order of this court entered on the ninth day of February, 1904, a copy of which accompanies this report, whereby there was referred to the undersigned the suggestion of damages resulting from the wrongful suing — of the injunction herein, with instructions to take proof as to the damages sustained by the defendant by reason of such wrongful suing out of such writ of injunction and to report the same together with his conclusions ther-on, the master on the tenth day of February, 1904, notified counsel for the respective parties by mail, that a hearing would be had on February 15th, 1904. A copy of said notice accompanies this report.

Pursuant to said notice on February 15th, 1904, came Walter H. Kirk, solicitor for the defendant, and upon his motion, counsel for the complainant not being present, the hearing was continued until February 19th, 1904.

On February 19, 1904, there being present Walter H. Kirk and Winslow Evans, solicitors for the defendant and William Jack for the complainant, by agreement of counsel, the taking of proof was postponed until February 24th, 1904.

On February 24th, 1904 came the parties by W. T. Abbott and W. T. Irwin for the complainant and Walter H. Kirk and Winslow Evans for the defendant and thereupon the complainant filed with the master copies of motions that day filed with the clerk of the court, *i. e.*, objections to taking testimony, motion to report no damages, and motion for rule to file bill of particulars.

196 Thereupon witnesses on behalf of the defendant testified as shown by the evidence submitted with this report, showing that the defendant City of Peoria has expended the following amounts for the purposes indicated, as follows:

Printing abstract of evidence before the special master.....	$606.05
Attorney's fee paid to F. H. Tichenor.....	2500.00
Necessary expenses of F. H. Tichenor.....	169.49
Special Master I. C. Pinckney, *per diem*.....	678.50
Necessary expenses "	72.27
Special Master I. C. Pinckney, fee.....	500.00
C. P. Watson reporting evidence before special master.....	352.70
C. P. Watson, reporting, *per diem*.....	100.00
C. P. Watson, necessary expense.....	74.02
Attorney's fee paid William Jack.....	180.00

Also evidence showing that the defendant City of Peoria incurred additional expense as follows:

Special master, I. C. Pinckney, *per diem* unpaid.....	$9.00
Attorney's fee Henry Mansfield.....	1000.00
C. P. Watson, copies of evidence for defendant.....	396.13
Walter H. Kirk, city attorney, necessary expenses.....	6.84

197 On March 5, 1904, the parties appeared before the master for argument as to his report, W. H. Kirk and Winslow Evans appearing for the defendant and W. T. Irwin and W. T. Abbott for the complainant and after argument on behalf of the complainant, the master concludes (counsel for the defendant assenting) that no damages have been sustained by the defendant, City of Peoria, by reason of the suing out of the injunction in this cause. The master further reports that the costs of this reference should be taxed against the defendant, City of Peoria, to-wit the sum of twenty-four dollars ($24.00) for the taking of the evidence upon said reference and the master's fee to be fixed by the court. All of which — respectfully submitted.

F. C. HOWE,
Master in Chancery.

Endorsed: "Filed Mar. 9, 1904. Marshall E. Sampsell, clerk."

198 And afterward on to-wit the ninth day of March A. D. 1904 there was filed in the office of the clerk of said court in said cause, evidence and exhibits accompanying the master's report on suggestions of damages, which said evidence and exhibits are in the words and figures following, to-wit:—

PEORIA GAS & ELECTRIC COMPANY } Injunction and Relief.
vs.
CITY OF PEORIA. }

Testimony taken in the above entitled cause, upon defendant's suggestions of damages, before F. C. Howe, Esq., master in chancery, at the United States circuit court room, Government building, in the city of Peoria, in said district, on Wednesday, the 24th day of February, A. D. 1904, Mr. W. T. Irwin and Mr. W. T. Abbott appearing for the complainant, The Peoria Gas & Electric Company; Mr. Walter Kirk, city attorney, and Judge Winslow Evans appearing for the defendant, The City of Peoria.

Judge Evans, on behalf of the City of Peoria, offers in evidence a certified copy of rule 38, of the circuit court of the United States for the northern district of Illinois.

I. C. PINKNEY, called on behalf of defendant, City of Peoria, bei first duly sworn, deposes and says:

Direct interrogatories by Judge EVANS:

1. State your name, residence and occupation?

A. I. C. Pinkney; No. 1411 North Monroe street, Peoria, Ill. A practicing attorney at law.

2. Were you the special master who took the proof on the issue made by the pleadings in this case and made report on it?

A. Yes sir.

3. You are familiar, then, with the services rendered by the solic itors for the defendant, The City of Peoria, are you not?

A. In so far as such services were before me only.

4. You are familiar with the services that were rendered by Mr Tichenor in this case, are you not, in the taking of the proof and preparing and presenting the case on the whole record to the master?

221 A. No, Judge I could not say I am familiar with what work he did outside of the work that was done by him before me; I have no means of knowing whether he had anything to do with the preparation of any work outside of the hearings or not?

5. From your knowledge of what he did in the case, in the taking of proof and preparing and presenting the case to you as master, and from your knowledge of the questions that were involved, and the necessary investigation that a lawyer would have to make to prepare and present those questions would $2500 be a usual and customary fee for a reputable solicitor in this county and in this southern division of the northern district of Illinois for such services as were rendered by him?

Objected to by complainant as incompetent, immaterial, irrelevant and not a proper element of damage under the pleadings in this case.

A. Judge, I could not answer that question for the reason that I do not know of my own personal knowledge what he said to do with the case outside of his participation in the case before me in the taking of testimony.

6. What would be the usual and customary fee for the services you know he rendered before you?

A. I don't know; I don't know what the usual and customary fees are in this county in the United States court for services of that character.

7. Have you a statement or charge of the time put in by you as master for the city of Peoria?

A. Yes sir; with the exception of the time I put in in the preparation of my final report.

8. How many days were you engaged in taking testimony for the city of Peoria?

Objected to by complainant as immaterial.

A. Including the number of days consumed by the city on
222 the argument of the case before the master, with the number of days spent in taking testimony at the instance of the city of Peoria, I was engaged just 27½ days.

9. Did you render a bill to the city of Peoria for that number of days at $25.00 a day?

Objected to by complainant as incompetent and immaterial.

A. I did.

10. Did the city of Peoria pay you that sum?

Objected to by complainant on same grounds.

A. Yes sir.

11. That was in pursuance of an order of court theretofore entered, was it not?

A. Followed by an order of court thereafter made in that regard. The total amount of my *per diem* for the taking and hearing of testimony on that agreed compensation was $687.50 for which I received a warrant from the city of Peoria for the sum of $678.50, leaving a balance of $9.00 still due on the account unpaid, a fact which I had entirely overlooked.

12. What were your necessary expenses in taking the proof for the city?

Objected to by complainant as incompetent and immaterial.

A. $72.27 all told.

13. Did you render a bill to the city for those expenses?

A. I did, an itemized bill.

14. And the city paid it?

Ans. Yes sir.

15. Have you rendered a bill to the city of Peoria for $500., being one half of the fee fixed and allowed to you by order of the court filed June 8, 1903?

Objected to same grounds as before.

A. Yes sir, I have rendered a bill.

16. Have you received the amount thereof?

223 A. Yes sir, I received the amount about two weeks ago.

Cross interrogatories by Mr. ABBOTT:

1. All these days for which the city was charged for your services as master, you were engaged in the taking of evidence in the case on the issues presented by the pleadings and referred to you and the hearing of argument upon them—is that the fact?

A. That is true, yes sir.

Counsel for complainant objects to all of the foregoing testimony of the witness, I. C. Pinkney, on the ground that it is incompetent, and

immaterial, involving elements of damage not proper to be considered in this proceeding and for the same reasons move the court to exclude it.

THOMAS N. GORMAN, called on behalf of the defendant, The City of Peoria, being first duly sworn, deposes and says:

Direct interrogatories by Judge EVANS:

1. State your name and residence?
A. Thos. N. Gorman; 1020 S. Adams street, Peoria, Ill.
2. What official relation do you occupy to the city of Peoria?
A. I am a member of the city council.
3. How long have you been a member of the city council?
A. About 12 years.
4. Are you acquainted with the matter of the litigation involved in this case?
Ans. Yes sir.
5. Were you present at a conversation with Mr. Mansfield in May last, or about the 1st of May, with reference to his being retained as associate counsel with the city attorney then elect?
224 A. Yes sir.
6. State what that conversation was?

Objected to by complainant as incompetent, immaterial and irrelevant.

A. The conversation was between Mr. Mansfield, the city attorney Mr. Kirk, Mayor Woodruff, Alderman Proctor and myself. Our conversation was with reference to Mr. Mansfield's services in assisting the city attorney and the compensation that he was to receive and the services he was to render. It was agreed and understood that Mr. Mansfield's services to the city attorney would be up and to the time that the case was presented to the court and there was some discussion on the question of fees for such services. Mr. Mansfield said he ought to receive compensation amounting to $1500., but after discussing the question the agreement between the gentlemen I speak of and Mr. Mansfield was that his services were to be paid for at the rate of $1,000, that is $1000., for his services and if there were any outside trips to be taken his expenses would be additional.

Complainant objects to the foregoing answer as incompetent, immaterial, irrelevant and moves the court to exclude it.

7. You have stated that was the agreement and understanding, state as nearly as you can what the parties said there rather than your conclusion as to what the agreement was.

Objected to by complainant as incompetent, immaterial and irrelevant.

A. The fee paid Mr. Tichenor was one of the things talked of; it was considered that the fee paid him was exorbitant and the purpose of the meeting with Mr. Mansfield was that there would be an understanding, which condition did not exist in the Tichenor matter, and that the city council would know something about the probable expense involved in the further litigation of this case.

225 Complainant objects to the foregoing answer as incompetent, immaterial and irrelevant and moves the court to exclude it.

6. Did any one, if so who, ask Mr. Mansfield as to what he would perform the services mentioned for?

Objected to by complainant as incompetent, immaterial and irrelevant.

A. That question was asked by Mayor Woodruff.
9. What did Mr. Man-field reply?

Objected to by complainant same grounds.

A. Finally he replied he would give his services for $1000.
9. Were those present a committee of the city council?
A. The parties present were the finance committee of the city council, the mayor and the city attorney—the meeting being held in the mayor's office.
10. They were acting for the city council in this matter?

Objected to by complainant as leading, suggestive, incompetent and calling for a conclusion.

A. Yes sir, it was by an act of the city council referred to that committee.

Complainant objects to the foregoing answer as incompetent, immaterial, hearsay, not the best evidence and moves the court to exclude it.

12. Did Mr. Mansfield in pursuance of what was said and done there at that time, go on and render the services that were mentioned there as solicitor for the city thereafter?
Ans. Yes sir.

Counsel for complainant objects to all of the foregoing evidence of the witness, T. N. Gorman, both questions and answers, as incompetent, immaterial, irrelevant, and for the further reasons they relate wholly to matters of damage, not proper to be considered in these proceedings and for the same reasons moves the court to exclude his testimony.

226 HENRY MANSFIELD, called on behalf of the defendant, Th City of Peoria, being first duly sworn, deposes and says:

Direct interrogatories by Judge EVANS:

1. State your name, residence and occupation.
A. Henry Mansfield; Peoria, Ill.; attorney at law.
2. Are you an attorney and counselor at law of the circuit cour of the United States for the northern district of Illinois?
A. I am.
3. Were you formerly city attorney of the city of Peoria?
A. I was.
4. Were you city attorney during the progress of litigation, or a part of it, in this case?
Ans. I was.
5. Are you familiar with the services rendered by Mr. Tichenor as associate counsel in this case?
Ans. I am.
6. Were you the city attorney during the time he rendered services as solicitor to the city of Peoria in this case?
Ans. I was.
7. Was it reasonably necessary for you to have assistant counsel in order to properly protect the rights and interests of the city in this case?

Objected to by complainant as incompetent and immaterial.

A. I thought so.
8. What was the general character of the services rendered by Mr. Tichenor as solicitor for the city of Peoria in this case?
A. In deciding upon the various matters of defense, in seeking witnesses and in examining witnesses upon the line of defense that had been mapped out and in looking up and becoming familiar with the law pertaining to the case.
9. Did he also participate in preparing, presenting and arguing the case before the master?
Ans. Yes and before the court.

227 10. Do you know how much he was paid by the city of Peoria for his services as such solicitor?

Objected to by complainant as incompetent and immaterial.

A. I only know so far as I O K'd the bill, that was presented by Mr. Tichenor.
11. That bill was for the sum of $2500?

Objected to same grounds.

A. Yes sir.
12. Was that the usual and customary fee of reputable attorneys in this county and in this southern division of the northern district of Illinois for such services as were rendered by Mr. Tichenor for the city?

Objected to by complainant same grounds.

A. I do not believe I am quite familiar enough with the customary fees charged to answer that question but I will say that in my opinion it was a reasonable fee for the work and services rendered.

Complainant's counsel objects to the foregoing answer as incompetent and moves the court to exclude it.

13. Did you continue as associate counsel with the present city attorney in this case after the expiration of your term as city attorney in May last up to the time and concluding with the hearing before the court?

A. I don't know what you mean by associate counsel; I did all the work in the case when I was connected with it.

14. I will ask you if you continued with the city attorney from the time of the beginning of the present city attorney's term of office until the case was argued and presented to the court?

A. Mr. Kirk at that time was city attorney but he did none of the work connected with the case at all except to prepare the index to the abstract of record.

228 15. Well, you participated in and represented the city as a solicitor in the case?

Ans. I did.

16. Who acted for the city in employing you?

Objected to by complainant as incompetent and immaterial.

A. Well, I don't know; there was a meeting, as I understood it, of the finance committee together with the mayor and city attorney which meeting I attended, and I understood that I was employed by the city through them.

Complainant objects to the foregoing answer as incompetent and immaterial and moves the court to exclude it.

17. Did you have any conversation with them about the first week in May last with regard to the amount of your compensation and the services you were to render? If so state what it was.

A. I did; I was telephoned to and requested to come up to the city hall, and when I got up there I found the mayor, E. N. Woodruff, Thos. N. Gorman, Chas. Proctor and Mr. Kirk in the mayor's office and they took up the matter of engaging me as counsel in the gas case; I don't know the exact words of the conversation that took place there, but I was asked, how much I would charge to conduct the case up to the hearing before the court and I told them that was very hard to determine as I could not determine the length of time it would be before the court would meet; the argument was to be made before the master, however, on or about the first day of June, and the mayor was acquainted with that fact, and he said, "Well, we will give you $1000. to take care of this case and argue it up to

the final hearing" and said, if it only took 20, days that woul
at the rate of $50.00 a day; I said that while the master was to
the arguments on the exceptions at that time that it wou d n
sarily take longer than that time for the court to hear the
and decide it; and I stated that if they wanted me to n
a round sum I would do it for $1500; the mayor said, "We
it takes any longer time than that, we will allow yo
229 reasonable fee in the matter"; it did take longer than t
the time I spent upon the case, with the exception of 7
was from the 8th day of May, 1903, or the day immediately
my engagement by the city at that time, up to the 23rd day of
tember, 1903. I would like to say in this connection with refer
to the testimony of the gentlemen who have testified before me,
it would have been folly upon my part if I had made such arra
ment to afterwards go to work and prepare an abstract of the rec
and also file a written brief in the case when the printers got
sum of over $600. for simply printing that abstract and brief
taking my stenographer's fees out I would not get as much as
printer did.

Complainant objects to the foregoing answer as incompetent,
material and irrelevant, and moves the court to exclude it.

18. What would be a usual and customary fee for a reputable
torney in this county and in this southern division of the north
district of Illinois for such services as were rendered by you in p
suance of the arrangement you had with the finance committee,
mayor and the city attorney?

Objected to by complainant as incompetent and immaterial.

A. As I stated before, I do not consider myself familiar with wh
would be a usual and customary fee to be charged in a case of th
kind, but I believe that a fee of $2500. for the services I rendered
the city would be a reasonable fee.

19. Would $1000. be any more than a usual and customary fee

Objected to by complainant same ground as before.

A. I do not know of any reputable attorney in the city of Peoria,
in the district mentioned, who could do the work which I performe
taking into consideration the length of time I was engaged, tha
would even consider taking the case upon the basis of such a fee
$1000.

230 20. Did you render services as solicitor for the city
Peoria in pursuance of your arrangement with the financ
committee, the mayor and city attorney?

Ans. I did.

Cross interrogatories by Mr. ABBOTT:

**1. At the time Mr. Tichenor came into the case to assist you, th
complainant's evidence in chief was all in, was it not?**

A. Yes sir, it was.

2. And Mr. Tichenor's services began, I presume, with consultations with reference to the policy to be pursued in conducting the defense and securing witnesses to present the city's side of the case?

Ans. Yes sir.

3. And that was followed up by the work of securing witnesses and in their examination before the master?

Ans. Yes, sir, it was.

4. And his services also included work in connection with the rebuttal testimony taken by the complainant?

Ans. It did.

5. And also the preparation of the case for argument before the master and that argument?

Ans. Yes sir.

6. Then it is a fact, is it not, that all the services rendered by Mr. Tichenor were rendered in the preparation for the putting in of evidence on the part of the city and putting in of that evidence and the following of it up to the time of the argument before the master of the city's defense in the case?

A. Yes, I believe that is true.

7. Now, after you came into the case under special employment, after you ceased to be city attorney, the services rendered by you, as you have testified, were in the further carrying on of the case from the time of the making of the master's report, that is, in the preparation of objections to the master's report, the argument thereon, the preparation of exceptions and then the preparation of the case for argument before the court, including the work which you did in the way of dictating, having typewritten and prepared for
231 the printers the abstract?

A. Yes sir, and the brief.

8. And that work I believe you testified was substantially all performed by yourself?

Ans. Yes sir.

Counsel for complainant objects to all of the foregoing testimony of the witness, Henry Mansfield, both questions and answers, on the ground that the same is incompetent, irrelevant and immaterial, relating sole-y to matters of damage not proper to be considered in this proceeding and on the same grounds moves the court to exclude it.

CHARLES S. PROCTOR, called on behalf of the defendant, The City of Peoria, being first duly sworn, deposes and says:

Direct interrogatories by Judge EVANS:

1. State your name, residence and occupation.

A. Chas. S. Proctor; No. 920 Moss Ave., Peoria, Ill.; manufacturer.

2. What official relation, if any, do you occupy to the city of Peoria?

A. Yes, I think so.

35. Were the items of expenses rendered by you to the city and paid by the city to you reasonable and necessary expenses incurred by you in rendering services as solicitor for the city of Peoria in this case which you have already mentioned?

Objected by complainant as immaterial.

A. They were absolutely.

36. Was there any contract in advance between you and the city as to the amount of your fees for your services in behalf of the city in this case?

212 A. No sir, none whatever, the subject was never — until I presented my bill.

37. At whose instance and request in the first place did you render your services as solicitor for the city of Peoria?

Objected to by complainant as immaterial.

A. The city attorney at that time, Henry Mansfield, told me I had been retained to assist in the defense by the city.

39. And your bills as you have mentioned were subsequently allowed by the city council and paid to you?

Objected to by complainant as immaterial.

A. Yes sir.

Cross interrogatories by Mr. IRWIN:

1. I understand that you came into the case some time after the hearing had been commenced?

Ans. Yes sir.

2. All the services that were rendered by you were in the taking of the testimony and on the final hearing of the case on the general merits of the case, were they not?

A. Yes sir on the whole record.

3. Looking after witnesses and the taking of the testimony you took was as to the general issues involved in the case?

A. It pertained to all of the questions involved.

4. But was on the merits of the case as made up by the issues?

A. Yes sir, necessarily so.

Counsel for complainant objects to all of the foregoing testimony of the witness, F. H. Tichenor, both questions and answers, on the ground it is incompetent, immaterial irrelevant and because the matters testified about are not proper elements of damage to be considered in this proceeding and for the same reasons moves the court to exclude said testimony from the record.

213 WALTER H. KIRK, called on behalf of the defendant, The City of Peoria, being first duly sworn, deposes and says:

Direct interrogatories by Judge EVANS:

1. State your name occupation and place of residence.
A. Walter H. Kirk; attorney at law; Peoria, Ill.
2. What, if any, relation do you occupy to the city of Peoria?
A. I am at present city attorney.
3. When did your term as city attorney commence?
A. May, 1903.
4. Did you enter on the discharge of your duties at that time?
A. I did; I think it was the 5th day of May.
5. Had you at that time had any connection with, or knowledge of, the matter involved in this suit?
Ans. No sir.
6. In your judgment, was it necessary at that time to employ assistance for you to reasonably protect the rights and interests of the city in this case?

Objected to by complainant as incompetent an- immaterial.

A. Yes sir.
7. Was an assistant engaged to assist you in representing the city as solicitor in this case from that time on?
Ans. Yes sir.
8. Who was it?
Ans. Henry Mansfield.
9. He was the former city attorney and had been prior to that time engaged in this case had he not?
A. Yes sir, he was my immediate predecessor.
10. How long did he continue in the case?
A. From along about the middle of May, 1903, some time in the fore part or about the middle of May, until the matter was submitted
214 before the court, the exact date of which I do not now recall, but the bill will show when it was argued in this room before Judge Humphrey.
11. Had the master's report at that time been made and filed?
A. The master had made his report known to the attorneys in the case and by courtesy I was requested to be present, I think, on the second day of May, 1903, just before I came into office.
12. Did Mr. Mansfield's services cover the preparation of objections to the report and exceptions to the report before the court and the presentation of those exceptions and argument of the case?
A. Yes sir.
13. Did he also participate in the preparation of the abstract as well as the argument?
Ans. Yes sir.
14. Was a printed argument prepared and filed with the court?
A. Yes sir.
15. Was an oral argument also made?

A. As I remember it, the oral argument was a presentation of the written argument; the written argument was in type-written form, but substantially the same argument, with possibly a few variations therefrom was presented before the court from man-script and later a printed argument was filed and taken by the court.

16. Did Mr. Mansfield continue in the case after that or perform any services after it had been argued and taken under advisement by the court?

Ans. No sir.

17. Did you with any member of the city council meet with and make any arrangement with Mr. Mansfield to assist you as solicitor for the city in this case?

Ans. Yes sir.

18. When was that?

A. I think it was on the 7th or 8th day of May, 1903, following a special meeting of the city council which was held on the 6th of May.

19. Who all were present?

215 A. Mayor E. N. Woodruff, Alderman Chas. D. Proctor, chairman of the finance committee, Alderman Thomas N. Gorman, a member of the finance committee, Mr. Henry Mansfield and myself.

20. What was said between you and Mr. Mansfield at that time about his rendering services and the amount of compensation he should receive therefor?

Objected to by complainant as incompetent, immaterial and irrelevant.

A. Mr. Mansfield was told, in the presence of those whom I have named, that he had been selected to continue in the interests of the city as associate counsel in this gas case and that it was the purpose in having him meet those who were present to have an understanding and an agreement between him and the city with respect to such fees as he should want for his services in carrying the matter forward. And at that time and place Mr. Mansfield agreed to come into the case, be associated with me in it and assist me in taking such further steps as would be necessary—to file objections before the master to his findings and, if necessary, take exceptions thereto and present the same before the court and submit the matter to the court, for a total fee of $1,000.

Counsel for complainant objects to the foregoing answer as incompetent, immaterial, irrelevant and hearsay, the city could not make a contract of that character, and moves the court to exclude it.

21. Just state what Mr. Mansfield said there in that connection not merely your conclusion as to it, but what he said and what was said by the others present.

Objected to by complainant as incompetent, immaterial and irrelevant.

A. Mayor Woodruff, I believe, asked Mr. Mansfield about how many days' time it would require for the services necessary to be performed, and about how much per day it would be worth.

216 I think Mr. Mansfield replied it would be impossible to tell how many days it would require and that he could not submit any proposition or make any agreement with reference to the number of days at so much per day; that he would prefer to make an agreement that should include all the work to be done and to give it the attention necessary to do it. He also added that if it was necessary for him to be to any expenses in being away from Peoria he should expect his incidental traveling expenses in addition while away.

Counsel for complainant objects to the foregoing answer as incompetent, immaterial and irrelevant and moves the court to exclude it.

22. What did Mr. Mansfield say, if anything, as to what he would render his services for, which were yet to be performed, or were proper to be done by him in this case?

Objected to by complainant as incompetent, immaterial, irrelevant and hearsay.

A. He said he would do all that was necessary to do in the matter and submit it to the court, be associated with me in the case for $1,000. and his necessary traveling expenses if it were necessary for him to be away from home.

Counsel for complainant objects to the foregoing answer as incompetent, immaterial and irrelevant and moves the court to exclude it.

23. Did he, in pursuance of that understanding and agreement at that time enter upon the discharge of his duties rendering services to the city of Peoria as solicitor in this case from that time on?

Objected to by complainant as assuming there was an agreement; also as incompetent, immaterial, irrelevant and for the reason the city could not make a contract in that manner unless authorized by the city council.

217 A. Yes sir.

24. Do you know what necessary incidental expenses were incurred by Mr. Mansfield in rendering his services from that time on for the city of Peoria as solicitor in this case?

Objected to by complainant, as incompetent, immaterial, and irrelevant.

A. There were two trips made to Springfield, Ill., the exact dates of which I do not recall, but that was all that was done outside of the city of Peoria.

25. What were his necessary expenses on those trips, if you know?

Objected to by complainant as incompetent, immaterial and irrelevant.

A. My recollection is that the round trip fare from here to Springfield and return is about $3.40 or $3.50; I don't remember just the amount.

26. How long was he at Springfield each time?

Objected to by complainant as immaterial.

A. He left Peoria in the morning between 7 and 8 o'clock and left Springfield on his return after luncheon about 2 or 3 o'clock.

27. About what would be the necessary expenses incurred on each of those trips?

Objected to by complainant as incompetent.

A. Not to exceed a dollar over and above railroad fare.

28. Are you an attorney and counselor at law of the United States circuit court of the northern district of Illinois?

A. Yes sir.

29. Were the services which Mr. Mansfield rendered, after you became city attorney, as associate counsel and solicitor for the city of Peoria in this case, reasonably worth the sum of one thousand dollars?

218 Objected to by complainant as incompetent, immaterial and not a proper element of damage under the pleadings in this case.

A. Yes sir, I think that is a fair and reasonable fee for the services that were necessary to be rendered and which were rendered.

30. Is $1000. the usual and customary fee of reputable solicitors in this county and in the southern division of the northern district of Illinois for such services as rendered by Mr. Mansfield as solicitor for the city of Peoria?

Objected to by complainant same grounds as before.

A. I believe it is. There is one word I want to add that has occurred to me to my answer to a former question, that is, as to what was said at this meeting referred to. Mr. Mansfield was asked in naming a fee for which he would go on with me in the case as associate counsel, to consider the bill the city council had recently paid, viz: $2500. to Mr. Tichenor, who had been associated with him in the case, and to take into consideration the fact that the city council of the city of Peoria would not pay any such fee, that they regarded the fee as excessive and too high; he was also asked to take that into consideration and to further consider the fact he personally had a pride and a desire to win the case and to be connected with it to the end; that he should consider those things; and after it had been discussed back and forth the agreement was made by Mr. Mansfield to which I have testified.

Counsel for complainant objects to the foregoing voluntary statement of the witness as incompetent, immaterial, irrelevant and hearsay.

Cross interrogatories by Mr. ABBOTT:

1. Were all of the services rendered by Mr. Mansfield during
219 the time of his special employment after you became city attorney as you have testified, connected with the preparation of objections to the master's report, arguing those objections before the master, the preparation of exceptions to the master's report and the argument of the whole case before Judge Humphrey—were those the services rendered by him?

A. Those services were rendered and in addition to those the record in this case was, with Mr. Mansfield's co-operation and assistance, abstracted and printed in the form presented here in two volumes and indexed.

2. Then, if I understand you, the services covered by my former question and those that you indicate in your answer thereto comprised all the services rendered by Mr. Mansfield during this period?

A. I think they do.

3. Were there any services rendered by him in the case in any other connection during this time?

A. None except the trips to Springfield I have mentioned.

4. Do you remember what was done on those trips to Springfield in a general way?

A. The first trip to Springfield, I believe, was made upon a notice served by the complainant in this case on the defendant to appear there for the purpose of setting a day by which all exceptions to the master's report should be on file. There may have been some other minor questions presented by counsel to the court in chambers, but I believe that was the main purpose of that trip; Mr. Mansfield and myself were both there in the interests of the city. The second trip, which I believe was along in the early part of July—I may be mistaken as to just the time but it was in the beginning of the summer—was for the purpose of having the court set a time when counsel in this case could be heard before the court.

220 5. At both of those occasions, either the master, or counsel for complainant, were the moving parties and you were there in defense of the city's interests?

A. As I recollect it, we were. I know now of no occasion the city had to be there.

Counsel for complainant objects to all of the foregoing testimony of the witness Walter H. Kirk, both questions and answers, on the ground it is incompetent, immaterial, irrelevant and because the matters testified about are not proper elements of damage to be considered in this proceeding and for the same reasons move- the court to exclude the same from the record.

not able at this time to state definitely as to the number of times I went there with reference to this particular case. I think applications for an injunction were made upon both bills at the same time and that I attended objecting to the issuance of the injunction; the court ordered the injunction and I then filed an answer in one case and a demurrer in the other. I know I attended at Chicago at least twice on this particular case. When my bill was made out by me, it was made out with reference to the two cases and I cannot now recall particularly the services I performed in each individual case. My charges for the entire services for which I received compensation, including expenses, was $360. and I think about half of those services were performed in this case of The Peoria Gas & Electric Company against The City of Peoria.

Complainant objects to the foregoing answer as incompetent and immaterial and moves the court to exclude it.

15. Did the city pay you the amount of the bill so rendered?

Objected to as incompetent and immaterial?

A. They paid me $360., yes sir.

16. You say one half of that was for services rendered in this case?

A. There was no distinction made between the services in this case and the services in the other case but I think about one half of the services were rendered in this case.

17. Is $180. a usual and customary fee for such services, or would it be for a reputable lawyer in this county and in this southern division of the northern district of Illinois?

Objected to by complainant as incompetent and immaterial.

241 A. It would be a very reasonable fee and I think probably considerably less than the usual and customary fee for services rendered in that case. I will say I — ashamed of the bill when I looked at it.

Counsel for complainant objects to all the foregoing testimony of the witness, William Jack, as incompetent, immaterial and irrelevant, relating wholly to a question of expense not proper to be considered in this proceeding and for the same reasons move the court to exclude it.

This was all the evidence in the case.

" Filed Mar. 9 1904.

MARSHALL E. SAMPSELL, *Clerk.*"

242 In the Circuit Court of the United States, Northern District of Illinois, Southern Division.

PEORIA GAS AND ELECTRIC COMPANY
vs.
CITY OF PEORIA. } In Chancery.

Now comes the complainant, Peoria Gas and Electric Company, by its solicitors, and in addition to such specific objections as it may hereafter make to any questions propounded to witnesses and their respective answers thereto, objects to the taking of testimony and to any and all testimony that may be offered by the defendant as to any damages to be assessed against the complainant herein arising upon the suggestions of damages filed by said defendant in this proceeding, for the following reasons, namely:

1st. That said defendant is not entitled to have damages assessed in this proceeding, as sought by the suggestions of damages on file herein.

2nd. That there is no liability against the complainant in this proceeding for damages arising under said causes stated in defendant's suggestions of damages on file herein,

3rd. That said suggestions of damages are made up wholly of damages alleged to have been sustained by the defendant which are not proper elements of damage to be considered under the record in this case.

4th. That it appears from said suggestions of damages that the attorney's services rendered and other expenses incurred, as claimed in said suggestions of damages, were each and all rendered and incurred in the general defense of the suit.

243 5th. That it does not ap-ear that defendant suffered any damage from the issuance of the preliminary injunction herein.

6th. That any testimony offered in support of defendant's suggestions of damages on file herein would be incompetent, immaterial and irrelevant.

PEORIA GAS AND ELECTRIC COMPANY,

245 In the Circuit Court of the United States, Northern District of Illinois, Southern Division.

PEORIA GAS AND ELECTRIC COMPANY
vs.
CITY OF PEORIA. } In Chancery.

Now comes the complainant in the above entitled cause, Peoria Gas and Electric Company, by its solicitors, and moves the court for a rule upon the defendant to file herein forthwith and prior to proceeding to take the testimony upon the suggestions of damages referred to the master herein, a bill of particulars setting forth in detail the damages alleged to have been sustained by the defendant, as alleged in its several suggestions of damages on file herein, for the following reasons, namely:—

First. That this complainant is entitled to have exhibited a bill of particulars showing the several items and sums claimed as damages by the defendant in this proceeding.

Second. That the complainant cannot safely proceed to the taking of testimony herein upon said suggestions of damages without being first informed, by way of a bill of particulars, of the several items claimed by said defendant under said several suggestions of damages on file herein.

Third. That the complainant is entitled to have a bill of partic-

ulars exhibited herein prior to proceeding to take testimony
246 upon said suggestions of damages under the rules and regulations governing this court.

Fourth. That said suggestions of damages are indefinite and uncertain and do not sufficiently apprise the complainant of the damages sought thereby to be assessed against it.

247 In the Circuit Court of the United States for the Northern District of Illinois, Southern Division.

TUESDAY, *February* 9, *A. D.* 1904.

Present: Honorable J. Otis Humphrey, district judge.

PEORIA GAS AND ELECTRIC COMPANY, Complainant, *vs.* CITY OF PEORIA, Defendant.	288.	In Chancery. For Injunction.

This cause coming on to be heard at this term, having heretofore been presented and argued by counsel and thereupon upon consideration thereof, it is ordered, adjudged and decreed that the exceptions made and filed herein on behalf of the defendant City of Peoria against the failure of the special master I. C. Pinckney to find in his report on file herein that the complainant, prior to the commencement of this suit, had formed, entered into and become a party to an illegal and unlawful combination, pool, trust, combination or arrangement with the Peoria Gas Light and Coke Company (the old gas company) should be and the same is hereby sustained.

And the defendant by leave of court files herein its suggestions of damages and the court being of the opinion that said injunction was wrongfully sued out, said suggestions of damages by the defendant are hereby referred to F. C. Howe, master in chancery of this court to take proof as to the damages sustained by the defendant by reason of such wrongful suing out of such writ of injunction and to report the same together with his conclusions thereupon for the information and advice of the court.

Endorsed: "Filed Mar. 9, 1904, Marshall E. Sampsell, clerk."

248 In the Circuit Court of the United States of America for the Northern District of Illinois, Southern Division.

I, Marshall E. Sampsell, clerk of the circuit court of the United States of America, for the northern district of Illinois, do hereby certify the above and foregoing to be a true and correct copy of the order of reference entered in said court on the ninth day of February A. D. 1904, in the cause wherein The Peoria Gas and Electric Company is complainant and The City of Peoria is defendant as the same appears from the original records now remaining in my custody and control.

In testimony whereof, I have hereunto set my hand and affixed the seal of said court at my office in Peoria, in said district and division, this ninth day of February A. D. 1904.

{ Seal of Circuit Court U. S., Northern Dist. Illinois, Southern Division, 1887. }

MARSHALL E. SAMPSELL, *Clerk*,
By F. C. HOWE, *Ch. Dep.*

249 And afterwards on to-wit the twenty-third day of March, A. D. 1904, there was filed in the office of the clerk of said court in said cause, a petition for rehearing by complainant, which said petition is in the words and figures following, to-wit:

250 In the Circuit Court of the United States for the Northern District of Illinois, Southern Division. In Chancery.

PEORIA GAS AND ELECTRIC COMPANY, Complainant,
vs.
CITY OF PEORIA, Defendant. } No. 288.

Petition for Rehearing by Complainant.

To the Hon. J. Otis Humphrey, judge of said court:

Your petitioner, The Peoria Gas and Electric Company, complainant herein, respectfully prays this honorable court to grant a rehearing in the above cause and refers in support thereof to the points hereto attached and made part hereof, which it is respectfully submitted have been overlooked or misapprehended by the court.

W. T. ABBOTT,
W. T. IRWIN,
E. C. RITSHER,
Solicitors for Complainant.

251 *Points in Support of Petition for Rehearing.*

The opinion of the court.

The court, in its opinion hereto attached and made a part hereof, (Exhibit A), says:

"The Illinois anti-trust law, as construed by the supreme court of Illinois, leaves no doubt in my mind that this record shows on the part of this complainant a violation of that act in the manipulation of the stock of both companies, the use of the mains of both companies, the performance by complainant's servants of the business of both companies, the simultaneous agreement of rates between the officers of both companies, and the contract in evidence between the two companies—all lead to the inevitable conclusion that there was an understanding between complainant and the old company such as the Illinois act prohibits. A court of equity will not assist complainant to reap the fruits of such unlawful combination."

I.

The court has misapprehended the facts as disclosed by the record.

a. The evidence shows no "manipulation of the stock of both companies."

Complainant's Brief 4, pp. 38 & 67.

252 *b.* There is nothing in the record which warrants the charge of "the use of the mains of both companies."

Complainant's Brief 4, pp. 37 & 38.

c. The "performing by complainant's servants of the business of both companies," consisted in the rendering of service for a limited period of time as a business accomm-dation.

Complainant's Brief 4, p. 39.

d. As to "the simultaneous agreement of rates between the officers of both companies," the record discloses nothing which warrants the charge that such agreement, if any existed, was unlawful, or that there was any agreement between the companies to maintain the prices so made.

Moreover, as a matter of fact, the rates of the two companies did not remain the same except for a period of about ninety days.

Complainant's Brief 4, p. 39 to p. 48.

United States *vs.* Trans-Missouri Freight Association, circuit court of appeals, 8th dist., 58 Fed. Rep. 58.

e. "The contract in evidence between the two companies" was entirely lawful.

Complainant's Brief 4, p. 39.

Complainant's Brief 1, pp. 38 & 39.

253 II.

The court misapprehended the law applicable to this case.

1. The doctrine that "he who comes into equity must come with clean hands" is subject to well-defined limitations, and under the limitations of that doctrine the maxim is not applicable to the facts in this case, because

a. The illegal acts charged in the court's opinion are not connected with the matter in litigation so that they in any manner affect the equitable relations subsisting between the two parties at the time the suit was commenced, and

b. All such acts, except the circumstance of the change of price on August 1, 1900, took place after the commencement of the suit.

Pomeroy's Equity Jurisprudence, sec. 399.
Lewis appeal, 67 Penna. St., 166.
Complainant's Brief 2, pp. 110–116.
Liverpool & London etc. Ms. Co. *vs.* Clunie (C. C. Co.) 88 Fed. 160.

2. If complainant is guilty of the illegal acts charged in the court's opinion, such fact should be determined only in a direct proceeding, by the proper governmental authority, and not in a collateral attack.

New Memphis Gas Light & Coke Co. *vs.* City of Memphis, 72 Fed. Rep., 952.
Complainant's Brief 2, pp. 104–110, and
Complainant's Brief 4, pp. 16–20.

254 The Federal courts have repeatedly held that the question of the illegality of corporate acts cannot be raised in a collateral proceeding. Some of these decisions have been rendered in cases where it was attempted to show collaterally illegal acts of the complainant under this same Illinois anti-trust statute.

La Fayette Bridge Co. *vs.* Streator, 105 Fed., 729.
Connolly *vs.* Union Sewer Pipe Co. 184 U. S. 540.

3. The Illinois anti-trust act mentioned by the court has been declared by the United States Supreme Court to be in conflict with the Federal Constitution and void.

Connolly *vs.* Union Sewer Pipe Co., 184 U. S., 540.

Cited with approval by the supreme court of Illinois in

Complainant respectfully submits that upon the points stated it is entitled to a re-hearing and that the opinion heretofore rendered

herein should be withdrawn and a decree entered in conformity with the prayer of the complainant's bill.

Respectfully submitted,

E. C. RITSHER,
W. T. IRWIN,
W. T. ABBOTT,
Solicitors for Complainant.

I certify that in my opinion the foregoing petition for rehearing of Peoria Gas and Electric Company, complainant, is well founded in law and proper to be filed in the above cause.

E. C. RITSHER,
Solicitor for Complainant.

255 UNITED STATES OF AMERICA, } ss:
Northern District of Illinois, }

Edward C. Ritsher, being first duly sworn, on oath states that he is the solicitor of Peoria Gas and Electric Company, and that he has read the foregoing petition for rehearing of complainant in this suit, and that the same is not interposed for the purpose of delaying said suit or any proceeding therein.

[NOTARIAL SEAL.] EDWARD C. RITSHER.

Subscribed and sworn to before me this 23rd day of March A. D. 1904

ROBERT F. JACK,
Notary Public.

256 EXHIBIT A.

In the Circuit Court of the United States, Northern District of Illinois, Southern Division.

PEORIA GAS AND ELECTRIC COMPANY }
vs. }
CITY OF PEORIA. }

Opinion by Judge J. Otis Humphrey, February 8, 1904.

This matter comes up on exceptions to the master's report. I believe both complainant and defendant have filed exceptions to certain affirmative holdings of the master, and both parties have also filed exceptions because the master failed to hold—omitted to hold—upon certain other questions. Without undertaking to remember or specify the facts about this long list of exceptions, this record shows that complainant's bill was filed on September 18, 1900, seeking to enjoin the enforcement of an ordinance of the city of Peoria fixing the maximum rate for gas, which ordinance had been passed on the 4th day of the same month,—September, 1900.

A. Alderman for the fifth ward in the city council.

3. How long have you been a member of the city council?

A. About four years.

4. Were you present at a conversation in the fore part of last May with Mr. Mansfield and others concerning his retention as solicitor for the city of Peoria in this case?

A. Yes sir.

5. Who all were present at that time?

232 A. Walter H. Kirk, the present city attorney, Mayor E. N. Woodruff, Alderman Thos. N. Gorman, Henry Mansfield and myself.

6. Those present of the city officials were a committee of the city council, were they not?

A. The finance committee of the city council.

7. What was your conversation with Mr. Mansfield on that occasion?

Objected to by complainant as incompetent and immaterial.

A. The committee, at the direction of the city council, had called in Mr. Mansfield to arrive at an understanding with him as to what part he would take in assisting Mr. Kirk, the city attorney, in continuing the gas case for the city, and it was largely a matter of understanding as to what compensation Mr. Mansfield should receive for such services. Mr. Mansfield said first he thought a fee of $1500. was what he should receive; there was some objections to that amount and Mr. Mansfield finally agreed to accept the sum of $1000. for his services exclusive of traveling expenses.

Complainant objects to the foregoing answer as incompetent and immaterial and moves the court to exclude it.

8. What did Mr. Mansfield say about it—you have stated that he agreed so and so—I ask you to say now what he said as to what compensation he would accept to act as solicitor for the city in the case?

Objected to by complainant as incompetent and immaterial.

A. He said he would do it for the sum of $1000.

Complainant objects to the answer as incompetent and immaterial and moves the court to exclude it.

9. Did he perform services as solicitor in pursuance of the conversation and arrangement entered into at the time?

Objected to by complainant as incompetent and calling for a conclusion.

233 A. So far as I know, he did.

Counsel for complainant objects to all of the foregoing evidence of the witness, Charles S. Proctor, both questions and answers, on

the ground that the same is incompetent, immaterial and irrelevant, relating wholly to matters of damage not proper to be considered in this proceeding, and on the same grounds move the court to exclude it.

EDWARD N. WOODRUFF, called on behalf of defendant, The City of Peoria, being first duly sworn, deposes and says:

Direct interrogatories by Judge EVANS:

1. State your name, residence and occupation.

A. E. N. Woodruff; No. 1026 N. Jefferson Ave., Peoria, Ill. I am in the ice business.

2. What official relation, if any, do you occupy to the city of Peoria?

Ans. Mayor.

3. How long have you occupied that position?

A. Since May 5th, 1903.

4. Were you present at this conversation with Mr. Mansfield about the time you became mayor?

Ans. Yes sir.

5. State who were present and what the conversation was?

Objected to by complainant as incompetent and immaterial.

A. There were present Alderman Gorman, Alderman Proctor, City Attorney Kirk, Mr. Mansfield and myself. Alderman Gorman and Proctor represented the finance committee, Mr. Kirk the law department, Mr. Mansfield represented himself and I represented the city as mayor. They came into my office with the proposition of employing an associate attorney for which the finance committee had been at a special meeting of the council empowered to employ, to assist Mr. Kirk in the further prosecution of the gas case.

234 The question the committee had to deal with was the question of pay. Mr. Mansfield offered to handle the case up to Judge Humphrey's court, that is as nearly as I can explain it, for the sum of $1500.; the matter seemed finally up to me and I simply told the committee and Mr. Mansfield that I felt I could not reasonable sign a voucher for over $1000 for that service; that while I had no right to put an estimate on a man's capacity or ability as an attorney I thought that was as much as the city should pay; Mr. Mansfield raised the question that it might take some six seven or eight months and I said I felt the city was able and willing to pay for services rendered it and if it seemed necessary and right later the city would certainly be willing to pay its part but that was a matter which would be adjusted later if anything was done with it. The price agreed on for Mr. Mansfield was $1000. to take the case to Judge Humphrey's court.

Complainant's counsel objects to the foregoing answer as incompetent and immaterial, and moves the court to exclude it.

6. You say the price agreed on was $1000., state just what Mr. Mansfield said as to whether he would do the work for $1000. as indicated in your statement to him?

Objected to as incompetent and immaterial.

A. He expressed a willingness to handle the case for that amount.

7. What did he say—you say he expressed a willingness—did he say he would or would not?

Objected to as incompetent and immaterial.

A. He said he would.

235 Counsel for plaintiff objects to all of the foregoing testimony of the witness, E. N. Woodruff, both questions and answers as incompetent, immaterial, irrelevant and as relating to expenses and damages which are not proper for consideration in this proceeding and for the same reasons move the court to exclude it.

CHARLES P. WATSON, called on behalf of the defendant, The City of Peoria, being first duly sworn, deposes and says:

Direct interrogatories by Judge EVANS:

1. State your name, occupation and place of residence.

A. Chas. P. Watson; stenographer, Peoria, Ill.

2. How long have you been engaged in the profession of stenographer?

Ans. 32 years.

3. Did you report the evidence as stenographer for the respective parties in this suit?

Ans. I did.

4. Did you do so under the directions of the special master to whom the case was referred?

Ans. I did.

5. Did you make out and render bills for your services as stenographer to the city of Peoria for the taking of its evidence in this case and your necessary expenses incurred in so doing?

A. I did.

6. Were those bills all approved by the master to whom this case was referred?

Ans. Yes sir, with the exception of the copies furnished the city.

7. For how much were your bills rendered against the city for the taking of its testimony and writing the same out for the master?

Objected to by complainant as incompetent and immaterial, calling for expenses and damages not proper to be considered in this proceeding.

236 A. My bill for services for taking the testimony on behalf of the city including my *per diem* and expenses attending the taking of the same amounted to $526.72. My bills against the city for copies of the testimony furnished it amounted to $396.13.

Complainant objects to the foregoing answer as incompetent and immaterial and moves the court to exclude it.

8. Were those the usual and customary fees of stenographers for the taking of such evidence?

Objected to by complainant as incompetent and immaterial.

A. Yes sir, less than the fees allowed in the United States court for taking testimony.

9. How much per 100 words did you charge the city for this testimony and how much for attendance?

A. $5.00 per day for attendance and 15 cents per 100 words for the evidence.

10. How much of your bill was for the transcribing of the evidence on behalf of the city exclusive of the expense attending upon it?

Objected to by complainant as incompetent and immaterial.

A. $352.70.

11. How many days did you attend the taking of testimony at $5.00 per day?

Objected to by complainant same grounds.

A. 20 days—$100

12. And what was the total amount of your expenses on behalf of the city?

Objected to same grounds.

A. $74.02

13. Were those bills all paid you by the city?

Objected to same grounds.

A. They were.

237 Cross examination by Mr. ABBOTT:

1. All this time you were employed in attending before the master and in writing out the testimony afterwards was with reference to testimony taken before the master by the city in its defense of the general case?

Ans. It was.

2. What portion of the services, to which you have testified, was for transcribing the evidence for the record and what portion for the copies which you furnished to the city attorney at his request?

A. My *per diem*, expenses and bills for writing out evidence for

the record amounted to $526.72; my bills for copies of the evidence furnished the city amounted to $396.13.

Counsel for complainant objects to all the testimony of the foregoing witness, Chas. P. Watson, both questions and answers thereto, as incompetent, immaterial, irrelevant, relating to expenses and damages which are not proper for consideration in this proceeding and for the reasons moves the court to exclude it.

WALTER H. KIRK, recalled on behalf of the defendant, The City of Peoria, deposes and says:

Direct interrogatories by Judge EVANS:

1. Were you compelled to make any trips to Springfield as city attorney in this case since your induction into office?
A. Yes sir, as I testified on my former examination, I made two trips to Springfield since I have been in office.
2. What necessary expenses did you incur in making those two trips?

Objected to by complainant as incompetent and immaterial.

238 A. The necessary railroad fare which amounted on each trip to $3.42 making a total of $6.84.
3. Did you render bills to the city for those items of expense?
A. Yes, sir.

Cross examination by Mr. ABBOTT:

1. The two trips to Springfield which occasioned these expenses one was on the occasion of an application by complainant to set date at which the exceptions would be heard and the other, as state by Judge Pinkney, the special master, was when he made applica tion to the court to fix his compensation for making his report?
Ans. Yes sir, those were the two trips.

Counsel for complainant objects to the testimony of this witne as incompetent, immaterial and irrelevant, relating wholly to question of expense no- proper to be considered in this proceedin and for the same reason move- the court to exclude it.

WILLIAM JACK, called on behalf of defendant, The City of Peori being first duly sworn, deposes and says:

Direct interrogatories by Judge EVANS:

1. State your name, residence and profession.
A. Wm. Jack; Peoria, Ill.; attorney at law.
2. How long have you been an attorney at law?

Ans. 38 years.

3. Are you an attorney and counselor at law of the United States circuit court of the northern district of Illinois?

A. Yes, sir.

4. How long have you been such?

A. Oh, since before the Chicago fire; I was associated with Judge Wead from the year 1866 until about 1872 and during that time I was admitted to practice in the United States courts.

239 5. Were you acting for a time as solicitor for the city of Peoria in this case associated with the city attorney?

Ans. Yes sir.

6. Your firm was formerly Jack & Tichenor, was it not?

A. Yes sir.

7. And you were a member of the firm of Jack & Tichenor at the time you were a solicitor in this case?

Ans. Yes sir.

8. At what stage of the proceedings in this suit did you represent the city?

Ans. Immediately after the bill was filed.

9. Was it such a case and of such a character it was reasonably necessary that the city attorney should have assistance and associate counsel?

Objected to by complainant as incompetent and immaterial.

A. I think so, sir.

10. Who was the city attorney at that time?

Ans. Wm. V. Tefft.

11. What services as solicitor did you render in this case for the city of Peoria?

A. I filed an answer in this case. I was employed in two cases, the Peoria Gas & Electric Co. case and the Peoria Gas Light & Coke Co. case, and in the one case I filed the demurrer and in the other case I filed an answer. I see by looking at the files, and it is also my best recollection, that in this case I filed an answer in the first instance.

12. Did you make any preparation by way of examining and considering the law in this case previous to filing the answer?

A. Yes sir, I did in the two cases; they were practically the same as they presented themselves to me at that time.

13. Did you prepare any brief with reference to the matters involved in this case?

Ans. Yes sir.

14. What bills did you render to the city for your services as such solicitor in this case?

240 Objected to by complainant as incompetent and immaterial.

A. I rendered no separate bill in this particular case except for filing the answer. I went to Chicago a number of times, but I am

271 And afterwards on the same day to-wit the twenty-sixth day of April, A. D. 1904, there was filed in the office of the clerk of said court in said cause assignment of errors, which said assignment is in the words and figures following to-wit:—

272 In the Circuit Court of the United States, Northern District of Illinois, Southern Division.

PEORIA GAS AND ELECTRIC COMPANY *vs.* CITY OF PEORIA. } In Chancery. For Injunction, etc.

Assignment of Errors.

Now comes the complainant and files the following assignment of errors upon which it will rely in its appeal from the decree made by this honorable court on the twenty-fourth day of March, A. D. 1904, in the above entitled cause:

1. The United States circuit court in and for the northern district of Illinois, southern division, erred in dismissing the complainant's bill of complaint as amended in the above entitled cause.

2 The court erred in dismissing said suit and entering a final decree therein in favor of the said city of Peoria and against the said Peoria Gas and Electric Company.

3. The court erred in dismissing the complainant's bill of complaint as amended in manner and form as shown by the record of said suit and proceedings.

273 4. The court erred in refusing to grant the complainant the relief asked and prayed for in and by said complainant's bill of complaint as amended.

5. The court erred in refusing to enter a decree in favor of complainant in accordance with the prayer of the bill of complaint as amended.

6. The court erred in not taking cognizance as a court of equity of the subject matter of the bill of complaint as amended.

7. The court erred in holding that complainant was not entitled to equitable relief.

8. The court erred in sustaining the exceptions, or any of them, of defendant to the report of the special master appointed herein by agreement and stipulation of the parties.

9. The court erred in rendering its opinion and in making the findings as same appear therein. (Opinion rendered February 8th, 1904, and filed March 24th, 1904.)

10. The court erred in holding in his said opinion that "the Illinois anti-trust law as construed by the supreme court of Illinois leaves no doubt in my mind that this record shows on the part of this complainant a violation of that act in the manipulation of the stock of both companies, the use of the mains of both companies,

the performing by complainant's servants of the business of both companies, the simultaneous agreement of rates between the officers of both companies, and the contract in evidence between the two companies, all lead to the inevitable conclusion that there was an understanding between complainant and the old company such as the Illinois act prohibits.

274 A court of equity will not assist complainant to reap the fruits of such unlawful combination. The exception on the part of the city to that part of the master's report which omits to find in accordance with these views will be sustained."

11. The court erred in its construction of the anti-trust act of the State of Illinois in applying it to the facts in this case in any manner whatsoever under the pleadings in this case.

12. The court erred in not holding that if applicable in any way to the facts in this case, said anti-trust act of the State of Illinois is in conflict withand in violation of the provisions of the Constitution of the United States and the amendments thereto.

13. The court erred in holding that the matters and things set up in defendant's answer, and such of its exceptions to the special master's report as were sustained by the court, were proper matters of defense in this suit.

14. The court erred in allowing the alleged illegal agreement or combination between complainant and the Peoria Gas Light and Coke Company to be made a defense to complainant's bill as amended wherein it was sought to enjoin the defendant, The City of Peoria, from enforcing an ordinance which would deprive complainant of its property, contrary to the provisions of the Federal Constitution.

15. The court erred in permitting a collateral attack to be made upon the rights of complainant as set up in complainant'- bill as amended and supported by the evidence and the findings of the special master.

275 16. The court erred in not overruling defendant's exceptions to the findings of fact as the same were made in the report of the special master, appointed by agreement of the parties.

17. The court erred in not overruling all of defendant's exceptions to the conclusions of law found by the special master in his report.

18. The court erred in making the order of February 9th, 1904, in which he ordered, adjudged and decreed "that the exceptions made and filed herein on behalf of the defendant, City of Peoria, against the failure of the special master, I. C. Pinckney, to find in his report on file herein that the complainant prior to the commencement of this suit had formed, entered into and become a party to an illegal and unlawful combination, pool, trust, combination or agreement with the Peoria Gas Light and Coke Company, (the old gas company,) should be and the same is hereby sustained."

19. The court further erred in making the order of February 9th, 1904, in which, after making the foregoing finding, he referred the case to the master in chancery to take evidence as to the damages

sustained by the defendant by reason of the wrongful suing — of the writ of injunction.

20. The court erred in not sustaining certain exceptions, and each of them, by complainant to the special master's report, to-wit: the first, second, fourth and fifth exceptions to the conclusions of law of the special master.

21. The court erred in not confirming the findings of fact made by the special master in his report.

276 22. The court erred in not confirming the report of the special master after amending the same by sustaining complainant's exceptions as follows, to-wit: the first, second, fourth and fifth exceptions to the conclusions of law of the special master and each of them.

23. The court erred in not rendering an opinion and entering a decree confirming the report of the special master after amending the same by sustaining complainant's exceptions one, two, four and five, and each of them, to the conclusions of law of the special master.

24. The court erred in holding in its final decree "that the complainant unlawfully entered into a combination, agreement or understanding with the Peoria Gas Light and Coke Company (another corporation organized and doing business under the laws of the State of Illinois and engaged in the business of furnishing gas to the citizens of defendant, The City of Peoria, in competition with the said complainant) to regulate or fix the price at which gas should be furnished the people and citizens of the defendant, The City of Peoria, by the complainant and said The Peoria Gas Light and Coke Company, contrary to and in violation of the statute of the State of Illinois approved June 11, 1891 and in force July 1, 1891": such statute not having been pleaded in defendant's answer, no evidence having been introduced or offered under it, it not having been made the basis of any of the defendant's exceptions to the report of the special master, not having been considered by the court in rendering its opinion of February 8th, 1904 nor in the order of the court on February 9th, 1904.

25. The court erred in finding in its final decree that the complainant unlawfully entered into a combination, agreement or understanding with the Peoria Gas Light and Coke Company * * * to regulate or fix the price at which gas should be furnished the people and citizens of the defendant, such holding not

277 being warranted by the evidence, nor by the exceptions by defendant to the report of the special master, nor by the findings of the court in its opinion of February 8th, 1904, nor by its order of February 9th.

26. The court erred in allowing defendant to withdraw its suggestions of damages on the dissolution of the injunction after the same had been referred to the master to take evidence and the master had filed his report and had found therein that The City of Peoria, the

defendant, has sustained no damages by reason of the suing out of the injunction in this cause.

27. The court erred in taxing the costs of the case in including the sum of $606.00 paid by the defendant for printing *and* abstract of the evidence, the defendant not having complied with the law and the rules of court as to printing such abstract.

28. The court erred in not sustaining the report of the special master and in not entering a decree making perpetual the preliminary injunction gr*a*nted September 4th, 1900.

29. The court erred in holding that the collateral matters set up in the answer of defendant and its exceptions to the special master's report constituted any defense to the matters averred in complainant's bill of complaint as amended, and in refusing and neglecting as a court of equity to take cognizance of the case as disclosed by complainant's bill of complaint as amended, and the evidence in support thereof, and the report of the special master herein, and instead of doing so, dismissing complainant's bill.

30. The court erred in denying to complai-ant the relief granted to it by the fifth amendment to the Constitution of the United States as prayed for in said bill of complaint as amended, and to which the special master found that it was entitled.

278 31. The court erred in denying to complainant the relief granted to it by the fourteenth amendment to the Constitution of the United States as prayed for in said bill of complaint as amended, and to which the special master found it was entitled.

32. The court erred in sustaining defendant's exceptions to the report of the special master and in neglecting and refusing to confirm the said report except so far as exceptions were taken to the conclusions of law therein by the complainant and thereby denying to complainant the protection afforded it by the Constitution of the United States and the amendments thereto, the right to such protection being prayed for in said bill of complaint as amended and allowed by the special master.

33. The court erred in not holding that the ordinance of the city of Peoria in controversy in this case is in conflict with and in violation of the provisions of the fifth and fourteenth amendments of the Constitution of the United States, in that by the said ordinance, as appears from the evidence and from the report and findings of the special master, the complainant is, *first*, deprived of property without due process of law; *second*, deprived of and denied the equal protection of the law, and *third*, that its private property is taken thereby for public use without just compensation.

34. The court erred in not holding under the evidence in this case and the report of the special master, that by the enforcement of the ordinance of the city of Peoria sought to be enjoined by the bill as amended in this case, the complainant would be deprived of property without due process of law, would be denied the equal protection of the law, and that its private property would be taken for public use without just compensation.

35. The court erred in denying the petition of complainant for a re-hearing in this cause.

279 36. The court erred in dismissing complainant's bill for want of equity on the ground that complainant had violated the Illinois anti-trust act of 1891, such act not having been specially pleaded in defendant's answer, and complainant not having been apprised by said answer, nor by and subsequent proceedings in the case that the defendant claimed the acts averred in said answer were in violation of said act.

37. The court erred in dismissing complainant's bill for want of equity on the ground that complainant had violated the Illinois anti-trust act of 1891; inasmuch as the said act provided a new and different remedy from that given at common law, and it was the duty of the defendant to plead the same in an appropriate manner if any decision in the case was to be based thereon.

38. The court erred in admitting any evidence (complainant having specifically objected thereto) going to the question of the alleged illegal combination or understanding between complainant and the Peoria Gas Light and Coke Company, as such controversy was and is wholly collateral to and in no manner connected with the case made and the relief sought by the complainant's bill.

39. The court erred in making and entering its final decree in this cause.

In order that the foregoing assignment of errors may be and appear of record, the complainant presents the same to the court and prays that such disposition be made thereof as in accordance with the law and the statutes of the United States is in such cases

280 made and provided, and complainant prays a reversal of the decree of dismissal made and entered by said court in this cause, and that the same be remanded with directions to the said circuit court to enter a decree in accordance with the prayer of the bill of complaint as amended, and the report of the special master (except so far as exceptions were taken by complainant to the conclusions of law therein).

EDWARD C. RITSHER,
WILLIAM T. ABBOTT,
WILLIAM T. IRWIN,
Solicitors for Complainant.

Endorsed: "Filed Apri- 26, 1904 Marshall E. Sampsell, clerk."

281 And afterwards on the same day to-wit the twenty-sixth day of April, A. D. 1904, there was filed in the office of the clerk of said court in said cause, a bond on appeal, which said bond is in the words and figures following, to-wit:—

282 Know all men by these presents, that, we Peoria Gas and Electric Company, a corporation, organized and existing under the laws of the State of Illinois, as principal, and the United States Fidelity and Guaranty Company, a corporation organized and existing under the laws of the State of Maryland and authorized to act as surety by the laws of the State of Illinois, as surety are held

and firmly bound unto the City of Peoria in the penal sum od one hundred and fifty thousand dollars ($150,000.00) lawful money of the United States, for the payment of which well and truly to be made, we bind ourselves and our successors and assigns, jointly and severally, firmly by these presents.

Sealed with our seals and dated this 25th day of April, in the year of our Lord one thousand nine hundred and four.

Whereas, lately, at a session of the circuit court of the United States, for the northern district of Illinois, southern division, in a suit pending in said court between Peoria Gas and Electric Company, complainant, and The City of Peoria, defendant, a decree was rendered dismissing the bill of complaint filed in said suit for want of equity, and the said Peoria Gas and Electric Company having obtained from said court an order allowing an appeal to the Supreme Court of the United States to reverse the decree so rendered in the aforesaid suit, and a citation directed to the said City of Peoria is about to be issued, citing and admonishing it to be and appear at a Supreme Court of the United States, to be holden at Washington within 30 days from the date hereof;

283 Now the condition of the above obligation is such that if the said Peoria Gas and Electric Company shall prosecute its said appeal to effect, and shall well and truly pay and refund to the said City of Peoria for the use of such of the inhabitants thereof as are consumers of gas furnished by the said Peoria Gas and Electric Company, complainant, all excess over 75 cents per thousand cubic feet, charged and collected by said complainant from such consumers, and all damages that may accrue to said city and said consumers of gas, by reason of the restraining order heretofore entered and continued in said cause, and by reason of the appeal herein if it fails to make its plea good, then the above obligation to be void; otherwise to remain in full force and virtue.

286 NORTHERN DISTRICT OF ILLINOIS, *Southern Division,* } *ss:*

I, Marshall E. Sampsell, clerk of the circuit court of the United States for the northern district of Illinois, do hereby certify that the fore going eight volumes numbered from one to eight inclusive are a full, true and complete transcript of the record, proceedings and evidence in the cause wherein Peoria Gas and Electric Company is complain ant and City of Peoria is defendant, as fully as the same appears of record and remains on file in my office, except "Exhibit 11" omitted by agreement.

Seal of Circuit Court U. S., Northern Dist. Illinois, Southern Division, 1887.

In testimony whereof I have hereunto set my hand and affixed the seal of said court at my office in Peoria in said southern division of said northern district of Illinois, this fourteenth day of May, A. D. 1904.

MARSHALL E. SAMPSELL, *Clerk*,
By F. C. HOWE, *Ch. Dep.*

287 UNITED STATES OF AMERICA, *ss*:

To City of Peoria, Greeting:

You are hereby cited and admonished to be and appear at a Supreme Court of the United States, at Washington, within 30 days from the date hereof, pursuant to a an order allowing appeal, filed in the clerk's office of the circuit court of the United States for the southern division of the northern district of Illinois, wherein Peoria Gas and Electric Company is appellant and you are appellee, to show cause, if any there be, why the decree rendered against the said appellant as in the said decree mentioned, should not be corrected, and why speedy justice should not be done to the parties in that behalf.

Witness, the Honorable Christian C. Kohlsaat, district judge this 26th day of April, in the year of our Lord one thousand nine hundred four.

KOHLSAAT, *Judge*.

287½ [Endorsed:] #3494. #241. No. 288. Supreme Court of the United States. Peoria Gas and Electric Company *vs.* City of Peoria. Citation to the Supreme Court of the United States.

April 27, 1904.—Service accepted.

CITY OF PEORIA,
By WALTER H. KIRK,
City Att'y.
WINSLOW EVANS,
Of Counsel for City of Peoria.

I have served the within writ within my district in the following manner, to-wit:

Upon the City of Peoria, therein named by personally delivering a true copy of the same to Edward N. Woodruff, mayor of the city of Peoria, Illinois, at Peoria, Illinois, this 27th day of April A. D. 1904.

And by reading the same to and in the presence and hearing of Walter H. Kirk, city attorney, for the city of Peoria, Illinois, who at the same time acknowledged service on the said writ by endorsing

The bill avers that the city council had no power to pass the ordinance, that the rate as fixed by the ordinance is unreasonably low, that its enforcement would deprive the complainant of its property without due process of law, and would deny to complainant the equal protection of the laws, thus raising a Federal question on the fourteenth amendment to the Constitution of the United States. The answer of the city avers that the complainant has entered into an illegal combination or understanding with the old gas company; second, that whether that be so or not, the complainant is estopped to deny the validity of this ordinance or the reasonableness of this rate by certain acts of its own at the time this franchise ordinance was passed; third that the city council had power to pass the ordinance in question; and fourth that the rate fixed was a reasonable one.

257 I am of the opinion that the averment of the answer which I have first mentioned, has been so fully proven by this record that it must be conclusive of the case. The Illinois anti-trust law, as construed by the supreme court of Illinois, leaves no doubt in my mind that this record shows, on the part of this complainant, a violation of that act in the manipulation of the stock of both companies, the use of the mains of both companies, the performing by complainant's servants of the business of both companies, the simultaneous agreement of rates between the officers of both companies, and the contract in evidence between the two companies,—all lead to the inevitable conclusion that there was an understanding between complainant and the old company such as the Illinois act prohibits. A court of equity will not assist complainant to reap the fruits of such unlawful combination. The exceptions on the part of the city to that part of the master's report which omits to find in accordance with this view, will be sustained, and I need not enlarge upon the other numerous questions raised by this record. The bill will be dismissed at complainant's costs. Counsel for the city may prepare the order.

STATE OF ILLINOIS, }
County of Peoria, } ss:

N. L. Fastenau, being first duly sworn, on oath says that on the 8th day of February, A. D. 1904, she attended upon the session of the circuit court of the United States for the northern district of Illinois, southern division, before the Honorable J. Otis Humphrey, judge of said court, and then and there took down in short-hand the opinion rendered by said judge in the case of Peoria

258 Gas and Electric Company *vs.* City of Peoria; and affiant further says that the foregoing is a true and correct copy of the said opinion, duly transcribed by this affiant from the original stenographic notes in the possession of this affiant,

N. L. FASTENAU.

Subscribed and sworn to before me this 23rd day of March A. D. 1904.

[NOTARIAL SEAL.]

ROBERT P. JACK,
Notary Public.

Endorsed "Filed Mar. 23, 1904. Marshall E. Sampsell, clerk, as of Feb. 9, 1904."

And afterwards, to-wit, on the twenty-third day of March,
259 A. D. 1904, the same being one of the regular days of the regular October term A. D. 1903 of said court, among others, further proceedings were had in said cause and entered of record in the words and figures following to-wit:—

260 In the Circuit Court of the United States, Northern District of Illinois, Southern Division.

WEDNESDAY, *March* 23, *A. D.* 1904.

Hon. J. Otis Humphrey, district judge.

PEORIA GAS AND ELECTRIC COMPANY
vs.
CITY OF PEORIA. } 288.

This cause coming on to be heard, on the petition of the defendant for a rehearing herein, filed by order of the court as of February 9th 1904, and the court having heard the same and the arguments of the council and being now fully advised in the premises denies said petition, and thereupon the defendant excepts thereto.

261 And afterwards, to-wit on the twenty-fourth day of March A. D. 1904, the same being one of the regular days of the regular October A. D. 1903 term of said court, among others, further proceedings were had in said cause and entered of record in the words and figures following, to-wit:—

262 In the Circuit Court of the United States, Northern District of Illinois, Southern Division.

THURSDAY, *March* 24, *A. D.* 1904.

Present: Hon. J. Otis Humphrey, district judge.

THE PEORIA GAS AND ELECTRIC COMPANY
vs.
CITY OF PEORIA. } 288. In Chancery. For Injunction.

This cause having come again for a hearing on motion of the defendant, it is ordered by the court that the defendant The City of

Peoria, have leave to withdraw its suggestion of damages and the same *are* by the said city of Peoria withdrawn without prejudice to the right of the said defendant or any proper person in interest prosecuting suit upon the bond of the complainant heretofore given herein on the suing out of the injunction heretofore issued in this cause; and it is ordered by the court that the defendant, The City of Peoria, pay the costs for the taking of proof and making report by the master herein on the said suggestion of damages.

And this cause further coming on to be heard on the bill of complaint, the answer of the defendant and the replication thereto and the report of the master therein and the exceptions thereto and the evidence reported by said special master, and the court having heard the arguments of counsel and being now fully advised in the premises, finds from the evidence heretofore taken and reported in said cause, that the complainant unlawfully entered into a combination, agreement, or understanding with the Peoria Gas, Light and Coke Company, (another corporation organized and doing business under the laws of the State of Illinois and engaged in the business of furnishing gas to the citizens of the defendant, The City of
263 Peoria, in competition with the said complainant), to regulate or fix the price at which gas should be furnished the people and citizens of the defendant, The City of Peoria by the complainant and the said Peoria Gas, Light and Coke Company, contrary to and in violation of the statutes of the States of Illinois, approved June 11th, 1891 and in force July 1st, 1891; and that the complainant is, therefore, without equity and that the injunction heretofore issued in this cause should be dissolved.

It is therefore ordered, adjudged and decreed by the court that the injunction heretofore issued in this cause be and the same is hereby dissolved and that the complainant's bill of complaint be and the same is hereby dismissed for want of equity and that complainant pay the costs of this suit, to be taxed, not herein otherwise directed, and that the defendant have execution therefor.

And the court further finds from the evidence taken and reported by the master F. C. Howe and orders that the sum of six hundred and six dollars ($606.00) paid by defendant for printing abstract of the evidence in the record in this cause in accordance with rule 38 of this court, be taxed as costs to be paid by the complainant; and that the sum of five hundred dollars ($500.00) for making report; and the sum of four hundred fifty dollars ($450.00) the *per diem* and necessary expenses paid to I. C. Pinckney, special master-in-chancery of this court by defendant for taking the evidence in said cause for defendant, be taxed as costs herein to be paid by the complainant; and that the sum of five hundred twenty-six dollars and seventy-two cents ($526.72) paid by the defendant, City of Peoria, to Charles P. Watson, for his fees and *per diem* and necessary expenses in taking the evidence of the defendant in short hand and writing out the same for the said special master-in-chancery, I. C. Pinckney, be taxed as costs, to be paid by the complainant.

264 And thereupon the complainant enters its motion herein for an appeal to the Supreme Court of the United States, which is allowed, and the court fixes the amount of the bond at the sum of one hundred and fifty thousand dollars ($150,000.00), conditioned that if the said complainant shall not prosecute its appeal with effect and make its plea good, then the said complainant shall well and truly pay and refund to the said city of Peoria for the use of such of the inhabitants thereof as are consumers of gas furnished by the said Peoria Gas and Electric Company complainant all excess over seventy-five cents per thousand cubic feet charged and collected by said complainant from such consumers and all damages that may accrue to said city and said consumers of gas by reason of the restraining order heretofore entered and continued in said cause and by reason of the appeal herein.

And it is further ordered by the court said bond when so filed and approved shall operate as a supersedeas and shall keep in force the restraining order heretofore entered during the pendency of this appeal or until the further order of the court.

And it is further ordered by the court that pending said period of sixty days from this date the former restraining order entered herein shall remain in force.

Enter

HUMPHREY, *J.*

265 And afterwards on to-wit the twenty-fourth day of March, A. D. 1904, there was filed in the office of the clerk of said court in said cause, the opinion of the court by Judge J. Otis Humphrey, which said opinion is in the words and figures following, to-wit;—

266 In the Circuit Court of the United States, Northern District of Illinois, Southern Division.

PEORIA GAS AND ELECTRIC COMPANY
vs.
CITY OF PEORIA.

Opinion by Judge J. Otis Humphrey, February 8, 1904.

Oral.

This matter comes up on exceptions to the master's report. I believe both complainant and defendant have filed exceptions to certain affirmative holdings of the master, and both parties have also filed exceptions because the master failed to hold—omitted to hold—upon certain other questions. Without undertaking to specify the facts about this long list of exceptions, this record shows that complainant's bill was filed on September 18, 1900, seeking to enjoin

the enforcement of an ordinance of the city of Peoria fixing the maximum rate for gas, which ordinance had been passed on the 4th day of the same month,—September, 1900.

The bill avers that the city council had no power to pass the ordinance, that the rate as fixed by the ordinance is unreasonably low, that its enforcement would deprive the complainant of its property without due process of law, and would deny to complainant the equal protection of the laws, thus raising a Federal question on the fourteenth amendment to the Constitution of the United States. The answer of the city avers that the complainant has entered into an illegal combination or understanding with the old gas company; second, that whether that be so or not, the complainant is estopped to deny the validity of this ordinance or the reasonableness
267 of this rate by certain acts of its own at the time its franchise ordinance was passed; third, that the city council had power to pass the ordinance in question; and fourth, that the rate fixed was a reasonable one. I am of the opinion that the averment of the answer which I have first mentioned, has been so fully proven by this record that it must be conclusive of the case. The Illinois anti-trust law, as construed by the supreme court of Illinois, leaves no doubt in my mind that this record shows, on the part of this complainant, a violation of that act. The manipulation of the stock, the use of the mains of both companies, the performing by complainant's servants of the business of both companies, the simultaneous agreement of rates between the officers of both companies, and the contract in evidence between the two companies.—all lead to the inevitable conclusion that there was an understanding between complainant and the old company such as the Illinois act prohibits. A court of equity will not assist complainant to reap the fruits of such unlawful combination. The exception on the part of the city to that part of the master's report which omits to find in accordance with this view, will be sustained, and I need not enlarge upon the other numerous questions raised by this record. The bill will be dismissed at complainant's costs. Counsel for the city may prepare the order.

STATE OF ILLINOIS, } ss:
County of Peoria, }

N. L. Fastenau, being first duly sworn, on oath says that on the 8th day of February, A. D. 1904, she attended upon the session of the circuit court of the United States for the northern district of Illinois, southern division, before the Honorable J. Otis Humphrey, judge of said court, and then — there took down in short-
268 hand the opinion rendered by said judge in the case of Peoria Gas and Electric Company *vs.* City of Peoria; and affiant further says that the foregoing is a true and correct copy of the said opinion, duly transcribed by this affiant from the original stenographic notes in the possession of this affiant.

N. L. FASTENAU.

Subscribed and sworn to before me this 23rd day of March A. D. 1904.

[NOTARIAL SEAL.] ROBERT P. JACK,
Notary Public.

Endorsed: "Filed March 24 1904. Marshall E. Sampsell, clerk."

269 And afterwards on to-wit the twenty-sixth day of April, A. D. 1904, there was filed in the office of the clerk of said court in said cause, a petition for appeal, which said petition is in the words and figures following, to-wit:—

270 In the Circuit Court of the United States, Northern District of Illinois, Southern Division.

PEORIA GAS AND ELECTRIC COMPANY *vs.* CITY OF PEORIA. } In Chancery. For Injunction, etc.

The above named complainant, Peoria Gas and Electric Company, conceiving itself aggrieved by the order and decree made and entered in the above named court, in the above entitled cause, under date of March 24th, 1904, wherein and whereby among other things it was and is ordered and directed that the bill of complaint of said complainant be dismissed for want of equity, does hereby appeal to the Supreme Court of the United States from said order and decree for the reasons set forth in the assignment of errors which is filed herewith; and it prays that this its petition for its said appeal may be allowed and that a transcript of the record proceedings and papers upon which said order was made, duly authenticated, may be sent to the Supreme Court of the United States.

Dated April 25th, 1904.

EDWARD C. RITSHER,
WILLIAM T. ABBOTT,
WILLIAM T. IRWIN,
Solicitors for Peoria Gas and Electric Company, Complainant.

4/25/04 O. K.
WALTER H. KIRK,
City Attorney of City of Peoria, Illinois.
WINSLOW EVANS,
Of Counsel for City of Peoria.
O. K.
J. O. H.

Endorsed: "Filed Apr. 26, 1904, Marshall E. Sampsell, clerk."

contain nine retorts and each bench contains also a regenerativ
furnace of the full depth type for heating retorts; the gas after bein
driven off of the coal passes over into a preliminary air condenser
from this condenser it passes through a tar extractor of
9 type commonly known as P. & A.; it then passes through tw
other air coolers and then through two water coolers, the
through a washer and then through two scrubbers; the operatio
up to this point is for the purpose of reducing the temperature dow
to about the atmospheric temperature and the removal of the ta
and ammonia; after leaving the scrubbers, the gas passes throug
purifyers containing oxide of iron for the purpose of removing th
impurities known as sulphuretic hydrogen and carbonic acid; afte
leaving the purifyers the manufacture of gas is complete and it the
passes through a station meter where it is registered as to volum
and thence into a storage holder from which it is distributed
through the proper mains into the street.

Q. Have you with you a plan of the buildings, machinery an
apparatus of the Peoria Gas & Electric plant in the city of Peoria

A. I have (witness produces plan). Here it is.

Q. Is this plat produced by you a correct representation of th
plan of the Peoria Gas & Electric Company's gas plant in the city
of Peoria?

A. It is correct as the property stood in June, 1900, when thi
drawing was made; and there has been no change of any impor
tance made since that time and it is substantially correct to-day.

Q. Is it the same plan of the buildings, machinery and apparatu
that existed at the time the bill was filed in this case in September
1900?

A. Yes sir.

Q. Is it drawn to a scale?

A. Yes sir.

Q. Are the marks, lines and figures as shown upon that pla
correct?

10 A. Yes, sir, I checked them all and I think every figur
mark is correct, as the plan stood in September, 1900 on th
date of the filing of this bill.

Complainant's counsel offers in evidence and exhibits to the maste
the plat just identified by the witness, which said plat is hereto at
tached and marked by the master Exhibit 1.

(Mr. MANSFIELD:)

Q. Did you make this plat yourself?

A. It was made under my direction; I did not make it myself.

(Mr. IRWIN:)

Q. Explain the lines, figures and notations as shown upon Ex
hibit 1.

A. For convenience I will speak of the side of the property nex

the river where are located the tracks of the Peoria Terminal railway, as south, the opposite side, where are located the tracks of the Peoria & Pekin Union railway, as north; Rye street, as shown on the plat is on the west side of the main body of the property, owned and used by the Peoria Gas & Electric Company; the coal shed, it will be observed, is in the north-west corner of the property and is reached at the easterly end by a side-track of the P. & P. U. Ry. Co.; another side-track of the P. & P. U. Ry. Co. runs through the coal-shed down to the coke shed which is located in the south-west corner of the property; the plant is used in the following manner, viz: coal is received into the coal shed from the tracks usually of the P. & P. U. Ry. from whence it is taken over a scale into the retort house, where it passes on an elevator and is carried up to the second floor of the retort house, where it is fed into the retorts and carbonized; after being carbonized, the coke is drawn and
11 falls in shutes down to the basement floor of the retort house, where it is quenched and thrown into buggies, carried up onto the second floor on an elevator and then brought out on a platform and delivered into the car, or brought over and put into the coke-shed; the gas after being driven off of the coal passes through the main pipe, located on the plan in the westerly end of the retort house, over into the preliminary condenser, as shown, thence through the various pieces of apparatus, described in my previous testimony, through the purifying apparatus, meter, and into the storage holder.

Q. On the easterly end of the plat, what do these buildings represent?

A. The office meter-room for the storage and repair of consumers' meters; store room for the storage of gas stoves, fittings, etc., and fitting shop and a pipe shed. Further describing the process of manufacture, I want to say we have one piece of apparatus not previously mentioned, known as a fixing bench; there are times when the coal produces gas of a lower candle power than we wish to send out to our customers, and we have a bench containing a closed retort in which we gasify nap-tha for the purpose of enriching the gas and bringing a portion of the purified gas back through the purifyers through the fixing bench to be mixed with the naphtha gas and send it all again through the condensing and purifying apparatus, in this way raising the candle power of the gas.

Q. What gas plants have you examined throughout the country with reference to their completeness, utility and economical
12 manufacture of gas?

Objected to by defendant unless the gas works the witness has examined are similar to the works of the Peoria Gas & Electric Company in the city of Peoria.

Mr. IRWIN: They are not similar, I will state that. I propose to show the knowledge the witness has of plants generally and from that knowledge he has evolved and installed the best and most

economical plant that is in use in Peoria to show his experience and knowledge of gas plants.

The MASTER: I think it admissible for that purpose.

A. I have examined a very large number of gas plants, among others the plant of the Cleveland Gas Light & Coke Company, the Cincinnati Gas Light & Coke Company, the Dayton Gas Light Company, the Hamilton Gas Light Company, the Canton Gas Light Company, the Youngstown Gas Light Company, the Toledo Gas Light & Coke Company, the Tiffin Gas Light Company—all in Ohio. The Lansing, Kalamazoo, Saginaw and Detroit Gas Companies in Michigan. The Wilkesbarre, Eagle Falls and Pittsburgh Gas Companies in Pennsylvania. The Chicago, Evanston, Bloomington, Springfield, Jacksonville, Streator, Dixon, Belvidere Gas Companies in Illinois. The Sioux City, Dubuque, Burlington, Waterloo, Le Mars and Oskaloosa Gas Companies in Iowa; the Fon- du Lac, Racine, Os-kosh and Milwaukee Gas Companies in Wisconsin. The Minneapolis Gas Company in Minneapolis; the New York City, Staten Island and Westchester Gas Companies in New York State, the plants at Springfield and St. Louis, Missouri.

Q. Who laid out the plans for the construction of the plant of the Peoria Gas & Electric Company in the city of Peoria.

13 A. They were laid out by myself and Mr. C. H. Christie, who was then the superintendent of the works.

Q. Were they submitted to any other experienced gas manufacturers for approval?

A. Yes sir, they were criticized and gone over in the usual way by Mr. Geo. O. Knapp, president of the Peoples Gas Light & Coke Company of Chicago and by John Williamson, the consulting engineer of that company.

Q. Was the plan as made or outlined by you for the Peoria Gas & Electric Company's plant approved by Mr. Knapp and Mr. Williamson?

Objected to as incompetent and immaterial.

A. Yes sir.

Q. State whether or not the plan of the Peoria Gas & Electric Company's plant offered in evidence as Exhibit 1 is the plan referred to as prepared by you and approved by Mr. Knapp and Mr. Williamson?

Objected to same grounds as before.

A. The plan as offered in evidence is substantially the plan which was agreed upon; if any changes were made after the plans were submitted to Mr. Knapp, they were minor and unimportant changes.

Q. In outlining and making the plans of the Peoria Gas & Electric Company in the city of Peoria, what did you take into consideration in making the same?

A. The size of the town, its possible future growth and development, the cost of gas making materials, the price at which residuals could be sold and the general conditions of the gas business then existing; that is to say, there was another gas company already in operation there and it would be necessary for us to be prepared to make gas of a good quality at a low cost and it was necessary
14 to have the best possible plant in order to compete with it.

Q. Who had charge of the construction of the plant of the Peoria Gas & Electric Company in the city of Peoria?

A. I did.

Q. What was the population of the city of Peoria at the time of the erection of the plant of the complainant company?

A. The population of the city proper was about 56,000; the total population within the district which we proposed to reach was between 55,000 and 60,000, probably approaching the latter figure.

Q. What is the capacity of the plant of the complainant company in Peoria?

A. The plant of the Peoria Gas & Electric Company has a bench capacity of from 600,000 to 650,000 cubic feet per day of 24 hours; the condensing plant is designed for a working capacity of 25,000 cubic feet per hour, which is equal to slightly over 500,000 cubic feet per day; there are two purifying boxes, each of the capacity of 800,000 to a million cubic feet per day; the steerage holder has a capacity of 300,000 cubic feet; the total plant has an easy working capacity of 520,000 and can be crowded up to 600,000 and 650 cubic feet per day of 24 hours.

Q. How much mains in distance, or length, did the Peoria Gas & Electric Company have in the city of Peoria and vicinity on the first of December, 1900 at the time of the commencement of this suit?

A. Substantially 26½ miles.

15 Q. About what extensions have been made since that time?

Objected to as immaterial.

A. Very few extensions of any importance.

Q. How many service pipe- and services did the company have at the time of the commencement of this suit in the first part of September, 1900.

A. About 2,000.

Q. Were those services installed and in use by consumers by that time?

A. Nearly all of them; occasionally one has been put in where people were not using gas, but substantially all were in use at that time.

Q. State the character of the plant of the Peoria Gas & Electric Company at the time of the institution of this suit as to its being a modern and economical plant for the manufacture and distribution of gas?

Objected to as leading, suggestive and calling for a conclusion.

A. The plant, at the date mentioned, represented in my opinion the very latest and best practice in the design and construction of gas plants for the most economical and profitable production of gas and was superior in this respect to any gas plant of a similar size with which I am acquainted.

Q. Do you know the cost of material, machinery, apparatus, and labor entering into the construction of the plant of the Peoria, Gas & Electric Company in the city of Peoria?

A. Yes sir.

Q. What was the cost of it at the time of the commencement of this suit about September 1st, 1900.

A. The cost on September 1st, 1900 was $434,252.35.

16 Q. Did that include the cost of the real estate?

A. Yes sir.

Q. Who had the purchasing of the material and apparatus, making of the contracts, the superintendency and outlay of the money required in the construction of complainant's plant.

A. I had.

Q. Were there correct books of account kept during all the time of the construction of the plant of the complainant showing the cost of all labor, material, machinery and apparatus entering into the construction thereof?

A. Yes sir.

Q. Do such books of account show the actual cost of all matters entering into the construction of the plant?

A. Yes sir.

Q. Do such books also show the cost of the real estate upon which the plant is located?

A. Yes sir.

Q. Are all of the expenditures entering into the construction of the plant evidenced by vouchers made at the time of the outlay of the several amounts of money entering into the cost of the plant?

A. Yes sir.

Q. Under whose supervision was all the money paid out that entered into the cost and completion of the plant?

A. Under my supervision.

Q. What was the cost of all the labor, material, machinery and apparatus entering into the construction of the plant of the complainant as compared with the market value of such at the time of the construction of the plant?

A. Every purchase was made at the lowest market value

17 obtainable cash being paid for everything.

Q. How did the price of such labor, material, machinery and apparatus entering into the construction of that plant, compare with the price of like labor, material, machinery and apparatus at the time of the commencement of this suit?

A. There had been a general rise between the date of the purchase

of the material and apparatus in the plant and the date of the commencement of this suit.

(The MASTER:)

Q. Do you mean by that answer to be understood as saying there was a general rise in labor, material, and all matters entering into the plant?

A. Practically everything.

(Mr. IRWIN:)

Q. What was the cost of the plant then including the real estate upon which the same is situate?

A. The total cost of the plant, including real estate, labor and materials of all sorts and kinds [and the general expenses incident to the organization of the business] as of September 1st, 1900 was $434,252.35.

Defendant objects to that part of the foregoing answer inclosed in brackets and moves the court to exclude it unless something is shown as to what the expenses incidental to the business mean.

The MASTER: I think the answer may stand; that is a matter you can enquire into on cross examination.

(Mr. IRWIN:)

Q. Have you a compilation or statement of the cost of the plant of the complainant showing the different items of expenditure entering into the cost of the same?

A. Yes sir.

Q. In what form have you such compilation or statement?

18 A. The form follows the general scheme of accounts as used in the business; it classifies all expenditures under thirty-eight different headings and subdivides each heading into labor and material.

Q. Name the different headin-s under which the books have been kept from which the statement referred to is compiled.

Objected to by defendants as not the best evidence.

The MASTER: The question only calls for him to detail the separate headings under which the different items were charged—a classification of the several items of expense.

A. Account No. 1 salaries of officers; account No. 2 accounting department; account No. 3, general office sundries; No. 4 canvassing; No. 5 insurance; No. 6 rentals; No. 7 interest; No. 8 taxes; No. 9 legal expenses, loss and damage; No. 10 stationery, printing and postage; No. 11 stable expenses; These 11 accounts are assembled under the general heading "General expenses." Account No. 13 generator, fuel; No. 14 gas, coal; No. 15, boiler, fuel; No. 16, bench fuel; No. 17, manufacturing labor; No. 18, manufacturing supplies; No. 19 oil; No. 20, enrichers; No. 21, purification, labor; No. 22,

purification supplies; Accounts from No. 13 to No. 22 inclusive, are assembled under the general head "Manufacturing expenses." Account No. 23 distribution, labor; No. 24, distribution supplies. Accounts No. 23 and No. 24 are assembled under the general heading "Distribution expenses." Account No. 26 miscellaneous supplies and expenses; account No. 32 land and buildings; Accounts from No. 27 to No. 31 inclusive are repair and renewal accounts
19 which don't have to do with the cost of the property. Account No. 33 extension of mains; account No. 34 manufacturing plant; account No. 35 new meters; No. 36, new services; No. 37 tools and implements; No. 38 furniture and fixtures. Accounts No. 33 to Nos. 38 inclusive are assembled under the general head of "Additions to property."

Q. From your superintendency and management of the construction of the plant and your examination of the accounts and vouchers, are you able to state whether or not the books of account are correct as showing the cost of the plant.

A. Yes sir.

Q. Are they correct?

A. Yes sir.

Q. Was the compilation and statement made by you as to the cost of the plant of the Peoria Gas & Electric Company of the city of Peoria made from the books and vouchers for the payment of money referred to?

A. Yes sir.

Q. It is correct?

A. Yes sir.

Mr. Irwin: For convenience and reference, complainant now offers in evidence the statement identified by the witness as to the cost of the plant up to September 1st, 1900, which said statement is hereto attached marked by the master Exhibit 2.

Objected to by the defendant for the reason that the complainant has not shown that the statement was taken from the books of original entry; also because complainant has not shown that the books were kept and entries made at the time by the witness, or by a disinterested party and for the further reason that the books of account are the best evidence.

20 Mr. Irwin: I don't offer that particularly as evidence, but more for convenience; I should think the counsel for defense would want it. But if he insisis that we bring our books and vouchers here, we have a wagon load of them and he can have our books and vouchers and go through them; but we don't want to spend a month here finding out the cost of this building, going through item after item.

The Master: The statement will be admitted subject to the objection.

Q. How was the statement or compilation referred to made?

A. It was made by the book-keeper of complainant and myself

working jointly together; we examined the vouchers, the books of account, proved them up, examined the cash book, and took the total amount of cash received by the company and the total expenditures and the balance on hand at that date and checked it against the expenditures as shown by the statement.

Q. Do you know whether or not that statement is correct?

A. Yes sir, it is correct.

Q. What is the character of the gas business as to the stability of the price of manufacture and the permanency of the plant?

Objected to as immaterial.

A. The business is a growing and changing one and the process is improved and changed from time to time. Since the first introduction of the business, there has been great changes in the character of the apparatus and the detailed methods of manufacture and distribution.

Q. What changes have been made in the process of manu-
21 facturing gas say in the last twenty years.

A. The coal gas process has been almost entirely changed in the last twenty years by the introduction of regenerating furnaces for the heating of retorts, and the slower and more careful method of conversion and by the substitution of oxide for lime in the purification of gas; these changes have been extremely radical and in a majority of instances have necessitated the remodeiling or rebuilding of gas plants, making coal gas.

Q. What effect, if any, does such changes in the process of manufacturing gas have upon the machinery and apparatus, or life of a plant when it don't involve reconstruction?

Objected to as immaterial unless complainant shows some changes have occurred in its plant since its installation at Peoria up to the filing of this suit.

Mr. IRWIN: The purpose of this line of questions is to show the risk of the business.

A. The principle effect of the change mentioned is, in shortening the life of the retorts and benches; this is due to the higher heats carried in regenerative furnaces as compared with open fire furnaces, resulting in a more rapid disintegration of the retorts and brick work around the furnaces.

Q. Are there any other agencies now operative upon the pipes, machinery or apparatus of a gas plant in a city of the size and character of Peoria?

Objected to as immaterial.

A. The destructive influences about a gas plant and main system are the presence about the plant of gas more or less charged with sulphur and acids which destroy the metal work, including
22 the roof supports, trusses and covers of purifying boxes, the shells of the condensing plant and the drum at the station

thereon the acceptance of service of same, also by reading the same to and in the presence and hearing of Winslow Evans, of counsel for the city of Peoria, Illinois, who also acknowledged service on the said writ and endorsed his acceptance thereon this 27th day of April A. D. 1904.

PEORIA GAS & ELECTRIC COMPANY
vs.
CITY OF PEORIA. } In Chancery.

Testimony taken in the above entitled cause before Judge I. C. Pinkney, special commissioner, in the directors' room of the Equitable Trust Company, Chicago National Bank building, No. 150 Monroe street, Chicago, Illinois, on the several dates set forth in the following pages.

Directors' room, Chicago National Bank building.

CHICAGO, ILL., *November* 5, 1901—10 o'clock a. m.

Parties met by agreement.

Present: Judge I. C. Pinkney, special commissioner.

Messrs. W. T. Irwin and E. C. Ritsher appearing for complainant Mr. Henry Mansfield appearing for defendant.

It is hereby stipulated by and between the solicitors for the respective parties hereto, that the testimony in this case may be taken in shorthand by Chas. P. Watson, a stenographer, and transcribed by him or under his direction, and that the signatures of the witnesses to their respective depositions are hereby expressly waived.

3 FRANCIS W. LITTLE, called on behalf of complainant, being first duly sworn, according to law, deposes and says:

Direct interrogatories by Mr. IRWIN:

Q. State your name, age and residence?

A. Francis W. Little; Peoria, Illinois; 42.

Q. What business are you engaged in?

A. I am the vice-president and general manager of the Peoria Gas & Electric Company of Peoria, Illinois.

Q. What business is the Peoria Gas & Electric Company engaged in?

A. In the manufacture and distribution and sale of gas and electricity in Peoria and vicinity.

Q. How long have you held such position, or a similar position connected with the manufacture and sale of gas?

A. I have held the position mentioned with the Peoria Gas & Electric Company since about the first of May, 1900; for about five years prior to that time, I was the vice-president and manager of the Akron Gas Company of Akron, Ohio.

Q. How long have you been connected with public service corporations and municipal service?

A. I have been officially connected with such corporations since 1890.

Q. What has been your former experience with public service corporations prior to taking charge of the Akron & Peoria Gas Companies?

A. Since 1884, or 1885 I have been either interested in such properties or officially connected with them.

4 Q. Will you state in detail what your experience has been in public service corporations up to the time of taking charge of the Peoria Gas & Electric Company?

Objected to by defendant unless it is confined to gas companies; the mere fact that he was connected with public service corporations would not be material.

The MASTER: I don't think the master has any power to pass on the competency or materiality of any question or answer thereto; the parties may make their objections to the testimony and it will be admitted subject to the objection; the objections, however, must be made at the time or they cannot be considered by the court.

Mr. IRWIN: The question is merely preliminary for the purpose of showing the knowledge and experience of the witness.

A. Beginning about the year 1882, I was in the money loaning business and dealing in bonds and securities; at that time I began to investigate the merits of gas and electric light securities and bought such securities, investigated the accounts of gas companies and familiarized myself with that particular line of business. In 1886, I was interested in the formation of a trust company which succeeded to my own business and business of other people in northwestern Iowa; the trust company dealt in similar securities and in my position as secretary of the company one of my duties was to investigate all loans of this character which were offered to the company. In 1890, I became president of the Lincoln Street Railway Company, Lincoln, Nebraska, but remained for some time thereafter a director of the trust company and continued to supervise the making of such loans, while continuing to actively manage

5 the affairs of the railway company; I continued in this line of business until 1895, when I went to Akron, Ohio to take charge of the Akron Gas Company.

Q. And following your management of the Akron Gas Company, you came to Peoria?

A. Yes sir.

Q. Are you familiar with the business of manufacturing and selling gas?

A. Yes sir.

Q. Have you made the business of the manufacture and sale of gas a specialty for any period of time, if so, state how long?

A. I have been in the direct management of gas companies since

1895, having the entire charge of the manufacture and sale of the gas made by the companies with which I was connected.

Q. What investigation have you made, if any, of the different processes of the manufacture of illuminating and fuel gas for genera purposes?

A. I have made that branch of the business a special study for the last six or seven years.

Q. Will you give a brief history of the art of manufacturing illuminating and fuel gas?

Objected to by defendant unless it is confined to the process of manufacture as carried on in the city of Peoria.

A. Gas, as first introduced, about 100 years ago, was made from the destructive distillation of coal and usually in cast iron retorts and with common furnaces to heat the retorts; this process was carried along for many years, subject to only the ordinary and usual improvements until about twenty years ago; at that time, a process, commonly known as the water gas process, was brought for-
6 ward and extensively introduced; these two processes, that is to say, coal gas and water gas, are the processes now commonly in use both in this country and abroad; the water gas process, which is in use generally in this country, is technically known as a carbonated water gas; the use of the cast iron retorts and open fire furnaces in making coal gas has almost entirely disappeared; nowadays coal gas is almost universally made in fire-clay retorts, which are heated by regenerative furnaces.

Q. What is the difference in the manufacture of what is known as coal gas and what is known as water gas—describe it?

A. The coal gas process consists of the destructive distillation of bituminous coal in closed retorts from which all air is excluded and these retorts are heated by external fires; the heat drives off the gas, which is contained in the coal, and leaves a residuum of carbon, known as coke; in the continuation and purification of coal gas thus made, there are two other by-products which result and are tar and ammonia; they are in addition to the coke. In the water gas process,—(interrupted)

Q. While you are on that, what are those products you have mentioned that grow out of the manufacture of coal gas, ordinarily from?

A. The three by-products resulting from the manufacture of coal gas are termed and sold under the names of coke, tar and ammonia.

Q. They are commonly called residual products?

A. Yes sir.

Q. I think my former question also included the manufacture of water gas?

A. Yes sir. What is known as water gas or carbonated
7 water gas, is made in a plant of a totally different kind and character. The first piece of apparatus in a water gas plant

is known as a generator; this consists of a cylindrical shell lined with fire brick, containing a grate near the bottom; the generator is filled with coke or anthracite coal, the fire is then lighted and the entire fuel bed is brought to a state of incandescent heat by means of an air-blast; the air blast is then shut off and steam is introduced into the fuel bed, the result being, the decomposition of the steam, the oxygen uniting with the carbon of the fuel and forming carbonic oxide; the other element, hydrogen, is formed into hydrogen gas; these two gases pass from the generator into a second shell which contains fire brick in a checker form, which has been previously heated to a state of incandescent heat, by the waste products of the combustion of the fuel generator; this second shell is called the carbo-metor; with the admission of the carbonic oxide and hydrogen gases, a spray of oiley vapor is forced into the carbo-metor, all three gases there uniting and being intimately mixed by the passage through the heated checker work; passing out of the carbo-metor, the gas which then has been intimately mixed, as stated, goes on into a third shell similarly filled with heated fire brick where the gas is super-heated and converted into a fixed gas; the water gas process is distinguished primarily from the coal gas process by the fact that in the water gas process the residuals are of very little value; the only residual being a small amount of a substance commonly known as tar, but which has very few of the characteristics of coal tar. The office of the carbo-metor is to break up and gasify the molecules composing the oil which is sprayed into this piece of apparatus. The oil being a complex compound, will not all gasify and a por-
8 tion of it passes over and this is known as water gas tar and as stated, is the only residual product in the manufacture of water gas?

Q. Which kind of gas is considered the most economical for general use in this country?

A. That is entirely a matter of local conditions, depending upon the cost of materials, the cost of real estate and plant and the market for residual products.

Q. Which kind would be the most economical to manufacture for general use in a city of the size, character and location of the city of Peoria?

A. Coal gas can be made very much cheaper in Peoria than water gas.

Q. In speaking of the cost of real estate in the manufacture of the two different kinds of gases,—what do you mean by that statement?

A. A water gas plant of equal capacity requires very much less ground than a coal gas plant for the reason that the generating apparatus takes up less room than coal gas apparatus and no ground is required for the storage of the residuum.

Q. Please give the machinery and the several processes required in the manufacture and purification of coal gas in the plant of the Peoria Gas & Electric Light Company in the city of Peoria.

A. The Peoria plant consists of a stack of seven benches, which

ing the value of all residuals during that period and including 6½% depreciation and 10% upon the investment.

A. Yes sir.

Q. Please state what that cost was?

A. $2.56 3/10 per thousand cubic feet.

Q. Can you state the cost as related in the last preceding question, counting interest upon the investment at 5% per annum instead of 10%?

A. Yes sir.

Q. State what that cost was?

A. $2.12 1/10 per thousand cubic feet.

Q. Have you with you a statement or compilation showing the actual cost of the manufacture of gas and delivery of the same to the consumers of the Peoria Gas & Electric Company giving the figures concerning which you have just testified about during the period from May 1st, 1900 to August 31st, 1900, and from Sept. 1, 1900 to August 31st, 1901?

A. Yes sir, I have it in the form of two statements, one showing the amount of gas sold in cubic feet—the total expenses, the
32 total amount of residuals made, the net actual expenditure and a classification of the expenditures showing where the money was spent. The first statement is entitled "an operating statement" and the other statement shows the total amount of gas sold, the total expenditures, the value of the residuals made and a computation on the cost of the plant at the rate of 6½% per annum, the amount of interest at 5% per annum on the cost of the plant and the amount of interest on the cost of the plant at 10% per annum, then a statement showing the total cost and the cost per thousand cubic feet under all of the different theories and conditions mentioned in the interrogatories pertaining to the cost of gas.

Q. Are those statements you refer to correct?

A. Yes sir.

Q. Are those statements a compilation taken from the books of the company?

A. Yes sir.

Q. Were those books correct?

A. Yes sir.

Q. Do the books show the actual cost of the manufacture of gas?

A. They show all of the expenditures and the amount of gas sold and the value of the residuals made.

Q. Who made those statements that you refer to?

A. They were made by myself jointly with the book-keeper of the company.

Q. And you know them to be a correct compilation from the books?

A. Yes sir, I compared all the figures with the original books and checked them myself.

Q. And as to the adding of the price, including the interest and

depreciation, those figures were figured out by you yourself
33 from the actual cost as shown by the books?

Complainant's counsel offers in evidence the statements identified by the witness, which said statements are hereto attached, marked by the master Exhibits 3, 4, 5, and 6.

Objected to as not the best evidence.

Q. I understood you to say that the total expenditures of the manufacture and delivery of gas fro n May 1st, 1900, to September 1st, 1900 was $21,041., did that include the value of residuals, or after deducting the value of the residuals?

A. That was the money expended after deducting the value of the residuals?

Q. What would be the amount expended without deducting the value of residuals during that period?

A. The total expenditures during that period without deducting the value of the residuals was $26,413.46.

Q. I understood you to testify that the total expenditures for the manufacture and delivery of gas from September 1st, 1900 to August 31, 1901 was $60,257.25; is that the cost before or after deducting the value of all residuals during that period?

A. That sum represents the expenditures before deducting the value of the residuals.

Q. What was the value of the residuals during that period?

A. $20,372.91.

Q. Can you state the candle power of the gas as manufactured by the Peoria Gas & Electric Company at the time of the commencement of this suit in September, 1900?

A. Yes, sir.

34 Q. What was the candle power at that time?

A. Between 17 and 18.

Q. That was the candle power of the gas as manufactured by your company and delivered to consumers at that time?

A. Yes sir.

Q. What has been the candle power of the gas as manufactured and sold by your company to consumers from May 1900 up to the present time?

A. It ranges between 16½ and 19 candle power,—the average has been about 18.

(The MASTER:)

Q. Is there any method known to the art by which the candle power can be kept uniform?

A. Not absolutely uniform; it will vary according to weather conditions and pressure; there is also an atmospheric pressure.

(Mr. IRWIN:)

Q. Will you please explain fully how the candle power of gas is determined?

A. The candle power of gas is determined by nearly all gas companies by an instrument known as a bar photometer; this is an instrument which is set up in a dark room from which all daylight is excluded and consists of a wooden bar, at one end of which is placed two standard English sperm candles; these candles are manufactured as a rule in England and are sent out under the seal of the British board of trade; at the opposite end of the bar a gas flame is placed and the gas is regulated to one inch pressure and at the rate of consumption of exactly 5 cubic feet per hour; travelling along on the top of the bar is a screen in which is placed a disc of
35 white paper containing a paraffine spot usually in the shape of a star; when a light is thrown on both sides of the screen of equal intensity, the spot becomes invisible to the eye and the indicator on the screen points to a scale on the bar which shows the candle power of the gas.

Q. What is ordinary candle power of gas as manufactured by the several gas companies throughout this country that manufacture coal gas?

Objected to as immaterial.

A. It varies between 14 and 18 candles according to the quality of material used and the amount of enrichers used to bring up the candle power.

Q. Which is the higher candle power, coal or water gas.

A. Generally water gas is manufactured and delivered at a higher candle power than coal gas.

Q. What is the comparison between coal and water gas as to illuminating power?

A. Coal gas has a larger flame for a given amount of consumption per burner and also has a denser flame and therefore gives a greater degree of illumination for a given number of cubic feet than coal gas; as a general proposition, 18 candle power coal gas is equal in its illuminating value to 24 candle power water gas.

Q. Please explain wherein candle power differs from illuminating power?

A. The distinction is based upon a law of physics which is that the color of the light, which is determined by the molecular vibration, determines the power of the light to diffuse itself through the atmosphere. In other words, the light in which the molecu-
36 lar vibration is low, is better diffused and permeates the atmosphere better than where the molecular vibration is higher.

Q. Can you tell why it is that coal gas at 18 candle power has as high illuminating qualities as water gas at 24 candle power?

A. Because of the difference in the rate of vibration of the molecules of gas when burning, and because of the power of the gas burning at a lower rate of vibration to diffuse through the atmosphere; it is also in a measure due to the difference in specific gravity of the two gases, coal gas being of lighter specific gravity, the vol

ume is larger and presents a greater radiating surface than the water gas.

Q. Is it practicable to deliver gas to consumers of a quality of the uniform 18 candle power at the place of consumption?

A. No.

Q. Why?

A. First because it is impossible to make gas of an absolute uniform candle power, because the atmospheric pressure, the temperature in the works, in the storage holders and in the mains, all influence the candle power of the gas, and also because of the fact that the friction in the distributing mains, and more particularly in the piping system in the houses of the consumers, will reduce the candle power if the friction becomes excessive. In other words, if it is necessary to increase the pressure under which the gas is delivered in order to send it into the mains and pipes of the consumers' houses, you thereby reduce perceptibly the candle power of the gas;

it is also impracticable to make coal gas higher than 18 or
37 18½ candle power to the satisfaction of the consumer because such a gas is rich in hydrocarbon and smokes easily; anything that creates an air current in the room causes the gas to smoke badly, if the candle power is higher than 18 or 18½ made of coal gas.

Q. What candle power would it require the Peoria Gas & Electric Company to manufacture gas so that at all points of delivery for consumption it would not be less than 18 candle power?

A. It would have to be at least 21 candle power when leaving the works to show 18 candle power under all conditions and at all times at the point of consumption.

Q. Would the manufacture of coal gas of the uniform 21 candle power at the factory be practicable?

A. No, it would not.

Q. Would it be satisfactory to consumers?

A. No, it would not.

Q. Why?

A. Because a coal gas of so high a candle power would contain a very large percentage of rich hydro-carbon, which makes the gas very smoky and the cost of enriching it from the ordinary standard of 17 or 18 candle to 21 candle would be excessive.

(The MASTER:)

Q. Is the consumption by the ordinary consumer more or less if the candle power is increased above the ordinary candle power?

A. They are dissatisfied with it; it is too rich and it is as bad to have too rich gas as too poor.

(Mr. IRWIN:)

Q. How much is the increased cost of manufacture of coal
38 gas and delivery to consumers to manufacture it at a uniform candle power?

A. Probably from 7 to 10 cents per thousand cubic feet; I don't think it could be done in Peoria for less than 10 cents per thousand cubic feet.

(The MASTER:)

Q. Do you mean in addition to the cost of 18 candle power gas?
A. Yes sir, to bring it up the additional three candles.

(Mr. IRWIN:)

Q. Would your figures as to the cost of manufacture and delivery of gas in the city of Peoria necessarily raise the 7 to 10 cents per thousand cubic feet, if you were required to manufacture gas at 21 candle power at your plant?

A. Yes sir, I don't think it would be practical at all to manufacture any such a gas in Peoria unless it remained a combination of coal and water gas; I don't think it would be practicable to make it 21 candle power gas from coal enriched with nap-tha or cannel coal or any of the ordinary methods of enriching; I think it would have to be a mixed gas.

Q. Would that require the installation of a water gas plant in addition to the plant you now have?

A. Yes sir, it would.

Q. Is the manufacture of gas a continuing process?

A. Yes sir, the making of coal gas is a continuing process; that is necessitated by the fact that the retorts are heavy and made of fire clay and are heated by regenerating furnaces and inclosed in a mass of brick work; it is necessary to keep the heat at all times in the furnaces and run the retorts so that they don't cool off below
39 a temperature at which gas can be made; otherwise the retorts would go to pieces very rapidly, disintegrate through contraction and expansion, as would also the brick work in which the furnaces and retorts are placed.

Q. About how long does it require to heat a retort?

A. It takes from 2 to four weeks to start up a new stack of benches, or benches with which the retorts have been recently placed—refilled, as we call it.

Q. About what degree of heat is required.

A. In regenerative furnaces, you probably reach from 4000 to 5000 degrees of temperature.

Q. What kind of furnaces are used by the Peoria Gas & Electric Company?

A. Regenerative furnaces; we required four weeks to heat up our benches the first time and they have never been let down since.

Q. At what price did the Peoria Gas & Electric Company sell gas at the time of the commencement of this suit?

A. At the price of $1.15 net for light and $.75 net for fuel; these were the prices if the bills were paid on or before the 10th day of the following month at which the gas was consumed; if they were

not so paid after the 10th day of the month, the price was $1.25 for light and 85 cents for fuel.

Q. Why did you make two prices, one for illuminating gas and one for coal gas?

A. Because of the fact that our company in making and selling gas for light was required, by reason of the fact that the manufacture of gas is a continuous process, to have its plant in operation during the entire 24 hours of the day; the gas sold for fuel is
40 consumed almost entirely during the daylight hours; its primary use is for gas stoves in houses, for gas engines and in the mechanical arts, where it is used during the ordinary business day or during the daylight period; the manufacture of this additional amount of gas imposes no additional burden on the company excepting the material required in the manufacture. In other words, it don't affect the fixed expenses of the business which were the same whether any considerable amount of gas was sold for fuel or not and we wished to stimulate and develop the use of gas for fuel purposes and daylight consumption.

Q. What proportion of the illuminating gas is used in the daytime and what at night?

A. Certainly not more than 10% of the gas sold for illuminating purposes is used during the daylight period; the other 90% is used during the dark hours of the night.

Q. Would the same proportion apply to fuel gas in the day and night time?

A. No sir, it would be almost exactly reversed; about 90% of the fuel gas is sold in the day time and the remainder sold during the night.

Q. Is gas for the use of fuel comparatively a new departure or venture in the manufacture and sale of gas?

A. Yes sir.

Q. Was that one reason why the price was made as designated?

A. Yes sir, that was one of the reasons as stated in my answer to the previous questions; we wished to develop and stimulate the use of gas for fuel because that was a new use for it. It has been
41 only within the last half dozen years that people generally have been willing to believe that gas could be used for fuel purposes economically.

Q. Did your company sell gas stoves?

A. Yes sir.

Q. How many gas stoves did your company sell about between May 1st, 1900 and September 1st, 1901?

A. About 700.

Q. About how many were sold between May 1st, 1900 and September 1st, 1900?

(Mr. MANSFIELD:)

Q. You have an account of the number of stoves sold on your books, have you not?

A. Yes sir.

(Mr. MANSFIELD:) I then object to the question as not the best evidence.

(The MASTER:) If the witness has a personal knowledge of it independent of his books, I think it competent.

Q. What were the prices at which you sold gas for the several purposes on September 1st, 1900?

A. $1.15 net for light; 75 cents net for fuel; those were the net prices if the payment for the fuel gas was made before the 10th of the following month in which the gas was used. Otherwise they paid 10 cents more on the price of either class.

Q. What was the number of gas stoves sold by your company approximately between the 1st day of May, 1900 and the first day of September, 1900? Do you know how many?

A. Yes sir; we sold between May 1st, 1900 and September
42 1st, 1900 a few more than 400 stoves.

Q. Would it be practicable to operate a gas plant of the character of the Peoria Gas & Electric Company's plant by simply operating it during the night shift for the manufacture of illuminating gas?

A. No, it would not.

Q. Why?

A. Because the process is necessarily a continuous process and the men would have to be there during the entire 24 hours and the plant would have to be kept in operation during the 24 hours, otherwise the heat would fluctuate so you could not carbonize the coal at all.

Q. Are you acquainted with the price at which coal gas is sold throughout other cities in the United States?

A. Yes sir.

Q. In what cities throughout the United States of a population of 50,000 or upwards do you know the price at which coal or water gas was sold at or about the time of the commencement of this suit or prior thereto?

Objected to as immaterial and incompetent unless it is shown the same conditions surrounded the places where the gas was furnished as in the city of Peoria?

A. I am familiar with the price at which gas was sold about the time of the commencement of this suit in all cities in the United States having a population of 50,000 and upwards.

Q. Please state the cities you refer to.

A. Harrisburg, Pa.; Kansas City, Kansas; Elizabeth, N. J.; Erie,
Pa.; Duluth, Minn.; San Antonio, Texas; Salt Lake City,
43 Utah; Savannah, Ga.; Charleston, S. C.; Utica, N. Y.;
Manchester, N. H.; Evansville, Ind.; Troy, N. Y.; Spring-

N. J.; Camden, N. J.; Wellington, Delaware; Reading, Pa.; Hartford, Conn.; Seattle, Washington; Nashville, Tenn.; Richmond, Va.; Dayton, O.; Grand Rapids, Mich.; Atlanta, Ga.; Portland, Oregon; Cambridge, Mass.; Albany, N. Y.; Lowell, Mass.; Memphis, Tenn.; Los Angeles, Cal.; Omaha, Neb.; St. Joseph, Mo.; Fall River, Mass.; Patterson, N. J.; New Haven, Conn.; Syracuse, N. Y.; Worcester, Mass.; Columbus, Ohio; Allegheny, Pa.; Toledo, Ohio; St Paul, Minn.; Kansas City, Mo.; Indianapolis, Indiana; Providence, R. I.; and Minneapolis, Minn.; Louisville, Ky.; Jersey City and Newark, N. J.; Washington, D. C.; Milwaukee, Wis.; Detroit, Mich.; New Orleans, La.; Pittsburg, Pa.; Cincinnati, O.; San Francisco, Cal.; Buffalo, N. Y.; Cleveland, O.; Baltimore, Md.; Boston, Mass.; St. Louis Mo.; Brooklyn, New York; Philadelphia, Pa.; Chicago, Ill.; and New York city.

Q. Have all of the cities you have named a population of 50,000 and upward?

A. Yes sir.

Q. Have you a schedule prepared by yourself showing the population of the several cities named, the amount of the output and manufacture of gas, showing the net and gross price at which gas is sold in said several cities for illuminating and fuel purposes?

Objected to as immaterial.

A. Yes sir.

Q. Is the schedule so made by you correct?

A. Yes sir.

Q. Is it a correct schedule of those prices at or about the
44 time of the commencement of this suit?

A. Yes sir, the schedule states the prices prevailing in the cities mentioned at and about September 1st, 1900.

Q. Is that schedule correct?

A. Yes sir.

Q. Will you produce it and have it attached as a part of your answer to this interrogatory for convenience and reference in this case?

A. Yes sir.

(By Mr. MANSFIELD:)

Q. Where did you get the figures contained in this statement?

A. I got them from a number of different sources, partly from letters written to me by people and partly from personal examination and visits to the plants and partly from a trade publication known generally as Brown's Directory of the American Gas Companies.

(The SAME:)

Q. Were any of these figures compiled from your personal knowledge of the output of the gas plant and the cost of the distribution of the gas in any of these cities?

meter. The mains are subject to disintegration from the action of acids formed in the soil, which are impregnated more or less with ammonia and other salts due to the presence of horses and animals in public streets and also to acids which form in streets where the ground is what is known as made ground, filled with cinders etc. and to a greater or less extent to the action of electrolysis.

Q. From what source does electrolytic action prevail now in the city of Peoria?

Objected to as immaterial.

A. From any grounded circuit carrying an electric current.

Q. What electric plants or currents are there in Peoria that operate more or less on your gas piping system?

Objected to as immaterial and because the witness has not qualified himself to testify on that subject.

A. The street railways in Peoria operate with the overhead trolley using the rails for the return circuit, and there are some small motors in the city also using a ground return.

Q. Any telephone systems?

A. The telephone system has some grounded circuits, I think, in Peoria.

Q. What effect, if any, has competition of other kinds of lights had upon the stability and permanency of the gas business if you know?

Objected to as immaterial.

A. The electric light cuts into the gas business, especially in gas sold for illumination, as does also gasoline and other forms of
23 regenerating light using a Wellsbach mantle, made of rare oxides; kerosene lamps are now made which first convert kerosene into gas, then burns it to illuminate mantels; this is also a somewhat serious competition.

Q. What effect, if any, has the competition or inroads of the use of oils and electricity for illuminating purposes had upon the gas business in Peoria.

Objected to as immaterial.

A. They reduce the quantity of gas used for lighting purposes.

Q. Taking into consideration the destructive agencies that result to a gas plant, as mentioned in your testimony above, what in your judgment would be the probable and ordinary depreciation, annual depreciation of a gas plant of the character and location of the one constructed by you in the city of Peoria.

Objected to as immaterial because the question is based on a conclusion that there are destructive agencies at work.

A. About 6½ per cent. would be the annual depreciation.

A. What in your opinion is the annual depreciation of complainant's plant in the city of Peoria?

Objected to as immaterial.

A. About 6½ per cent. of the cost of the property.

Q. From your experience and observation in the management and investigation of gas plants, are you able to state what would be a reasonable and fair return to investors taking into consideration the hazard of the investment, on account of the improvements and competition concerning which you have testified.

24 Objected to as immaterial.

A. Yes sir.

Q. What would be a fair and reasonable return to investors upon the cost of the plant of complainant, taking into consideration the hazards of the business and the improvements arising from time to time?

Objected to as immaterial.

A. In my opinion, ten per cent. per annum on the cost of the property would be a fair return to any investor.

(The MASTER:)

Q. You mean by that 10% on the original cost, or 10% on the original cost and betterments to it?

A. 10% of the construction value of the property, whatever it may be at any time.

(Mr. IRWIN:)

Q. What effect has natural gas had upon the hazards of the investment in the manufacture of gas from the investor's standpoint?

Objected to as immaterial.

A. Where natural gas is found, or likely to be found, it increases the hazard or risk of the business very materially.

Q. Do you know of any localities where it has materially affected the business of the manufacture and sale of gas for investment, if so, state them?

Objected to as immaterial.

A. Yes sir, all through Ohio, Pennsylvania and Indiana, where natural gas has been found, it has very materially decreased the profits of the business and value of the business, in some instances, almost destroying the value of the business of the gas companies.

Q. Do you know of any other hazards you have not
25 already testified about that face the business of manufacturing and selling gas in municipalities?

Objected to as immaterial.

A. Yes sir, a condition threatens now which may necessitate a very great increase in the expenditures of gas companies by reason of a radical change in the process of manufacturing; there are two new processes being developed at the present time, one known as the by-product oven process, which has come into very general use in Germany, and a number of plants of that character have been constructed in England and a number in this country.

Q. What effect would that process have upon a plant of the character of complainant's plant in Peoria.

Objected to as immaterial.

A. It would almost necessitate the complete abandonment of the present plant, require the building of a new one.

Q. What determines whether such process would have to be adopted or not.

Objected to as immaterial.

A. Its general use by other people in the same vicinity would necessitate its adoption by the existing company as a matter of precaution to prevent its getting into the hands of other people and letting them come in and compete with you and make gas cheaper than you could.

Q. Do you know whether there is any prospects of natural gas being found in or about Peoria where the plant of complainant is now located?

Objected to as immaterial.

26 A. Indications of natural gas have been found there recently, and the report is in current circulation of an attempt to develop it and determine the absence or presence of gas at the present time.

Q. Is it not a fact that the organization of a company for that purpose has already been consummated?

Objected to as immaterial.

A. Yes sir.

Q. Have they not been for some time raising money and selling stock for the purpose of continuing the development of the gas field, if one can be found in that locality.

Objected to as immaterial.

A. Yes sir, a company has been formed for the development of natural gas properties, which are claimed to exist immediately across the river from Peoria and stock is now being sold and efforts made to develop the natural gas which is supposed to exist there and of which indications have been found.

Q. If natural gas were found to any extent in that locality what if any effect in your judgment would it have upon the plant and business of the complainant.

Objected to as immaterial and incompetent.

A. If any considerable amount of natural gas was found there, and it were piped into Peoria, it would take away practically all of the fuel gas business of the complainant.

Q. What distance would it require the piping of gas from the supposed gas fields near Peoria to bring it into the city.

Objected to as immaterial and incompetent.

27 A. About three miles.

Q. Is that an unreasonable distance to pipe natural gas to supply the city?

Objected to on the same grounds.

A. No sir, a very short distance.

Q. From your management and control of the Peoria Gas & Electric Company, are you able to tell the actual cost of the manufacture of gas by that company?

A. Yes sir.

Q. When did the Peoria Gas & Electric Company begin the manufacture and sale of gas in Peoria?

A. A small amount of gas was made in the latter part of the month of March, 1900 and the plant was gotten into shape to operate fully during the month of April, the first gas being sent out, I think, on the 27th of March, if my memory serves me right, and gas was continuously sent out from that time on, but the work of putting the plant into shape, getting it limbered up and put in running order took the entire month of April, 1900.

Q. Then you were in good operation about May 1st, 1900?

A. Yes sir.

Q. Are you able to give the cost of gas per thousand feet delivered to consumers from the plant of the Peoria Gas & Electric Company in the city of Peoria during the period beginning May 1st, 1900 and ending August 31, 1900?

A. Yes sir.

Q. Can you give such cost during that period exclusive of depreciation and exclusive of interest on the investment, taking into your calculation, however, any moneys received from the sale of residuals during that period.

A. Yes sir.

28 Q. What is that cost?

A. The total cash expenditures from May 1st, 1900 to August 31, 1900 after deducting the value of the residuals made, was $21,041.43. During that period, we sold 15,475,200 cubic feet; the cost per thousand cubic foot of the gas so sold was $1.35 8/10 cents; that is exclusive of depreciation and interest on the investment and after deducting from the cash expenditures the value of the residuals.

Q. Can you give the cost of gas per thousand cubic feet as manu-

factured by the plant of the Peoria Gas & Electric Company, without deducting the moneys received or the value of residuals during that period, exclusive of interest on the investment and depreciation.

A. Yes sir.

Q. Will you please state what that cost is?

A. For the period mentioned, the cost was $1.70 6/10 per thousand cubic feet.

Q. Can you give the cost of gas per thousand cubic feet during the period from May 1st, 1900 to August 31st, 1900 without deducting the amount of value of the residuals and including interest on the investment at the rate of 10 % per annum?

A. Yes sir.

Q. Please state what that cost was?

A. $2.64 2/10 per thousand cubic feet.

Q. Can you give the cost per thousand cubic feet during the period from May 1st, 1900 to August 31st, 1900 without deducting the value of residuals and including 10 % upon the investment and 6½ % depreciation on the cost of the plant?

A. Yes sir.

Q. Please state what that cost was?

A. $3.24 1/10.

29 Q. Can you give the cost per thousand cubic feet of gas manufactured by the complainant company from May 1st, 1900 to August 31st, 1900 after deducting the value of all residuals and including 10 % interest upon the investment and 6½ % depreciation on the cost of the plant?

A. Yes sir.

Q. Will you please state what that cost is?

A. $288 6/10.

Q. Can you give the cost of gas manufactured by the complainant company during the period from May 1st, 1900 to August 31, 1900 after deducting the value of all residuals during that period and including interest on the investment at 5 % per annum and also including 6½ % depreciation on the cost of the plant?

A. Yes sir.

Q. Will you please state what that cost is?

—. $2.41 9/10.

Q. Are you able to give the cost of gas per thousand cubic feet as manufactured by the Peoria Gas & Electric Company and delivered to consumers during the period from September 1st, 1900 to September 1st, 1901.

A. Yes sir.

Q. Can you give such cost during that period exclusive of depreciation and exclusive of interest on the investment, taking into your calculation, however, any moneys received from the sale of residuals during that period, or the value of any residuals during that period?

A. Yes sir.

Q. Please state what that cost was?

A. The cost during the period mentioned, after deducting the value of the residuals, and excluding any depreciation or interest, amounted to seventy-seven and nine-tenths cents per thousand cubic feet.

30 Q. What was the total cost of the manufacture of gas sold by your company during the period from September 1st, 1900 to September 1901?

A. The total expenditures in the manufacture and delivery of gas from September 1st, 1900 to August 31st, 1901, was $60,257.25.

Q. Does that include residuals or have you deducted the residuals from that amount?

A. The residuals have not been deducted from that amount; that sum represents the total expenditures during that period.

Q. What was the volume of gas manufactured and sold by your company during the period from September 1st, 1900 to August 31st, 1901?

A. The total amount of gas sold to consumers was 51,178,300 cubic feet during the period mentioned.

Q. Can you give the cost of gas as manufactured by the Peoria Gas & Electric Company and delivered to its consumers during the period from September 1st, 1900 to August 31st, 1901 after deducting the cost of residuals and including depreciation upon the cost of the plant at the rate of 6½ %?

A. Yes sir.

Q. Please state what that cost was?

A. $1.31 7/10 per thousand cubic feet.

Q. Can you state the cost of gas as manufactured by the Peoria Gas & Electric Company and delivered to consumers during the period from September 1st, 1900 to August 31st, 1901, after deducting the value of all residuals and including depreciation on the cost of the plant at the rate of 6½ % per annum and including 10 % upon the cost of the investment?

A. Yes sir.

Q. Please state what that cost was?

A. $2.16 5/10 per thousand cubic feet.

31 Q. Can you state the cost of gas manufactured by the complainant company during the period from September 1st, 1900 to August 31, 1901 after deducting the value of all residuals and including therein depreciation on the cost of the plant at the rate of 6½ % per annum and including interest on the investment at the rate of 5% per annum?

A. Yes sir.

Q. Please state what that cost was?

A. $1.74 1/10 per thousand cubic feet.

Q. Can you state the cost of gas as manufactured and delivered to the consumer of the Peoria Gas & Electric Company during the period from September 1st, 1900 to August 31, 1901 without deduct-

A. Only as the result of inquiries directly addressed to the managers of those properties.

(The SAME:)

Q. But not from your inspection of the plants or any definite knowledge you have?

A. No, I could not have that of course.

(By Mr. IRWIN:)

Q. Were a large number of these figures secured from personal interviews with managers?

A. A large number of them were, yes sir; I visited a large number of these plants during the fall of 1900 and early part of 1901 and made careful inquiry as to the price at which they were selling gas.

45 Q. And the schedule presented by you is the result of that investigation?

A. As to those places I visited; as to the others, my information was obtained by correspondence directly with the manager of the plant or by reference to the standard publications known as Brown's Directory of American Gas Companies.

(Mr. IRWIN:) The complainant submits that the schedule is proper and offers the same in evidence, which said schedule is hereto attached and marked Exhibit 7.

Objected to as not the best evidence.

The MASTER: It will be admitted subject to the objection.

Q. Look at Exhibit 7 and state in what cities named thereon gas for illuminating purposes is sold at less than $1.00 per thousand cubic feet net.

Objected to as immaterial.

A. Chicago, Illinois; Cleveland, O.; Cincinnati, O.; Milwaukee, Wis.; Toledo, O.; Grand Rapids, Mich.; and Dayton, O.

Q. What company in Chicago sells at less than $1.00 per thousand cubic feet not for illuminating purposes.

Objected to as immaterial.

A. The Ogden Gas Company.

Q. At what price did it sell illuminating gas for in September, 1900?

Objected to as immaterial.

A. 90 cents per thousand cubic feet.

Q. What proportion of the consumption of gas in Chicago is sold by the Ogden Company.

Objected to as immaterial.

46 A. A very small proportion; they operate only in a small district of the city.

Q. What did the other companies in Chicago sell gas at at that time?

Objected to as immaterial.

A. $1.00 per thousand cubic feet.

Q. Did the same price prevail in those Chicago companies for fuel gas?

Objected to as immaterial.

A. Yes sir.

Q. Cleveland, Ohio is one of the cities where you state that gas is sold for less than $1.00 per thousand cubic feet?

A. Yes sir.

Q. What were the conditions there as compared with the city of Peoria, if you know?

A. I presume y-u mean as to the cost of manufacture?

Q. Yes sir.

A. Cleveland is located within 150 miles of the coal fields from which gas coal is obtained. In this connection I want to say that for a satisfactory manufacture of gas it is necessary to purchase coal in a limited region lying in western Pennsylvania; or in western Virginia, or in a small portion of Kentucky; coal outside of those regions is generally speaking unsuitable for the manufacture of gas; the cost of coal in Cleveland at about the time of the commencement of this suit was $1.60 per to- delivered in the yards of the gas company; at the same time, in Peoria, coal cost upwards of $2.50 per ton, the same coal, by reason of the difference in freight rates; the price of residuals in Cleveland at the same time was higher than in Peoria for the reason that the manufacturing
47 industries of Cleveland and a large well-to-do resident population were willing to pay a higher price for coke than we could charge in Peoria and the gas companies were able to sell their tar and ammonia at better figures because the plants using this material were located at or near Cleveland; we sell tar and ammonia in crude form to tar distillers and ammonia manufacturers who work it up into commercial form; these plants are generally speaking located in northern Ohio or southern Michigan.

Q. What was the price in Cleveland at that time?

Objected to as immaterial.

A. 75 cents net per thousand cubic feet for gas used for both purposes.

Q. Do you know of any other city in the United States of 50,000 inhabitants or upwards where gas is sold at that price?

Objected to as immaterial and incompetent.

A. Yes, sir, Cincinnati, Ohio.

Q. Did the same conditions prevail in Cincinnati as in Cleveland as compared with Peoria?

Objected to as immaterial and incompetent.

A. The conditions prevailing in Cincinnati are even more favorable to the gas companies than the conditions prevailing in Cleveland as compared with the condition prevailing in Peoria.

(The MASTER:)

Q. Do you mean the conditions are more favorable to the gas company or to selling gas for that figure?

A. They are more favorable to the manufacture of gas at a low cost.

(Mr. IRWIN:)

Q. In what particular?

48 A. For the reason the freight rate for gas coal to Cincinnati is lower than to Cleveland because the coal is usually brought down the Ohio river in barges at the cheapest freight rates known in this country. Another fact, that is important in this connection at Cincinnati, a very large amount of coal is elevated from the barges, screened and shipped from there to the West and Northwest. The Cincinnati Gas Light & Coke Company uses for the manufacture of gas screenings when obtainable instead of lump coal. These screenings are bought at a very low price—in the summer of 1900 at the price of 90 cents per ton delivered at the gas works.

Q. Do you know of any other city of a population of 50,000 and upwards that sells gas for 75 cents per thousand cubic feet net?

A. I do not.

Q. Can you tell me what the price of gas is net in Toledo, Ohio?

Objected to as immaterial and incompetent.

A. The price for illuminating light gas, net in Toledo, Ohio is 95 cents per thousand cubic feet.

Q. What are the conditions in Toledo, Ohio as compared with those in Peoria, Illinois for the manufacture of gas?

Objected to as immaterial.

A. Coal is cheaper in Toledo and residuals generally command a higher price.

Q. What is the price in Dayton, Ohio?

Objected to as immaterial.

A. 85 cents per thousand cubic feet net.

49 Q. What are the conditions in Dayton, Ohio, for the manufacture of illuminating gas from coal as compared with the conditions at Peoria, Illinois.

Objected to as immaterial.

A. Coal is cheaper and residuals generally command a higher price.

Q. Are there any other cities than those named that sell gas for less than $1.00 per thousand cubic feet of 50,000 inhabitants and upwards.

Objected to as immaterial and incompetent.

A. In Milwaukee, a certain portion of the gas sold for illuminating purposes is sold as low as 80 cents; they have a sliding scale there; the price varying from $1.00 down to 80 cents, according to the amount of consumption.

Q. What is the gross price charged in Milwaukee?

Objected to as immaterial.

A. $1.20 per thousand cubic feet.

Q. Are there any other cities now of 50,000 inhabitants and upwards, except those named, that sell for less than $1.00.

A. I mentioned Grand Rapids, Michigan and Dayton, Ohio; those are the only two other places.

Q. What is the net price charged for gas in the city of New York per thousand cubic feet.

Objected to as immaterial.

A. $1.00 per thousand cubic feet; it is the same for both illuminating and fuel purposes.

Q. What is the net price charged for gas per thousand cubic feet in Philadelphia?

50 Objected to as immaterial.

A. $1.00 per thousand cubic feet; the same for both light and fuel.

Q. What is the net price charged for gas in the city of Boston?

Objected to as immaterial and incompetent.

A. It varies somewhat according to the district supplied; in the larger part of the city, the net price is the same, but in some of the suburban districts the price is $1.10 and in one case it is $1.40 net; there is no district where it is sold for less than $1.00; it is the same for light and fuel.

Q. What is the net price charged for gas in the city of Buffalo, N. Y.?

Objected to as immaterial and incompetent.

A. $1.00 per thousand cubic feet.

Q. What is the gross price in the city of Buffalo?

Objected to as immaterial and incompetent.

A. $1.20.

Q. What is the price for fuel purposes.

Objected, same grounds.

A. $1.00 net and $1.20 gross.

Q. What is the net price for gas per thousand cubic feet at Baltimore, Md.?

Objected to as immaterial and incompetent.

A. $1.10, and the same for fuel purposes.

Q. What is the net price charged per thousand cubic feet for gas at Pittsburg, Pa.?

Objected to, same grounds.

51 A. One company charges $1.00 and another company doing business in a smaller portion of the city charges $1.20; it is the same price for fuel purposes; they sell but a very small proportion of fuel gas.

Q. How is the city of Pittsburg situated as to conditions for the manufacture of gas as compared with the city of Peoria?

Objected to, same grounds as before.

A. It is right in the midst of the coal fields; the coal is mined right at their very door and they can buy their manufacturing material, coal and oil much cheaper than we can at Peoria.

Q. What is the price charged for gas per thousand cubic feet in the city of Washington, D. C.

Objected to, same grounds as before.

A. $1.25 gross; $1.10 net; the same for fuel purposes.

Q. What is the price charged per thousand cubic feet in the city of Newark, N. J.?

Objected to, same grounds.

A. $1.00 net for both light and fuel; $1.10 gross.

Q. What is the price charged for gas in Louisville, Ky.

Objected to, same grounds.

A. For light $1.20 net; $1.25 gross.

Q. How is it for fuel purposes?

Objected to, same grounds.

A. There are two companies operating in Louisville, one known as the Kentucky Heating Company, which distributes natural gas, or a mixture of natural gas and artificial gas; this gas is all of low candle power and is not suitable for lighting purposes, and 52 they are prohibited by their charter from selling it for lighting and they sell only for fuel purposes, at the price of 55 cents gross and 45½ cents net, being a discount of 10% if the bill is paid promptly. This is a mixture of natural and artificial gas, the larger portion of it, natural gas; they only manufacture artificial gas during the period of low pressure in the natural gas mains. The other company, known as the Louisville Gas Light & Coke Company, sells gas for fuel purposes at 80 cents gross, 75 cents net; the gross price of illuminating gas of that company is $1.25.

Q. What is the price charged per thousand cubic feet in the city of Minneapolis, Minn.

Objected to same grounds.

A. The net price is $1.20 for both light and fuel; $1.40 gross.

Q. What is the price for gas in the city of Providence, R. I. per thousand cubic feet.

Objected to, same grounds.

A. $1.10 for both light and fuel.

Q. What is the price per thousand cubic feet for gas in Indianapolis, Indiana.

Objected to, same grounds.

A. For light, $1.00 per thousand cubic feet net.

Q. What is it in Kansas City, Missouri.

Objected to, same grounds.

A. $1.00 is the net price.

Q. How is it in St. Paul, Minn.

Objected to same grounds.

A. The net price is $1.30; the gross price $1.50; the same
53 for fuel.

Q. How is Indianapolis situated compared with Peoria for the manufacture and delivery of gas?

A. They can buy their coal much cheaper than we can in Peoria because of lower freight rate and because of the fact they can use a considerable percentage of Indiana cannel coal, which is mined right near Indianapolis.

Q. What is the price of gas per thousand cubic feet in the city of Allegheny, Pa.

Objected to same ground.

A. $1.20 gross; $1.00 net.

Q. How does that compare with the city of Peoria.

Objected to, same ground.

A. They can buy their material very much cheaper than we can and get a better price for residuals.

Q. What is the price of gas per thousand cubic feet in the city of Columbus, Ohio.

Objected to, same grounds.

A. $1.00 net; $1.10 gross; same price for fuel purposes.

Q. What is the price of gas per thousand cubic feet in the city of Worcester, Mass.

Objected to, same grounds.

A. $1.00 net; $1.20 gross; same for light and fuel.

Q. What is the price per thousand cubic feet in Syracuse, N. Y.

Objected to, same grounds.

A. $1.30 net for light; $1.50 gross; fuel is sold for $1.00 per thousand both gross and net.

54 Q. What is the price per thousand cubic feet in the city of New Haven, Conn.?

Objected to, same grounds.

A. $1.10 gross; $1.00 net; same for light and fuel.

Q. What is the price per thousand cubic feet in the city of Paterson, N. J.?

Objected to, same grounds.

A. $1.15 net; $1.25 gross; same for both light and fuel.

Q. What is the price per thousand cubic feet in the city of Fall River, Mass.?

Objected to, same grounds.

A. $1.15 net; $1.20 gross; for both light and fuel.

Q. What is the price in the city of St. Joseph, Mo.?

Objected to, same grounds.

A. $1.00 net; $1.25; gross for both light and fuel.

Q. What is the price per thousand cubic feet in the city of Omaha, Neb.?

Objected to, same grounds.

A. They have a sliding scale running from $1.35 down to $1.15 according to the amount consumed and the same price prevails for both light and fuel; the gross price is $1.45.

Q. What is the price per thousand cubic feet in Memphis, Tenn.?

Objected to, same grounds.

A. The gross price in Memphis for light is $1.40; for fuel $1.15; they have a sliding scale of discounts running down to $1.20 for light and $1.00 for fuel.

Q. What is the price per thousand cubic feet in Lowell, Mass.?

Objected to, same grounds.

55 A. $1.00 net for both light and fuel; $1.20 gross.

Q. What is the price in the city of Albany, N. Y.?

Objected to, same grounds.

A. $1.50 net for light and $1.25 for fuel.

Q. What is the price in the city of Cambridge, Mass.?

Objected to, same grounds.

A. $1.00 net for light; $1.20 gross; the fuel price is $1.00 net.

Q. What is the price in the city of Richmond, Va.?

Objected to, same grounds.

A. $1.00 for both light and fuel purposes.

Q. How is that city, as compared with Peoria, for the manufacture of gas cheaply?

Objected to, same grounds.

A. They can buy their material very much cheaper than we can because of their proximity to the coal and oil fields.

Q. What is the price in the city of Nashville, Tenn.?

Objected to, same grounds.

A. $1.00 net; $1.10 gross for both light and fuel.

Q. What is the price in the city of Hartford, Conn.?

Objected to, same grounds.

A. $1.00 net; $1.10 gross for both light and fuel.

Q. What is the price in Reading, Pa.?

Objected to, same grounds.

A. $1.35 net and $1.50 gross for both light and fue .

Q. How is that city as compared with Peoria for the manufacture of gas?

Objected to, same grounds.

56 A. They buy their coal, oil and coke cheaper than we can in Peoria.

Q. What is the price in the city of Bridgeport, Conn.?

Objected to, same grounds.

A. There are two companies operating in Bridgeport, or were two companies at the date of the passage of this 75 cent gas ordinance in Peoria, one making principally coal gas which sold at $1.25 net for light and $1.50 gross; their gross price for fuel was $1.25 subject to a discount reaching as high as 10% according to the quantity consumed and for prompt payment; the other company manufactured a fuel gas, pure and simple, that is to say, it is a carbonated water gas made under what is known as the Loomis process, very low in heat units and having practically no candle power; this gas is sold only for heating purposes.

Q. What is the price in the city of Lynn, Mass.?

Objected to, same grounds.

A. $1.20 gross; $1.00 net for both light and fuel.

Q. What is the price in the city of Lawrence, Mass.?

Objected to, same grounds.

A. $1.10 gross; $1.00 net for both light and fuel.

Q. What is the price in the city of New Bedford, Mass.

Objected to, same grounds.

A. $1.40 gross; $1.12 net for both light and fuel.
Q. What is the price in the city of Des Moines, Iowa?

Objected to, same grounds.

A. $1.20 net; $1.30 gross, for both light and fuel.
Q. What is the price in Springfield, Mass.?

Objected to, same grounds.

57 A. $1.05 net; $1.20 gross for both light and fuel.
Q. What is the price in the city of Troy, N. Y.?

Objected to, same grounds.

A. $1.50 gross for light and $1.25 for fuel; they have a sliding scale discount.
Q. What is the price in the city of Manchester, N. H.

Objected to, same grounds.

A. $1.40 gross; $1.25 net.
Q. What is the price in the city of Utica, N. Y.?

Objected to, same grounds.

A. $1.50 for light; for fuel it ranges from $1.50 per thousand down to $1.00 according to the quantity consumed.
Q. What is the price in the city of Duluth, Minn.?

Objected to, same grounds.

A. For light the gross price is $1.35 with a quantity discount bringing it down as low as $1.15; the price for fuel is $1.25 gross with a net price of $1.00.
Q. What is the price in the city of Elizabeth, N. J.?

Objected to, same grounds.

A. $1.50 gross; $1.25 net for both fuel and light.
Q. What is the price in the city of Kansas City, Kansas?

Objected to same grounds.

A. $1.10 gross, $1.00 net for both light and fuel.
Q. What is the price in the city of Harrisburg, Pa.?

Objected to same grounds.

A. $1.60 net; $1.70 gross for light; $1.25 net and $1.35 gross for fuel.

58 Defendant's counsel objects to all of the foregoing evidence of this witness with regard to the price at which gas was sold in the various cities mentioned on the ground of hearsay and not

matter within the witness's knowledge, and moves the court to exclude it.

Adjourned until Wednesday, November 6, 1901 at 10 a. m.

Directors' room, Chicago National Bank building.

CHICAGO, ILLINOIS, WEDNESDAY, *Nov.* 6, 1901—10 a. m.

Parties met pursuant to adjournment.

Present: Judge I. C. Pinkney, special master; Messrs. W. T. Irwin and Mr. E. C. Ritsher appearing for complainant; Mr. Henry Mansfield appearing for the defendant.

Direct examination of FRANCIS W. LITTLE resumed by Mr. Irwin:

Q. I see in the statement introduced in evidence last night marked Exhibit 7, which shows the price of gas charged in the several cities named, that you also show the candle power of the gas in the respective cities. What do you know with reference to the character of the gas manufactured by the respective parties where the candle power exceeds 18 candle power as shown in that statement.

Objected to as immaterial and incompetent.

A. In all instances where the candle power exceeds 18 candle the gas made is water gas, or a mixture of coal gas and water gas.

Q. You resided in the city of Peoria about the first of September 1900?

A. Yes sir.

Q. And had charge of the complainant company at that time?

59 A. Yes sir, I was vice-president and general manager of the company at that time.

Q. And had been since its organization?

A. Yes sir, since the first of May, 1900.

Q. Do you remember the time that the ordinance in question fixing the price of gas at 75 cents was before the city council of the city of Peoria?

A. Yes sir.

Q. Did you interest yourself at that time in determining what action the city was likely to take upon that ordinance?

A. Yes sir, I interviewed the mayor and two or three members of the council while the ordinance was being considered.

Q. Did you make any statement to them as to the cost of the manufacture of gas by your company in the city of Peoria?

A. I did to the mayor.

Q. What did you say to him?

Objected to as immaterial.

A. I said to him that gas could not be made by our company at the price fixed by the ordinance, 75 cents per thousand cubic feet

and requested him, either personally or through any representative he might select to investigate the cost by an examination of our books to ascertain the cost of the plant, the amount of the investment and what it was then and had been costing us to make gas and what would be the probable cost in the future. I offered to permit him or any person he might select to examine our books of account and ascertain for himself every material fact connected with the cost of the plant, or the cost of the manufacture of gas in our works in Peoria.

Q. Did you suggest or request the mayor to have a com-
60 mittee of the council make such examination.

Objected to as immaterial and irrelevant.

A. Yes sir.

Q. Was there any request for such examination from the mayor or any of the officials of the city?

Objected to, same grounds.

A. No.

Q. Was there by any other person on behalf of the city prior to the passage of this ordinance?

A. No sir.

Q. Do you know whether the mayor or city council, or any committee of the city council, or any official, or person on behalf of the city council, made any investigation of your company, or of any other gas company doing business in the city of Peoria, as to what gas could be manufactured and sold for prior to the passage of that ordinance.

A. I know of no such investigation.

Q. Could any such investigation have been made of the cost of manufacture and delivery of gas by your company by the city council, or any committee of the city council, or any one on behalf of the city council, without your having known it?

Objected to as immaterial.

A. I don't think so; no one was authorized to make any statement whatever concerning the Peoria Gas & Electric Company excepting myself and I think no other employee of the company living in the city of Peoria had any means of knowing the facts, or actual cost of the manufacture of gas.

Q. What did the mayor of the city say to you at the time you requested him to make the examination above referred to?

61 Objected to as immaterial and incompetent.

A. He said he would think it over.

Q. Did you ever have any other conversation with the mayor, alderman or any committee of the city council, or any one on behalf of the city council, regarding the price at which gas could be manu-

factured and sold in the city of Peoria by your company, prior to the passage of the ordinance in question.

Objected to, same grounds, and because no proper foundation has been laid.

A. I think not.

The MASTER: What is the purpose of this line of examination, Mr. Irwin.

Mr. IRWIN: To show that they arbitrarily passed the ordinance without any evidence to ascertain what a reasonable charge was; that it was done captiously and without investigation or consideration of the rights of the company.

Q. Was your company ready and willing at any and all times during the pendency of that ordinance before the city council to have given to the mayor, city council, or any committee of the city council, or any one on behalf of the city council, all the information that they might desire regarding the cost of manufacture and delivery of gas by your company?

Objected to, same grounds.

A. Yes sir.

Q. Is the plant of the Peoria Gas & Electric Company so constructed as to enable one familiar with the business to manufacture gas as economically as it can be manufactured by any other
62 design or character of a gas plant for the manufacture of artificial coal gas.

Objected to unless the question is confined to the process of manufacture used in the city of Peoria.

A. Yes sir.

Q. In all your investigation of gas plants, the manufacture of gas and the cost of manufacturing gas in cities of 50,000 and upwards throughout the United States, do you know of any city of that size situated under conditions like the city of Peoria where coal gas can be manufactured and sold at a profit at 75 cents per thousand cubic feet.

Objected to as immaterial and incompetent.

A. Not where the price of materials and the selling values of the residuals approximate the Peoria prices.

Q. Do you know of any such city similarly situated where coal gas can be manufactured and delivered to consumers at 75 cents per thousand cubic feet without any loss to the company?

Objected to as immaterial.

A. No, I do not.

Complainant's counsel offers in evidence from the Supplement to the Public Statutes of Massachussetts, from 1882 to 1888 published

and prepared pursuant to the act of 1888, chapter 383 of the Publi
Statutes of Massachusetts,—from that volume I offer chapter 31
page 333 of said volume, being "An act to establish a board of g
commissioners," and will read section 1 of said act, which is
follows:

63 SECTION 1. The governor by and with the consent of t
council shall appoint three citizens of this Commonwealt
who shall constitute a board of gas commissioners, and the governo
shall designate the chairman thereof. Said board shall have
clerk, to be appointed by the governor with the consent of t
council, who shall make full and faithful records of its proceedin
and shall serve such notices and perform such other duties as t
commissioners may require, and shall be sworn before entering up
the discharge of his duties."

Objected to as immaterial and incompetent.

(Mr. RITSHER:) Complainant also offers in evidence from t
Supplement to the Public Statutes of Massachusetts, 1889 to 189
prepared pursuant to an act of the legislature, Statutes of 1895, cha
863. From that volume, I offer chap. 373, page 127 entitled "A
act to change the name of the board of gas commissioners." I rea
section 1 of that act:—

"SECTION 1. The board of gas commissioners shall hereafter
known and designated as the board of gas and electric light co
missioners."

Objected to as immaterial and incompetent.

Mr. RITSHER: From the same volume on page 166, the co
plainant offers in evidence chapter 440 entitled "An act concerni
the printing and distribution of the laws and public document
and simply call attention to the fact that among the other doc
ments listed in that act there appears on page 170 the followin
"Report of gas & electric light commissioners 3000 copies."

Objected to as immaterial and incompetent.

Mr. RITSHER: Complainant also offers in evidence fro

64 the same volume page 1399, chap. 463, entitled "An act re
tive to the annual expenditures and report of the board
gas & electric light commissioners." I read section 2 of said act.

"SECTION 2. 3500 copies of the report of said board shall be print
annually as a public document and shall be ready for distributi
on the first Wednesday of January, or as soon thereafter as may

Objected to as immaterial and incompetent.

Mr. RITSHER: Complainant also offers from the same volu
page 484, chap. 370 entitled "An act to enable cities and towns
manufacture and distribute gas and electricity and will read secti
10 of said act, which appears on page 487 as follows:

"SECTION 10. The price to be charged for gas or electricity
persons and corporations shall be fixed, and shall not be chang
oftener than once in three months. Any change shall take eff
on the first day of the month and the new price adopted shall,
fore the change can take effect, be advertised in some newspaper

the city or town where the plant is, if any is published therein. Such price shall not, except with the written consent of the gas and electric light commissioners, be fixed at less than cost, in which shall be included in addition to all operating expenses, interest on the net investment in plants made by the city or town*m*, less assessments collected under section 6, at the rate paid upon the bonds above provided for, together with the requirement of the sinking fund established to meet such bonds and also depreciation of the plant to be reckoned at not less than 5% per annum of its cost, and losses, but any loss exceeding 3% of the investment in the plant may be charged in different years at not more than such 3% per annum.

65 Such price shall not be greater than shall allow above such costs a profit of 8 % per annum to the city or town upon its net investment. In fixing such cost to establish the price to be charged to persons and corporations, the gas and electricity used by the city or town shall be charged to it at cost. A sufficient deposit to secure the payment for gas or electricity for three months may be required in advance from any taker, and the supply may be shut off from any premises until all arrearages for gas or electricity furnished thereon, to whomsoever furnished, shall be paid. After three months' default in the payment of such arrearages, all appliances for distribution belonging to the city or town on such premises may be removed and after such removal shall not be restored except on payment of all such arrearages and a sufficient sum to cover any expenses, cost of removal and restoration."

Objected to as immaterial and incompetent.

Mr. IRWIN: In connection with the statute just offered in evidence, complainant offers in evidence the 15th Annual Report of the Board of Gas and Electric Light Commissioners of the Commonwealth of Mass., published pursuant to the act offered in evidence of January, 1900, and complainant specially offers for the record in this case, pages 104, 105, 106 and 107 of said report; the heading of which reads as follows: "The following pages show the price charged by the several companies June 30, 1899, the average candle power as shown by the tests made by the State inspector of gas, and the average price per thousand cubic feet received from sales by meter in each of the two years ending June 30, 1899."

Pages 104 to 107 inclusive are in the words and figures following, to-wit:

65*a* 1900.) Public document No. 35. 103.

Price of Gas.

The following companies reduced the price of gas during the year ending June 30, 1899:—

Attleboro,	Gloucester,	Northampton,
Beverly,	Haverhill,	Taunton,
Cambridge,	Lawrence,	Waltham,
Charlestown,	Lexington,	Webster,
Danvers,	Newburyport,	Williamstown.
Pedham,	North Adams,	

65*b* (Jan. Gas and electric light. 104.

The following pages show the price charged by the several companies, June 30, 1899; the average candle power, as shown by the tests made by the State inspector of gas; and the average price per thousand feet, received from sales by meter in each of the two years ending June 30, 1899:—

Company.	Average candle-power.	Gross price.	Remarks.	Average price 1897–'98.	Average price 1898–'99.

65*h* 108. Gas and electric light. (Jan.

The average price paid by consumers for coal gas to the companies selling annually more than 30,000,000 feet each is $1.08 per thousand feet. If the Boston and Brookline companies be excluded the average is $1.14. The average price received by the remainder of the coal gas companies from sales by meter is $1.67, the average received by all is $1.12 per thousand. The average price for oil gas is $4.21 per thousand feet.

The average price paid by consumers for sales by meter in 1886 was $1.72; in 1887, $1.66; in 1888, $1.56; in 1889, $1.50; in 1890, $1.46; in 1891, $1.43; in 1892, $1.52; in 1893, $1.45; in 1894, $1.26; in 1895, $1.21; in 1896, $1.17; in 1897, $1.15; in 1898, $1.14.

The following table shows the amount of gas made in the year ending June 30, 1899, and in the year ending June 30, 1898; the amount sold by meter and to public lamps in both these years; the amount used at works and offices, with the amount of gas unaccounted for during the year ending June 30, 1899, and the percentage of unaccounted-for gas in both years.

NOTE.—The terms "coal gas" and "coal-gas companies" whenever used in the report are intended, unless otherwise qualified, to include all the companies except those that make their gas entirely from oil distilled in closed retorts externally fired.

66 Mr. IRWIN: Complainant also specially offers in evidence from page 108 of the same report the following:

"The average price paid by consumers for coal gas to the companies selling annually more than 30,000,000 feet each is $1.08 per thousand feet. If the Boston and Brookline companies be excluded the average is $1.14. The average price received by the remainder of the coal gas companies from sales by meter is $1.67, the average received by all is $1.12 per thousand. The average price for oil gas is $4.21 per thousand feet.

The average price paid by consumers for sales by meter in 1886 was $1.72; in 1887, $1.66; in 1888, $1.56; in 1889, $1.50; in 1890, $1.46; in 1891, $1.43; in 1892, $1.52; in 1893, $1.45; in 1894, $1.26; in 1895, $1 21; in 1896, $1 17; in 1897, $1.15; in 1898, $1.14.

Objected to as immaterial, incompetent and because no proper foundation has been laid.

Adjourned by agreement until Thursday, November 7, 1901, at 10 a. m.

Directors' room, Chicago National Bank building.

CHICAGO, ILL., THURSDAY, *November* 7, 1901,
10 o'clock a. m.

Parties met pursuant to adjournment.

Present: Judge I. C. Pinkney, special commissioner. Messrs. W. T. Irwin, and E. C. Risther, appearing for compl'nt. Mr. Henry Mansfield appearing for defendant.

Direct examination of FRANCIS W. LITTLE resumed by Mr. Irwin:

67 Mr. IRWIN: During this examination of Mr. Little the complainant has introduced in evidence itemized statements of the cost of complainant's plant etc., as shown on Exhibits "2 to 6" inclusive, for the purpose of getting those facts into the record as shortly and concisely as possible and in order to save expense and not encumber the record. Counsel for defendant has objected to that character of evidence and complainant is, therefore, compelled to prove such expenditures by presenting the vouchers showing the payment of the money for the respective accounts and will continue the examination of Mr. Little on that line unless counsel for defendant withdraws his objection to the competency of the statements heretofore offered in evidence.

The MASTER: Does counsel for defendant withdraw his objection to the competency of the evidence offered in that regard?

Mr. MANSFIELD: No sir.

The MASTER: Proceed Mr. Irwin.

Q. Have you with you the vouchers pertaining to the cost of the construction of the plant of the Peoria Gas & Electric Company in the city of Peoria and also the vouchers showing the expense of operating the plant?

Ans. Yes sir;

Q. Please refer to voucher No. 1, and state what it is for?

A. Voucher No. 1, if for the sum of $986.13, in favor of F. W. Little for sundry payments made by him. The voucher is dated June 20, 1899, and is receipted on June 23, 1899.

Q. Was the amount of money named in that voucher paid towards the expense of the plant, or operation of complainant's plant?

Q. The amount of money represented by that voucher was paid

out for the following purposes: viz., $491.09 was for general office sundries; $27.50 was paid for legal expenses; $42.66 was paid for stationary, printing and postage; $12.99 was paid for stable
68 expenses $411.89 was paid for materials that went into the storeroom of the Peoria Gas & Electric Company.

Q. Is that the original voucher for the payment of that amount of money?

Ans. Yes sir;

Q. Was the amount of money named in that voucher actually paid?

Ans. Yes sir;

Q. Was that the original entry of the moneys paid for the purposes named?

Ans. Yes sir; that was the original entry in the books and accounts of the Peoria Gas & Electric Company.

Q. State how these vouchers are made and what is done with them?

Ans. We use the original and duplicate voucher system; the original voucher is the evidence of the payment of the money and bears the receipt of the person to whom the money is paid by the company; the duplicate voucher is a copy of the original voucher and there is attached to it also any invoice, bills or receipts necessary to show in detail the purposes for which the voucher is made.

Q. Is this the original or duplicate voucher?

Ans. The original

Q. Do all the vouchers pertaining to this matter contain a detail of the account on which and to whom the money was paid in the cost of this plant and its operation?

A. Yes sir; the original voucher is a receipt for the money paid; the duplicate voucher is a copy of the original voucher and in addition shows in detail the person to whom and the purposes for which the money was paid; the system followed is this: The majority of the payments were made by the treasurer of the company directly to me and the expenditures were made by me; many of these vouchers will be found to run in my favor and my receipt will appear attached to the original voucher; attached to the duplicate voucher will be found the receipts of the various people to whom I paid the money, showing for what the payments to them were made by me.

Complainant's counsel offers in evidence and reads to the master voucher No. 1, in the words and figures following, to-wit:—

A

69 JUNE 23, 1899.

Received from Peoples Gas & Electric Company nine hundred eighty-six and 13/100 dollars, in full for above account.

F. W. LITTLE, *V. P.*

Objected to for the reason it is a mere summary of bills paid and it does not show upon its face to whom the several items, that go to make up the total voucher, *was* paid; and for the further reason it does not show that they were legitimate expenses that went to make up the cost of the plant.

Q. Did you receive the amount of money named in voucher No. 1, at the time of the date of that receipt?

Ans. Yes sir.

Q. What did you do with the money?

A. I paid $51.44 to Kinsey & Mahler of Peoria, Ills., for materials used in the construction of the gas plant of the Peoria Gas & Electric Company; I paid $25.29 of that money to Clark, Quien & Morse of Peoria, Ill., for 1 Fairbanks scale; I paid $39.25 to John C. Streibich of Peoria, Ill., for 1 letter press; 1 waste basket; 1½ doz. copying clothes; 2 pair banker's shears; 1 calendar; 1 dozen figuring tabs; ½ pound pins; 1 two part P. O. box; 1 National mail scale; 1 Triumph punch; 1 doz. sheets of rubber cloth; ½ dozen sheets of oil board; 2 doz. blotters; 1 cash sales box; 1 glass paper weight; 2 iron paper weights; 1 bottle red ink; 1 bottle muscilage; 1 library ink stand; 1 waste basket; 1 penholder; 2 glass paper weights; 1 doz. large bull-dog clips; 1 copying press stand; 1 200 page cash book; 1 three part P. O. file [illegible] waste basket.

I paid $22.85 to the Standard [illegible] Company for ½ bll. lard oil and the package in which it was contained; 1 bll perfection oil; 2 sixty gal. tanks; 1 ten gal. jacket can.

I paid $71.44 to the Wahlfeld Manufacturing Company of Peoria Ill., for 6 plugs for 12 in. pipe; 6 plugs for 8 in. pipe; 6 plugs for 6 in. pipe; 100 pieces of 2 x 6 pine lumber, 16 inches long;

70 100 pieces ¾ x 6 in. pine lumber, 16 inches long; 2 tool boxes; 1 drawing table, containing one drawer; 2 tressles for a drawing table; 8 pieces of ⅞ by 3 in. pine lumber; 6 plugs for 4 in. pipe; 2 rammers with iron bands; 2 straight edges; 2 pieces 4 x 4 in. clear oak; 8 feet long; 100 pieces 2 in. by 6 in. by 20 in. pine lumber; 50 pieces 1 in. by 6 in. by 20 in. pine lumber.

I paid to the Central Electric Company of Peoria, Ill., $29.14 for, 18 sockets; 18 bushings; 2 tubes; 65 feet weather-proof wire; knobs; 50 ft. of circular loom; one 25 ampere fuse box; 23 incandescent lamps; for 12 hours labor of electrician and helper installing above material in the office of the Peoria Gas & Electric Company in Peoria, Illinois, 6 electric shades; short piece of weather-proof wire; 1 wall socket; 1 lamp and for putting in electric call bells in the office of the Peoria Gas & Electric Co., at Peoria, Ill.

I paid $12.25 to A. Hubinger of Peoria, Ill., for the following articles:—1 wall map of the city of Peoria, mounted.

I paid $12.40 to the Brunner Stamp & Stencil Works of Peoria, Ill., for rubber stamps.

I paid $13.97 to J. W. Franks & Sons of Peoria, Illinois, for the

following articles:—1000 receipts, bound in 10 books; 100 discharge tickets; 1000 daily cash reports; 1000 blanks.

I paid $172.37 to Kinsey & Mahler of Peoria, Illinois for the following articles:—24— 1½ in. by 1¼ in. bushings;—8⅝ by 3½, machine bolts; 4—⅝ by 6 in. machine bolts; 12—⅝ in. iron washers; 12¾ in. iron washers; 2 No. 2 Barnes pipe cutters; 1 set No. 2½ Harmony stock & dies; 1 mallable iron pipe vise; 2—1 in. hose nickels; 2—inch by 2 in. nipples; two ¼ in. by 2 in. nipples; two ⅜ in. by ¼ in. bushings; 2 sets No. 3 Harmony stock & dies; 1 No. 2 frame pipe vise; 1 piece 1½ in. black pipe, 7 feet long; two 1½ in. threads cut thereon; one 1½ in. plug, drilled and capped for ⅜ in. pipe; 1 air pump; one
1 in. male hose nipple; two 1 in. female hose couplings; two
71 1 in. Sherman hose clamps; 15 feet of 1 in. 3 ply hose; one
1 in. brass steam cock; 1 No. 6 mall-able iron wrench; 1 air pump; one 1 in. male hose nipple; two 1 in. female hose nipples; two 1 in. Sherman hose bands; 15 feet 1 in. 3 ply hose; one 1 in. brass steam cock; 1 No. 6 mallable iron wrench; 55 pounds 4 in. cast iron plugs; 47 pounds 6 in. cast iron plugs; two 2 in. plugs, one 2 in. plug with 3 in. hole tapped in the head; 150 feet 2½ in. fire hose; one 2 in. by 1 in. mallable "T;" one 2½ Ludlog gate valve; one 2½ in. brass female hose coupling; with white thread on the tail piece; 3 pounds special brass hose nipples; for ¾ hour labor spent on same; six 1 in. hose nipples; two 1 in. long nipples; two ¼ in. long nipples; two ⅜ in. by ¼ in. bushings; 303 pounds 2 in. galvanized street "L's;".

I paid $16.91 to John C. Streibich of Peoria, Ill. for the following articles:—1 ink well; 1 five hundred page copy book; 1 doz. cloths; 1 doz. oil boards; 1 doz. blotters; 1 doz. No. 140 blotters cut to size; 1 pound assorted rubber bands; 1 qt. Arnold's fluid; 2 wire desk baskets; 1 porcelain bowl; 1 brush; six 500 page letter books.

I paid to Kinsey & Mahler of Peoria, Ill. $17.96 for the following articles:—24 feet of ⅜ in. pipe; 24 1½ in nipples; four ⅜ in. threads; four ⅜ in. caps; 24—1½ in. by 1¼ in. reducers; 4 pair 1¼ in. crane steel pipe tongs; twelve 1½ in. plugs; 24—2 in. couplings; 8—¾ in. couplings; 6—2 in. galvanized "T's;" 6 No. 3 Saunder Hite cutter wheels; 2—¾ in. threads, cut on spades; 4—¾ in. threads cut on pipes; 2 pieces ¾ in. black pipe; 1 pouring clamp.

I paid to Martin Rehfuss, Jr., of Peoria, Ill., $12.99 for, one set single harness; one neck strap and one whip.

I have the receipt of the various parties above mentioned for all of these payments.

I paid $487.86 for sundry purchases the receipts for such
72 payments being now mislaid and a search for them is now being made.

Mr. IRWIN: We will not wait to look up those receipts but will ask leave to introduce them when they are found.

Q. Have you the original receipts for the paying out of the several amounts of money to the respective parties named for the material therein named?

Ans. I have.

Q. Did all that material go into the plant and office fixtures of the Peoria Gas & Electric Company in Peoria, Ill.?

Ans. It did.

Q. Have you the original receipts for the paying out of said respective amounts of money now in your hands in court for inspection?

Ans. I have.

Q. Will you now refer to voucher No. 2?

Ans. I have it here.

The MASTER: Let me suggest to you gentlemen now, that I will not permit you to go on with this examination in this way. It is a farce in my opinion. I think some method can be devised by which this examination can be expedited. The rules of court gives the master authority and power to direct the mode in which matters pertaining to the controversy and the matters regarding evidence shall be proved before him etc.

Mr. IRWIN: I have a suggestion to make with regard to that matter which I will present in a few minutes.

Q. What amount of money does voucher No. 2 represent?

Ans. $408.05.

Q. To whom paid?

Ans. Paid to me.

Q. Is the voucher you have produced here the original voucher for the payment of that money?

Ans. It is.

Complainants counsel offers in evidence and reads to the master voucher No. 2 identified by the witness, as follows, to-wit:

"JUNE 23, 1899.

Received from the Peoples Gas & Electric Company four hundred eighteen and 05/100 dollars. In full for above account.

F. W. LITTLE, *V. P.*"

73 Objected to by defendant unless the receipts for which the voucher was issued are produced in court for the purpose of inspection.

Q. Have you with you the original receipts for which this money was paid?

Ans. I believe I have them all.

Q. Have you them with you in court?

Ans. I have.

Q. Do they represent the paying out by you of the amount of money named in voucher No. 2?

Ans. They do.

Mr. IRWIN: Now then, if the master please, we take the position

that if counsel for defendant insists the complainant will have to introduce in evidence each of the items that go to make up the amount of this voucher as we did in reference to voucher No. 1, and we want counsel for defendant at this time to elect whether he will compel us to introduce each of the sub-vouchers showing the payment of this money.

Mr. MANSFIELD: My understanding is that the vouchers and sub-vouchers will be subject to inspection by counsel for defendant at any time he requires it?

Mr. IRWIN: Yes, sir; during the examination of this witness.

Mr. MANSFIELD: I am willing to admit that if I have the privilege of looking over the vouchers and sub-vouchers and asking questions with regard to any items that appear in the receipts given by the different parties which go to make up the sum total of the vouchers.

Mr. IRWIN: Of course, so far as Mr. Little's examination is concerned. We want it limited to his examination. We do not want to go over this same thing time and time again during the progress of the hearing, but so long as Mr. Little's examination proceeds these vouchers will be subject to inspection in court whenever wanted by counsel for his inspection or for use in cross-examination, and for general purposes, the vouchers will always be sub-
74 ject to inspection by the court, master or counsel.

The MASTER: Is this a stipulation?

Mr. IRWIN: It is a proposition, but I am willing to make a stipulation with regard to it.

The MASTER: If counsel don't make a stipulation with reference to this, the master will direct the mode in which this proof shall go in and counsel will be obliged to follow it unless a modification of it is obtained from the court.

It is hereby stipulated by counsel for the respective parties that the original vouchers shall be offered in evidence and read into the record, and the duplicate, or sub-vouchers showing for what the money was paid, shall remain in court during the progress of the examination of the witnesses, and shall at all times be subject to inspection by the court, master or counsel during the progress of this hearing for verification of the original vouchers offered in evidence and for the purpose of cross-examination.

Q. What was done with the amount of money named in voucher No. 2?

Ans. It was paid for materials which entered into the construction of the plant and property of the Peoria Gas and Electric Co.

Mr. MANSFIELD: The defendant objects to that unless it was used in the construction of the gas plant, or used for the purpose of carrying on the business of the gas company, in contra-distinction to the electric light company.

Q. Was the amount of money named in voucher No. 2, expended

in and about the plant and business of the gas plant and business of the complainant company?

Ans. Yes sir.

(Mr. RITSHER:)

Q. In all cases in this examination where you have referred to the plant of the Peoria Gas & Electric Company, and the business of said company, have you referred solely to the gas plant and the gas business of said company?

Ans. I have.

75 (The SAME:)

Q. And in all future questions that may be asked you if your answer refers to anything else will you so state?

A. I will.

(Mr. IRWIN, resuming:)

Q. Have you with you vouchers for all the moneys that were expended and paid out in and about the purchase, construction, completion and operation of the gas plant of the Peoria Gas & Electric Company in the city of Peoria, Illinois, from the time and including the organizations of that company and up to and including August 31, 1901, in addition to those you have already testified about?

Ans. I have, yes sir.

Q. Have you also the duplicate or sub-vouchers showing to whom and for what purpose each amount of money was applied in and about the organization, purchase, construction and operation of the gas plant of the Peoria Gas & Electric Company in the city of Peoria beginning with the inception of the company and coming up to and including August 31, 1901, in addition to those you have already testified about?

Ans. Yes sir.

Q. Will you now refer to the several original vouchers in their numerical order and state the amount of money that was paid out as shown by each voucher in and about the organization, purchase, construction, completion and operation of the gas plant of the Peoria Gas & Electric Company beginning with its inception and running up to and including August 31, 1901, naming in each instance the payee, and the account to which the same was charged, including the date, the account, the amount paid and the payee?

A. Voucher No. 1, is dated June 20, 1899, is in favor of F. W. Little for $986.13. This voucher was charged to the following accounts: To account No. 3 $491.09; to account No. 9 $27.50; to account No. 10 $42.66; to account No. 11 $12.90; to account No. 41 $411.69.

76 Voucher No. 2, is dated June 20, 1899, and is for the sum of $416.05 being money paid to F. W. Little, vice president, and the entire amount of the voucher was charged to account No. 41.

Voucher No. 3, is dated June 20, 1899, amount $437.51, in favor of F. W. Lttle, vice president, and the amount of the voucher was charged as follows:—To account No. 3 $14.94; to account No. 11 $148.30; to account No. 10 $40; to account No. 41 $273.87.

Voucher No. 4, is dated June 20, 1899, amounts to $12.500; is drawn in favor of F. W. Little and is for services as engineer and superintendent of construction of the gas plant of the Peoria Gas & Electric Company. The entire amount of the voucher was charged to the general plant account of the company.

Voucher No. 5, is dated June 20, 1899, for the sum of $2582.03, drawn in favor of F. W. Little, vice president, and was charged as follows:—To acct. No. 10 $21; to acct. No. 41 $2561.03.

Voucher No. 6, is dated June 20, 1899, amounting to $8595.22, drawn in favor of L. A. Walton, treasurer, and was charged as follows:—$5000 was charged to city of Peoria deposit account and $3595.22 was charged to sundries account.

Voucher No. 7, is dated June 20, 1899, amount $11.05; drawn in favor of L. A. Walton, treasurer, and the entire amount was charged to account No. 10.

Voucher No. 8, is dated June 20, 1899, amount $280.03, drawn in favor of F. W Little, vice president, and the amount was charged to the following accounts:—To acct. No. 3 $1.50; to acct. No. 6 $50; to acct. No. 10 85c.; to acct. No. 11 $214.05; to acct. No. 41 $13.63.

Voucher No. 9, is dated June 20, 1899, amount $352.55, was drawn in favor of F. W. Little, vice president, and was charged to the following accounts:—To acct. No. 1 $300; to acct. No. 41 $42.55; to acct. No. 3 $10.

77 Voucher No. 11, dated June 20, 1899, amounting to $110, drawn in favor of The A. H. Andrews Company; the entire amount of the voucher was charged to acct. No. 38.

Voucher No. 12, dated June 20, 1899, amount $38; drawn in favor of Amberg File & Index Company; charged to acct. No. 38.

Voucher No. 13, dated June 20, 1899, amount $62.13, was drawn in favor of the Baker-Vawter Company and the entire amount charged to account No. 10.

Voucher No. 14, dated June 20, 1899, amount $36; drawn in favor of the Crerer-Adams Company, and the entire amount of the voucher was charged to account No. 41.

Voucher No. 15, dated June 20, 1899, amount $206.85; drawn in favor of Jas. B. Clow & Sons, and the entire amount is charged to acct. No. 41.

Voucher No. 16, dated June 20, 1899, for the sum of $74.08, in favor of Eugene Deidzgen Company was charged as follows:—to acct. No. 23, $4.29; to acct. No. 41 $69.79.

Voucher No. 17, dated June 20, 1899, amount $15.38; drawn in favor of The Goheen Manfg. Co., charged to account No. 41.

Voucher No. 18, dated June 20, 1899, amount $3; drawn in favor of The Globe Company, charged to account No. 38.

Voucher No. 19, dated June 20, 1899, amount $40; drawn in favor of The D. B. T. Goodrich Company, charged to account No. 41.

Voucher No. 20, dated June 20, 1899, drawn in favor of Geo. Light, amount $160.80, charged to account No. 41.

Voucher No 21, dated June 20, 1899, amount $4, drawn in favor of E. B. Myers & Co., charged to account No. 3.

Voucher No. 22, dated June 20, 1899, amount $3; drawn in favor of Progressive Age; charged to account No. 3.

Voucher No. 23, dated June 20, 1899, amount $126.70; drawn in favor of P. F. Pettibone & Co., charged to account No. 10.

Voucher No. 24, dated June 20, 1899, amount $48; drawn in favor of The Ryan & Hart Company, charged to account No. 10.

78 Voucher No. 25, dated June 28, 1899, amount $12,553.25; drawn in favor of United States Cast Iron Pipe & Foundry Company, charged to account No. 41.

Voucher No. 26, dated July 27, 1899, amount $667.77; drawn in favor of F. W. Little, vice pres. The voucher don't show to what accounts it is charged; I suppose the pay-roll would have to test vouchers No. 26 and 27.

Voucher No. 27, dated July 27, 1899, amount $2253.70; drawn in favor of F. W. Little, vice president; the voucher don't show the account to which it is charged; same as No. 26.

Voucher No. 28, dated June 30, 1899, amount $250; drawn in favor of the Chicago national bank and is charged to interest acct. or acct. No. 7.

Voucher No. 29, dated June 30, 1899, amount $50; drawn in favor of C. D. Organ, charged to account No. 1.

Voucher No. 30, dated June 30, 1899, amount $300; drawn in favor of F. W. Little and charged to account No. 1.

Voucher No. 31, dated June 30, 1899, amount $9.71; drawn in favor of the Equitable Trust Company and is charged as follows:—To acct. No. 3, $1.11; to acct. No. 10, $5.10; to acct. No. 38 $3.50.

Voucher No. 32, dated July 13, 1899, amount $423.59; drawn in favor of F. W. Little, vice president, and is charged as follows:—To acct. No. 3 $30.98; to acct. No. 4 $1.25; to acct. No. 6 $25.50; to acct. No. 10 $9.57; to acct. No. 11 25c.; to acct. No. 41 $356.04.

Voucher No. 33, dated July 13, 1899, is for $5373.58; drawn in favor of F. W. Little, vice president, and was charged to the following accounts:—To acct. No. 3 $20.73; to acct. No. 6 $10.30; to acct. No. 10 $19.56; to acct. No. 11 $37.58; to land and buildings $7.50; to acct. No. 41 $4196.96; to legal expenses $1080.95.

Voucher No. 34, dated July 13, 1899, is for $408.29; drawn in favor of F. W. Little, vice pres. and is charged to the following accounts:—To acct. No. 2 $37.50; to acct. No. 3 $53.62; to

79 acct. No. 6 $54.43; to acct. No. 10 $5.45; to acct. No. 11 70c.; to acct. No. 41 $17.19; to land and buildings $15.40; to legal expenses $24; to sundries $200.

Voucher No. 35, dated July 13, 1899, amount $50; drawn in favor of Amberg File & Index Company and charged to acct. No. 3.

Voucher No. 36, dated July 13, 1899, amount $25.25, drawn in favor of Baker-Vawter Company and charged to account No. 10.

Voucher No. 37, dated July 13, 1899, amount $1920.18; drawn in favor of James B. Clow & Sons, and charged to account No. 41.

Voucher No. 38, dated July 13, 1899, amount $2.74; drawn in favor of Chicago Directory Company and charged to account No. 3.

Voucher No. 39, dated July 13, 1899, amount $45; drawn in favor of H. Channon Company and charged to account No. 41.

Voucher No. 40, dated July 13, 1899, amount $44.50; drawn in favor of the Goheen Manfg. Co., and charged to account No. 41.

Voucher No. 41, dated July 13, 1899, amounting to $102.04; drawn to the order of Hatch & Ritsher and charged to legal expenses.

Voucher No. 42, dated July 13, 1899, amounting to $26.40; drawn in favor of George Light and charged to account No. 41.

Voucher No. 43 dated July 13, 1899, amounting to $7.60; drawn in favor of Library Bureau and charged to account No. 10.

Voucher No. 44, dated July 13, 1899, amounting to $5.40; drawn in favor of H. Mueller Manfg. Co., and charged to account No. 41.

Voucher No. 45, dated July 21, 1899, amounting to $35.50; drawn in favor of P. F. Pettibone & Co., and charged to account No. 10.

Voucher No. 46, dated July 13, 1899, amounting to $18; drawn in favor of the Ryan & Hart Company and charged to account No. 10.

Voucher No. 47, dated July 13, 1899, amounting to $12.726.56; drawn in favor of the United States Cast Iron Pipe & Foundry Company and charged to account No. 41.

80 Voucher No. 48, dated July 27, 1899, amounting to $2439.27; drawn in favor of F. W. Little, vice president, covers the pay roll for the first half of June and the voucher does not show to what accounts the payment was charged.

Voucher No. 49, dated July 27, 1899, amounting to $2908.29; drawn in favor of F. W. Little, vice president, covers the pay roll for the second half of June 1899, and the voucher does not show to what accounts the amount of the voucher was charged.

Voucher No. 50, dated July 27, 1899, amounting to $3.50; drawn in favor of F. W. Little, vice president, covers an error in the pay roll for the first half of June 1899, and the voucher does not show to what accounts it was charged.

Voucher No. 51, (missing)

The following vouchers No. 52 to No. 72 inclusive, are all dated in the month of August 1899, and registered in July 1899.

Voucher No. 52 is for $527.76; drawn in favor of Chicago national bank and charged to interest account or account No. 7.

Voucher No. 53, amounting to $6; drawn in favor of Equitable Trust Company and charged to account No. 2.

Voucher No. 54, is for $1229.62, drawn in favor of F. W. Little, V. P. and is charged to the following accounts:—To account No. 3

$49.27; to account No. 5 $26.75; to acct. No. 10 $28.80; to acct. No. 11 $47.08; to acct. No. 41 $1051.47; to legal expenses $23.25.

Voucher No. 55, is for $300; in favor of F. W. Little and is charged to account No. 1.

Voucher No. 56, is for $50, in favor of C. D. Organ and is charged to account No. 1.

Voucher No. 57, is for $108.85, in favor of the H. Mueller Manfg. Co., and is charged to acct. No. 41.

81 Voucher No. 58, is for $994.52, in favor of the John Davis Company and charged to acct. No. 41.

Voucher No. 59, is for $21.887.16, drawn in favor of the United States Cast Iron Pipe & Foundry Company and charged to acct No. 41.

Voucher No. 60 is for $2684.87, drawn in favor of F. W. Little, V. P. and was charged to the following accounts:—To acct. No. 2 $35.85; to acct. No. 3 $32.16; to acct. No. 6 $61.24; to acct. No. 10 $8.25; to acct. No. 11 $8.50; to acct. No. 41 $2523.07; to legal expenses $15.20.

Voucher No. 61 is for $8490.74 in favor of F. W. Little, V. P. and covers the pay roll for the first and second halves of July 1899, and the voucher does not show to what accounts it was charged.

Voucher No. 62 is for $19.21, in favor of Dayles Engineering Co., and charged to acct. No. 41.

Voucher No. 63 is for $27 in favor of James B. Clow & Sons and charged to acct. No. 41.

Voucher No. 64 is for $125, in favor of Crane Company and charged to acct. No. 41.

Voucher No. 65 is for $18.50 in favor of the Globe Company and charged to acct. No. 41.

Voucher No. 66 is for $365 in favor of the Employés Liability Assurance C-rporation and is charged to insurance acct. or acct. No. 5.

Voucher No. 262 is for $380.25 in favor of Lindsley Bros. Company and is charged to acct. No. 41.

Voucher No. 263 is for $66 in favor of Library Bureau and is
harged—to acct. No. 41 $30; to acct. No. 106 $36.
Voucher No. 264 is for $4052.52 in favor of the Maryland Meter
Manfg. Company and is charged to acct. No. 41.
Voucher No. 265 is for $6.50 in favor of Manville Covering Com-
ny and is charged to acct. No. 41.
Voucher No. 266 for $25.48 in favor of Pittsburgh Glass Co., and
charged to acct. No. 41.
Voucher No. 267 is for $202.73, is in favor of Parker-Russell Min-
g & Manfg. Co., and is charged to acct. No. 41.
Voucher No. 268 is for $770.94, is in favor of John A. Roeblings
ons Company and is charged to acct. No. 41.
Voucher No. 269 is for $5.11, is in favor of Sewell-Clapp Manfg
o., and is charged to acct. No. 10.
Voucher No. 270 is for $55, is in favor of Scaffer & Budenberg
nd is charged to acct. No. 41.
Voucher No. 271 is for $32.94, is in favor of Western Tube Com-
pany and is charged to acct. No. 41.
Voucher No. 272 is for $479.66, is in favor of the Westing-
house Electric Manfg. Company and is charged to acct. No. 41.
Voucher No. 273 is for $384.50, is in favor of Western Electric
ompany and is charged to acct. No. 41.
In all cases where the vouchers presented, or any portion of them,
ave been charged to accounts numbered from No. 100 upwards,
ich charges are for the construction of the electric plant of the
eoria Gas & Electric Company and should not be considered as
art of the cost of the gas plant, that is, in figuring it up you should
iminate all accounts numbered No. 100 and upwards.
Voucher No. 51 which was missing on yesterday is a pay roll
oucher and will be found among the payrolls, which I now have
ith me. The first pay roll covers the period from May 1, 1899 to
lay 15, 1899 and amounts to $669.27—Interrupted——
The MASTER: Are not the amounts represented by these pay rolls
eferred to already in evidence in the vouchers presented?
The WITNESS: Not as to the accounts to which it is charged; the
istribution is on the back of the pay roll itself.
This pay roll forms a part of voucher No. 26 and is charged as
llows:—To acct. No. 2 $13.85; to acct. No. 33 $18.28; to acct. No.
3 $554.18; to acct. No. 36 $82.96.
The next pay roll, which is a part of voucher No. 27, covers the
eriod from May 16, 1899, to May 31, 1899. The amount of the pay
ll is $2353.70, and is charged as follows:—To acct. No. 1 $207.53;
acct. No. 3 $55.64; to acct. No. 33 $67.74; to acct. No. 2 $20; to
ct. No. 11 $25; to acct. No. 33 $1567.92; to acct. No. 36 $409.87.
The next pay roll, which forms a part of voucher No. 48, covers
e period from June 1, 1899 to June 15, 1899. The pay roll amounts
$2439.27 and is charged as follows: To acct No. 2 $20; to acct.
o. 33 $2128.21; to acct. No. 34 $1.73; to acct. No. 36 $232; to
ct. No. 41 $57.33.

99 The next pay roll, which forms a part of voucher No. 49, amounts to $2908.29, and covers a period from June 16, 1899, to June 30, 1899, and is charged to the following accounts:—To account No. 1, $266.67; to account No. 2, $115.00; to account No. 4, $9.00; to account No. 33, $2311.00; to account No. 34, $2.01; to account No. 36, $156.21; to account No. 37, $4.40; to account No. 41, $44.00.

The next pay roll which forms a part of voucher No. 61, amounts to $3632.76, and covers the period from July 1, 1899, to July 15, 1899, and is charged as follows:—To account No. 1, $50.00; to account No. 2, $20.00; to account No. 33, $3205.99; to account No. 34, $11.87; to account No. 36, $290.60; to account No. 37, $4.45; to account No. 41, $49.85.

The next pay roll, which forms a part of voucher No. 61, and amounts to $4857.98, and covers the period from July 16, 1899, to July 31, 1899, and is charged as follows:—To account No. 1, $216.67; to account No. 2, $434.52; to account No. 33, $3793.57; to account No. 34, $37.42; to account No. 36, $293.70; to account No. 37, $42.75; to account No. 41, $39.35.

The next pay roll, covering a period from August 1, 1899, to August 15, 1899, forms a part of voucher No. 81, and amounts to $5271.82, and is charged as follows:—To account No. 2, $35.00; to account No. 33, $3581.63; to account No. 34, $1103.60; to account No. 36, $448.87; to account No. 37, $2.25; to account No. 41, $100.47.

The next pay roll coveres the period from August 16, 1899, to August 31, 1899, amounts to $6958.04, forms part of voucher No. 81 and is charged as follows:—To account No. 1, $266.67; to account No. 2, $522.94; to account No. 32, $292.95; to account No. 33, $4782.46; to account No. 34, $493.90; to account No. 36, $517.80; to account No. 41, $69.82; to Parker-Russell, $11.50.

100 The next pay roll covering the period from September 1st, 1899, to September 15, 1899, forms part of voucher No. 109, amounts to $4526.54, and is charged as follows:—To account No. 2, $22.50; to account No. 32, $167.15; to account No. 33, $3636.66; to account No. 34, $209.14; to account No. 36, $396.54; to account No. 41, $77.55; to Parker-Russell Mining & Manufacturing Co., $17.00.

The next pay roll coveres the period from September 16, 1899, to September 30, 1899, amounts to $5738.27, forms part of voucher No. 110, and is charged as follows:—To account No. 1, $366.67; to account No. 2, $585.50; to account No. 11, $25.00; to account No. 32, $30.38; to account No. 33, $3569.57; to account No. 34, $97.85; to account No. 36, $647.94; to account No. 41, $70.67; to account No. 45, $258.69; to Parker-Russell, $86.00.

The next pay roll covering a period from October 1, 1899, to October 15, 1899, amounts to $4289.14, forms part of voucher No. 137, and is formed as follows:—To account No. 2, $25.00; to account No. 11, $25.00; to account No. 32, $28.55; to account No. 33,

$2543.82; to account No. 34, $67.92; to account No. 36, $989.57; to account No. 41, $121.52; to account No. 104, $393.55; to account No. 113, $24.38; to Parker-Russell, $69.83.

The next pay roll, covering the period from October 16, 1899, to October 31, 1899, amounts to $5558.06, forms part of voucher No. 51, and is charged as follows:—To account No. 1, $366.67; to account No. 2, $653.00; to account No. 32, $252.87; to account No. 33, $2324.17; to account No. 34, $69.00; to account No. 36, $1130.69; to account No. 41, $315.09; to account No. 104, $401.12; to Parker-Russell, $47.45.

The next pay roll, covers the period from November 1 to November 15, 1899, amounts to $5553.87, forms part of voucher No. 183, and is charged as follows:—To account No. 2, $25.00; to account No. 32, $687.62; to account No. 33, $2522.83; to account No. 34, $107.05; to account No. 36, $1321.69; to account No. 41, $210.91; to account No. 102, $6.; to account No. 103, $39.70; to account No. 104, $509.97; to Parker-Russell $123.10.

The next pay roll, covering the period from November 15th to November 30th, 1899, amounts to $5484.96, forms part of voucher No. 191, and is charged as follows:—To account No. 1, $366.67; to account No. 2, $811.40; to account No. 32, $248.47; to account No. 33, $973.98; to account No. 34, $123.70; to account No. 36, $2134.76; to account No. 41, $235.26; to account No. 102, $21.04; to account No. 103, $35.36; to account No. 104, $497.72; to Parker-Russell, $30.70; to the Western Gas Construction Co. $5.85.

The next pay roll, covering the period from December 1st to December 15th, 1899, forms part of voucher No. 243, amounts to $3478.84, and is charged as follows:—To account No. 2, $33.70; to account No. 32, $184.95; to account No. 33, $305.83; to account No. 34, $515.30; to account No. 35, $9.30; to account No. 36, $775.40; to account No. 40, $11.45; to account No. 41, $91.85; to account No. 104, $17.78; to account No. 125, $11.66; to account No. 131, $14.25; to account No. 132, $1.80; to account No. 133, $421.24; to account No. 134, $3.68; to Parker-Russell, $80.15.

The next pay roll, covering the period from December 16th to December 31st, 1899, amounting to $3684.35, forms a part of voucher No. 242, and is charged as follows:—To account No. 1, $266.67; to account No. 2, $678.00; to account No. 32, $113.50; to account No. 33, $337.48; to account No. 34, $1126.92; to account No. 35, $32.00; to account No. 36, $270.44; to account No. 41, $36.60; to account No. 101, $200.60; to account No. 103, $2.25; to account No. 108, $150.00; to account No. 124, $26.90; to account No. 131, $70.00; to account No. 132, $2.95; to account No. 133, $303.68; to account No. 134, $.68; to account No. 137, $5.18; to Parker-Russell, Mining and Manufacturing Co., $59.50;

In every instance where the account is No. 100 and upwards the charges are for construction, operation or maintenance of the electric department of the business of the Peoria Gas and

Electric Company and such charges do not relate to the gas department of said company.

I have with me the original entries showing the various accounts, to which the material issued from the store room during the months from May to December, 1899 inclusive, were charged.

The first is "journal entry No. 2" for materials issued in the month of May, 1899, charging account No. 33 with $6942.68; account No. 36, with $377.77; account No. 37 with $745.16; account No. 40 with $2.64; account No. 41 with $16.10 and the store room account No. 41 is credited accordingly.

(Mr. MANSFIELD:)

Q. Are the items shown upon that statement?

A. The duplicates of these are a lot of things like this, requisitions on the store room for material, etc.; accompanying each one of these was probably 400 tickets making up the amount and if you want the tickets it is easy enough to get them; you can have access to all the details if you desire.

The next is "journal entry No. 6" for materials issued for the month of June, 1899, charging account No. 33 with $11957.91; account No. 34 with $10.00; account No. 36 with $283.29; account No. 37 with $501.57; account No. 38 with $183.38; account No. 41 with $101.68; and the store room account No. 41 receives a corresponding credit.

The next is "journal entry No. 7" for material issued in the month of July, 1899, charging account No. 33 with $1783.17; account No. 34 with $361.66; account No. 36 with $572.64; account No. 37 with $657.16; account No. 38 with $189.00; account No. 41 with $14.25; and the store room account No. 41 receives a corresponding credit.

The next is "journal entry 10" for material issued during the month of August, 1899, charging account No. 32 with
103 $17.85; account No. 33 with $13017.79; account No. 34 with $400.90; account No. 36 with $1689.64; account No. 37 with $504.06; account No. 38 with $71.94; account No. 41 with $4.54; and the store room account No. 41 receives a corresponding credit.

The next is "journal entry No. 14" for materials issued in the month of September, 1899, charging account No. 32 with $550.70; account No. 33 with $12961.89; account No. 34 with $1178.46; account No. 36 with $1771.90; account No. 37 with $177.83; account No. 40 with $11.54; account No. 41 with $15.19; Parker-Russell Mining & Manufacturing Co. $61.22; store room account No. 41 receiving corresponding credit,

The next is "journal entry No. 17," covering material issued in October 1899, charging account No. 32 with $644.95; account No. 33 with $7145.67; account No. 34 with $53.89; account No. 36 with $2643.09; account No. 37 with $51.21; account No. 41 with $12.16. The store room account No. 41 receiving corresponding credits.

The next is "journal entry " 22," for material issued in November 1899, charging account No. 32 with $2077.08; account No. 33 with $6089.80; account No. 34 with $82.20; account No. 36 with $3993.20; account No. 38 with $8.97; account No. 41 with $94.00. The store room receiving a corresponding credit.

The next is "journal entry " 26," covering materials issued from store room in the month of December 1899, charging account No. 3 with $34.10; account No. 10 with $15.00; account No. 11 with $33.00; account No. 22 with $734.05; account No. 32 with $6371.30; account No. 33 with $3605.84; account No. 34 with $6718.03; account No. 35 with $5.98; account No. 36 with $1257.20; account No. 37 with $453.48; account No. 38 with $161.95; account No. 40 with $413.07; account No. 41 with $57.99; Parker-Russel Mining and Manufacturing Co. $3297.70; Stacey Manufacturing Co. $2166.88; Western Gas Construction Co. $692.95. The store room receiving corresponding credits.

104 Questions by the MASTER:

Q. These entries are with reference to requisitions made on the store room account, are they not?

Ans. Yes sir.

Q. Is not the amount of these requisitions represented in the store room account as already testified to by you. In other words, how did you get these things into the store room?

A. Bought them, paid for them and charged them to the store room.

Q. Has the amount of that expenditure been already testified to by you and did those amounts go to make up the store room account against which these requisitions just testified to by you were made?

Ans. Yes sir.

Q. And went into the gas plant?

Ans. Yes sir.

Q. Are these amounts just given by you expenditures in addition to the amounts testified to by you on yesterday and this morning, or are they merely withdrawals from that stock on hand in the store room?

A. They are withdrawals from the stock on hand, the purchase of which was testified to yesterday.

(Witness resuming the reading of vouchers) The following original vouchers No. 274, to No. 315 inclusive, were registered in the month of January, 1900, and were paid in January or February, 1900.

Voucher No. 274 for the sum of $553.53, in favor of Fraser & Barrett Company and was charged to account No. 41.

Voucher No. 275 is for $5.25, in favor of the Equitable Trust Company and charged—to account No. 10, $5.00; to account No. 3, $.25.

Voucher No. 276 is for $300.00 in favor of F. W. Little and charged to account No. 1.

Voucher No. 277 is for $75.00 in favor of C. D. Organ and charged to account No. 1.

Voucher No. 278 is for $1076.39 in favor of the Chicago
105 national bank and charged to interest account or account No. 7.

Voucher No. 279 is for $3406.12, covering the pay roll for the second half of January 1900. The voucher does not show to what accounts it was charged.

Voucher No. 280, amounting $2458.71 covers the pay roll for the first half of January 1900. The voucher does not show to what accounts it was charged.

Voucher No. 439 is for $2.55 in favor of C. Whittemore & Sons and charged to acct. No. 41.

Voucher No. 440 is for $137.08 in favor of F. W. Little, vice pres't and is charged as follows:—To acct. No. 10 $10.97; to acct. No. 41 $122.74; remainder of voucher charged to electric accounts.

Voucher No. 441 is for $1050.41 in favor of F. W. Little vice pres't and is chargedas follows:—To acct. No. 3 .52c.; to acct. No. 4 $15; to acct. No. 10 $7.23; to acct. No. 11 .35c.; to acct. No. 41 $69.63; to Western Gas Construction Company $75.80. Remainder of voucher charged to electric accounts.

Voucher No. 442 is for $215.11 in favor of F. W. Little vice pres't and is charged to acct. No. 41.

Voucher No. 443 is for $392.24 in favor of F. W. Little vice pres't and charged to acct. No. 41.

The MASTER: Don't you think Mr. Mansfield, that you can agree that the balance of the expenses of complainants' plant can be proved by the ledger balances and books of the company, you being allowed to inspect any voucher containing any item appearing on the books which you desire to question. I do not mean that you shall accept the statements offered in evidence as true and correct, but prove the balance of the accounts by the ledger balances and any item appearing on the books you desire to question, the voucher containing such item or items shall be submitted to you at such time as you desire for your inspection.

I think the present method of introducing the vouchers in evidence, if pursued, is a useless incumbrance of the record.

119 The witness, Mr. Little, has stated to me that there are in the neighb-ood of 2000 vouchers of the character of those already introduced in evidence. I would like to have counsel agree on this matter if they can possibly do so.

Mr. IRWIN: I think so far as counsel for complainant are concerned we have made every reasonable proposition that can be expected of us. There are only two ways of putting in proof properly,

one is by stipulation, and the other is to make the proof in legal form. We have tried to stipulate and failed and are now proceeding in the legal way. I am satisfied in my own mind that when we get through with these vouchers on the course we are now pursuing Mr. Mansfield will not be any wiser than he would be if he had accepted the proposition we made, but he don't see fit to accept it and I don't see how either the special master, or counsel can force him to do so.

Mr. MANSFIELD: I do not think I ought to admit that the balance as shown by the ledger, or ledger accounts are true and correct without having inspected the ledger, or the accounts that go to make up the ledger accounts and it would — impossible for me with my knowledge of the books to do it at this time. I do not know whether the ledger will show what has been charged to operating expenses and construction account etc., separately or not, and for that reason, if no other, the balances, as shown by the ledger accounts, would not be the evidence upon which any judgment in this case could be based.

The SPECIAL MASTER: Will you tell me, Mr. Mansfield, what there is in these vouchers indicating what the different amounts are expended for, whether for operating expenses or not?

Mr. MANSFIELD: The voucher itself don't show it, but the subvouchers contain every item of expense they have been to.

Mr. IRWIN: *Is it* now nearly adjourning time, and if the master will adjourn the hearing at this point until to-morrow morn-
120 ing Mr. Ritsher and myself will draw up a stipulation this evening which will perhaps be acceptable to counsel for defendant and will greatly shorten the examination.

Adjourned by agreement until Saturday, November 9/ 1901 at 10 a. m.

Directors' room, Chicago National Bank building.

CHICAGO, ILL., SATURDAY, *November* 9, 1901—10 a. m.

Parties met pursuant to adjournment.

Present: Judge I. C. Pinkney, special commissioner. Mr. W. T. Irwin and Mr. E. C. Ritsher appearing for complainant. Mr. Henry Mansfield appearing for defendant.

Mr. IRWIN: Counsel for complainant have drawn up a stipulation, which I now submit to counsel for defendant, for his approval. The stipulation, if agreed to, will do away with the introduction of further vouchers in the case and materially shorten the examination of the witness on the stand and also save considerable expense.

Mr. MANSFIELD (after an examination of the stipulation): I cannot agree to this stipulation in its present form.

After considerable discussion between master and counsel for both complainant and defendant, the further hearing of testimony was adjourned until Wednesday, November 13th, 1901, at 10 o'clock a. m.

121 *In re* PEORIA GAS MATTER.

Parties met pursuant to adjournment at the directors' room of the Equitable Trust Company, Chicago, Illinois, November 13, 1901, at 10 o'clock a. m.

Present: Same as before.

Mr. IRWIN: In view of the holding of the special commissioner on Saturday with reference to the introduction of testimony and the remarks of Judge Kohlsaat, when his attention was called to the matter, we now offer to enter into the following stipulation with reference to the introduction of testimony, as to the cost of the gas plant of the complainant and the operation thereof. This is the same one that was presented to you Saturday (handing document to Mr. Mansfield). I ask that the stipulation be made part of the record as offered.

Mr. MANSFIELD: I object to it as immaterial, and for the further reasons that it will merely encumber the record, and has no relation to the suit in any manner.

By the MASTER: The stipulation may be admitted and made a part of the record and proceedings in this case. Do you desire to have it marked as an exhibit, Mr. Irwin?

Mr. IRWIN: No, I offer it as part of the record,—in view of the rulings of the master and the suggestion of the court.

Mr. MANSFIELD: Seems to me it just simply makes an additional cost; no reason why it should be in the record.

Mr. RITSHER: The court says he will tax the costs with reference to whether we agreed or not; and we want the court to know what we offered to do.

122 Mr. MANSFIELD: Then I would like to make a statement there to the effect that if the words "and were proper expenditures" appearing on the fourth line from the bottom of the first page, are struck out of the stipulation, that the city of Peoria will enter into it.

Mr. RITSHER: Let the record show that the complainant will consent to the elimination of the words "and were proper expenditures," from the stipulation offered, provided the following is added to the stipulation, to-wit: "And in the event that the defendant shall attack or question any item or items of expenditure entering into the cost of the construction or operation of the gas plant of complainant, then the complainant shall have the right to introduce all original vouchers, duplicate vouchers and sub-vouchers pertaining to such cost or outlay, to be considered as evidence of its case in chief.

Mr. MANSFIELD: I will agree to that, provided the stipulation is not considered as having any relation to the items set forth in Exhibit No. 3 as contained in the record, otherwise I will not.

Mr. RITSHER: The stipulation speaks for itself and we can not modify it, as suggested by counsel.

Mr. MANSFIELD: I will modify that stipulation,—"provided such stipulation has no reference to items and figures contained in Exhibit 3 preceding account designated as expenses.

Mr. RITSHER: May it please the court, we have determined to introduce our proof in an orderly way, put in all original sub-vouchers.

Mr. IRWIN: I would like to have Mr. Mansfield designate
123 in the record, from the exhibit there, just what items on that exhibit he has objected to as not being actual and proper expenditures in the construction or operation of the plant.

Mr. MANSFIELD: I won't do that, Mr. Irwin.

By the MASTER: Referring to Exhibits 2 to 6, both inclusive

Mr. IRWIN: If you want us to limit the proof on these matters, we have got to know what we are limited to; and if we don't know what your objection is, we have got to go on and make proper proof as to all.

Mr. MANSFIELD: Mr. Mansfield will make the statement requested by the opposing counsel, provided the words "and were proper expenditures" are stricken out of the request.

Mr. IRWIN: I don't see anything else to do than to go on.

Said proposed stipulation is in words and figures following, to-wit:

In order to save the time and expense incident to making formal proof of the cost of the construction and operation of the plant of the Peoria Gas and Electric Company and to avoid the necessity for introducing several thousand vouchers,

It is here stipulated and agreed by and between the respective parties by their respective counsel, that the witness, F. W. Little may testify as to the total amount of expenditures made by the complainant company in and about the construction and operation of the gas plant of said company from the time of the organization of the complainant company to September 1, 1901, as shown by the vouchers and books of the company, stating the totals of the various accounts under which said expenditures are entered;

124 It is further stipulated that in the event that said Little shall testify that said totals are true totals, as shown by the books and vouchers of said company, and represent all the actual expenditures made by said company during said period in and about the construction and operation of the gas plant of said company, and that the vouchers, duplicate vouchers and sub-vouchers, showing all said expenditures in detail, are present in court for inspection and examination by the special commissioner and counsel for the parties, then and in that event no objection shall be made by the defendant to the competency of such evidence, but it shall be and hereby is admitted that such expenditures were in fact made and that the said expenditures are charged to the proper accounts, (and were proper expenditures,) except in so far as any of said expenditures or the distribution thereof in the several accounts may be effectively attacked upon cross examination or otherwise.

It is further stipulated that for the purpose of attacking and verifying such expenditures, or any of them, the said vouchers duplicate vouchers and sub-vouchers throughout the pendency of this suit before said special commissioner, shall be subject to examination by counsel for defendant or by any qualified public accountant in his behalf, at all reasonable times during business hours at the office of the company in Chicago, subject to such regulations as may be imposed from time to time by the court."

By the MASTER: Proceed with the examination.

F. W. LITTLE.

Direct examination continued by Mr. IRWIN:

Q. Mr. Little have you the sub-vouchers with you to original voucher No. 2 read in evidence?

A. Yes, sir.

125 Q. Will you produce them?

A. I have them here (producing vouchers)

Q. Will you produce and read them for the purpose of verifying the purposes for which the expenditure, as named in voucher No. 2.——

Mr. MANSFIELD: I want to object to the reading of the sub-vouchers on the ground of their immateriality, incompetency and not the best evidence, and not being taken from books of original entry, and I want to make a statement here,—that opposing counsel having seen fit to introduce sub-vouchers, objection is hereby made on the part of the city of Peoria to the stipulation hereinbefore entered into by and between counsel, as shown on page "XX" 74 of the record of November 5th, 1901, and request that said stipulation be stricken from the record.

Mr. IRWIN: I want to state before the master's ruling that this offer is now made under the stipulation referred to and is in pursuance of the terms thereof.

By the MASTER: I think I will require you gentlemen to adhere to this stipulation in regard to further proof as to the cost of this plant, as appears in the record of the proceedings of this cause Nov. 5, 1901 on page "74" designated by the reporter as "XX J. M."

Mr. IRWIN: If that is the ruling of the master, we now offer sub-vouchers referred to for verification under the stipulation referred to.

Mr. MANSFIELD: I object on the ground that it does not come within the terms of the stipulation and on the further ground that it is not competent evidence, not being taken from the books of original entry.

By the MASTER: Proceed with the examination of the witness.

By Mr. IRWIN:

Q. Will you proceed to read the sub-vouchers to original voucher No. 2.

126 By the MASTER: No, I don't want you to do that, Mr. Irwin. You will have to go to court with that.

Mr. RITSHER: We would like to have the master rule this is not under the stipulation, if the master will do so, so that we can get a ruling.

By the MASTER: The master does rule that the offer to read these sub-vouchers is in violation of the stipulation and not in accordance with its terms.

Mr. IRWIN: We except to the ruling of the master.

Q. You have with you here all the sub-vouchers showing for what the money was expended as named and designated in original voucher No. 2, have you, Mr. Little?

A. Yes.

Q. Do you remember the number of the last original voucher read in evidence at the preceding examination.

A. My recollection is it was voucher No. 443.

Q. Have you sub-vouchers showing the expenditures and for what the money was expended that is named in each one of those respective vouchers?

A. Yes, I have.

Q. Showing the original voucher taken for the payment of the money, and for what the money was paid, as named in all of those original vouchers read in evidence?

A. Yes.

Mr. IRWIN: I now produce and offer to put in evidence in this case, for the purpose of verification of the expenditure of all the money shown to have been paid out by the original vouchers read in evidence and for the verification of the original vouchers, and also for the purpose of showing for what each particular amount of money was paid entering into the cost of the plant of the complainant, or the operation thereof from original vouchers Nos. 2 to 443 inclusive, read in evidence.

127 Mr. MANSFIELD: I object on the ground that it is incompetent and not being the best evidence and not being taken from the books of original entry.

By the MASTER: The master rules that the sub-vouchers offered may be admitted for the purposes only covered by the stipulation appearing in the record on page designated by reporter XX p. 74 of the proceedings had on Nov. 5, 1901.

To which ruling of the master, counsel for City of Peoria then and there duly excepted.

By the MASTER: Proceed with your examination, Mr. Irwin.

Q. Will you proceed then Mr. Little with the sub-vouchers to original voucher No. 2 and read them into the record for the purposes mentioned by the master.

By the MASTER: No sir, the master has already ruled on that, gentlemen; the stipulation expressly provides that the sub-vouchers

shall remain in court during the progress of the examination of the witnesses and be subject to inspection by the court, master or counsel during the progress of this hearing for verification of the original vouchers offered in evidence and for the purposes of cross examination, and that under this stipulation it is not competent for counsel to read into the record anything shown by the sub-vouchers.

To which ruling of the court counsel for complainant then and there duly excepted.

Mr. MANSFIELD: I want to——

By the MASTER: I want you to get on with this hearing. I am not going to be delayed any longer; the question is fully presented and preserved for the court, and it is proper now that you should preserve the question and then go on with the hearing in the
128 way provided for by this stipulation.

Mr. MANSFIELD: I want either to be bound by this stipulation or not be bound by this stipulation.

Mr. RITSHER: We are offering everything under the stipulation.

Mr. MANSFIELD: And if the complainant is not bound by the stipulation, I want to here make an exception to the introduction of the sub-vouchers as not being the best evidence and not taken from books of original entry.

By the MASTER: The master has already ruled both the complainant and yourself are bound by that stipulation.

Mr. MANSFIELD: All right, sir.

By the MASTER: In reference to the introduction of vouchers and sub-vouchers.

Mr. IRWIN: We simply offered the sub-vouchers under the provisions of the stipulation referred to by the master and intend to be bound thereby, believing that they are competent under the stipulation.

By the MASTER: The master has already ruled that they may be offered for the purposes specified in the stipulation and for no other whatever.

Mr. IRWIN:

Q. Will you proceed to read the vouchers in their consecutive order from the number you left off with at our previous adjournment.

A. I will state that vouchers No. 444 to 534½ were registered in the month of April, 1900 and were paid during the months of April and May 1900. Voucher No. 444 is for $2212.98 in favor of F. W. Little, vice-president; covers the pay-roll of the complainant
129 for the first half of April, 1900 and the voucher does not show to what account charged.

Mr. MANSFIELD: I object to its introduction then unless proof is offered to what account it is to be charged and object to it as being immaterial and incompetent.

By the MASTER: It may be admitted subject to the objection.

A. (Continuing.) Voucher No. 446 is for $300.. in favor of F. W. Little, vice-president and was charged to D. R. Russell. Voucher No. 447 is for $52.14, in favor of F. W. Little, vice-president and was charged to account No. 11, 90 cents; to account No. 41, $6.92; to the Akron Gas Company $43.47; the remainder of the voucher was charged to electric accounts. Voucher No. 448 is for $197.40 in favor of F. W. Little, vice-president, was charged to account No. 3, $58.17; to account No. 4, $4.80; to account No. 6, $104.77; to account No. 10, $8.30; to account No. 41., $19.76; to Schneider & Trenkamp, 60 cents; the remainder of the voucher was charged to electric account. No. 449 is for $16.75 in favor of F. W. Little, vice-president and was charged to account No. 41; No. 450 is for $75.00 in favor of C. D. Organ and was charged to account No. 1. No. 451 is for $300. in favor of F. W. Little, and was charged to account No. 1; No. 452 is for $6.20 in favor of the Equitable Trust Company and was charged to account No. 3. No. 453 is for $1041.67 in favor of Chicago national bank and was charged to interest account for account taxes. No. 454 is for $53.90, in favor of William Vogel & Bros. and is charged to account No. 41; No. 455 is for $8.63 in favor of the Westinghouse Electric & Manufacturing Co. and was charged to account No. 41; No 456 is for $1980.47 in favor of J. L. Flinn and was charged to account No. 41. No. 457 is for $706.80 in favor of A. Lucas & Sons, was charged to account No. 41. No. 458 is for $1436.08
130 in favor of Daniels Coal & Coke Company and was charged to account No. 41. No. 459 is for $1709.82 in favor of George M. Clark & Company and was charged to account No. 41. No. 460 is for $429.82 in favor of Daniels Coal & Coke Company, charged to account No. 41. No. 461 is for $1.50 in favor of Barker & Wheeler Company, charged to account No. 41. No. 462 is for No. 4. in favor of Buckeye Engine Company and is charged to account No. 41. No. 463 is for $44.35 in favor of the Baker-Vawter Company and is charged to account No. 10. No. 464 is for $10.54, in favor of Brass Foundry & Heating Company and was charged to account No. 41. No. 465 is for $15., in favor of Bradley Polytechnic Institute, charged to account 41. No. 466 is for $57.11, in favor of Central Electric Company and was charged to account No. 41. No. 467 is for $8.23 in favor of Colburn, Birks & Company, charged to account No. 41. No. 468 is for $2.85, in favor of Crawley Electric Company, charged to account No. 41. No. 469 is for $29.89 in favor of Cummings & Emerson, charged to account No. 41. No. 470 is for $326.96, in favor of Couch & Heyle and was charged to account No. 41. No. 471 is for $12.25, in favor of Comstock Avery Company, was charged to account No. 41. Voucher No. 515 is for $28.00 in favor of Shipper & Block Furniture Company and is charged to account No. 41. Account No. 516 is for $124.45 in favor of G. W. Smith Sons and is charged to account No. 41. Voucher No. 517 for $164.35 is in favor of the Standard Lighting Company
133 Voucher No. 518 is for $3.98, in favor of the Standard Oil Company and was charged to interest. Voucher No. 519 is for $20.95, in favor of H. Sandmeyer & Co., and was charged to account No. 41. Voucher No. 520 is for $168.55 in favor of Schneider & Trenkamp Company and was charged to account No. 41. Voucher No. 520½ is for $1.27, in favor of John C. Streidich and was charged to account No. 41. Voucher No. 521 for $14.51 is in favor of Thede Bros. and was charged to account No. 41. Voucher No. 522 is for $24.15, in favor of E. Weber and is charged to account No. 41. Voucher No. 523 is for $13.66 in favor of L. Philip Wolfe and was charged to account No. 4. Voucher No. 524 for $5.50 is in favor of C. E. Wheelock & Co. and was charged to account No. 41. Voucher No. 526 is for $3.50, in favor of Western Awning Company and is charged to account No. 3. Voucher No. 527 for $300, in favor of Western Electric Company and was charged to account No. 41. Voucher No. 528 is for $369.90, in favor of Wahlfield Manufacturing Company and was charged to account No. 41. Voucher No. 529 for $10, in favor of P. A. Flannagn, charged to account No. 41. Voucher No. 530 is for $357.05, in favor of Fardon & Brothers, is charged to account No. 41. Voucher No. 531 is for $2.10, in favor of Fisher Brothers, and is charged to account No. 3. Voucher No. 532 is for $40.25, in favor of J. W. Franks & Sons, charged to account No. 41. Voucher No. 533 is for $2635.25, in favor of the Akron Gas Company and is charged to account No. 41. Voucher No. 534 is for $349.99, in favor of F. W. Little, vice-president and is charged to account No. 3, $30.12; account No. 4, $5.00; account No. 6, $200; account No. 9, $1.70; account No. 10, $6.66; account No. 40, $20, and account No. 41, $86.51. Voucher No. 534½ is for $43,577.03 in favor of F. W. Little, vice-president, covers the
134 pay-roll for the second half of April, 1900 and the voucher does not show to what accounts it was charged. Vouchers No. 535 to 615 both inclusive were registered in the month of May, 1900 and paid in the months of May and June, 1900. Voucher No. 535 is for $55, in favor of the Hartford Deposit Company and was charged to account No. 6. Voucher No. 536 is for $2908.27 in favor

of F. W. Little, vice-president, covers the pay roll of the compa for the first half of May, 1900 and the voucher does not show what accounts the money was charged.

Mr. MANSFIELD: I except to the introduction of that voucher u less it is shown to whom payable and for what purpose.

By the MASTER: Admit it subject to the objection.

A. (Continuing:) Voucher No. 537 is for $1408.58, in favor of t John Davis Company and was charged to account No. 41. Vouch No. 538 is for $1324.35 in favor of John Davis Company and is charg to account No. 41. Voucher No. 539 for $300. in favor of F. W Little, was charged to account No. 1. Voucher No. 540 for $75.0 in favor of C. D. Organ, charged to account No. 1. Voucher N 541 for $37.28, payable to the Equitable Trust Company and w charged to account No. 3. Voucher No. 542 is for $196.60 in favor E. W. Blatchfird & Co. and is charged to account No. 41. Voucher N 542½ is for $1076.38 in favor of the Chicago national bank w charged to interest or account No. 7. Voucher No. 543 is for $2.0 in favor of H. E. Gobel, agent, and was charged to account No. Voucher No. 544 for $55. in favor of H. E. Gobel, agent and w charged to account No 3. Voucher No. 545 for $3233.03 in favor Daniels Coal & Coke Company and was charged to account No. 4 Voucher No. 546 for $1758.77 in favor of Parker-Russell Mining Manufacturing Company, was charged to account No. 4

135 Voucher No. 547 is for $335.31, in favor of F. W. Little, vic president, was charged to account No. 41. Voucher No. 5 for $3952.04 covers the pay roll for the second half of May, 1900; t voucher does not show to what accounts charged.

Mr. MANSFIELD; I object to the introduction of that voucher u less it is shown to whom payable and for what purpose.

By the MASTER: Admit it subject to the objection.

(Continuing:) Voucher No. 549 for $1039.14 in favor of F. W Little vice president was charged to account No. 3, $3.85; to accou No. 4, $2.00; to account No. 6, $1.76; to account No. 9, $5.00; t account No. 11, 55 cents; to account No. 41, $2573., J. J. Jobst $1,00 and the remainder of the voucher was charged to electric account Voucher No. 550 for $509.64 in favor of F. W. Little, vice-presiden was charged to account No. 3, $26. to account No. 4, $42.25; to ac count No. 10, $7.55; to account No. 11, $16.74; to account No. 4 $5.00; to account No. 41, $35.15; and the remainder of the accou was charged to electric accounts. ive parties.

Whereupon an adjournment was taken to 2 o'clock p. m.

139 2 o'clock p. m., met pursuant to adjournment.

Present: Same as before.

MR. RITSHER: On consultation with Mr. Irwin this noon, we have concluded that if you now wish to stipulate to accept the formal stipulation presented this morning, striking out the words "and were proper expenditures," we will accept the stipulation,—in other words, the stipulation offered Saturday with the words "and were proper expenditures" stricken out.

By the MASTER: It is here stipulated by and between counsel in this case as follows: "In order to save the time and expense incident to making further formal proof of the cost of the construction and operation of the plant of the Peoria Gas and Electric Company and to avoid the necessity for introducing several thousand vouchers,

It is here stipulated and agreed by and between the respective parties by their respective counsel, that the witness F. W. Little may testify as to the total amount of expenditures made by the complainant company in and about the construction and operation of the gas plant of said company from the time of the organization of the complainant company to September 1, 1901, as shown by the vouchers and books of the company, stating the totals of the various accounts under which said expenditures are entered;

It is further stipulated that in the event that said Little shall testify that said totals are true totals, as shown by the books and vouchers of said company, and represent all the actual expenditures made by said company during said period in and about the construction and operation of the gas plant of said company, and that the vouchers, duplicate vouchers and sub-vouchers, showing

140 all said expenditures in detail, are present in court for inspection and examination by the special commissioner and counsel for the parties, then and in that event no objection shall be made by the defendant to the competency of such evidence, but it shall be and hereby is admitted that such expenditures were in fact made and that the said expenditures are charged to the proper accounts.

It is further stipulated that for the purpose of attacking and verifying such expenditures, or any of them, the said vouchers, duplicate vouchers and sub-vouchers, throughout the pendency of this suit before said special commissioner, shall be subject to examination by counsel for defendant or by any qualified public accountant in his behalf, at all reasonable times during business hours at the office of the company in Chicago, subject to such regulations as may be imposed from time to time by the court.

Q. Mr. Irwin, will you look at Exhibit No. 8 and state what that represents?

A. Exhibit No. 8 represents the classification of the accounts covering expenditures of the Peoria Gas & Electric Company which went into effect on the first day of May, 1899.

Q. Were the books of the Peoria Gas & Electric Company, so far as pertains to the gasplant of the company, kept in the manner provided by that book, Exhibit 8?

A. Yes, they were.

Q. And have been during the entire period of the organization of that company and operation?

A. They have. This classification was adopted in May, 1899 and continues down to the present time.

Q. How are the accounts designated in the book, the several accounts?

A. The accounts of the Peoria Gas & Electric Company
141 are first subdivided under the general headings of general expense,—manufacturing——

Mr. MANSFIELD: I object to this as immaterial; this has been once testified to; no use in encumbering the record in that way.

By the MASTER: Answer subject to the objection.

A. (Continuing:) Distribution, miscellaneous, repairs and renewals plant account and additions to property, and miscellaneous accounts. These various general headings are again subdivided, as is shown in the book Exhibit 8.

Q. Into how many consecutive numbers?

A. The total numbers are from 1 to 41 both numbers inclusive.

Mr. IRWIN: I now offer this Exhibit No. 8 in evidence for the purpose of showing how the accounts of the complainant company have been kept.

Mr. MANSFIELD: Objected to as immaterial.

By the MASTER: You offer that portion of it embraced within the numbers 1 to 41 inclusive.

Mr. IRWIN: That is right, under the head of the Peoples Gas & Electric Company, Peoria Illinois, classification of accounts; then the general headings and classifications from numbers 1 to 41 inclusive.

Mr. MANSFIELD: That is objected to as immaterial.

Mr. IRWIN: That is contained on pages 2 to 9 inclusive of the Exhibit 8.

By the MASTER: You offer that as an exhibit, do you?

Mr. IRWIN: Yes sir, offer it in evidence for the purpose of simply showing how the accounts have been kept?

By the MASTER: Is it now offered to be made a part of the
142 record or as an exhibit in the case?

Mr. IRWIN: Both ways.

By the MASTER: Then it will have to be copied in the record, and also stand as an exhibit in the case.

Mr. MANSFIELD: Objected to on the ground of immateriality and incompetency and under the stipulation in this case, that the ledger totals would be the best evidence and that the accounts should be designated in connection therewith.

By the MASTER: It may be admitted subject to the objection and is in words and figures following, to-wit:

"People's Gas and Electric Company, Peoria, Ill.

Classification of Accounts.

General expense.

No. 1. Salaries of officers.—Salaries of all general officers, including president, secretary, treasurer and superintendent, except as otherwise provided for.

No. 2. Accounting department.—Salaries of assistants to treasurer, cashier, book-keepers and all clerks employed in the accounting department, including salary of storekeeper.

No. 3. General office sundries.—Includes all expenses of officers and other incidentals, telephone and petty office expenses and small supplies for office.

No. 12. Discounts.—Covers all discounts on gas bills (ac-
143 cording to rules of the company) allowed for payments of same on or before the 12th of the month following that in which gas was consumed, and special discounts allowed by general manager.

Manufacturing.

No. 13. Generator fuel.—Includes the cost of all coke and coal, used in manufacture of water gas expenses of handling same, and freight.

No. 14. Gas coal.—Includes cost of same as determined by storeroom, unit and cost of handling into retorts.

No. 15. Boiler fuel.—Includes cost of coal or other substances used under boilers, and cost of handling same.

No. 16. Bench fuel.—Includes cost of coal, coke or tar used for firing benches, together with cost of handling same.

No. 17. Manufacturing labor.—Includes wages of engineers, firemen, gas makers and labor of all employés in and about the works for the manufacture of gas not otherwise classified.

No. 18. Manufacturing supplies.—Includes cost of lubricating oils, waste, packing, etc. used in and about engine room and generator room, together with freight and cartage.

No. 19. Oil.—Cost of naphtha or gas oil, together with freight on same, if paid by the company, and cost of handling.

No. 20. Enrichers.—Includes cost of oil, naphtha, or coal used for this purpose, together with cost of handling same.

No. 21. Purification labor.—Cost of all labor in handling of purifying materials in the manufacture of gas, and work in and about the purifying house.

No. 22. Purification supplies.—Cost of all materials used for purifying, together with freight, cartage and handling.

Distribution.

No. 23. Distribution labor.—Includes car fares and wages of meter readers, car fares and wages of man engaged in the distribution of bills, attending to frozen service mains, car fares of collectors and their wages, cleaning tips and pumping drips.

No. 24. Distribution supplies.—Tips and supplies furnished customers gratis, and labor and expense of removing and setting old meters.

No. 25. Street lamp operating.—Cost of all labor and material used in lighting, extinguishing and maintaining street lamps.

Miscellaneous.

No. 26. Miscellaneous supplies and expenses.—This includes all small supplies and renewal of tools which may be furnished to or incurred at works, which can not be charged to repairs or renewals, and includes cleaning engine room, generator room, yard, etc.

Repairs and renewals.

No. 27. Repairs and renewal of meters.—All labor, materials and car fares used in this connection.

No. 28. Repairs and renewal of services.—All labor, material and car fares used in this connection.

No. 29. Bench repairs.—Includes cost of materials and labor used in this connection.

No. 30. Gas house and machinery repairs and renewals.—All labor and materials used in this connection.

No. 31. Repairs and renewals of mains.—All labor, materials and car fares, also cost of removing and replacing street pavement.

Plant account.

No. 32. Land and buildings.—Cost of all real estate purchased, including fees for examination of title and guarantee policies.

Additions to property.

No. 33. Extension of mains.—Cost of all labor and material and expenses connected therewith; new work only.

No. 34. Manufacturing plant.—Includes cost of retorts, generators, purifiers, pumps, exhausters, holders, separators and other apparatus used in the manufacture and storage of gas and its residuals.

No. 35. New meters.—The store-room unit price of all meters taken from stock for setting.

No. 36. New services.—Cost of all labor and material and
144 expenses connected therewith, which are to be furnished gratis.

No. 37. Tools and implements.—New tools only.

NOTE.—Tools and implements bought to replace those old or worn out, should be charged to the proper operating or repair and renewal account.

No. 38. Furniture and fixtures.—First cost of all office furniture and fixtures. Renewals and repairs to be charged account No. 3.

Miscellaneous accounts.

No. 39. Accounts receivable.—This account covers the billed accounts for service sales, stove sales, store-room sales, coke sales, tar sales, ammonia sales and fitting sales.

No. 40. Sales account.—This account will be debited with all material used and labor employed in mercantile sales and job work, and credited with the cost of completed work billed. Such completed work will be reported to the general office, by abstract, at the close of the month, giving the cost of the work and the billed amount charged to customers.

No. 41. Store-room.—This account represents all materials purchased, and the balance of the account represents the materials on hand. All purchases for stock except as otherwise provided for, to be charged this account. This account to be credited with all deliveries from store-room and the respective accounts for which the deliveries were made, debited.

All coke, breeze, tar, ammonia or other residuals from gas making are to be debited to this account, and this account to be credited with the cost of same when sold or used by the company.

145 Q. Mr. Little, can you state the amount paid by the complainant company for the salaries of officers under account No. 1 from the time of the organization of the company up to September 1st, 1900 as shown by the vouchers and books of the company, stating the totals?

A. Yes.

Q. What was that amount?

Mr. MANSFIELD: I object unless the ledger is brought in and the items shown as being on the ledger.

By the MASTER: Let him answer subject to the objection.

Mr. MANSFIELD: Under the stipulation in this case.

By the MASTER: I take it you gentlemen are limiting this inquiry as to the gas plant exclusively.

Mr. IRWIN: Yes.

By the MASTER: No use encumbering the record with anything else.

Mr. RITSHER: We have told him to confine himself to that and I have a notation here to cover that at the end of his examination by a general question.

Mr. MANSFIELD: I object, under the stipulation it is incompetent and immaterial.

By the MASTER: Answer subject to the objection, yes or no.

Mr. MANSFIELD:—and not the best evidence.

Q. Please state the amount so paid.

A. From the organization of the company to September 1st, 1900, there was paid as salaries to officers, the sum of $10,482.57.

Q. Can you tell the amount of salaries paid to officers under account No. 1 by the complainant company from May 1st, 1900 to September 1st, 1900 as shown by the vouchers and books of the company.

146 Mr. MANSFIELD: Objected to as immaterial and incompetent under the stipulation filed in this case.

By the MASTER: That covers part of the same ground covered by the previous question, Mr. Irwin?

Mr. IRWIN: Yes, sir.

By the MASTER: Answer that question yes or no.

A. Yes.

Q. Will you please state the amount?

A. The salary paid to officers covering the period from May 1st to August 31, 1900, as shown by the books of the company, amounted to $2741.67.

Mr. MANSFIELD: If it please the master, as I understand this stipulation, it covers the amounts and the various accounts that have been paid out from May 1st to September 1st, 1901. I am willing to allow these ledger accounts to go in for that purpose, covering that period, to show the expense of the construction of that plant and the operation of that plant, up to that date. Now, Mr. Irwin is trying to get in here another matter entirely, which I am not prepared to admit, and which I will not admit under any circumstances, and I think the master ought to confine them to this stipulation in this regard.

By the MASTER: The master has no means of knowing or determining that they are not going to ask the same question covering the entire period.

Mr. MANSFIELD: That is all that they can ask.

By the MASTER; I take it they are; but I can't say to them, you

shall cover the entire period in one question; suppose they divide it into periods of three months each.

147 Mr. MANSFIELD. Would not show the sum totals.

By the MASTER: I think perhaps the sum totals will be shown; I can't tell as far as they have gone what their purpose is just yet.

Q. Can you state the amount of money paid out by the complainant company on accounting department on account No. 2 from the date of the organization of the company to May 1st, 1900?

Mr. MANSFIELD: Objected to as immaterial.

Q. As shown by the vouchers and books of the company?

Mr. MANSFIELD: And also as incompetent under the stipulation on file in this case.

By the MASTER: Answer subject to the objection.

A. Yes.

Q. Please state the amount?

A. $6549.46.

Q. Can you state the amount paid out under account # 2 for accounting department of your company from May 1st, 1900 to August 31, 1900 inclusive, as shown by the books and vouchers of the company?

A. Yes.

Q. Please state the amount?

Mr. MANSFIELD: Objected to as incompetent and immaterial under the stipulation on file in this case.

A. $1551.70.

Q. Can you state the amount paid out by the complainant company under account No. 3 for general office sundries from the date of the organization of the company to May 1st, 1900, as shown by the books and vouchers of the company.

Mr. MANSFIELD: Same objection.

A. Yes.

By the MASTER: Answer subject to the objection.

148 Q. Please state what the amount was?

A. $1903.33.

Q. Can you state the amount paid out under account No. 3 for general office sundries from the first of May, 1900 to the 31st day of August, 1900 inclusive, as shown by the books and vouchers of the company?

Mr. MANSFIELD: Objected to as incompetent under the stipulation and for the reason that it is not the best evidence.

By the MASTER: Let him answer subject to the objection.

A. Yes.

Q. Please state what that amount was?
A. $1096.72.
Q. Can you state the amount paid out by your company under account No. 4 for canvassing, from the date of the organization of the company to May 1st, 1900.

Mr. MANSFIELD: Same objection.
By the MASTER: Answer subject to the objection.

A. Yes.
Q. As shown by the books and vouchers of the company?
A. Yes.
Q. Please state what that amount was?
A. $581.35.
Q. Can you state what was paid out by your company under account No. 4 for canvassing, between the first day of May, 1900 and the 31st day of August, 1900 inclusive, as shown by the books and vouchers of the company?

Mr. MANSFIELD: Same objection.
By the MASTER: Answer subject to the objection.

A. Yes.
Q. Please state what that amount was?
A. $1699.88.

149 Q. Can you state what amount your company paid out under account No. 5 for insurance from the date of the organization of the company to the first day of May, 1900 as shown by the books and vouchers of the company?

Mr. MANSFIELD: Same objection.
By the MASTER: Answer subject to the objection.

A. Nothing.
Q. Can you state what amount of insurance was paid out by your company under account No. 5 between the first day of May, 1900 and the 31st day of August, 1900 inclusive, as shown by the books and vouchers of the company?

Mr. MANSFIELD: Same objection.
By the MASTER: Answer subject to the objection.

A. Yes.
Q. Please state what that amount was?
A. $2655.25.
Q. Can you state what amount your company paid out under account No. 6 for rentals from the date of the organization of the company to the first day of May, 1900 as shown by the books and vouchers of the company?

By Mr. MANSFIELD: Same objection.
By the MASTER: Answer subject to the objection.

A. Yes.

Q. Please state what that amount was.
A. $1230.
Q. Can you state the amount paid out by your company under account No. 6 for rentals between the first day of May, 1900 and the 31st day of August, 1900 inclusive, as shown by the books and vouchers of the company?

Mr. MANSFIELD: Same objection.
By the MASTER: Answer subject to objection.

150 A. Yes.
Q. Please state what that amount was?
A. $433.43.
Q. Can you state the amount paid out by the complainant company under account No. 7 for interest between the date of the organization of the company and the first day of May, 1900, as shown by the books and vouchers of the company?

Mr. MANSFIELD: Same objection.
By the MASTER: Answer subject to objection.

A. Yes.
Q. Please state what that amount was?
A. $16,546.58.
Q. Can you state what amount your company paid out under account No. 7 for interest from the first day of May, 1900 to the 31st day of August, 1900, inclusive, as shown by the books and vouchers of the company?

Mr. MANSFIELD: Same objection.
By the MASTER: Answer subject to the objection.

A. No charges were made to the interest account during the period mentioned.
Q. Can you state what amount your company paid out under account No. 8 for taxes between the date of the organization of the company and the first day of May, 1900 as shown by the books and vouchers of the company?

Mr. MANSFIELD: Same objection.
By the MASTER: Answer subject to the objection.

A. Yes.
Q. Please state that amount?
A. The amount charged to taxes during the period mentioned was $1228.92.
Q. Can you state the amount paid out by the complainant company under account No. 8 for taxes between the first day of
151 May, 1900 and the 31st day of August, 1900 inclusive?

Mr. MANSFIELD: Same objection.
By the MASTER: Answer subject to objection.

A. The amount charged to taxes during the period mentioned was $828.88.

Q. Can you state the amount paid out by the complainant company under account No. 9 for legal expenses, loss and damages, from the date of the organization of the company to the first day of May, 1900 as shown by the books and vouchers of the company?

Mr. MANSFIELD: Same objection.
By the MASTER: Answer subject to objection.

A. Yes.
Q. Please state the amount?
A. $2213.92.
Q. Can you state the amount paid out by your company under account No. 9 for legal expenses, loss and damages from the first day of May, 1900 to the 31st day of August, 1900, inclusive, as shown by the books and vouchers of the company.

Mr. MANSFIELD: Same objection.
By the MASTER: Answer subject to the objection.

A. Yes.
Q. Please state what that amount was?
A. The amount was $432.50.
Q. Can you state the amount paid out by the complainant company under account No. 10 for stationery, printing and postage, as shown by the books and vouchers of the company from the date of the organization of the company to the first day of May, 1900?

Mr. MANSFIELD: Same objection.
By the MASTER: Answer subject to the objection.

A. Yes.
Q. Please state what that amount was?
152 A. $1723.83.
Q. Can you state the amount paid out by the complainant company under account No. 10 for stationery, printing and postage, as shown by the books and vouchers of the company from the first day of May, 1900 to the 31st day of August, 1900, inclusive, as shown by the books and vouchers of the company?

Mr. MANSFIELD: Same objection.
By the MASTER: Answer subject to the objection.

A. Yes.
Q. Please state the amount.
A. $461.63.
Q. Can you state the amount paid out by the complainant company under account No. 11 for stable expenses between the date of the organization of the company and the first day of May, 1900, as shown by the books and vouchers of the company.

Mr. MANSFIELD: Same objection.

By the MASTER: Answer subject to the objection.

A. Yes.
Q. Please state the amount?
A. $2200.52.

Q. Can you state the amount paid out by the complainant company under account No. 11 as shown by the books and vouchers of the company between the first day of May, 1900 and the 31st day of August, 1900 as shown by the books and vouchers of the company?

Mr. MANSFIELD: Same objection.
By the MASTER: Answer subject to the objection.

A. Yes.
Q. Please state?
A. $894.24.

Q. Can you state the amount paid out by the complainant company under account No. 13 as shown by the books and
153 vouchers of the company for generator fuel between the date of the organization of the company and the first day of May, 1900?

Mr. MANSFIELD: Same objection.
By the MASTER: Answer subject to the objection.

A. There was nothing paid out on that account.

Q. Can you state the amount paid out under account No. 13 between the first day of May, 1900 and the 31st day of August, 1900, as shown by the books and vouchers of the company for generator fuel?

Mr. MANSFIELD: Same objection.
By the MASTER: Answer subject to the objection.

A. The books show no payments to that account during the period mentioned.

Q. Can you state the amount paid out by the complainant company under account No. 14 for gas coal, as shown by the books and vouchers of the company between the date of the organization of the company and the first day of May, 1900?

Mr. MANSFIELD: Same objection.
By the MASTER: Answer subject to the objection.

A. Yes.
Q. Please state the amount?
A. The value of the gas coal used during the period mentioned, as shown by the books of the company, was $1681.99; more coal than this amount was purchased, but the amount stated is the value of the coal which was used during the period mentioned, as shown by the books of the company.

Q. Can you state the amount expended or used under account

No. 14 for gas coal between the first day of May, 1900 and the 31st day of August, 1900 inclusive, as shown by the books and vouchers of the company?

Mr. MANSFIELD: Same objection.
154 By the MASTER: Answer subject to the objection.

A. The amount in value of the gas coal used during the period mentioned, as shown by the books of the company was $5829.79.

Q. Can you state the amount paid out by your company under account No. 15 for boiler fuel from the date of the organization of the company to May 1st, 1900, as shown by the books and vouchers of the company?

Mr. MANSFIELD: Same objection.
By the MASTER: Answer subject to objection.

A. Yes.

Q. Please state the amount?

A. The value of the boiler fuel used during the period mentioned, as shown by the books of the company was $303.63.

Q. Can you state the amount paid out by your company, or used under account No. 15 for boiler fuel from the first day of May, 1900 to the 31st day of August, 1900, inclusive, as shown by the books and vouchers of the company?

A. Yes.

Mr. MANSFIELD: Same objection.

Q. Please state the amount?

A. The value of the boiler fuel used during the period mentioned was $91.24.

Q. Can you state the amount paid out by the complainant company under account No. 16 for bench coal, as shown by the books and vouchers of the company from the date of the organization thereof to the first day of May, 1900?

Mr. MANSFIELD: Same objection.
By the MASTER: Answer subject to the objection.

A. Yes.

Q. Please state the amount?

A. The value of the bench coal used during the period mentioned was $812.73.

155 Q. Can you state the amount paid out by your company under account No. 16 for bench fuel from the first day of May, 1900, to the 31st day of August, 1900, inclusive, as shown by the books and vouchers of the company.

A. The value of the bench coal used during the period mentioned was $1337.69.

Q. Can you state the amount paid out by the complainant company under account No. 17 for manufacturing labor from the date

of the organization of the company to the first day of May, 1900, yes or no.

Mr. MANSFIELD: Same objection.
The MASTER: Answer subject to the objection.

A. Yes.
Q. Please state the amount.
A. $1129.32.
Q. Can you state the amount paid out under account No. 17 for manufacturing labor from the first day of May, 1900 to the 31st day of August 1900, inclusive, as shown by the books and vouchers of the company?

Mr. MANSFIELD: Same objection.

A. Yes.
Q. Please state the amount?
A. $3135.31.
Q. Can you state the amount paid out by the complainant company under account No. 18 for manufacturing supplies from the date of the organization of the company to the first day of May, 1900?

Mr. MANSFIELD: Same objection.
By the MASTER: Answer subject to the objection.

A. There was nothing paid by the company during the period mentioned for manufacturing supplies.

156 Q. Can you state the amount paid out by your company under account No. 18 for manufacturing supplies between the first day of May, 1900 and the 31st day of August, 1900 inclusive, as shown by the books and vouchers of the company?

Mr. MANSFIELD: Same objection.
By the MASTER: Answer subject to the objection.

A. Yes.
Q. Please state the amount?
A. $82.70.
Q. Can you state the amount paid out by your company under account No. 19 for oil, from the date of the organization of the company to the first day of May, 1900, as shown by the books and vouchers of the company?

Mr. MANSFIELD: Same objection.
By the MASTER: Answer subject to the objection.

A. There were no payments made for oil during the period mentioned.
Q. Can you state the amount paid out by your company on account No. 19 for oil from the first day of May, 1900 to the 31st day of August, 1900, inclusive, as shown by the books and vouchers of your company?

A. There were no payments made for oil during the period mentioned.

Q. Can you state the amount paid out by your company under account No. 20 for enrichers from the date of the organization of the company to the first day of May, 1900, as shown by the books and vouchers of the company?

A. Yes.

Mr. MANSFIELD: Same objection.
Same ruling.

Q. Please state the amount?

A. $313.67.

Q. Can you state the amount paid out by your company under account No. 20 between the first day of May, 1900 and the
157 31st day of August, 1900 for enrichers as shown by the books and vouchers of the company?

Mr. MANSFIELD: Same objection.
By the MASTER: Same ruling.

A. Yes.

Q. Please state the amount?

—. $598.68.

Q. Can you state the amount paid out under account No. 21 for purification labor from the date of the organization of the company to the first day of May, 1900 as shown by the books and vouchers of the company?

Mr. MANSFIELD: Same objection.
By the MASTER: Same ruling.

A. Yes.

Q. Please state the amount?

A. $385.45.

Q. Can you state the amount paid out under account No. 21 for purification labor between the first day of May, 1900 and the 31st day of August, 1900, inclusive, as shown by the books and vouchers of the company?

Mr. MANSFIELD: Same objection.
By the MASTER: Answer subject to objection.

A. Yes.

Q. Please state the amount?

A. $205.75.

Q. Can you state the amount paid out by the company under account No. 22 for purification supplies from the date of the organization of the company to the first day of May, 1900, as shown by the books and vouchers of the company?

Mr. MANSFIELD: Same objection.
By the MASTER: Answer subject to the objection.

158 A. Yes.

Q. Please state?

A. $1141.61.

Q. Can you state the amount paid out under account No. 22 for purification supplies between the first day of May, 1900 and the 31st day of August, 1900, inclusive, as shown by the books and vouchers of the company?

Mr. MANSFIELD: Same objection.

By the MASTER: Answer subject to objection.

A. Yes.

Q. Please state?

A. $181.52.

Q. Under manufacturing,—can you state the amount paid out under account No. 23 for distribution labor, as shown by the books and vouchers of the company between the date of its organization and the first day of May, 1900?

Mr. MANSFIELD: Same objection.

By the MASTER: Same ruling.

A. The amounts paid out under account No. 23 are a subdivision of the general distribution account,—not of the manufacturing account. I know the amount paid out under account No. 23 as shown by the books of the company.

Q. Please state the amount?

A. The amount was $368.45.

Q. Can you state the amount paid out under account No. 23 for distribution labor between the first day of May, 1900 and the 31st day of August, 1900, as shown by the books and vouchers of the company?

Mr. MANSFIELD: Same objection.

By the MASTER: Answer subject to the objection.

A. Yes.

Q. Please state?

A. $809.24.

159 Q. Can you state the amount paid under account No. 24 for distribution supplies from the date of the organization of the company to the first day of May, 1900, as shown by the books and vouchers of the company?

Mr. MANSFIELD: Same objection.

The MASTER: Same ruling.

Q. Please state?

A. $310.00.

Q. Can you state the amount paid out by your company under account No. 24 from the first day of May, 1900 to the 31st day of August, 1900, inclusive, as shown by the books and vouchers of the company?

Mr. MANSFIELD: Same objection.
By the MASTER: Answer subject to objection.

A. Yes.
Q. Please state?
A. $24.63.

Q. Can you state the amount paid out by your company unde account No. 26 for miscellaneous supplies and expenses from th date of the organization of the company to the first day of Ma 1900, as shown by the books and vouchers of the company?

Mr. MANSFIELD: Same objection.
The MASTER: Answer subject to objection.

A. Yes.
Q. Please state?
A. $112.17.

Mr. MANSFIELD: I want to offer an objection and ask that all th totals as testified to by Mr. Little in regard to the cost of operatin or the cost rather of constructing the plant previous to May 1s 1900, be stricken out on the ground of immateriality, incompetenc and as not being items which should be charged up to the cost o constructing the gas works.

160 Q. Can you state the amount paid out by your company under account No. 26 for miscellaneous supplies and expense from the first day of May, 1900 to the 31st day of August, 1900, a shown by the books and vouchers of the company?

Mr. MANSFIELD: Same objection.
By the MASTER: Answer subject to objection.

A. Yes.
Q. Please state?
A. $293.26.

Q. Can you state the amount paid out by your company on ac count No. 12 for discounts from the date of the organization of the company to the first day of May, 1900, as shown by the books and vouchers of the company?

A. The books and vouchers of the company show no charges to account No. 12 during the period mentioned.

Q. Can you state amount paid out by your company on account No. 12 for discounts from the first day of May, 1900 to the 31st day of August, 1900, as shown by the books and vouchers of the company.

Same objection by defendant. Same ruling by master.

A. I can not; I have not that information available.
Q. Can you get that information?
A. Yes.
Q. Will you, and be ready to answer at some future sitting?
A. Yes.

Q. Can you state the amount paid out by your company on account No. 25 for street lamp operating between the date of the organization of the company and the first day of May, 1900 as shown by the books and vouchers of the company?

Same objection by defendant. Same ruling by master.

A. There were no charges made to account No. 25, street lamp operating during the period mentioned.

Q. Can you state the amount paid out by your company under account No. 25 for street lamp operating between the first day of May, 1900 and the 31st day of August, 1900, inclusive, as shown by the books and

161 Same objection by defendant. Same ruling by master.

A. There were no amounts paid out by the company during the period mentioned charged to account No. 25.

Q. Can you tell me the amount paid out under account No. 27, repairs and renewals of meters between the date of the organization of the company and the first day of May, 1900, as shown by the books and vouchers of the company?

Same objection by defendant. Same ruling by master.

A. No amounts charged to that account during the period mentioned.

Q. Can you state the amount paid out under account No. 27 for repairs and renewals of meters between the first day of May, 1900 and the 31st day of August, 1900, inclusive, as shown by the books and vouchers of the company?

Same objection by defendant. Same ruling by master.

A. Yes.

Q. Please state the amount?

A. $9.22.

Q. Can you state the amount paid out under account No. 28 for repairs and renewals of services from the date of the organization of the company to May 1st, 1900, as shown by the books and vouchers of the company?

Same objection by defendant. Same ruling by master.

A. There were no amounts paid out and charged to that account during the period mentioned.

Q. Can you state the amount paid out under account No. 28 for repairs and renewals of services from the first day of May, 1900 to the 31st day of August, 1900, inclusive, as shown by the books and vouchers of the company?

Same objection by defendant. Same ruling by master.

A. Yes.

Q. Please state?
A. $58.76.

Q. Can you state the amount paid out under account No.
162 29 for bench repairs between the date of the organization of the company and the first day of May, 1900, as shown by the books and vouchers of the company?

A. There were no amounts paid out or charged to the account mentioned during the period mentioned.

Q. Can you state the amount paid out under account No. 29 for bench repairs between the first day of May, 1900 and the 31st day of August, 1900, inclusive as shown by the books and vouchers of the company.

Same objection by defendant. Same ruling by master.

A. $35.80.

Q. Can you state the amount paid out under account No. 30, gas house and machinery repairs and renewals, from the date of the organization of the company to the first day of May, 1900, as shown by the books and vouchers of the company?

A. There were no amounts paid out or charged to the account mentioned during the period mentioned.

Q. Can you state the amount paid out under account No. 30 for gas house and machinery repairs and renewals from the first day of May, 1900 to the 31st day of August, 1900, as shown by the books and vouchers of the company?

A. Yes.

Same objection by defendant. Same ruling by master.

Q. Please state the amount?
A. $199.34.

Q. Can you state the amount paid out under account No. 31 for repairs and renewals of mains between the date of the organization of the company and the first day of May, 1900, as shown by the books and vouchers of the company?

A. There were no amounts paid out or charged to the account mentioned during the period mentioned.

Q. Can you state the amount paid out under account No. 31 for repairs and renewals of mains between the first day of May,
163 1900 and the 31st day of August, 1900, as shown by the books and vouchers of the company?

Same objection by defendant. Same ruling by master.

A. Yes.
Q. Please state?
A. $215.63.

Q. Can you state the amount paid out under account No. 32 for lands & buildings from the date of the organization of the company to the first day of May, 1900, as shown by the books and vouchers of the company?

Same objection by defendant. Same ruling by master.

A. Yes.

Q. Please state?

A. $98,322.64.

Q. Can you state the amount paid out under account No 32 for lands & buildings between the first day of May, 1900 and the 31st day of August, 1900?

Same objection by defendant; same ruling by master.

A. My previous answer to the previous question includes the amount paid up to the first day of September. I haven't available the amount that had been paid to that account at May 1st, 8—up to May 1st.

Q. Can you tell about what proportion of that amount was paid up——

By the Master: Your answer there covers the period up to May 31, 1900, did it?

A. No, the amount that was covered,—what was intended to be covered by that answer to the question was the amount which had been expended up to the first day of September in the construction account; that is to say, in the land and buildings account.

By the Master: That is 1900?

A. That is September, 1900.

Q. Can you get from the books and vouchers of the company the amount paid out by the company between the date of its organization and the first day of May, 1900?

164

Same objection by defendant; same ruling by master.

A. Yes sir.

Q. Will you give that amount so as to be interrogated n reference thereto at some future sitting?

A. Yes.

Q. Can you give the amount paid out by your compary under account No. 33 for extension of mains between the date of the organization of the company and September 1st, 1900?

Same objection by defendant; same ruling by master.

A. Yes.

Q. Please state the amount?

A. The amount paid for the main system of the company from the organization of the company to September 1st, 1900 was $129,081.15.

Q. Can you state from the books and vouchers of the company what proportion of that amount was for labor and what proportion for material?

Same objection by defendant; same ruling by master.

A. Yes.

Q. Please state?

A. $40,708.36 was for labor and $79,372.79 was for materials.

Q. Can you state the amount paid out by your company under account No. 34 for manufacturing plant from the date of its organization to the first day of September, 1900, as shown by the books and vouchers of the company?

Same objection by defendant; same ruling by master.

A. Yes.

Q. Please state?

A. $107480.15.

Q. Can you state from the same books and vouchers the proportion of that amount paid out for labor and the proportion paid out for material?

165 Same objection by defendant; same ruling by master.

A. Yes.

Q. Please give the items?

A. $13,994.22 was paid out for labor and $93,485.93 was paid out for material.

Q. Can you state the amount paid out by the complainant under account No. 35 for new meters froom the date of its organization to the first day of September, 1900, as shown by the books and vouchers of the company?

A. Yes.

Same objection by defendant; same ruling by master.

Q. Please state the amount?

A. $13,174.26.

Q. Can you state from the same books and vouchers the proportion of that amount paid out for labor and the proportion for material?

Same objection by defendant; same ruling by master.

A. Yes.

Q. Please state?

A. $1963.65 was paid out for labor and $11,210.61 was paid out for material.

Q. Can you state the amount paid out by your company under account No. 36 for new services between the date of its organization to the first day of September, 1900, as shown by the books and vouchers of the company.

Same objection by defendant; same ruling by master.

A. Yes.

Q. Please state?

A. $38,575.94.

Q. Can you state what portion of that amount was for labor and what portion for material, as shown by the books and vouchers of the company.

Same objection by defendant; same ruling by master.

A. Yes.

Q. Please state?

A. $16,582.50 was for labor and $21,993.44 was for material.

166 Q. Can you state the amount paid out under account No. 37 for tools and implements from the date of the organization of the company to the first day of September, 1900, as shewn by the books and vouchers of the company?

Same objection by defendant; same ruling by master.

A. Yes.

Q. Please state?

A. $5288.37.

Q. Can you state what portion of that amount was paid out for labor and what portion for material, as shown by the books and vouchers of the company?

A. $63.38 was for labor and $5224.99 was for material.

Q. Can you state the amount paid out by your company under account No. 38 for furniture and fixtures from the date of its organization to the first day of September, 1900, as shown by the books and vouchers of the company.

Same objection by defendant; same ruling by master.

A. Yes.

Q. Please state the amount?

A. $2852.01.

Q. Can you state what portion of that amount was for labor and what for material, as shown by the books and vouchers of the company?

A. Yes.

Q. Please state?

A. $304.62 was for labor and $2547.39 was for material.

Q. Can you state the total cost of the plant of the complainant from the date of its organization up to the first of September, 1900, as shown by the books and vouchers of the company?

Same objection by defendant; same ruling by master.

A. Yes.

Q. Please state the total amount?

A. $434,252.35.

167 Q. Can you state the amount of money paid out by your company under account No. 39, accounts receivable from the date of its organization to the first day of September, 1900, as shown by the books and vouchers of the company?

Same objection by defendant; same ruling by master.

A. Account No. 39, accounts receivable is a miscellaneous account, which has nothing whatever to do with the construction of the

plant; it merely assembles the various accounts which are due and payable to the company.

Q. Can you state the amount paid out by your company under account No. 40 on Exhibit No. 8 for sales account, as shown by the books and vouchers of the company from the date of its organization to September 1st, 1900?

Same objection by defendant; same ruling by master.

A. Sales account is a miscellaneous account, and has nothing to do with the cost of the plant; it merely assembles the sales of miscellaneous merchandise, gas fittings, stocks, etc. which are sold in the ordinary course of business of the company, and shows whether such sales were made at a profit or loss.

Q. Can you tell the amount expended by your company, under account No. 41. for store room, as shown by the books and vouchers of the company, from the date of its organization to the first day of September, 1900?

Same objection by defendant; same ruling by master.

A. The store room account, No. 41 was used for the purpose of assembling the cost of materials purchased, the materials which were purchased for account of the company, either for construction or operation are charged into this account and at the end of the month,
such materials as have been used either for purposes of con-
168 struction or operation are charged out of the account and credited to the store room account and are charged to the various construction or operating accounts under some one of the previous numbers upon the books of the company. The balance of the account at the close of each month shows the amount of material on hand belonging to the company which has been unused for any construction or operating purpose.

By the MASTER: Balance on hand under account No. 41.

A. Always shows the kind of the material we have on hand unused.

By the MASTER: Mr. Little, I would like to ask this question. Do the several amounts that you have given and charged to the several accounts from No. 1 to No. 38 inclusive make the total cost of the plant to September 1st, 1900, as stated by you, as shown by the books of the company?

A. Yes, they do; the figures which I have testified to $1342523.35 represents the total cost of the gas plant and gas property of the Peoria Gas & Electric Company at September 1st, 1900, excepting only unused materials on hand which were then in the store-room of the company, and which are not included in that figure.

Mr. RITSHER: Is that total arrived at by computing the sum of all the different accounts as they stood at May 1st, 1900 or as they stood at September 1st, 1900?

A. All operating accounts, that is to say, all accounts from No. 1 to No. 26 inclusive, were charged on May 1st, 1900 to the cost of the

property. After May 1st, 1900, and up to September 1st, 1900, these various operating accounts, being accounts numbered 1 to 26 inclusive, where no longer charged against the cost of the property, but were charged against the operations of the property, and the only charges made against the cost of the property from May 1st,
169 1900 to September 1st, 1900 were under general accounts numbers 32 to 38 inclusive.

Mr. RITSHER: Then, if I understand you right, the total cost of the construction of the gas plant of the Peoria Gas & Electric Company which you have given as $134,252.35 is arrived at by computing the sum of the various accounts from 1 to 26, both inclusive, as the same stood on May 1st, 1900, and also the sum of accounts 32 to 38 inclusive, as the same stood September 1st, 1900?

A. Yes sir.

By Mr. IRWIN:

Q. Mr Little, can you state the amount paid out by your company under account No. 1 for salaries of officers between the first day of May, 1900 and the 31st day of August, 1900, inclusive, as shown by the books and vouchers of the company?

By the MASTER: You have already got that, $2741.67.

Mr. IRWIN: I am just going into another account now; it will be a repetition only of one question. Please state the amount.

Objected to by defendant; same ruling by master.

A. $2741.67.

Q. Can you state the amount paid out by your company under account No. 1 for salaries to officers from the first day of May, 1900 to the 31st day of August, 1900, as charged to operating account?

Mr. MANSFIELD: Same objection.

Same ruling by master.

A. Yes.

Q. Please state the amount.

A. $2741.67 was paid for the salaries of officers during the period mentioned and charged to the operating expenses of the company.

Q. Can you state the amount paid out by your company under account No. 2 for accounting department between the first day of May, 1900 and the 31st day of August, 1900 inclusive, and charged to operating account as shown by the books and vouchers of the company?

170 Same objection by defendant; same ruling by master.

A. Yes.

Q. Please state?

A. $1551.70.

Q. Can you state the amount paid out by the complainant company under account No. 3 for general office sundries between the first day of May, 1900 and the 31st day of August, 1900, inclusive,

and charged to operating expenses as shown by the books and vouchers of the company?

Same objection by defendant; same ruling by master.

A. Yes.
Q. Please state?
A. $1096.72.
Q. Can you state the amount paid out by your company on account No. 4 for canvassing between the first day of May, 1900 and the 31st day of August, 1900, inclusive, as shown by the books and vouchers of the company, and charged to operating expenses?

Same objection by defendant; same ruling by master.

A. Yes.
Q. Please state the amount?
A. $2655.55.
Q. Were all the items as paid out by your company on accounts from No. 1 to No. 26 inclusive between the first day of May, 1900 and the 31st day of August, 1900 charged to the operating expenses of the company?

Same objection; same ruling by master.

A. All the amounts paid out by the company during the period mentioned which I have testified as charged against accounts 1 to 31 inclusive were charged against the expenses of operating the plant and business of the complainant, during the period mentioned.

Mr. RITSHER: Can you state the amount paid out by your company under account No. 1 for salaries of officers betwe n September 1st, 1900 and August 31, 1901 and charged to operating ac-
171 count, as shown by the books and vouchers of the company?

Mr. MANSFIELD: That is objected to as incompetent and immaterial.

The MASTER: Admitted subject to objection.

A. Yes.
Q. Please state?
A. $3692.50.
Q. Can you state the amount paid out by your company under account No. 2, accounting department from September 1, 1900 to August 31, 1901 and charged to operating account as shown by the books and vouchers of the company?

Mr. MANSFIELD: Objected to as immaterial.

The MASTER: Answer subject to objection.

A. Yes.
Q. Please state?
A. 4090.60.
Q. Can you state the amount paid out by your company under account No. 3, general office sundries, from September 1, 1900 to

August 31, 1901, and charged to operating account, as shown by the books and vouchers of the company?

Mr. MANSFIELD: Objected to as immaterial and incompetent.
The MASTER: Answer subject to objection.

Q. Yes.
A. Yes.
Q. What is that amount?
A. 714.29.

Q. Can you state the amount paid out by your company under account No. 4 for canvassing from September 1, 1900 to August 31, 1901 and charged to operating account, as shown by the books and vouchers of your company?

Same objection by defendant; same ruling by master.

A. Yes.
Q. Please state the amount?
A. $2176.62.

Q. Can you state the amount paid out by your company under account No. 5 for insurance between September 1st, 1900 and
172 August 31, 1901 and charged to operating account, as shown by the books and vouchers of your company?

Mr. MANSFIELD: Same objection.
The MASTER: Same ruling.

A. Yes.
Q. Please state the amount?
A. $269.75.

Q. Can you state the amount paid out by your company under account No. 6 for rentals between September 1st, 1900 and August 31, 1901 inclusive and charged to operating account as shown by the books and vouchers of your company?

Same objection by defendant; same ruling by master.

A. Yes.
Q. Please state the amount?
A. $1184.

Q. Can you state the amount paid out by your company under account No. 7 for interest between September 1st, 1900 and August 31, 1901 inclusive and charged to operating account as shown by the books and vouchers of your company?

Same objection by defendant; same ruling by master.

A. No interest was charged against operating account during the period mentioned.

Q. Can you state the amount paid out by your company under account No. 8 for taxes between September 1st, 1900 and August 31, 1901 inclusive and charged to operating account, as shown by the books and vouchers of your company?

Same objection by defendant; same ruling by master.

A. Yes.

Q. Please state the amount?

A. During the period mentioned, taxes upon the gas plant and gas property of the company were paid amounting to $2486.68. Of this sum, $828.88 was charged against operating accounts representing the *pro rata* share of the taxes of the year 1900. The
173 payment mentioned of $2486.68 was for the taxes of the *of the* year 1900. The taxes for the year 1901 have not yet been levied and no portion of the taxes for the year 1901 have been charged against operations on the books of the company from January 1, 1901 to August 31, 1901.

Q. Can you state the amount paid out by your company under account No. 9 for legal expenses, loss and damage between September 1, 1900 and August 31, 1901, inclusive, and charged to operating account as shown by the books and vouchers of your company?

Same objection by defendant; same ruling by master.

A. Yes.

Q. Please state the amount?

A. $5190.10.

Q. Can you state the amount paid out by your company under account No. 10 for stationery, printing and postage between September 1, 1900 and August 31, 1901, inclusive, and charged to operating account as shown by the books and vouchers of your company?

Same objection by defendant; same ruling by master.

A. Yes.

Q. Please state the amount?

A. Yes, $3093.30.

Q. Can you state the amount paid out by your company under account No. 11 for stable expenses between September 1, 1900 and August 31, 1901, inclusive, and charged to operating account as shown by the books and vouchers of your company?

Same objection by defendant; same ruling by master.

A. Yes.

Q. Please state?

A. $1297.35.

Q. Can you state the amount paid out by your company under account No. 12 for discounts between September 1, 1900 and August 31 1901, inclusive, and charged to operating account, as shown by the books and vouchers of your company?

Same objection by defendant; same ruling by master.

174 A. I haven't the figures available at the present time.

Q. Will you procure them and bring them in?

A. Yes.

Q. Can you state the amount paid out by your company under account No. 13 for generator fuel between September 1, 1900 and August 31, 1901, inclusive, and charged to operating account as shown by the books and vouchers of your company?

Same objection by defendant; same ruling by master.

A. During period mentioned, no sums were paid for generator fuel.

Q. Can you state the amount paid out by your company under account No. 14 for coal between September 1 1900 and August 31, 1901, inclusive, and charged to operating account, as shown by the books and vouchers of your company?

Same objection by defendant; same ruling by master.

A. Yes.

Q. Please state?

A. Value of the gas coal used and charged against operating account No. 14, gas coal during period mentioned was $15,141.67.

Q. Can you state the amount paid out by your company under account No. 15 for boiler fuel between September 1, 1900 and August 31, 1901, inclusive, and charged to operating account, as shown by the books and vouchers of your company?

Same objection by defendant; same ruling by master.

A. Yes.

Q. Please state?

A. The value of the boiler fuel used and charged against operating account No. 15 during the period mentioned was $1193.06.

Q. Can you state the amount paid by your company under account No. 16 for bench fuel between September 1, 1900 and August 31, 1901 inclusive, and charged to operating account, as shown by the books and vouchers of your company?

175 Same objection by defendant; same ruling by master.

A. Yes.

Q. State the amount?

A. During the period mentioned, the value of the bench fuel used and charged against operating account No. 16 was $3669.15.

By the MASTER: What does bench fuel mean, Mr. Little?

A. Fuel used to heat the benches of retorts.

Q. Can you state the amount paid out by your company under account No. 17, for manufacturing labor between September 1, 1900 and August 31, 1901, inclusive, and charged to operating account, as shown by the books and vouchers of your company?

Same objection by defendant; same ruling by master.

A. Yes.

Q. Please state?

A. $286.12.

Q. Can you state the amount paid out by your company under account No. 18 for manufacturing supplies between September 1, 1900 and August 31, 1901, inclusive, and charged to operating account, as shown by the books and vouchers of your company?

Same objection by defendant; same ruling by master.

A. Yes, value of the manufacturing supplies, both during the period mentioned and charged against operating account No. 18 was $535.10.

Q. Can you state the amount paid out by your company under account No. 19, for oil, between September 1, 1900 and August 31, 1901, inclusive, and charged to operating account, as shown by the books and vouchers of your company?

Same objection by defendant; same ruling by master.

A. During the period mentioned, no oil of the kind contemplated by this account was purchased or used or charged against the account.

Q. Can you state the amount paid out by your company under account No. 20 for enrichers between September 1, 1900 and
176 August 31, 1901 inclusive, and charged to operating account, as shown by the books and vouchers of your company?

Same objection by defendant; same ruling by master.

A. Yes.

Q. Please state?

A. The value of the enrichers during the period mentioned used and charged against operating account No. 20 was $694.30.

Q. Can you state the amount paid out by your company under account No. 21 for purification labor between September 1, 1900 and August 31, 1901, inclusive, and charged to operating account, as shown by the books and vouchers of your company?

Same objection by defendant; same ruling by master.

A. Yes.

Q. Please state?

A. $186.65.

Q. Can you state the amount paid out by your company under account No. 22 for purification supplies between September 1, 1900 and August 31, 1901, inclusive, and charged to operating account, as shown by the books and vouchers of your company?

Same objection by defendant; same ruling by master.

A. Yes.

Q. Please state?

A. $39.20.

Q. Can you state the amount paid out by your company under

account No. 23 distribution labor, between September 1, 1900 and August 31, 1901, inclusive, and charged to operating account, as shown by the books and vouchers of your company?

Same objection by defendant; same ruling by master.

A. Yes.

Q. Please state?

A. $1939.46.

Q. Can you state the amount paid out by your company under account No. 24 distribution supplies, between September 1,
177 1900 and August 31, 1901, inclusive, and charged to operating account, as shown by the books and vouchers of your company?

Same objection by defendant; same ruling by master.

A. Yes.

Q. Please state?

A. The value of the distribution supplies used d ..ag the period mentioned and charged against operating account No. 24 was $899.30.

Q. Can you state the amount paid out by your company under account No. 25 for street lamp operating between September 1, 1900 and August 31, 1901, inclusive, and charged to operating account, as shown by the books and vouchers of your company?

A. During the period mentioned, no sums were expended on account of street lamp operating or any charge made against the account on the books of the company.

Q. Can you state the amount paid out by your company under account No. 26, miscellaneous supplies and expenses between September 1, 1900 and August 31, 1901, inclusive,. and charged to operating account, as shown by the books and vouchers of your company?

Objected to by defendant; same ruling by master.

A. Yes.

Q. Please state?

A. During the period mentioned the value of the miscellaneous supplies and expenses used and charged against operating account, No. 26 was $291.14.

Q. Can you state the amount paid out by your company under account No. 27, repairs and renewals of meters, between September 1, 1900 and August 31, 1901, inclusive, and charged to operating account, as shown by the books and vouchers of your company?

Objected to by defendant; same ruling by master.

178 A. Yes.

Q. Please state?

A. During the period mentioned, the value of the material and labor used in repairing and renewing the meters was $226.93.

Q. Can you state the amount paid out by your company under account No. 28, repairs and renewals services, between September 1, 1900 and August 31, 1901, inclusive, and charged to operating account, as shown by the books and vouchers of your company?

Same objection by defendant; same ruling by master.

A. Yes.
Q. Please state?
A. $64.81.
Q. Can you state the amount paid out by your company under account No. 29 bench repairs between September 1, 1900 and August 31, 1901, inclusive, and charged to operating account, as shown by the books and vouchers of your company?

Same objection by defendant; same ruling by master.

A. Yes.
Q. Please state?
A. $72.51.
Q. Can you state the amount paid out by your company under account No. 30 gas house and machinery repairs between September 1, 1900 and August 31, 1901, inclusive, and charged to operating account, as shown by the books and vouchers of your company?

Same objection by defendant; same ruling by master.

A. Yes.
Q. Please state?
A. $777.50.
Q. Can you state the amount paid out by your company under account No. 31, repairs and renewals mains between September 1, 1900 and August 31, 1901, inclusive, and charged to operating account, as shown by the books and vouchers of your company?

Same objection by defendant; same ruling by master.

A. Yes.
179 Q. Please state?
A. $72.96.
Q. Can you state the amount paid out by your company under account Nos. 32 to 41 both inclusive between September 1, 1900 and August 31, 1901, inclusive, and charged to operating account, as shown by the books and vouchers of your company?

Same objection by defendant; same ruling by master.

A. I have not available at this time the ledger balances or other information as to the amount of those accounts as at August 31, 1901.
Q. You will bring those in?
A. Yes.
Q. Mr. Little, can you state the totals of the accounts 1 to 31 inclusive concerning which you have just testified covering your

operating expenses from September 1st, 1900 to August 31, 1901 as shown by the books and vouchers of the company?

A. Yes.

Same objection by defendant; same ruling by master.

Q. What is that total?

A. $60,257.25.

Q. Can you give the total of labor and the total of materials covering that period as shown by the books and vouchers of the company?

Same objection by defendant; same ruling by master.

A. Yes.

Q. What are those totals?

A. The labor amounts to $22,751.12 and the material to $37,506.13.

Q. Mr. Little, I will ask you to state the cost of the various constituent buildings with machinery in all the buildings going to make up the plant of the Peoria Gas & Electric Company as shown by the books and vouchers of the company, if you can so state?

Same objection by defendant; same ruling by master.

A. The retort house cost up to September 1, 1900, the sum of $8235.19; the purifying house was remodelled from a ware-house and the cost of such remodelling was $7009.69; the boiler
180 and pump house cost $2228.53; the meter house extension cost $1258.47; the office building, shop and store room cost in the original contract $4417.01 and including partitions, fittings, etc. the total cost was $4540.72; the barn on the premises which was there when we bought the property was remodelled at a cost of $34.50; the coal and coke shed No. 1 cost $7395. The fireproof brick operating floor in the retort house cost $2494.37; the cost of coal and coke shed No. 2 was $6626.01. The fence around the works cost $225.41 and the grading of the yard and works cost $289.10; the real estate cost $42,896.00.

Q. Can you state the machinery and equipments of the plant and the cost of the respective parts?

(Not answered.)

Whereupon an adjournment was taken to November 14, 1901, at 9:30 a. m.

181 Directors' room, Chicago National Bank building.

CHICAGO, ILL., THURSDAY, *November* 14, 1901—9:30 a. m.

Parties met pursuant to adjournment.

Present: Judge I. C. Pinkney, special commissioner. Mr. W. T. Irwin and Mr. E. C. Ritsher appearing for complainant. Mr. Henry Mansfield appearing for defendant.

Direct examination of FRANCIS W. LITTLE resumed by Mr. IRWIN:

Q. Please give the constituent parts of the different apparatus and machinery necessary in the equipment of the plant and buildings of the complainant company for the manufacture and delivery of gas together with the cost of each particular part, equipment or apparatus, as placed and constructed in the buildings prior to September 1, 1900?

A. The gas manufacturing plant consists of 7 benches of 9 retorts each, which cost $22,108.73. The foundations upon which these benches were erected cost $1360.91; the freight elevator in the rettort house cost $889.45; the boilers, two in number, cost, including foundations and settings, $4631.89; the pumps which are used for pumping boiler feed water, water for the scrubbers, condensers and hydra-lic main, and for pumping tar and am-onia, and for operating the elevator and quenching coke, cost $1355.97; the ammonia concentrator which is located in the boiler room, cost $2165.98; the condensing and purifying apparatus, including the oxide elevator, cost $21,102.99; the foundations for the condensing and purifying apparatus, cost $1243.39; the steam piping in the purifying house, cost $1523.91; the station meter and governor cost $1749.40; the electric motor in the fitting shop and the electric wiring of the fitting shop and other buildings cost $824.71; the steel stack for the benches including the foundation on which it was erected, cost $1458.90; the boiler stack cost $685.19;

182 the fixing bench and vaporizer, located in boiler room, cost $2792.46; the water tank in the boiler room cost $169.90; the storage holder and foundation cost $30.839.48; the wagon scales cost $358.88 the minor scales cost $80; the railroad track scales cost $910.67; the brick tar tank cost $1614.39; the brick ammonia tank cost $1129.36; the steel oil tank in brick pit cost $865.33; the ammonia concentrate tank cost $346.25; the bar photometer cost $296.23; the laboratory cost $76.01; painting gas holder cost $198.78; the drainage sewer at works cost $774.78; the tool storage loft cost $140.78; the catch basins cost $81.92; the yard connections to the gas holder cost $406.66; the platform for coke storage cost $41.30; repairing plans and estimates of the work cost $174.06; leaving test holes under foundations cost $36.37 and erecting and operating a portable boiler during progress of construction cost $181.29. The above items represent a total of expenditures of

$105,615.70. The remainder of the charges to this account were for sundries, small expenses which were not charged to any one particular piece of apparatus.

Q. What was the actual cost of all the machinery and apparatus included in and about the plant for the manufacture and delivery of gas up to September 1, 1900, as shown by the books and vouchers of complainant company?

Mr. MANSFIELD: Is it a mere compilation of figures taken from the books of the company?

Ans. Yes sir;

Mr. MANSFIELD: Defendant objects to it as incompetent and not the best evidence under the stipulation, and moves the court to exclude it.

A. The total cost of the manufacturing plant of the Peoria Gas & Electric Company up to September 1, 1900, as shown by the books and vouchers of the company, was $107,480.15. I have testified in detail as to the cost of the various items going to make up
183 the sum of $105,615.70 of this amount. The remainder of the charges to this account, as shown by the books of the company, is made up of sundry small expenses which could not be charged to any one particular piece of apparatus.

Q. Can you give the size and length in feet of each gas main laid in and through the streets, alleys and highways of the city of Peoria, by the complainant company for the distribution of gas through the city of Peoria as of September 1, 1900?

Ans. Yes sir.

Q. Will you please give them in detail, giving each size with the length in feet, as shown by the books and vouchers of complainant company?

A. On September 1, 1900 there were:—1758 feet of 16 inch main 20,768 feet of 12 inch main; 3482 feet of 10 inch main; 20,229 feet of 8 inch main; 12,874 feet of 6 inch main; 80,852 feet of 4 inch main; 260 feet of 2 inch main; making a total of 140,223 feet of main pipe, amounting to 26 55/100 miles.

Q. Can you tell the total cost of the material, labor and other expenses entering into the purchase and laying of the gas main just mentioned, in and through the streets and highways of the city of Peoria, as shown by the books and vouchers of the company, as of September 1, 1900?

Ans. Yes, sir.

Q. Please state the total cost thereof?

A. The total cost of material and labor expended in the mains above referred to on September 1, 1900 was $120,081.15.

Q. Can you give the number and size of service pipes laid by the Peoria Gas & Electric Company from its mains into the premises of consumers in the city of Peoria up to September 1, 1900, as shown by the books and vouchers of the company?

Ans. Yes, sir.

Q. Please give them?

A. There were on September 1, 1900, three 3 inch service
184 pipes; two 2½ inch service pipes; 652—2 inch service pipes; 1503—1¼ inch service pipes, and 266—1 inch service pipes, making a total of 2426 service pipes on the date mentioned.

Q. Can you give the average length of each service pipe?

A. Yes sir;

Q. Please state it?

A. The 3 inch service pipes average 290 7/10 feet each; the 2½ inch service pipes average 187 feet each; the 2 inch service pipes average 57 1/10 feet each; the 1¼ inch service pipes average 74 feet each, and the 1 inch service pipes average 110 feet each.

Q. Can you give the total cost of all the service pipes laid by complainant company from its mains in the city of Peoria into the premises of consumers for the purpose of delivery of gas up to September 1, 1900, as shown by the books and vouchers of the company?

A. Yes sir;

Q. Please state the detailed cost thereof?

Ans. $38,575.94.

Q. Referring to the various amounts which you have testified were paid out by the complainant company and entered under the various accounts, will you please state whether each and all of the amounts, or totals named by you, are true totals, as shown by the books and vouchers of the company?

Ans. Yes sir; they are.

Q. Please state whether the amounts and totals testified to by you represent and show all the actual expenditures made by the Peoria Gas & Electric Company in and about the construction and operation of the gas plant of said company from the time of its organization up to September 1, 1901?

A. They represent all of the expenditures in and about the construction of the plant up to September 1, 1900, and the expenditures in the operation of the plant up to September 1, 1901.

Q. State whether or not the vouchers, duplicate vouchers and sub-vouchers showing all of said expenditures in detail, are
185 present in court subject to examination and inspection by the special commissioner and counsel for the parties?

Ans. They are.

Q. State whether or not all of the expenditures, concerning which you have testified, were made solely in and about the construction and operation of the gas plant of the complainant in the city of Peoria?

A. They were, except as to such vouchers and items which I have specifically stated in my examination were for electric accts.

Q. In your examination with reference to the vouchers offered and read in evidence you stated that several of the vouchers were for pay-rolls and the vouchers did not show for themselves to which particular accounts they were charged, will you please explain how

those pay rolls were charged, and if the proper portion thereof has been included in the totals to which you have testified as being proper charges against the gas plant of complainant?

A. The classification of the various charges for labor, as shown by the pay-rolls, is made upon the face and back of the pay-roll itself, and the number of the voucher is endorsed upon the pay-roll, for the purpose of identification and verification. The charge on the books of the company is made from the pay roll itself and each charge made was a proper charge. The proper proportion of each pay-roll has been included in the details to which I have testified.

Q. Were all of the expenditures and amounts, as testified to by you, necessary and proper expenditures in and about the construction, completion and operation of the gas plant of the complainant in the city of Peoria during the period named?

Ans. Yes, sir.

Q. Were all of such charges and expenditures reasonable and at the fair market price for the material and labor entering into the construction, completion and operation of the gas plant of the complainant at the respective times and periods the same were expended?

186 Objected to as immaterial, incompetent and calling for a conclusion.

A. Yes, sir.

Mr. IRWIN: Now, if the master please, we desire to reserve the right for Mr. Little to make any corrections of any errors which may appear in his testimony when the same is transcribed, or make any explanation which may be necessary when the evidence is written out and we may possibly want to ask him an additional question or two concerning the matter. With that reservation we turn the witness over for cross-examination.

Cross-interrogatories by Mr. MANSFIELD:

1. State, if you know, when the Peoples Gas & Electric Company was organized?

Ans. It was in March or April 1899.

2. The name of the company was afterwards changed, was it?

A. Yes sir; it was afterwards changed to the Peoria Gas & Electric Company.

3. Was the Peoples' Gas & Electric Company organized when they obtained their franchise and license from the city of Peoria?

A. Yes sir;

4. Were you the manager of that company at that time?

Ans. No.

5. How long after that date did you become the manager of the company?

A. My recollection is it was in the latter part of April 1899; the exact day I do not now recollect.

6. The Peoria Gas & Electric Company at the present time is operating, not only a gas plant, but an electric plant also, in the city of Peoria, is it not?

Ans. Yes sir;

7. And you are manager of both branches of the business of that company, are you not?

Ans. Yes sir;

8. Was any part of your salary up to May 1, 1900, charged
187 to the electric branch of the business of complainant company?

Ans. No.

9. Was any part of the salary of any of the officers and accountants of complainant company previous to May 1, 1900, charged to the electric accounts of that company?

A. No part of the salaries of the officers was charged to the electric branch of the business prior to May 1, 1900. The salary of the superintendent and bookkeeper of the electric department of the business and the wages of all operatives engaged in the electric part of the business, was charged to electric accounts.

10. When did complainant company buy the plant then known as the General Electric Company in the city of Peoria?

A. In June 1900.

11. Did you ever make an investigation of that plant previous to that time?

A. I do not quite understand what you mean. I was inside of the plant for the first time in June 1900. I saw the books of the company for the first time in June 1900.

12. Did you as manager of the Peoria Gas & Electric Company, carry on any negotiations for the purchase of that plant previous to May 1, 1900?

Objected to as immaterial, incompetent, not cross-examination.

A. No sir;

13. Did anybody in the employ of the Peoria Gas & Electric Company, or any of the officers of that company, investigate that plant previous to May 1, 1900?

Objected to same grounds as before.

The MASTER: I suppose you are calling for his personal knowledge of that, Mr. Mansfield?

Mr. MANSFIELD: Yes sir;

The MASTER: The witness may answer, subject to the objection, if he knows.

188 A. Not to my knowledge.

14. Who made, or entered into negotiations for the purchase of the real estate in the city of Peoria now owned by complainant company, which appears upon the books of complainant company and charged as "plant" on Exhibit "2"?

Objected to same grounds as before stated.

A. I did.

15. From whom was that property purchased?

Objected to same grounds as before.

A. The property which appears charged to that account was purchased as follows:—The fee title of the first piece was purchased of C. C. & C. D. Clarke, and the lease thereon, held by the Distilling & Cattle Feeding Company, was purchased from John McNulta, receiver. The second piece of property was purchased from Philip Zell, and the third piece from the Woodruff Ice Company.

16. Have you the deeds to this property in your possession or in the possession of complainant company?

Objected to same ground.

A. The deeds are in the hands of the treasurer of the company

17. Can you and will you produce those deeds?

Ans. Yes sir;

Defendant's counsel offers in evidence the three deeds referred to by the witness and reads the following portions thereof, viz:—

1. A deed dated June 10, 1899, from Charles C. Clarke *et al.*, to the Peoples' Gas & Electric Company conveying the following described property, to-wit:—part of lot 1, in the sub-division of school section 16, township 8, north of range 8, east of the 4th, principal meridian. A part of the southwest fractional quarter of section 9, township 8, north of range 8, east of the 4th, principal meridian, more particularly bounded and described as follows:—to-wit:—Commencing at a point on the southeasterly line of Grove street, 20 feet southwesterly from the most westerly corner of lot 6, block 70, in Bal-
189 lances' addition to the town, now city of Peoria, being the northwesterly corner of the Peoria Gas Light & Coke Company's land; thence, at right angles with Grove street along the said Peoria Gas Light & Coke Company's land to the Illinois river; thence southwesterly along the Illinois river to a stake, which is the termination of the line dividing lots 1 & 2 in said sub-division of school section 16; thence northwesterly along said dividing line to the southeasterly line of Grove street; thence northeasterly along said line of Grove street 215 feet to the place of beginning. Also lots 25, 26, 27, 28, 29, 30, 31, 32, 33, & 34, in Charles C. Clarke and Chauncey D. Clarke's resurvey of Little's sub-division of lot 2, in school section 16, aforesaid; except, however, the rights of way of the Peoria & Springfield Railroad Company and the Peoria Terminal Railway Co., over and across the same. Said premises situate, lying and being in the city of Peoria, county of Peoria and State of Illinois.

Signed by Chas. C. Clarke *et al.*, and recorded in the recorder's office of Peoria county, Ill., on June 28, 1899, Book "YH" of Deeds, p. 100.

2. A deed dated June 24, 1899, from John McNulta, receiver of the Distilling & Cattle Feeding Company, to Chas. C. Clarke *et al.*, for the leasehold interest etc., in the same property. Recorded in recorder's office of Peoria county, Illinois, in Book "ZH" p. 78.

3. A deed dated November 15, 1899, from Philip Zell to People's Gas & Electric Company conveying lot No. 6, in St. John's subdivision of lots No. 3 and No. 4, in school section 16, township 8, north of range 8, east of the 4th, principal meridian, except the right of way of the Peoria Terminal Railway Company across said lot; said lot situate, lying and being in the city of Peoria, county of Peoria and State of Illinois. Filed for record in recorder's office of Peoria county, Illinois, on November 28, 1899, and recorded in Book "YH" p. 350.

4. A deed dated November 15, 1899, from Woodruff Ice Company to the Peoples' Gas & Electric Company, conveying lots Nos. 1,
190 3, 4, & 5, in St. John's sub-division of lots Nos. 3 & 4, in school section 16, township 8, north range 8, east of the 4th, principal meridian, excepting, however, the right of way of the Peoria Terminal Railway Company across said lots; situate, lying and being in the city of Peoria, county of Peoria and State of Illinois. Recorded in Book "ZN" p. 213, in recorder's office, Peoria county, Illinois.

18. How much of this property is now occupied by buildings of the Peoria Gas & Electric Company*s?*

A. The main piece of property purchased from the Clarkes is enclosed by a fence and all of the principal buildings of the company are located on it. The property purchased from the Woodruff Ice Company and Philip Zell is used for storage purposes.

19. Do you know the area of ground covered by those buildings?

A. The plat Exhibit "1" introduced in evidence gives the size of the ground and the size of each building.

20. Look at plat marked Exhibit "1" and tell me what the area of that ground is as shown on said plat?

A. The piece purchased from Clarke Bros., is 315 9/10 feet on the river side; 335 9/10 on the Rye Street side; 339 9/10 feet on the Grove Street side, and 276 3/10 on the remaining side.

21. Where is the piece of property purchased from the Woodruff Ice Company located with reference to the property purchased from Clarke Bros.?

A. It is down the river from the Clarkes a distance of 85 feet.

22. What is the size of that property?

A. The Woodruff Ice Company's property and the Zell property together contain 4 lots each 27½ feet frontage and extend from St. Johns street down to the river bank less the right of way of the Peoria Terminal Railway Co.

23. Is the right of way of the Peoria Terminal Ry. Co., excluded or included in the deed from the Clarkes?

191 A. It is excluded, if I remember correctly; the deed shows.

24. How much did the complainant company pay for the property purchased from the Clarkes?

A. We paid to the Clarkes $33.000 and to the Distilling & Cattle Feeding Company $3.000.

25. How much did you pay to the Woodruff Ice Company for the four lots purchased from them?

A. We bought three lots from that company for $4500, and we bought one lot from Philip Zell for $1700 or $1750; I have forgotten which.

26. Look at voucher No. 614 and state the amounts of money that were paid under that voucher and to whom they were paid and for what purpose?

A. Under voucher No. 614 $3000 was paid to John McNulta, receiver of the Distilling & Cattle Feeding Company, for a release of the rights of that company; $33.500 was paid to C. C. & C. D. Clarke, and $4500 was paid to the Woodruff Ice Company.

27. Do those items represent the expenditures for all property owned by the Peoria Gas & Electric Company in the city of Peoria on the 1st, day of May 1900?

A. They do excepting revenue stamps, surveyor's charges for surveying the lots, the necessary abstracts of title and the expense of removing the buildings which were on the lots when we bought them and which were not necessary for our business, including also, the check of $1700 or $1750. given to Philip Zell for the purchase of one lot from him.

28. Then the deeds that have been offered in evidence are not all the deeds relating to property owned by the Peoria Gas & Electric Company in the city of Peoria on May 1, 1900?

A. Yes sir; they are. They represent the Clarke property,
192 the Zell property and the Woodruff Ice Company property, which was the only real estate, according to my recollection, which the company owned at that date. The voucher does not represent the total payments on the property; it covers the Clarke and Woodruff Ice Co., property but not the Zell property or the abstracts etc.

29. In what item of expenditure, as shown upon voucher No. 614, is the purchase price that complainant company paid for the Zell lot included?

A. The price paid for the Zell lot is not included in voucher No. 614; that is included in another voucher.

30. Is the description of the lot purchased from Philip Zell in any of the deeds that have been offered in evidence?

Ans. Yes sir.

31. What buildings were upon this property when it was purchased by the Peoria Gas & Electric Company?

A. The Clarke property contained the buildings known as the Clarke distillery; it included a complete set of distillery buildings.

32. Was there a warehouse upon that property?

A. Yes, a large warehouse.

33. To whom was that warehouse sold?

A. The warehouse was not sold.

34. What buildings were sold that were on that property?

A. The main manufacturing buildings, that is to say, the main distillery building was sold to Mr. Finkelstein.

35. Was not the warehouse sold to a man named Bushnell in the city of Peoria?

A. No, sir. Wait a moment. The small warehouse, according to my recollection now, was torn down by ourselves, but possibly it was torn down by Bushnell; I have forgotten who wrecked it; we at first contemplated using it as a retort house, but found on investigation it would not do for that purpose and we wrecked
193 it and put a new retort house in its place.

36. If Bushnell paid the Peoria Gas & Electric Company $400 for that building you know nothing about it?

Ans. No.

37. Would that item show upon the books of the company?

A. Yes.

38. Can you by an examination of the books of the company find out whether any item of that kind was received from Mr. Bushnell?

A. Yes sir.

39. Will you do so?

Ans. Yes sir.

40. What amount of money did the Peoria Gas & Electric Company receive from Mr. Finkelstein for the old distillery building?

A. My recollection is it was $500.

41. Is that item shown upon the books of your company?

A. Yes sir.

42. Will you examine the books and find out upon what page such item is entered and let us know?

Ans. Yes sir.

43. All of this property testified to by you as being owned by the Peoria Gas & Electric Company, is still owned by it, is it?

A. Yes sir.

(The MASTER:)

44. Has the electrical company you have testified *to* operated in the city of Peoria an independent plant, I mean independent of the premises you have testified concerning?

A. The electrical plant of the complainant company is situated on another block some distance away from the gas plant of the company.

(The SAME:)

45. Is it in any way connected physically with the gas plant of the complainant company?

Ans. No sir; It is run and operated as an entire different business from the gas business, merging only in the office of the company.

(Mr. MANSFIELD:)

46. Are you the same F. W. Little who scheduled the property of the Peoria Gas & Electric Company on the 26th day of April
194 1901, for the purpose of taxation?

Ans. Yes, sir.

47. Look at the paper now shown you and state whether or not that is a correct copy of the schedule filed by you as of date the day therein shown?

Objected to as incompetent, immaterial, not cross-examination.

A. I am unable to state from recollection that this is a correct copy, I think, however, it is substantially correct.

48. That paper is sworn to, is it not?

Ans. It appears to be.

49. It was sworn to by you at that time, was it not?

A. I don't remember about that—oh, I do now remember it was not sworn to; it was signed and mailed to the assessor.

50. In that statement you valued the steam engines, including the boilers of the gas plant of complainant company at $76,500, did you not?

Objected to as incompetent, immaterial, not cross-examination, and because there is nothing to show this paper is a true copy of the statement that was filed.

A. No, I did not.

51. Did you at that time in your written statement value the carriages and wagons of the Peoria Gas & Electric Co., at $450.00?

Objected to as incompetent, immaterial, not cross-examination.

A. I think they were valued at about that sum.

52. Did you in the schedule so filed by you value the manufacturing tools, implements and machinery, other than engines and boilers, of the Peoria Gas & Electric Co., at $120,000?

Objected to same grounds as before and also because the question assumes the statement was filed.

A. No, I did not.

53. Did you in the written schedule so filed by you value the household or office furniture of the Peoria Gas & Electric Co., at $1000?

195 Objected to as immaterial, incompetent, not cross-examination and assuming there was such a schedule filed.

A. I cannot now remember in the absence of a true and correct copy of the schedule filed as to the amounts which were inserted in that schedule.

54. Do you know whether the paper now shown you is or not a true and correct copy of the schedule filed by you?

Objected to as incompetent because the witness has already said he didn't know whether it was or not.

A. I do not know that this schedule shown me is a correct copy of the schedule filed by me, nor do I know it is not a correct copy.

55. Did you in that schedule place the total valuation of the plant, including an item of $45,000 for material and manufactured articles on hand, at $245,400.00?

Objected to as incompetent, immaterial, not cross-examination.

A. I was advised by our attorneys, that in valuing property for the purpose of taxation—Interrupted——

Mr. MANSFIELD: I object to the answer as not responsive.

The MASTER: I have no power to control the manner in which the answers of the witness shall be given, but I think the witness should answer the question yes or no and then make any explanation he desires.

A. In the absence of a true and correct copy of the schedule as filed I am unable to state.

56. Do you remember the day that schedule was filed?

A. No, I do not.

57. Was it signed by you or did you sign the name of the complainant company to that schedule?

Objected to as incompetent and immaterial and because no particular schedule has been shown the witness signed by anybody.

196 A. I signed a schedule as vice president of the Peoria Gas & Electric Co., but I don't know whether the paper you have presented to me is a true and correct copy of that schedule or not.

58. Look at the instrument I now show you and state on what day it purports to be signed and sworn to by you?

Objected to as incompetent, irrelevant, immaterial, not cross-examination and assuming it is a copy and asking about a paper nobody has seen or examined and not offered in evidence.

Mr. MANSFIELD: Before I get through I will show you what the paper is.

A. The paper appears to have been sworn to on April 26, 1901.

Defendant's counsel offers in evidence the instrument shown the witness for the purpose of connecting the evidence which will be hereafter offered with the instrument itself. Said instrument is marked by the master Exhibit "10" and is in the words and figures following, to-wit:

Objected to by complainant as irrelevant, immaterial and not the best evidence.

(Here follows schedule of personal property marked p. 196½.)

AUDITOR'S FORM NO. 1. Nixon Printing Co. Printers, Peoria

SEE ASSESSOR'S NOTICE ON BACK OF THIS SHEET.

Before commencing to fill out this Schedule, read carefully the INSTRUCTIONS TO PERSONS LISTING, and the EXTRACTS from the REVENUE LAW printed on the reverse side of this sheet.

A schedule of the numbers, amounts, quantity and quality of all personal property in the possession under the control of ..... *belonging to* Peoria Gas and Electric Company .....

on the first day of April, 1904, as listed by ..... *of the Town of* Peoria .....
in the County of Peoria, and State of Illinois.

Town ..... *School District* ..... *T* ..... *R* ..... *Village or City of* .....

To be Filled by Person or Persons Required to List Personal Property.			Schedule No.	4	5	6
1 No.	2 Full Fair Cash Value	3 Quality and Quantity, Description, Memoranda as to Quality, Face Value, etc.		ITEMS OF PROPERTY	Full Value (as determined by Assessor)	Assessed Value (Fixed by Assessor)
9	450		1	Horses of all ages	450	90
			2	Cattle of all ages		
			3	Mules and Asses of all ages		
			4	Sheep of all ages		
			5	Hogs of all ages		
	76500		6	Steam Engines, including Boilers	76500	15300
			7	Fire and Burglar-proof Safes		

			3	Mules and Asses of all ages		
			4	Sheep of all ages		
			5	Hogs of all ages		
	76500		6	Steam Engines, including Boilers	76500	15300
			7	Fire and Burglar-proof Safes		
			8	Billiard, Pigeon-hole, Bagatelle or other similar tables		
10	450		9	Carriages and Wagons of whatsoever kind	450	90

				Totals	$	$

I do solemnly swear that the foregoing is a full, complete and correct schedule of all the personal property subject to taxation in the county, town, city, village and school district above mentioned, owned by me, or controlled by me as agent for _____ on the first day of April, A. D. 1904 and which I am by law required to list; that the numbers, quantity, quality and amount of each item so listed are correctly stated; that the values of the several items of property, as by me stated in column No. 2, are the full fair cash values of the same, as I verily believe; that I have stated the full amount of my moneys and of my credits (less deductions authorized by law), and that I have correctly stated the full fair cash values and the face values of all bonds, stocks and shares of capital stock in companies or associations not incorporated by the laws of this State by me owned or controlled.

Peoria Gas and Electric Company
by F.W.Little, Vice-Prest

Remarks: _____

(See Sec. 20, Act Approved Feb. 25, 1898.)

Subscribed and sworn to before me this 26th day of April 1904

J. G. Janssen Assessor.

F. N. D.

19612

It is the duty of the Assessor, so far as possible, to question the person listing, and personally view the property.

SCHEDULE OF

Personal Property

OWNED OR CONTROLLED BY

FOR THE YEAR 190

Town.....

School District.....

Village or City.....

ASSESSOR'S NOTICE.

(See Sec. 17, Act Approved Feb. 25, 1898.)

To.....

.....

This Schedule must be filed out, sworn to and returned to me, in person or by mail, at.....

.....

on or before .....

You are to give a full fair cash value of the articles mentioned, as well as the amount of money required to be returned. Only one-fifth of the several amounts will be taken and assessed for the purpose of taxation.

.....

Assessor.

NOTE—This Schedule is to be filed with the Board of Assessors or Supervisor of Assessments, and shall be preserved for at least two years.

(See Sec. 28, Act approved Feb. 25, 1898.)

Part of Section 17 of "An Act for the Assessment of Property, and to Provide the Means Therefor, to Repeal a Certain Act Named Therein." Approved February 25th, 1898.

"And every person required to list personal property or money shall fill out, subscribe and swear to, and return to the Assessor, in person or by mail, at the time required, such schedule in accordance with law, giving the numbers, amount, quantity and quality of all the articles enumerated in said schedule by him possessed or under his control, required to be listed by him for taxation. The assessor shall determine and fix the fair cash value of all items of personal property, including all grain on hand, on the first day of April, and set down the same, as well as the amounts of notes, accounts, bonds and moneys, in column headed 'full value,' and ascertain and assess the same at one-fifth part thereof, and set down said one-fifth part thereof in a column headed 'assessed value,' which last amount shall be the assessed value thereof, for all purposes of taxation. The assessor or some person authorized by law to administer an oath, shall administer the oath required in this section."

Suggestions and Instructions to Persons Listing Personal Property.

If you own personal property liable to taxation in more than one town or school district (except property in hands of agents, and to be listed by them), make separate schedules of such property, according to location.

If you have property liable to tax within the limits of an incorporated village or city, state in schedule the name of such village or city; and if you have, also, personal property liable to tax lying outside such limits, make a separate schedule thereof, even if it be in the same school district.

Be especially careful to state correctly the school district in which you are liable to tax.

If you own live stock or other personal property connected with a farm not situated in the town or school district in which you reside, make separate schedule of said property as of the town and district in which said farm is situated. If, as administrator, guardian, trustee, agent, etc., you are required to list property in behalf of others, make a separate schedule of such property

Be careful to append, in the space for this purpose provided, such description of each item listed as will enable the assessor to fix its fair cash value.

Exhibit 10
I.C. Pinkney, Master

197 59. In Exhibit "3" offered in evidence by complainant you add to the figures therein shown an item for depreciation of the plant amounting to $9,178.44—upon what do you base that depreciation?

A. I assume that the average yearly depreciation on the plant would be at the rate of 6½ % per annum on its cost exclusive of the real estate.

(The MASTER:)

60. On what hypothesis or knowledge do you make that assumption?

A. From my experience in the business and general acquaintance with the depreciation of gas plants.

(Mr. MANSFIELD:)

61. Does that item represent 6½ % of the total cost of the plant?

A. Approximately; I think it is exactly 6½ % but it may vary, perhaps, one or two hundredths of one per cent.

62. That is exclusive of the cost of the real estate?

A. Yes sir. My recollections is that that statement referred to is for depreciation for the period of four months and in that event the depreciation is calculated on the basis of the depreciation for the entire year and these four months are charged with one third of the total yearly depreciation.

63. And that represents a depreciation of 6½ per cent. for four months on the total valuation of the plant $434,252.35 excluding the cost of the real estate?

A. From the cost of the plant, as shown, $434,252.35, was deducted the cost of the real estate and the depreciation is at the rate of 6½ % per annum for a period of four months.

(The MASTER:)

64. Is that depreciation figured on a cost of operating?

Ans. No sir.

(Mr. MANSFIELD:)

198 65. Is this item shown on Exhibit "2" as charged to the salary of officers included in the amount on which you calculate the 6½ per cent. depreciation?

A. The salary of the officers during the period of construction was included as a part of the cost of the plant and the depreciation was figured on that—the total cost.

66. Was the amount of money shown on Exhibit "2" and thereon charged to accounting department of $6549.46 included in that amount upon which you calculate the depreciation at 6½ %?

A. Yes sir, in the same manner as the salaries of officers.

(The MASTER:)

67. Did I understand you to say on direct examination that the

salaries of officers, after the plant was put in operation, was charged to operating expenses?

A. Yes sir, and prior to that date they were charged to the cost of the property.

(Mr. MANSFIELD:)

68. Were all the items of expenditures, as shown on Exhibit "2" down to and including account No. 26 taken to make the sum total upon which you calculate the depreciation of this plant at the rate of 6½ per cent.?

A. All of the expenditures represented by accounts Nos. 1 to 26 inclusive made prior to May 1st, 1900, were charged to the cost of the property and depreciation is figured on the entire cost less the real estate.

69. What rate of interest would you consider a fair remuneration to the stockholders of the Peoria Gas & Electric Co. on the amount of money you have testified to as being invested there and which goes to make up the cost of that plant?

A. 10 % would be a fair return to the stockholders if a sufficient allowance had been made to cover depreciation and maintenance of the plant.

70. What if any depreciation would occur on the amount
199 of money the Peoria Gas & Electric Co. had paid for officers' salaries previous to May 1st, 1900?

A. We built this plant ourselves and instead of pro rating these general expenses over various constructions we preferred to keep them separate; those expenditures are necessary and proper part of the cost of the plant and if they had been added in percentages to each individual piece of apparatus, would have made the legitimate cost of that apparatus; the apparatus with that additional amount, added to cover officers' salaries, accounting and administration, etc., would have then been stated at a greater sum than is stated in the accounts as the cost of the property and would then have been subject to depreciation on its legitimate cost just as it is now, therefore, it is proper management to add a depreciation to all officers' salaries, or other general expenses incident to the administration and proper accounting of the business up to the date when the plant went into operation.

Defendant's counsel objects to the foregoing answer as not responsive and moves the court to exclude it.

71. What depreciation, if any, would occur in the amount of money that was paid by the Peoria Gas & Electric Co. on account of the accounting department?

A. For the reasons given in my answer to the last preceding question, I think this is a proper expenditure against which to charge a depreciation.

72. What depreciation would there be, if any, in the amount that

was paid by the Peoria Gas & Electric Co. for interest previous to May 1st, 1900?

A. I consider interest during the progress of construction as a legitimate element of cost and subject to the same depreciation as any other portion of the company's property.

200 73. You have testified that the buildings were situated on the property that was obtained by the Peoria Gas & Electric Co., from the Clarke's, have you not?

A. Yes sir; the main buildings; there is a small building on the Woodruff Ice Co., property.

74. How many feet of ground have you in the property the complainant company obtained from the Woodruff Ice Co.,?

A. There are three lots, each 27½ feet front by 150 feet deep; the riparian rights added to that makes the total depth of the lot about 275 feet subject to the right of way of the Peoria Terminal Railway Co.,

75. Are any buildings of the complainant company upon the property purchased from Philip Zell?

Ans. No.

76. Where is that property located with reference to the property obtained by complainant company from the Woodruff Ice Co.,?

A. It is about 85 feet away from it.

77. Are they in one body or separate?

A. The Zell and Woodruff lots lie together in one body, and Rye street, which is a 30 foot street is between them and the property obtained from the Clarke's.

78. Is Rye street still open to public traffic?

A. The tressle of the Peoria Terminal Ry. practically blockades the street near the river; otherwise it is open so far as I know

79. Is the piece of property that complainant company obtained from the Woodruff Ice Company, and the Philip Zell piece of property, used by the company in the transaction or carrying on of their business of manufacturing gas in the city of Peoria?

A. It is used for storage purposes.

80. For what storage?

A. Principally of pipes and special pipe fittings.

81. Is all of the company's property, known as the Clarke

201 property, covered with buildings?

Ans. Not entirely.

82. Is there sufficient ground there unoccupied for the storage of pipes and other material you have referred to?

A. Not as a general proposition; at the present time we have a relatively small amount of pipe on hand and there is probably room enough for such an amount of pipe as we have now, but not for the usual stock we carry.

83. Look at Exhibit "2" and state what depreciation there is in all of the accounts from No. 1 to No. 25 inclusive, on account of the operation or construction of complainant's plant?

A. Accounts 1 to 25 inclusive, represent expenditures necessary

in the construction of the plant and putting it into operating condition; they increase the investment by the extent shown and therefore, in my judgment, are properly subject to depreciation, the same as any other element of cost.

84. Look at account No. 36, as shown on Exhibit "2," and state what is meant by "new services."

A. I mean the service pipes running from the street mains of the company into the buildings, houses, stores etc., of consumers. It is the pipe which conveys the gas from the main to the consumers' meter.

85. The plant of the Peoria Gas & Electric Co. is located at the foot of Persimmon St., is it not?

Ans. Yes, sir.

86. What is the size of the main running up Persimmon St.?

A. 16 inches.

87. What is the size of the main running down Washington St.?

A. I think we have no main on Washington St.; we have a 12 inch main in the alley between Adams and Washington streets.

88. Have you not a main running down Washington St. to Cass St.?

Ans. I think not; I have no recollection that our mains run on Washington St. On the contrary, I have quite a clear recol-
202 lection we have not. In fact, we have no main on Washington St., from Persimmon St. to Cass St.

89. Have you a main on S. Adams St., from Persimmon?

Ans. Yes.

90. How far does that main extend?

Ans. 3620 feet.

91. What is the size of that main?

Ans. 12 inch.

92. How many service pipes connect with that main on that street, if you know?

Ans. I don't know.

93. Have you any information in your possession from which you could state—I mean on May 1, 1900?

A. I have in my office in Peoria.

94. Will you get that information for me?

Ans. Yes, sir.

95. Have you a plat, or anything in your possession, which shows the service pipes running from your mains on all of the streets in the city of Peoria?

A. Yes, we have in the office at Peoria a plat book in which the mains are divided up into lengths of a thousand feet. That plat book shows the mains and the services running off of each main at the point where it leaves the main which is correct up to date; to ascertain just what services were put in prior to May 1, 1900, would require an examination of the original entries concerning those services to determine the date when they were put in; that record is kept up at all times.

96. Will you make an examination of that matter on your return to Peoria and compile a statement as to the services that were put in previous to May 1, 1900, and attach the same as a part of your answer to this question?

A. I can prepare such a statement but it will take time.

Mr. IRWIN: I object to the question as too indefinite and call upon counsel for defendant to state exactly what he wants furnished.

97. Are all of the service pipes that the Peoria Gas & Electric Co., put in previous to May 1, 1900, in use now for the purpose
203 *pose* of distributing gas to the people into whose premises the service pipe runs?

A. Not all of them are in use at the present time.

98. Have they been in use since you run them into the premises?

A. The great majority of them have.

99. Did the People's Gas & Electric Co., have an electric plant in the city of Peoria previous to November 15, 1899?

Objected to as incompetent, immaterial not cross-examination.

A. At the time mentioned the company was installing an electric plant in the power house of the P. & P. Terminal Ry., at Bartonville, and were putting in pole lines and wires for the distribution of electricity in the city of Peoria.

100. Did you have anything to do with the management of the electric branch of the business of the Peoria Gas & Electric Co.?

Objected to same grounds.

A. Very little; that was almost entirely in charge of P. A. Bertrand, superintendent.

101. Account No. 10 on Exhibit "2" represents the expenditures made by complainant company for stationary, printing and postage, does it not?

Ans. Yes sir.

102. Does the "printing" there have reference to notices printed in the daily papers in the city of Peoria?

Ans. No sir.

103. Under what account would such notices be charged?

A. Under account No. 4, canvassing.

104. Look at the answer filed in this case October 10, 1900, and state whether or not the notice, a copy of which is contained in the answer on page 8, was ever published in a newspaper in the city of Peoria, and if so, designate to what account it was charged?

Objected to as incompetent, immaterial, irrelevant, not cross-examination and assuming it is a copy set out in the answer; also because there are two notices appearing on that page of the answer
204 and the question does not designate which notice is referred to.

105. It is the notice purporting to be signed by the Peoria Gas & Electric Company?

Complainant objects to the question for the further reason that there is no proof that any such notice was signed by the Peoria Gas & Electric Company. And further, because the answer shows that the alleged notice, if published, was published long prior to the time of the examination of this witness.

A. A notice, similar in terms to the notice which appears in the answer signed by the Peoria Gas & Electric Co., was published in the newspapers of Peoria sometime in July or August 1900, and the bills for such publication were charged to account No. 4, "canvassing."

106. Was that notice, or one similar in terms, published in the Peoria newspapers under your directions?

Ans. Yes sir.

107. What was the price charged per thousand cubic feet of gas by the complainant company between May 1, 1900, and September 1, 1900?

Objected to as incompetent, immaterial, irrelevant and not cross-examination.

A. From about May 1, 1900, up to August 1, 1900, the price charged by the Peoria Gas & Electric Co., net, was about 30c. per thousand cubic feet; the 30c. rate was made somewhere along about the 1st, of May 1900, the exact date I don't remember.

108. What was the price charged per thousand cubic feet for gas sold by the complainant company from May 1, 1900 to Sept. 1, 1900?

Objected to same grounds as before.

A. The lowest general price was 30c. per thousand cubic feet; two consumers, viz:—the court house and the post office and custom house, received their gas for 25c. per thousand cubic feet.

109. What was the price charged for gas per thousand cubic feet by the complainant company during the period from May 1, 1900, to September 1, 1900, when the gas was used by the consumer
205 for fuel purposes?

Objected to same grounds as before.

A. Various prices were charged during the period from the commencement of operations by the plant up to August 1, 1900; during the greater portion of that period the price was 30c. per thousand cubic feet for gas for any and all purposes. On August 1st., the price was fixed at $1.15 net for light, and 75c. net for fuel purposes.

110. What price is now being charged by complainant company per thousand cubic feet for gas sold to consumers for fuel purposes?

Objected to as incompetent, irrelevant, immaterial, not cross-examination and not pertaining to the issue.

A. The present price charged is $1.00 per thousand cubic feet net

for gas used for any purpose in case the bill is paid on or before the 10th, day of the month in which it is due; if not paid within that period the price is $1.15 per thousand cubic feet.

111. When was the price changed?

Objected to as incompetent, immaterial, not cross-examination.

A. The price was last changed on November 1, 1901.

112. What had been the price from September 1, 1901, up to November 1, 1901, for fuel gas and illuminating gas?

Objected to same grounds as before.

A. $1.15 net for light and 75c. for fuel, provided the bills were paid on or before the 10th, day of the month in which they became due; if not so paid, the price was $1.25 for light and 85c. for fuel.

113. On your direct examination you testified, among other items contained in account No. 1, with reference to a bill paid the Central Electric Company for incandescent lights, electric shades, electric call bells and 65 feet of weather-proof wire. For what
206 purpose were those articles used?

A. I don't recollect that I testified that the items in question were charged to account No. 1; I think I testified that they were charged to account No. 3, general office sundries; the items in question were used in fitting up the office of the complainant company at No. 211 Main St., between Washington and Adams streets in Peoria.

114. Did you at any time while in that office use the electric light?

A. Yes sir; during nearly all the time we were in the office we used the electric light. In fact, during all the time. We did not open the office at No. 420 Main St., until we were ready to sell gas.

115. The gas plant of complainant company had not yet been completed at the time the articles named were purchased?

Ans. No.

116. You have testified that at the present time there is a process of manufacturing gas by which the cost of the manufacture of the gas is greatly reduced—was that process discovered at the time of the erection of the plant of complainant company in the city of Peoria, Illinois?

A. It was hardly in the nature of a discovery. An experimental plant was being erected in or near Boston, Mass., at that time and another experimental plant, using a slightly different type of apparatus, was being erected and put in operation at McKeesport, Pa., outside of those two places I don't know of any place in the United States where such a plant had then been operated.

117. It had been in pretty general use, however, in Germany and England, had it not?

Ans. Yes, quite generally used.

118. For how long had that process been generally used in Germany and England?

A. You could not say it had been generally used for any considerable period of time; I refer now to what is known as the
207 by-product oven process, and presume that is the process to which you refer. The principal point of that process is the character of the coke made and whether or not a metallurgical coke, that is to say, coke suitable for foundries and blast furnaces, could be made in such an oven with a saving, at the same time, of gas of sufficiently good quality to permit it to be sold for illuminating purposes. There are many opponents of the system to-day in both England and Germany, and it is hardly correct to say it is in general use as yet in either country.

119. Then you desire to modify the statement you made on direct examination, that it has come into general use in Germany?

A. I wish to explain the use of the word; it is coming into general use and its use if becoming more and more a matter of approval by gas engineers generally, both here and abroad.

120. What are the by-products obtained by complainant company from the manufacture of gas in the city of Peoria?

A. Coke, coal tar, ammonia and a very small amount of retort carbon.

121. What is the object of the use of oxide of iron in complainant's plant at Peoria?

A. To purify the gas from sulphuretted hydrogen.

122. What is the chemical change that occurs upon the introduction of the oxide of iron?

A. The oxide of iron has an affinity for the sulphuretted hydrogen in the gas and withdraws it from the gas.

123. What is the chemical compound produced when the sulphur in the gas combines with the oxide of iron?

A. If I went into that fully I would have to go into chemistry and go into it very deeply; there are several re-actions that will take place there.

124. Well, state one of the reactions?

208 A. The oxide of iron is a ferric oxide; the sulphur is decomposed and unites with the ferric oxide—the exact chemical symbal for which I have now forgotten.

125*a*. Is the product resulting from that chemical combination of any value in the market?

A. Not in ordinary gas works for the reason that the recovery of it is too expensive; in very large gas works some cyanogen could be recovered which would have a commercial value.

126. Has any natural gas been discovered in or around Peoria?

A. Yes, I have understood so.

127. Are you testifying to that from personal knowledge or from mere hearsay?

A. No, I have seen indications myself over in Tazewell county just across the Illinois river from Peoria.

128. What kind of gas is that?

Ans. I never analyzed it.

129. Do you know whether it is marsh gas or what kind of gas it is?

Ans. No sir; I do not.

130. How long have you lived in the city of Peoria?

A. I have lived there since about April 1899.

131. How long have you been acquainted with the city of Peoria?

A. I have been about Peoria more or less for a good many years; my first visit there was about 20 years ago; I was there again for sometime about 6 or 8 years ago and I have been about Peoria almost continuously since the early spring of 1899.

132. At the time you were there 20 years ago did you hear about the natural gas said to have been discovered across the river from Peoria?

Objected to as immaterial, incompetent, not cross-examination.

A. No.

133. If there was such an agitation at that time did you know anything about it?

Ans. No.

209 134. You stated on direct examination that a company had been formed for the purpose of developing the natural gas properties near Peoria, did you not?

A. I understand there has; I have seen such a statement in the newspapers.

135. Have you any stock in that company?

Ans. No sir;

136. All you know then about the company being formed to develope natural gas properties near Peoria is from what you have read in the newspapers?

A. No it is not; I have seen what might be considered indications of natural gas and have seen coming out of the ground a substance which I believe is natural gas.

137. You say you have seen it coming up out of the ground?

A. Yes sir; I have seen it bubbling up through the water at a marshy point and the appearance indicated natural gas.

138. How long has the electric street car system been established in the city of Peoria, if you know?

A. I don't know, but it has been there at least 7 years to my knowledge.

139. Have you noticed any disintegration resulting to your pipes in the city of Peoria from the action of electricity upon them?

A. I have found a few instances of it.

140. What was the condition of the pipes you saw?

A. We found two service pipes with holes eaten through them.

141. Do you know whether or not that was caused by the action of electricity?

A. I believe it was electrolytic action which did it.

142. Having knowledge of the great saving in the cost of manufacturing gas by the process known as the by-product oven process

when the complainant company built its plant in the city of Peoria, why did you not use that process?

210 A. Because to put in a plant of sufficient size to supply the city of Peoria with gas from the by-product oven process, would have required an investment of upwards of a million dollars for the plant alone; and further, because it had not yet been demonstrated that the coals which were available for gas making purposes in this country would produce a quality of coke for which we could find a market. In other words, it was too risky under American conditions, and particularly the conditions existing in Peoria.

143. Where does the complainant company buy its coal from which it manufactures gas?

A. It buys it as a rule in Chicago, but it is Youghiogheny coal from the Youghiogheny regions in Pennsylvania.

144. Through whom, in the city of Chicago, do you purchase that coal?

(Objected to as immaterial.)

A. The Daniels Coal & Coke Company.

145. Do you know of your own knowledge that the coal you purchase for manufacturing gas from comes from the district in Pennsylvania mentioned by you?

A. I have seen some of the coal unloaded from barges at Cincinnati and loaded into cars which I afterwards saw in our yards at Peoria; further than that I have no personal knowledge that it is Youghiogheny coal.

146. What is the peculiarity about that coal which makes it better for the manufacture of gas than any coal found around the city of Peoria?

A. It has a greater yield of gas and a better quality of coke, more tar and more ammonia.

147. What is the cost per ton of that coal at the present time laid down at Peoria?

(Objected to as immaterial.)

A. $2.80 per net ton for what is known as re-screened or barge coal, and $2.85 for what is known as 1¼ inch screened or all rail coal.

211 148. What is the cost per ton of coal of a similar description as to size found around the city of Peoria?

Objected to as incompetent and immaterial.

A. I don't know of any such coal around Peoria.

149. What is the price of coal, of like size as the coal designated by you, taken from the Illinois coalfields in Peoria at the present time?

(Objected to as incompetent and immaterial.)

A. It ranges in price from $1.55 to $2.20 per ton.

150. Is there any market for the coal tar manufactured by complainant company in the city of Peoria?

Objected to as immaterial and not cross-examination.

A. I know of but one person or firm in Peoria which ever buys coal tar; we have a contract with them for the sale of our tar to them and they are now behind nearly 60,000 gals. in the quantity which they agreed to take, but have not taken because they say they cannot use it.

151. What is this coal tar used for?

A. Roofing, felt, creosote oils and pitch; it is often further worked up into many different drugs and chemicals.

152. Is there any market for the sale of coke in Peoria?

A. Generally a very good market.

153. Is there any market in Peoria for the sale of the ammonia by-products?

Ans. None that I know of.

154. Where do you sell those?

A. We sell our ammonia to the Michigan ammonia works at Detroit.

155. Did you make out a statement for the Peoria Gas & Electric Co., as required by sec. 32, of an act of the legislature of the State of Illinois, entitled, "An act for the assessment of property and the levy and collection of taxes"?

A. I do not identify it by that description.

212 156. Made this year before the board of equalization of the State of Illinois?

Objected to as incompetent, irrelevant, not cross-examination.

A. There was such a statement made and signed by me, I think, but I have forgotten whether I actually made it out or not.

157. What was the valuation, if you remember, that you placed upon the real estate owned by complainant company at the time of filing said statement?

Objected to as incompetent, immaterial, not cross-examination, irrelevant to the issue, not the best evidence and because not confined to the property of the gas company.

A. The assessed valuation.

158. What was that assessed valuation?

Ans. I don't remember.

159. Do you know about what it was?

Ans. No, I could not say.

160. Did the complainant company own any other real property in the city of Peoria, other than the property deeded to it by the Clerke's, Philip Zell and the Woodruff Ice Company, at the time of making said statement?

(Objected to as immaterial)

A. Yes, sir;

161. What other real property did it own?

Objected to as immaterial, not cross-examination, not pertinent to the issue.

A. The land on which the electric light station is located at the foot of Liberty street in Peoria.

162. Do you know the number of square feet contained in that piece of property on which the electric light plant is located?

Objected to as incompetent, immaterial, not cross-examination.

A. No I do not.

163. That property at the foot of Liberty St., fronts on what is known as Water St., does it not?

Objected to as incompetent, immaterial, not cross-examina-
213 tion, not pertinent to the issue.

A. Yes, sir.

164. What is the frontage of that property on Water St., if you know?

(Objected to same grounds as before)

A. I don't remember.

165. What is the frontage on Liberty St., if you know?

Objected to same grounds.

A. I don't remember.

166. When did the complainant company buy that property at the foot of Liberty St., fronting on Water St.?

Objected to same grounds.

A. I don't remember the date but it was in the fall of 1900, or spring of 1901; my recollection now is it was about February 1901.

167. When was the Peoples' Gas & Electric Co., organized?

A. In March, 1899, I think.

168. What was the capital stock of that company at that time?

Objected to as immaterial.

A. The authorized capital stock was $500.000.00.

169. Was that stock on May 1, 1900, fully paid up?

Objected to as immaterial, irrelevant, not cross-examination.

A. No.

170. When was it fully paid up?

Objected to same grounds.

A. $100.000, or 20% of the capital stock, was paid in 1899; the

remainder of the capital stock was paid up in the summer of 1900—the exact date I don't remember.

171. Was that capital stock fully paid up before you commenced to operate the plant?

A. No sir; it was not paid up until after we got into operation. You asked me this morning, Mr. Mansfield, to obtain some informa-
214 tion for you with reference to the sale of the warehouse on *on* the gas company's property to Bushnell; I find on looking into it that $200 was received from Bushnell for that warehouse on June 29, 1899 and credited to plant account.

I also find that the distillery buildings which were on the property were sold to Finkelstein, and some material in the way of brick and iron beams etc., which went into the plant were taken from him in pay, and in addition he paid us $122.10, which was credited to plant account.

172. Look at Exhibit "7" and state, if you know, by what process the gas was manufactured in New York city designated on the exhibit as No. 1?

A. That is principally water gas; a relatively small proportion of the gas made by that company is coal gas.

173. Is that the process used by all of the gas companies designated in Exhibit "7" as doing business in New York city?

A. I think the 1st, and 5th, companies are the only ones there which make any coal gas.

174. You don't know what proportion of coal gas——Interrupted—

A. No it varies.

175. Is this a mixed gas?

A. It is either a water gas or a mixed gas.

176. Look at the same exhibit and state what process is used in the manufacture of gas in Chicago, Ills., designated on the exhibit as No. 1?

Ans. Water gas.

177. Look at the same exhibit and state what kind of gas is manufactured in Chicago, Ill., designated as No. 2?

Ans. Water gas.

178. What kind of gas is manufactured in Buffalo, N. Y., under No. 1?

A. Mixed gas.

179. What kind of gas is manufactured in San Francisco, Cal., under No. 1, No. 2 and No. 3?

A. No. 1 makes a mixture of coal and water gas; No. 2
215 and No. 3, I think, make only water gas.

180. Look at the same exhibit and state whether or not coal gas is manufactured in any of the cities shown on that exhibit? If so, what ones?

A. Yes sir; in Cincinnati, O. at Cleveland, O. they make almost wholly coal gas; both have water gas machinery, but I have never known them to run them; New Orleans makes almost entirely—is entirely coal gas; Milwaukee makes a considerable quantity of

coal gas; Louisville makes almost wholly coal gas, that is, company No. 1; Minneapolis makes a large proportion of coal gas; Providence makes nearly all coal gas; so also does Indianapolis; Kansas City makes a proportion of coal gas; Toledo, O. makes a large proportion of coal gas. Nearly every gas company has as an auxiliary a water gas machine and at some portion of the year during a time of wide flux-ation of the output of gas they are apt to take care of the fluctuations by water gas; while they may make nearly all coal gas during the greater portion of the year, in the dark days of November, December and January, it is frequently necessary for them to start up their water gas machine to make gas quick enough to supply the demand.

181. Has the complainant company a water gas machine?

A. No sir;

(Mr. RITSHER:)

182. Have you named all the cities now?

A. I do not see any other cities in the exhibit—well, Erie, Pa., I think, makes their entire output of coal gas—makes no water gas whatever.

(Mr. MANSFIELD:)

183. You testified on direct examination that it was not practicable to deliver gas to consumers of a quality of the uniform 18 candle power at the place of consumption—why is that so?

A. Because the candle power will vary according to the pressure on the gas and the temperature through which it passes after leaving the works; and also, according to the sufficiency or insuf-
216 ficiency of the piping within the premises of the consumer; and further, because of the variety of burners which are used by consumers.

184. Louisville is a city much larger than Peoria, is it not?

A. Yes sir.

185. I believe you state they manufacture coal gas there?

A. Yes, almost exclusively in the principal works.

186. What is the candle power of the gas manufactured at Louisville?

Ans. About 18 candle.

187. What is the candle power at that city as shown upon Exhibit "7"?

A. The candle power of the 1st, company is not stated; of the 2nd., company it is stated as 18.

188. Why would it not be practicable to manufacture a coal gas of 21 candle power at the plant of the complainant company at Peoria?

A. Such a gas would be very smoky and would be too expensive as the cost of enriching from 17 or 18 candles up to 20 or 21 candles would be excessive, and would not give satisfaction to the consumers.

189. Does the increase in the candle power of necessity make a smoky gas?

A. If made of coal gas, or if the candle power is brought up by rich hydro-carbons of any sort.

190. Then it is the enriching of the gas which causes the gas to smoke?

A. Yes sir; but water gas of that candle power, or a mixed coal and water gas of 21 or 22 candle power would not smoke.

191. When you enrich coal gas what is used for the purpose of enriching it?

A. We use cannel coal as a general rule; sometimes we enrich with the fixing bench using naphtha; our general practice, however, is to use cannel coal for enriching.

217 192. Would it be practicable to make a 21 candle power gas from coal enriched with naphtha, or cannel coal?

A. Such a gas could be made but it would not be satisfactory to the consumer.

193. You have testified that the making of coal gas is a continuous process—do you manufacture gas at complainant's plant at Peoria at all times?

A. Yes sir; we never expect that plant to shut down from this time on.

194. Is there any difference in the quality of the gas furnished by your company between the gas used for fuel and illuminating purposes?

(Objected to as immaterial.)

A. No.

Adjourned by agreement until Friday, November 15, 1901, at 9:30 a. m.

Directors' room, National Bank building.

CHICAGO, ILL., *November* 15, 1901—9:30 a. m.

Parties met pursuant to adjournment.

Present: Judge I. C. Pinkney, special commissioner. Mr. W. T Irwin and Mr. E. C. Ritsher appearing for complainant. Mr. Henry Mansfield appearing for defendant.

Cross-examination of FRANCIS W. LITTLE resumed by Mr. MANSFIELD:

195. Are all the gas mains laid by the Peoria Gas & Electric Company located within the city of Peoria?

A. They are now.

196. Complainant company has no gas mains then in the village of Averyville?

Ans. No, it has not.

197. Has complainant any mains in Richwoods township beyond the intersection of Wilcox avenue and Knoxville avenue?

218 A. No, I think not.

198. If there are any pipes located outside the city of Peoria belonging to the complainant company are they included in the summary you have testified to in this case?

A. Yes sir; I have given the total main milage and included it all in the cost of the property.

199. Do any of the mains of your company connect with the mains of the Peoria Gas Light & Coke Co., in the city of Peoria?

Objected to as incompetent, immaterial, irrelevant and not cross-examination.

A. No, sir.

200. Do you furnish gas to any consumer in the city of Peoria through mains sold to your company by the Peoria Gas Light & Coke Co., or rented by your company from said company?

Mr. IRWIN: Complainant objects to the question on the same grounds as before and I want to give you notice Mr. Mansfield if you are going to try and pry into the property affairs of this company that I will instruct the witness not to answer. We have no objection to your asking anything about the cost of gas, or the cost of the plant or anything that tends to prove the issues in this case.

Mr. MANSFIELD: I am trying to find out whether there is any combination with reference to the price of gas or cost of that plant. If there is anything that would limit the cost there I have a right to find it out; it is not my purpose to go into the private affairs of the company.

Mr. IRWIN: You have no right to go back of the time of the commencement of this suit at any rate, and no time is fixed in your question.

A. I have no knowledge or recollection of any such case and do not think we furnish gas to any consumer through mains purchased or leased from the Peoria Gas Light & Coke Company.

219 201. Does the Peoria Gas Light & Coke Co., furnish gas to any consumer in the city of Peoria through mains owned by the Peoria Gas & Electric Company?

Mr. IRWIN: Complainant objects to the question as incompetent, immaterial, irrelevant and not cross-examination and I instruct the witness not to answer unless the question is limited to September 1, 1901, the date at which any proof has been offered as to the cost of the manufacture and sale of gas.

Mr. MANSFIELD: Confine your answer, Mr. Little, to that limitation.

The WITNESS: Not to my knowledge.

202. What is the character of the plant of the Peoria Gas & Elec-

tric Company as to being a modern plant and well-equipped for the purpose of making gas in and about the city of Peoria?

A. It is thoroughly modern and well-adapted to the purpose.

203. Were the different parts of the plant so installed by the Peoria Gas & Electric Company, the best known by gas experts at the time said gas plant was installed, taking into consideration the location of the plant?

Ans. I think so.

204. At the time of the installation of this plant did you make estimates for the construction of its various parts?

Ans. Yes.

205. Do you remember what estimate you placed upon the making and installing of the purifying and condensing apparatus attached to that plant?

Ans. I could not remember now.

206. Would the books of your company show what that estimate was?

Ans. No, I think not.

207. In your working orders reported to the general officers of the company at Chicago, didn't you put an estimate of the work that was to be done under that order?

A. Yes, sir; there was an estimate made on the working order.

208. Are those working orders here?

Ans. I think so.

220 209. Have you the working order showing the estimate you made for the construction and installing of the purifying and condensing apparatus?

A. My recollection now is that there were two or three working orders gotten out in connection with the installation of the purifying and condensing plant; it was divided up into 2 or 3 working orders.

210. Can you obtain that information from the working orders?

A. Yes sir.

211. Will you do so?

Ans. Yes sir.

212. Have you an estimate of the cost made by you of the installing of the 7 benches and one storage holder of the plant of complainant company?

A. I have not got it with me but it is over at the other office and I will produce it for you.

213. You testified on direct examination that the Peoria Gas & Electric Company had expended the sum of $1903.33 for general office sundries. Was any part of that sum charged to the electric branch of the Peoria Gas & Electric Company?

A. The expenditure of $1903.33 as shown on Exhibit "2" and testified to by me, was for general office sundries of the gas department only; the items belonging under that classification to the electric department were charged in the electric accounts.

214. Was there, up to Sept. 1, 1900, any items charged to the

electric branch of complainants company's business, for general office sundries?

A. Yes sir; but such items do not appear on Exhibit "2."

215. You testified on direct examination, as shown on Exhibit "2" that the amount expended by the Peoria Gas & Electric Company for the salaries of officers amounted to $7740.90. Was there any money expended by the complainant company for sal-
221 aries of officers up to September 1, 1900, and charged to the electric branch of complainant company's business?

(Objected to as immaterial).

A. Yes sir.

216. When did the complainant company commence to charge such expenses to the electric branch of the company?

Objected to as immaterial.

A. When the officers and employés began to devote any attention to the electric branch of the business the time given to the electric branch was charged to that branch.

217. About what time was that?

A. In the summer of 1900; we commenced first on the gas plant and later on the electric plant.

218. When did the Peoria Gas & Electric Company purchase the electric plant now owned by it?

(Objected to as immaterial).

A. The plant of the Peoria General Electric Company was bought by the Peoria Gas & Electric Company either in the late fall or winter of 1900, or the spring of 1901; my recollection is that the purchase was made about the month of February 1901.

219. Then the officers and employés of the Peoria Gas & Electric Company were not paid any money that was charged to the electric branch of the company until the time of the purchase, or immediately before the purchase, of this electric plant?

A. No sir, that is not the case. I testified yesterday that the Peoria Gas & Electric Company commenced the construction of distributing lines in the summer of 1900, operating them from the plant located in the power house of the Peoria & Pekin Terminal Ry., at Bartonville.

220. You testified on direct examination that the amount of money expended by the Peoria Gas & Electric Co., for stable expenses was $2200.52, as shown on Exhibit "2." Were any items charged by complainant company to the electric branch of that company
222 for a similar expense prior to September 1, 1900?

Objected to as immaterial, irrelevant, not cross-examination.

A. The stable expenses for the electric department were charged in the same manner as to the gas department.

221. How much gas was manufactured by the Peoria Gas & Electric Company from May 1, 1900 to August 31, 1900?

A. From the date when the plant started to August 31, 1900, the plant made 18,942,213 cubic feet of gas.

222. You have testified that the gas sold consumers during the same period was 15,475,200 cubic feet—what became of the balance of that gas so manufactured?

A. It was used at the office and works and donated and lost by leakage.

223. How much gas was in the holder of the Peoria Gas & Electric Company on the morning of Sept mber 1, 1900?

A. I could not tell you that now without reference to the books and records of the company at Peoria.

224. Will you produce that record showing the amount of gas on hand at that time?

Ans. I wil- have to get it at Peoria.

225. The amount of residuals as testified to by you and shown on Exhibit "3," as the product from 18,942,213 cubic feet of gas, is not the by-product from the manufacture of the 15,475,200 cubic feet is it?

Ans. Yes sir.

226. How much gas was manufactured by the Peoria Gas & Electric Company during the year ending August 31, 1901?

Ans. 55,215,078 feet.

227. The residuals as testified to by you and shown on Exhibit "6" are the by-product result from the manufacture of 55,215,078 cubic feet then instead of 51,475,200 cubic feet?

Ans. Yes sir.

228. What became of the balance of the gas manufactured by complainant company during that period and which is not accountd for in your statement Exhibit "6"?

223 A. It was used at the office and works of the company, donated and lost by leakage from the street mains and services.

229. How many feet of gas was manufactured by the Peoria Gas & Electric Company in the month of April 1900?

A. I don't now recollect.

230. Can you find out the amount of gas that was manufactured by the Peoria Gas & Electric Company in monthly periods from the time the company commenced operations down to September 1, 1901?

A. Yes, I can get that information from the records of the company in Peoria; I have not got it here.

231. Will you do so and make such statement a part of your answer to this interrogatory?

A. Yes sir;

Said statement was subsequently produced by the witness in the words and figures following, to-wit:—

224 232. Can you ascertain the amount and value of the residuals obtained from the manufacture of gas for the same time and furnish it in monthly statements?

A. Yes sir.

233. Will you do so and make that statement a part of your answer to this interrogatory?

A. Yes sir;

Said statement was subsequently furnished by the witness and is in the words and figures following, to-wit:—

225 234. Can you determine the cost of coal used by the complainant company for the same period in the manufacture of coal gas and furnish the same in monthly periods?

Ans. Yes sir;

235. Will you do so and make such statement a part of your answer to this interrogatory?

A. Yes sir.

Said statement was subsequently furnished by the witness and is in the words and figures following, to-wit:—

226 236. Do you know the monthly cost of the bench fuel used by complainant company, the cost of the boiler fuel, the cost of manufacturing supplies, the cost of purification supplies, the cost of enrichers, the cost of repairing apparatus, for the same period?

A. No I do not.

237. Can you obtain that information from the books of your company?

Ans. Yes sir;

238. Will you do so and make such statement a part of your answer to this interrogatory?

A. I will do so.

The witness subsequently furnished said statement which said statement is in the words and figures following to-wit:—

227 240. Can you now give the total monthly cost of all material used by the complainant company during the period from May 1, 1900 to September 1, 1901; also the total monthly cost of manufacturing labor for same period; the monthly cost of purification labor for same period; the monthly cost of the labor for repair of the apparatus for same period; the monthly labor cost same period; the monthly value of the coke as manufactured in your storeroom same period; the monthly value of the tar manufactured in your storeroom same period; a monthly statement as to what price was received for the coal tar manufactured by complainant company during same period; the total monthly value of the ammonia obtained from the manufacture of gas during same period; the monthly value of the by-products obtained by complainant company from the manufacture of gas during same period; the monthly gross cost of gas during same period; the monthly net cost of gas

during same period and the monthly labor cost of gas per thousand cubic feet during the same period?

A. I cannot.

241. Can you obtain that information from the books of the Peoria Gas & Electric Company?

Ans. Yes sir;

242. Will you do so and make such statement a part of your answer to this interrogatory?

Ans. Yes sir;

The witness subsequently furnished the statement called for which said statement is in the words and figures following, to-wit:—

228 243. How many retorts were in use by the Peoria Gas & Electric Company during that same period of time per month?

A. I cannot tell now.

244. Can you obtain that information by an inspection of the books of your company?

Ans. Yes sir;

245. Will you make such an inspection of your books and make such information a part of your answer to this interrogatory?

A. Yes sir;

The witness subsequently furnished the information called for with reference to retorts in the words and figures following, to-wit:

246. Can you give the amount of gas made per month per retort during the same period of time?

Ans. No I cannot.

247. Can you obtain that information by an inspection of your books?

Ans. Yes sir;

248. Will you do so and make such information a part of your answer to this question?

Ans. Yes sir;

The witness subsequently furnished the information asked for in the words and figures following, to-wit:—

229 249. Can you give the amount of gas made per pound of coal used per month during the period from May 1, 1900 to Sept. 1, 1901?

A. No I cannot.

250. Can you obtain that information from an inspection of the books of complainant company?

Ans. Yes sir;

251. Will you do so and make such information a part of your answer to this interrogatory?

Ans. Yes sir;

The witness subsequently furnished such information in the words and figures following, to-wit:—

230 252. What fuel does the Peoria Gas & Electric Company use for the purpose of heating its benches?

Ans. Coke.

253. Where does the company get that coke?

A. Make it ourselves.

254. What per cent. of the coke that is manufactured per month by complainant's plant is used for fuel under the benches?

A. The amount used from September 1, 1900 to September 1, 1901, was $23\frac{3}{10}$ per cent.

255. What per cent. per month was so used during the same period?

A. I cannot tell you; it varies slightly from month to month.

256. Can you obtain such information from an inspection of the books of complainant company?

Ans. Yes sir.

257. Will you do so and make such information a part of your answer to this interrogatory?

Ans. Yes sir.

258. Can you give the amount of tar made per month measured in gallons during the same period?

Ans. No I cannot.

259. Can you obtain that information from an inspection of the books of complainant company?

Ans. Yes sir.

260. Will you do so and make such information a part of your answer to this interrogatory?

A. I will. I can give you all of that information for the first four months, period ending August 31, 1900, and for the next year now, but if you want it in monthly statements I will have to examine the records of the company at Peoria to obtain it.

261. I prefer it in monthly statements?

Ans. Very well.

231 262. Can you state the technical name of the gas coal used by the Peoria Gas & Electric Company in its furnaces?

A. We do not use gas coal in our furnaces.

263. Can you state the technical name of the gas coal used by complainant company for making gas?

A. We use 2nd, pool, Youghiogheny coal. We tried some Illinois coal and found we could not use it, abandoned its use and are using only Youghiogheny coal.

264. When did you abandon the use of Illinois coal?

A. In the summer of 1900.

265. Have you used any other gas coal?

A. Yes, we used a small amount of West Virginia coal and a little Kentucky coal.

266. What coal do you use for the purpose of enrichers?

A. Cannel coal.

267. What was the cost of the boiler fuel used by the Peoria Gas & Electric Company during the period from May 1, 1900, to August 31, 1901?

Ans. $1284.30.

268. Is there any connection between the holder of the Peoria Gas & Electric Co., and the works of the Peoria Gas Light & Coke Co. in the city of Peoria?

Mr. IRWIN: I object to the question as incompetent, immaterial, irrelevant and not cross-examination, and instruct the witness to refuse to answer.

A. Under the advice of counsel I refuse to answer.

269. Did the Peoria Gas & Electric Company expend any money between the 20th, day of October and the 1st, day of November 1901, in the laying of a gas main between the holder of the Peoria Gas & Electric Company and the works of the Peoria Gas Light & Coke Co.?

Mr. IRWIN: Complainant objects to the question for the same reasons heretofore given; also because it has nothing to do
232 with the cost of the plant during the period concerning which proof has been offered, and I instruct the witness to refuse to answer.

Mr. MANSFIELD: I do not see any use of my going on and asking questions if I am not to receive answers to the questions.

Mr. IRWIN: You have your remedy. If you think you have any legal right to compel him to answer we will go before the court with you at any time.

A. Under the advise of counsel I refuse to answer.

(The MASTER:)

270. Have you personal knowledge of the matters inquired of in the last two interrogatories, Mr. Little?

Mr. IRWIN: I object to that as immaterial. The witness may have personal knowledge of a good many things that are not proper in this inquiry; it is not a question whether he knows it or not but whether he ought to answer the question—whether it is competent or not, and I instruct the witness to refuse to answer.

(Mr. MANSFIELD:)

271. What was the daily average manufacture of gas previous to October 20, 1901, by the complainant company?

Objected to as incompetent, immaterial, irrelevant, not cross-examination, and because it has nothing to do with the cost of gas during the period for which proof has been offered.

The MASTER: I think the inquiry ought to be limited to Sept. 1, 1901, the time fixed in the examination-in-chief.

272. How much gas was manufactured by the Peoria Gas & Electric Co., up to November 1, 1901?

Objected to same grounds as before.

The MASTER: Do you think it material, Mr. Mansfield, on cross-examination to go into these matters subsequent to Sept. 1, 1901?

Mr. MANSFIELD: Yes sir; I think so.

Mr. IRWIN: I dislike very much to instruct the witness not to answer questions, but I do not propose to permit a lot of matter to go into the record that is incompetent, not cross-examination
233 and concerning which the witness was not inquired about on direct examination; and, if the counsel for defendant wants to go into any matters of that character he should do so on his defense and make this witness, or any other witness, his own witness for that purpose so that he will be bound by the answers of the witness. If the master will not rule on this question we will be compelled to instruct the witness not to answer.

The MASTER: The master is with counsel for complainant in reference to the competency of this evidence, but counsel is aware of the fact that the master has no power to rule on the competency of evidence. I can only suggest to counsel for defendant that this is a matter of defence, unless he limits his inquiry within the time covered by the direct examination of the witness.

(Mr. MANSFIELD:)

273. Has the Peoria Gas & Electric Co., laid a main on South Adams St., in the city of Peoria?

The MASTER: You went over that yesterday and the witness said it had and gave the number of feet as 3620 feet.

274. Is that main laid on S. Adams St., between Cedar and South streets in the city of Peoria?

A. My recollection is that the pipe runs from the intersection of Adams and Persimmon streets in a southwesterly direction 3620 feet down Adams street.

275. Was there any arrangement by and between complainant company and the Peoria Gas Light & Coke Co., for the furnishing of gas to consumers from Cedar street to South St., on Adams St., in the city of Peoria, at any time previous to September 1, 1901?

A. I have no recollection of any such an arrangement.

276. Would you know if such an arrangement had been made?

A. Probably.

277. Can you ascertain if such an arrangement has been made from an inspection of the books of the Peoria Gas & Electric Co.?

234 A. I presume I could; I would like to have you, however, state exactly what you mean by "an arrangement"; that is rather an indefinite word and I would like to have you definite about it.

278. Will you examine the books of your company and see whether or not any arrangement or agreement has been made by your company with the Peoria Gas Light & Coke Co., for the furnishing of gas to consumers on S. Adams St., in the city of Peoria, between Cedar St., and South St., previous to September 1, 1901?

Objected to as incompetent and immaterial because it certainly don't tend to show the cost of the manufacture of gas, nor tend to show the cost of the plant, and those are the only questions at issue in this case.

A. I will do so.

279. If, upon an examination of your books, you find that an arrangement or agreement has been made by and between the complainant company and the Peoria Gas Light & Coke Co., for the furnishing of gas to consumers on S. Adams St., between Cedar and South streets prior to September 1, 1901, will you prepare a statement of said arrangement or agreement so you can be further interrogated with respect thereto?

Objected to as incompetent, immaterial, irrelevant, not cross-examination, and calling for evidence which would be incompetent immaterial and irrelevant in this case.

The MASTER: The witness may answer subject to the objection and subject to the further objection of counsel to the statement asked for when produced.

A. I will examine the books of the company and ascertain and state what they show, if anything, concerning the matter asked for.

280. Has the quantity of gas manufactured anything to do with the cost of the production of the gas?

(Objected to as immaterial.)

A. Yes sir; it has a good many things to do with it.

235 (The MASTER:)

281. What is the possible daily output of complainant's plant in Peoria?

A. 500.000 to 650.000 cubic feet.

(The SAME:)

282. Of 18 candle power gas?

Ans. Yes sir;

(Mr. MANSFIELD:)

283. What was the average candle power of the gas manufactured by complainant company from April 1, 1900, to Sept. 1, 1901?

Ans. Slightly over 18 candle power.

284. What was the average candle power per month of the gas manufactured by the Peoria Gas & Electric Co., from April 1, 1900, to September 1, 1901?

Ans. I don't know.

285. Can you obtain that information from an inspection of the books of complainant company?

A. I think the records are sufficiently complete to enable me to give you the average candle power per month for the period mentioned.

286. Will you do so and make that statement a part of your answer to this interrogatory?

Ans. Yes sir;

236 287. Does the complainant company force any air into its mains at the works of the company before the gas enters the purifyers of the company?

A. None that I am aware of except the air that is used to vivify the oxide in the boxes.

288. What per cent. of air do you force into those?

A. I could not tell you.

289. Can you obtain that information from an inspection of the books of complainant company?

Ans. No, sir;

290. I will ask you as a gas expert if, under the modern process of purifying gas by means of the oxide of iron, it is not an aid, in carrying on the purification process, to use air?

A. Some people use air and some do not.

291. Is any air used by the Peoria Gas & Electric Co., in its process of purification?

A. You will have to ask the superintendent about that; it is his business, not mine.

292. Who is the superintendent of the Peoria Gas & Electric Co., at the present time?

Ans. E. W. Eustis.

293. As a gas expert would you consider it proper, under the modern process for the purification of gas by means of the oxide of iron, to use air in the purifying process?

A. Yes, sir; if the superintendent wanted to and found it satisfactory.

294. Well, what per cent. of air in your opinion would you use in that purification process, if any?

A. I have not said I would use any.

(The MASTER:)

295. I understood you to say you don't know whether it is used or not at complainant's plant?

A. Yes, I don't know whether it is used or not.

(Mr. MANSFIELD:)

237 296. What is your opinion as a gas expert, irrespective of anything that is done at the Peoria Gas & Electric Company's plant, as to the per cent. of air used in the modern process of purification of gas by means of the use of the oxide of iron?

A. I never have known anybody to use more than 2 %.

297. Would you, as a gas expert, recommend the use of 2 % of air in the purification of gas by means of the process known as the oxide of iron process?

A. I would recommend the superintendent to experiment with it and find what was the best per cent. for him to use, if he wanted to use it at all.

298. What do you base that percentage upon when you say 2 %— 2 % of what do you mean?

A. 2 % of air as compared with the total volume of gas purified.

299. Do you have reference to the volume of gas as made per day

A. It don't make any difference when it is made; if it is a per cent., it is a per centage no matter whether it is an hour, a day or a year.

300. Don't you know as a gas expert that through the United States, where the oxide of iron is used for the purification of gas, from 1 % to 2 % of air is used?

Ans. No, I do not.

301. What is your knowledge in that regard?

A. I stated before that some people use air and some do not.

302. What is the capacity of the ammonia plant connected with the Peoria Gas & Electric Co.'s, works at Peoria?

A. What do you mean by capacity?

303. How many cubic feet of gas would that plant be able to take care of in the course of 24 hours?

A. It could take care of the ammonia from about 400,000 or 500,000 feet of gas.

304. Is not every ammonia plant constructed to take care
238 of just a certain amount of gas?

A. I don't know about that; a good many ammonia plants are constructed that I don't know about.

305. What is the name of the company that manufactured the ammonia plant for complainant company?

A. The Michigan ammonia works.

Mr. IRWIN: I desire to call the attention of the master to an article appearing on page 10 of the Chicago American of date November 10, 1901, wherein it quotes what purports to be a portion of the examination of Mr. Little, as follows: "What do you mean by an effort to secure favorable legislation?" asked Attorney Mansfield "I do not mean bribery money" replied Mr. Little with a smile "the gas companies must spend money to secure legislation they are entitled to in all justice; even though they are entitled to it, there is no certainty of their receiving it, and in the event of failure there is a dead loss." Now, if the master please, there has nothing occurred in this examination to justify such a statement; the alleged representatives of this newspaper have been present at times during the examination of Mr. Little and either counsel for defendant is responsible for that statement directly or indirectly and I move that

the reporters of the Chicago American, and anyone connected with it, be excluded from this hearing; such articles as this are unfair to the witness and unfair to everybody. I insist that counsel for defendant either fothers this article or joins in my request.

Mr. MANSFIELD: Where did the reporter get that evidence?

Mr. IRWIN: I don't know; he didn't get it from our side of the case and there is nothing in the record showing that the witness made any statement of that kind and if the reporters for that paper are coming around here simply to publish falsehoods they
239 have no business here; I don't care how much they publish if they publish the *the* facts; we are willing to stand by the facts.

The MASTER: I think the better way, so far as representatives of the press are concerned, would be to send them to the stenographer when they desire information and let him give them such information as should be published.

Mr. IRWIN: I am perfectly willing that that method should be adopted, but such articles as this are published simply to prejudice the case and I don't propose to put up with it; I think counsel for defendant ought to join with me, in justice to himself, in asking that the reporters of this newspaper be excluded from this hearing.

Mr. MANSFIELD: I am sure I have had nothing to do with the publication of this article and I don't think any attorney of standing would countenance such a thing. I was surprised when I saw the article, and don't know who it came from or anything about it.

The MASTER: I think the master has power to make the order asked for and now directs that any newspaper reporter, or the reporter of any publication, who is present at these hearings and publishes matter as the testimony of any witness that has not been testified to by the witness, will thereafter be excluded from these hearings until such time as this order may be modified by the court. The master deems this course necessary and proper and just to all parties concerned.

Mr. MANSFIELD: The defendant now closes the cross-examination of Mr. Little reserving the right to further examine him with reference to any of the statements he has been asked to furnish when they are produced.

Re-direct interrogatories by Mr. IRWIN:

1. You were asked on cross-examination with reference to a schedule purporting to have been made by you of the property of the complainant company for the year 1900. Will you now state
240 upon what basis you made whatever statement may have been made by you for the purpose of taxation regarding the property of complainant company?

A. The property of the Peoria Gas & Electric Company, as scheduled by me for the purpose of taxation was valued at what I considered to be the fair cash value of such property disassociated from

the franchise of the company, simply as property in the place in which it was located at that time.

Q. Will you explain how the difference in value, if any, as fixed by you in any schedule made for taxation differs from the cost price of such property to the complainant company in the construction of its plant?

A. Separating the property from the franchise of the company reduces it merely to the value of the physical property for any use for which it might be desired. As an illustration of what I mean by this: The buildings upon the property purchased from the Clarke Bros., constituted a complete set of distillery buildings when we bought the property and had cost many thousands of dollars and they were probably worth all they cost for dis-illing purposes, but when the property was wanted for gas works it was necessary to wreck those buildings and the salvage, or amount received by the complainant company, after paying the expenses of wrecking, was less than $1000. The gas mains of the company, as laid in the public streets, without the authority of the franchise to use them, would be worth merely their scrap value as cast iron less the necessary expense of taking them out of the public streets. The franchise of the company give- them the only value they have beyond the salvage.

(The MASTER:)

3. Do you mean the franchise or license from the city?

A. Franchise or license. I refer to the franchise as the right acquired by the company by virtue of the city ordinance of
241 the city of Peoria to conduct and operate a gas plant and main system and do not refer to the franchise of the company to be a corporation.

(Mr. IRWIN:)

4. In the statement made by you for taxation did you give what you considered the fair, cash or market value of the property so scheduled as belonging to the complainant company based upon the valuation in the manner stated by you?

Ans. Yes sir; I did excepting only, that in the case of any item about which I was in doubt, I valued the property at the fullest possible amount which I believed it could be sold for.

5. You were asked on cross-examination with reference to item No. 7 and set forth on Exhibit "2." I will ask you up to what date that interest account was charged to the cost of the gas plant?

A. Up to May 1, 1900.

6. Was there anything charged on interest account No. 7 as against the cost of the gas plant of complainant company after May 1, 1900, about the time the plant was completed for the manufacture and delivery of gas to consumers?

Ans. No, there was not.

7. Was there any interest charged after May 1, 1900, as against the operating expenses of the company up to September 1, 1901?

A. No, there was not.

8. Was there any interest charged against the cost of operating the plant from May 1, 1900, to September 1, 1901 under account No. 7, for interest, or under any other account offered in evidence in this case against the operating expenses of complainant company?

A. No, there was not. The operating expenses as testified to by me do not include any interest whatever during the period mentioned.

9. About how many service pipes has the complainant in the city of Peoria extending from the mains into and through the property of consumers?

A. There were 2426 service pipes owned by the company
242 on September 1, 1901.

10. About what portion of such services, is or has been in use, up to September 1, 1901?

A. I cannot give you the exact figures, but taking it in percentages, I think fully 80% and probably 90% have been in use at one time or another since they were installed up to September 1st, 1901.

(The MASTER:)

11. Have you put in any service pipes on streets which were improved since your mains were laid?

A. Yes, when the mains are laid in unpaved streets, we only put in a service to applicants who expect to use gas, but if thereafter the street is about to be improved, we put in services so as not to disturb the paving in event people should want gas after the date of the paving of the street.

(The SAME:)

12. Is there any rule, ordinance or requirement of the city of Peoria that has anything to do with that?

A. Our ordinance requires us to at least put in the service up to and beyond the curb line prior to the paving of the street.

(Mr. IRWIN:)

13. Did you receive any orders from the city with reference to putting in such services prior to the making of any permanent pavement where there was no such demand for such service pipes from the respective property owners along the street?

A. In all cases where the street is about to be improved, the commissioner of public works, or superintendent of streets, is directed by our ordinance to notify us 60 days prior to the beginning of such improvement and instruct us to put in such service pipe. In some instances, these orders have not been in the form of a formal order but have been a telephone call from the commissioner of public works, or from the street superintendent,—a question or instruction

has been given by one or the other officer of the city to our superintendent or foreman. I think in every instance, however,
243 some form of order has been given to us to lay these services prior to improving the street.

14. Do such services as you have last referred to as having been laid by instructions from the city prior to the making of permanent pavements, include a large portion of the services not in use, or that were not used by the company, in delivering gas to consumers prior to September 1, 1901?

A. I could not state what proportion but a considerable proportion will come under that head.

15. What was the general average percentage of all your services in use during the period your plant operated in the city of Peoria prior to September 1, 1901?

A. I think 80% is the lowest number at any one time and I think, without referring to the complete record on the subject, that at times fully 90% of the services have been in use.

16. You testified on cross examination that complainant company had made up to September 1, 1900, a total of 18,942,213 feet of gas; that it sold during that period to consumers a total of 15,475,200 cubic feet, making a difference as I compute it of 3,467,013 feet. What became of that difference between the amount manufactured and the amount sold during that period?

A. 10,800 feet was used at the office of the company; 182,500 feet was used at the works of the company; 142,000 feet was given to the directors of the company in lieu of other compensation, and the remainder was lost through leakage in the street mains and services of the company.

17. About what percentage of the total amount of gas manufactured by the company during that period was leakage?

A. 16½%.

18. Was that an unusual leakage for a new plant during that length of time?

244 A. No, it was not; a greater portion of that was lost in the first few weeks of the operation of the plant, but the leak was soon discovered and the amount of gas lost was materially reduced.

19. You also stated on cross examination during the period from September 1, 1900, to September 1, 1901, the complainant company manufactured 55,215,078 cubic feet of gas and sold to consumers through meters during the same period 51,178,300 cubic feet of gas. Can you tell me what became of the difference between the amount manufactured during that period and the amount sold to consumers?

A. 366,700 cubic feet was used at the office of the company; 683,700 cubic feet was used in the works of the company; 867,00- cubic feet was donated to the directors of the company in lieu of other compensation and the remainder was lost through leakage in the street mains and services of the company.

13. When you laid your mains on South Adams street, did you not lay service pipe to the curb line along said street?

A. Yes, to the curb line and into the houses of people who applied for services.

14. Were any service pipes laid in the city of Peoria by your company where the property holders or consumers were required to pay for the service pipe?

Objected to unless the question is confined to the time prior to September 1, 1900?

A. I have no recollection of any such cases.

248 15. You testified on re-direct examination that the total amount of gas manufactured by complainant was 18,942,213 cubic feet and that the amount of gas sold to consumers was 15,475,200 cubic feet. How much of that difference did you say was given to the directors of the complainant company?

A. 142,000 feet.

16. Was any account kept, or any credit given upon the books of the company for the amount of gas so furnished to the directors?

A. A record was kept of the amount of gas so furnished, but it was not charged to any of our expense accounts, except to the general expenses of the manufacture of the entire amount of gas made.

17. If the price charged for that gas so given to the directors of that company had been charged to them, would it have reduced the cost of manufacturing the gas in the city of Peoria?

A. No, it would not; it would have to appear on one side charged against the expense account and on the other side credited to the earning account, and it would be as broad as it was long.

18. What was this gas donated to the directors of the company for?

A. In lieu of other compensation.

19. How much was due and owing to the directors of complainant company at that time?

A. Nothing that I know of; we simply compensated them for their services as directors by giving them free gas.

20. Would there have been any difference in the cost of manufacturing the gas if the directors had paid cash for the gas so donated to them?

—. That would depend on whether or not the directors were compensated in some other way for their services; if you figured that out at the selling price of gas during that time it would only

249 make a difference of a fraction of one per cent. of the cost of manufacture.

21. You have also stated on re-direct examination that 867,000 cubic feet of gas was furnished to the directors of the company from September 1, 1900, to September 1, 1901. Did the fact of the donation of that amount of gas to the directors make any difference in the cost of the manufacture of gas as shown by Exhibit "6"?

A. If we had not donated that gas to the directors, we would

otherwise have compensated them for their services and probably would have paid out more money in that way than by donating the gas to them.

22. Would the donation of that gas make any difference in the cost of the total amount of gas manufactured by your company during that period, irrespective of whether you paid your directors or did not pay them?

A. The proper compensation of the directors, officers and other employés of the company is part of the cost of the manufacture of the gas and if they were properly compensated for their services with money such payment would undoubtedly have increased the cost of gas beyond the point shown in the statement I have presented.

23. Did you take into consideration, when making up Exhibit "6," the fact that 867,000 cubic feet of gas was donated to the directors of your company?

A. Exhibit "6" represents the cost of all gas manufactured during the period shown by the statement and includes the cost of the gas that was donated to the directors of the company.

24. Was any corresponding credit made on the books of the company for the gas so furnished those directors?

250 Objected to as immaterial.

A. Neither debit or credit entries were made on the books of the company covering that transaction.

25. If the total cost of the manufacture of gas shown by your statement was $60,257.25 from September 1, 1900, to August 31, 1901, what would be the cost per thousand cubic feet for the manufacture of 52,045,300 cubic feet?

Objected as that is a matter of computation and the witness has not qualified himself as a mathematical expert.

A. It would not make a bit of difference in the cost of manufacture; it would simply increase our earnings in that respect if the directors had paid for the gas. If they had paid for the gas, it would have increased our earnings but not the cost of manufacture.

26. The question is whether or not you did not give that gas to the directors for nothing?

A. If they had paid for it our earnings would have been so much greater; if we had not given it to them they would have bought it.

27. Can you answer my former question?

A. No, that is a mathematical question and I am not qualified to answer; of course, I could if given a reasonable time make a computation of that kind and verify it and, if the master will give me time, I will do it.

The MASTER: I don't think we will wait.

28. When do you measure gas for the purpose of testing its candle power?

A. Usually every day; sometimes twice a day.

29. At what period in the manufacture of the gas, before it has gone through the purification process or afterwards?

A. After it is purified.

251 30. Would that be after the air has been forced in as you have testified?

A. I have not testified that any air has been forced in.

31. You testified on re-direct examination that by the mixture of 2% of air with gas the candle power of that gas would be decreased by about one candle?

A. Yes, if it were 18 candle gas.

32. How do you determine that?

A. It has been determined frequently by experiment.

33. What is the nature of the experiment used in determining it?

A. You take the candle power by a photometer before and after the introduction of the air.

34. When do you introduce the air, before the gas is purified or subsequently?

A. I have not testified we introduced any air at the Peoria plant.

35. As an expert for the purpose of determining how much air there is in gas, do you make a chemical analysis of the gas?

A. I never made one for that purpose.

36. Do they make chemical analyses for that purpose?

A. Some people do and some do not; it depends whether they have the facilities for it or not and want to arrive at such a determination.

37. Have they facilities for such chemical analysis at the gas plant of complainant company?

A. I never knew of any occasion when we cared to determine the percentage of air in manufacturing gas and whether we have facilities for it or not, I don't know.

38. As a gas expert, state if it is possible to determine the effect on a candle power of gas by forcing 2% of air into the

252 mains and mixing it with the gas before it reaches the purifying box, by making a test of the gas before and after the air is forced in?

Objected to as immaterial and not proper re-cross examination.

A. The air, if introduced, would not be introduced into the mains at all; I have spoken of mains here as representing the street mains of the company and the effect of the introduction of air would not be made in such a manner as indicated by your question.

39. How do you conduct your gas from one part of your plant to the other?

A. Through the ordinary house or yard piping.

40. Can you determine the effect on the candle power of gas by forcing or mixing with that gas 2 % of air and testing the candle power of the gas before and after the air is mixed with it?

A. I think personally I could not.

41. Can you distinguish a difference or effect upon the candle power of gas by the introduction of one per cent of air by testing the gas before and after the mixing of the one per cent. of air with the gas?

Objected to as not proper re-cross examination.

A. I have never made such an experiment.

Mr. MANSFIELD: I would like to reserve the right of asking Mr. Little some questions in reference to some service pipe as soon as I can get the information I have asked for from the books of the company in Peoria; with that exception I am through with Mr. Little.

Mr. IRWIN: If it is prior to September 1, 1901, we have no objection.

And further the witness saith not.

Adjourned until Saturday, November 16th, 1901, at 9:30 a m.

253 Directors' room, National Bank building.

CHICAGO, ILL., SATURDAY, *November* 16, 1901—9:30 a. —.

Parties met pursuant to adjournment.

Present: Judge I. C. Pinkney, special commissioner. Mr. W. T. Irwin and Mr. E. C. Ritsher appearing for complainant. Mr. Henry Mansfield appearing for defendant.

EDWARD G. COWDERY, called on behalf of the complainant, being first duly sworn, deposes and saith.

Direct interrogatories by Mr. IRWIN:

1. State your name, age and residence?

A. Edward G. Cowdery; 45; Milwaukee, Wis.,

2. What business are you engaged in?

Ans. Manufacturing gas.

3. What position do you now hold in Milwaukee?

A. General manager of the Milwaukee Gas Light Company.

4. How long have you held such position, or other similar positions connected with the manufacture and sale of gas?

A. 25 years.

5. Are you familiar with the business of the manufacture and sale of gas?

Ans. Yes sir;

6. Are you familiar with the different processes entering into the manufacture of gas?

Ans. Yes sir;

7. Have you made the business of the manufacture and sale of gas a specialty for any period of time, if so, about how long?

A. Yes sir; about 25 years.

8. What investigations have you made, if any, of the different

processes of the manufacture of illuminating, or fuel gas for genera purposes?

A. I have investigated the various new processes as they have come out.

9. Please give a brief history of the art of manufacturing gas?

254 A. Coal gas was manufactured and distributed as illuminating gas first, I think, about 1830, in London; I think it was first introduced into this country in New York about 1838, or thereabouts. There was no other process for manufacturing gas, other than what is known as coal gas, that was introduced in a practical way, until about 1870, when water gas was perfected and came into use as an artificial gas for general distribution. What are known as coal gas and water gas are the two principal gasses made for general distribution. There have been various other kinds of gas, such as a mixture of what is known as fuel gases, made up in various ways—all oil gases, either pure or diluted with air etc.

10. What are the general processes now in use for the manufacture and sale of illuminating and fuel gas for general purposes in cities?

A. What is known as coal gas and carburretted water gas?

11. Will you describe the modern process of the manufacture of coal gas and the changes in apparatus and machinery and mode of that manufacture within the past 25 years?

A. Coal gas in manufactured by the distilling of coal in heated ovens or retorts manufactured for the purpose; the gas being driven off by means of heat solely and the resulting product treated by washing, condensation, purification etc., until it is ready for distribution. The improvements in manufacture have been in the methods of treating, or purifying the gas, and in the application of the various details of manufacture, in order to cheapen the cost of production. We still distill coal to make gas the same as was done in the beginning.

12. Why do you call them improvements?

A. They are only improvements as they improve or cheapen the cost of production.

13. What has been your opportunities for experiment in the
255 manufacture of gas with different plants you have had charge of or visited during the period of time you have been in the business you have named?

A. My opportunities for experiment have been only such as one obtains by conducting the business and making such experiments as they choose to make in that way; my opportunities of learning of the improvements, or the methods of reducing the cost, have been by observation, going about from place to place where gas is manufactured and observing the different methods under which it is produced.

14. What have been the different types of furnaces invented, or used, or the improvements thereto, in the last 25 years?

A. Retort furnaces, do you mean?

15. Yes sir, any furnace used in the manufacture of coal gas?

A. They formerly used what is called the open firing, or brick firing furnaces, which heated the retorts; in later years, within the last 20 years, or thereabouts, there has been adopted very generally, what are known as re generative furnaces, furnaces that generate a pure gas from the fuel used in the furnaces; that gas being burned in and about the retorts in the ovens to heat the ovens; there has been two styles of those generative furnaces in use, one called the full depth furnace and one a half depth furnace.

16. What different types of benches have been in general use in that business, and what changes have been made therein, in the last 25 years?

A. We formerly used furnaces in ovens that had but three retorts in each oven, and those have been increased to 3, 4, 5, 6, 8 and 9 and upwards.

17. Why?

Ans. Economy of fuel.

18. What is the number of retorts now per bench in general use, and what changes have been made in that regard in years past?

256 A. The number of retorts in general use to-day throughout the country is either 6 or 9—I might also add 8, probably.

19. Has there been any change in the past 25 years with reference to the number of retorts per bench?

A. The tendency has been to increase the number of retorts during that time.

(The MASTER:)

20. Is that regarded as economy in the cost of production?

Ans. Yes sir, economy of fuel in heating the retorts.

(Mr. IRWIN:)

21. What changes or improvements have been made in the purification process of gas in the last 25 years?

A. Formerly lime was used almost entirely for purifying gas, but within the last 25 years they have very generally adopted the use of oxide of iron, and lime for purifying has almost gone out of use.

22. Has the change in the mode of purifying gas required a change in the apparatus or machinery use- for that purpose?

A. Not necessarily. To commence with we used the same class of purifiers with the oxide of iron purification as we did with the lime, but latterly they have been adopting a change in the purifiers, one in which lime would not be best adapted for, that is a deeper box, passing the gas to a deeper bed of material.

23. What different processes, or kinds of gas, are now considered by expert gas manufacturers as the best and most economical for general use?

A. There are only two standard processes, the coal gas and carbonated water gas.

24. In your experience as a gas manufacturer, what different plants, if any, have you examined throughout the country within the past few years?

A. I have been in Toronto, Canada, Buffalo, Syracuse, Albany, Providence, New York city, Brooklyn, Philadelphia, Baltimore, Washington, D. C., Pittsburgh, Cincinnati, Columbus, Dayton, Toledo, Cleveland, Ohio; Detroit, Grand Rapids, Michigan; Chicago, Ill., Louisville, Ky., New Orleans, St. Louis, Kansas City, Denver, Omaha, Minneapolis, St. Paul and Milwaukee. In a general way that covers the ground of the larger works as I recollect.

257

25. Have you had charge of any other plants as manager, or otherwise, except the plant at Milwaukee?

A. Yes sir, I have been the president of the Racine Gas Light Company the last 2½ years and during that time have constructed an entirely new plant at that point. I have been the president of the Kenosha Gas Company, which is now the Commercial Gas & Electric Company, for the last 4 years; during that time the plant has been added to and largely re-renovated, but not entirely reconstructed. Those are the companies I have been directly interested in and in an advisary way more or less perhaps with several other undertakings.

26. How long did you say you had been connected with the Milwaukee gas plant?

—. I said 25 years, but I really went with the Milwaukee Company in the spring of 1877; I might state that for two years, from 1880 to 1882, I was with the Peoploes' Company in Chicago, Ill.

27. Have you examined the plant of the Peoria Gas & Electric Company in the city of Peoria?

Ans. Yes sir.

28. Please refer to Exhibit "1" and state whether the same substantially represents the general plan of the plant of the Peoria Gas & Electric Company in the city of Peoria?

A. Yes sir, Exhibit "1" represents the plant as I saw it.

29. Please describe the plant of the Peoria Gas & Electric Company with reference to its general equipment and capacity?

A. It consists of a retort house with six benches of 9 retorts each, full depth regenerative furnaces; a condensing plant, consisting of the primary air condenser, tar extractor, secondary air condenser, multifarious water condensers, washer, two tower scrubbers; two purifying boxes; station meter; gas holder; boiler house; fixing bench; ammonia concentrating apparatus; tar and ammonia warehouse; naphtha storehouse; coal storage house; coke storage house; office and meter and fitting shop buildings; all necessary pipe connections of all kinds, gas, water, steam and sewer.

258

30. Are you acquainted with the general location, size, improvements and topography of the city of Peoria?

A. Fairly well, as I was in the city and drove over the city quite thoroughly.

31. Assuming that the population of the city of Peoria, and territory tributory to the plant of the complainant company, is about 65,000 inhabitants, what in your opinion should be the size, nature and character of a gas plant constructed to manufacture and sell coal gas in the said city of Peoria?

A. To answer that question strictly I will say that I would have built works double the size of this one, but under the conditions that existed in Peoria, they having a gas company already established there, I should have followed the same rules that were followed in this case in building works in that city, viz:—one hundred and twenty-five million cubic feet per year output.

32. What is your opinion of the plant of the Peoria Gas & Electric Company in the city of Peoria with respect to its fitness in size, character and equipment for the manufacture and sale of gas in said city, taking into consideration the element of future growth etc.?

A. I think I have already answered the question so far as size is concerned, and the plant is built with the idea of the greatest economy in the manufacture and furnishing of gas for a plant of its size. Of course a plant in a large city like Chicago would
259 probably be built along somewhat different lines.

33. How is the plant of the Peoria Gas & Electric Company with reference to size and capacity in your judgment, suitable to a city of the size, character and topography of the city of Peoria, where the same is located, taking into consideration the conditions there existing?

A. I think the plant is well suited to the city under the conditions existing as to size and as to general character, and I do not see how it could be better located than it is.

34. What in your judgment is the character, size and capacity of the plant of the Peoria Gas & Electric Company in the city of Peoria with reference to judicious investment and outlay, taking into consideration the conditions in 1900 and 1901,—up to say September 1, 1901, as appears from the size, character and location of the city?

A. I considered in looking it over that they had wasted no money whatever in its construction, and I was not able to see how they could have designed works, or other system, so as to have saved materially over the expenditures made, that is, over the amount of work done.

35. What in your judgment would be the proper and judicious character of a gas plant to be constructed in a city of the size, character and location of the city of Peoria—referring now to a coal or water gas plant?

A. I have not undertaken to go into the subject with all the figures necessary in order to determine absolutely whether a coal or

water gas is preferable in the city of Peoria, but under the conditions that have existed during the last 2 or 3 years in relation to the price of oil, and the fact that we could hardly buy oil except from the Standard Oil Co., it has been generally considered by all the gas companies in this part of the country, that it was
260 more economical to operate coal gas works than it was water gas works.

36. Are you familiar with the cost during the years 1899 and 1900, of the various items of labor, machinery and material entering into the construction of a gas plant of the capacity and character of the plant of the Peoria Gas & Electric Company?

Ans. Yes, sir.

37. From your examination of the plant of the Peoria Gas & Electric Company and from your knowledge of the cost of the construction of similar plants, are you able to state what would be a reasonable cost price of the plant and mains of the Peoria Gas & Electric Company, if constructed during the years 1899 and 1900?

Objected to because no proper foundation has been laid.

A. Yes, sir;

(The MASTER:)

38. Have you any knowledge of the amount of mains and their size of the Peoria Gas & Electric Company in the city of Peoria?

Ans. Yes, sir;

(Mr. IRWIN:)

39. From your examination of the plant of the Peoria Gas & Electric Company, and from your knowledge of the cost and price of labor, machinery and materials, please state what, in your opinion, would be the reasonable cost of the construction of said plant, fully equipped, tested and ready for the delivery of gas to consumers, assuming said plant was contracted for and erected during the year preceding September 1, 1900, and excluding from your estimate the cost of the real estate, and also excluding the cost of mains, services and other expenses outside of the construction and equipment of the manufacturing property and in your estimate please give items in detail so far as you can?

Objected to because no proper foundation has been laid; the witness not having testified that he knows anything about the soil in the city of Peoria, or that he knows what the price of labor was that entered into the construction of the plant during the period of construction.

261 A. I have made an estimate of the cost of construction of the works and my estimate in detail is as follows, viz:—Retort house building $12,000; purifying and boiler room building $18,000; office and meter shop building $4000; meter house $2000; oil house $500; coal and coke sheds $12,000; stack benches in the re-

tort house $23,000; two purifyers, their supports and pipe connections $7000; condensing house apparatus $12,000; two boilers set ready for use $3000; ammonia concentrating apparatus $2500; holder and foundation $28,000; station meter and connections $3000; fixing bench $2500; pumps, water tanks, elevator and conveying machinery $3500; tar and ammonia wells $3000; photometric and chemical apparatus $1000; Connelly governor and connections $1500; gas mains and valve connections about the works $4500; gas, steam, water pipes, sewers and tools, used in the operation of the works, $5000. To the sum total of these items I have added 10% for the superintendency of erecting plant, plans and general small items amounting to $14,700, making the total $161,700.00.

(The MASTER:)

40. Did you find those several items, of which you have testified, all existing in complainants company'- plant in the city of Peoria, at the time you made your examination?

A. I did not examine every pipe in the works, or examine those underground, but know that the works were in operation and that they must be there; the figures were made upon the general average cost of those items in the construction of the works. This estimate was made while I was on the ground.

(Mr. IRWIN:)

41. Did you examine the city of Peoria with reference to the cost of laying gas mains in and through the several streets alleys and highways of the city?

A. Yes sir; I drove over the city, looked over the streets and alleys wherein mains had been laid and distinguished the difference between those that were under paving and those that
262 were not and, of course, the length of mains laid of the various sizes, I got from the records of the company and from the maps exhibited to me as to where the mains were.

42. Did you make an estimate of the cost of the pipes and the laying of the same in and through the several streets and highways of the city of Peoria, assuming that certain number of feet of pipe of different sizes were laid in and through such streets?

A. Yes sir.

43. Will you give in detail so far as you can, your estimate of the cost of the laying of pipes in and through the several streets and highways of the city of Peoria, based upon the assumed length and size of each kind of pipe estimated, and the character of the street or alley in which they were laid?

A. 1759 feet of 16 inch main at a cost of $2.25 per foot laid, amounting to $4358.75. 21,229 feet of 12 inch pipe laid at $1.50 per foot amounting to $31,843.50. 3483 feet of 10 inch main at $1.00 per foot laid amounting to $3483.00. 19,465 feet of 8 in. main at 90c. per foot amounting to $17,518 50. 12,807 feet of 6 in. main at 70c. per foot amounting to $8964.90. 79,486 feet of 4 in. main at 40c. per

foot amounting to $31,794.40. There were laid in streets previously paved 37,864 feet of main of all sizes, the cost of replacing the paving at $1.00 per foot of main laid amounting to $37,864.00, making a total of $135,827.05.

44. Did you make an estimate of the cost of laying any number of service pipes from the street mains of complainant company in and through the property of the consumer along the lines of said mains respectively?

Ans. Yes sir.

45. Name the number of service pipes you estimated and the cost thereof, including labor and material?

A. The number of service pipes taken from the records of the company was 2468; the average length was assumed to be
263 from the main to the building 85 feet each at an average cost of 25c. per foot for the services laid, amounting to $23.75 each or $58,615.00.

46. That includes both labor and material?

A. Yes sir; and replacing such paving as was taken up to make connections.

47. Did your estimate of the cost of mains include both labor material, repaving and everything connected with the laying of such mains of the size and length named?

Ans. Yes sir;

48. Would that, in your judgment, be the fair market price of the labor and material in laying such mains and services during the year preceding September 1, 1900?

Ans. Yes sir;

49. Would your estimate as to the cost of the plant, in your judgment, include the fair market value of all the material and labor entering into the construction of the plant during the year preceding September 1, 1900?

Ans. Yes sir;

50. In your estimates heretofore given as to the cost of the plant, mains and services of the Peoria Gas & Electric Company, have you included in your estimate any amount for the legal organization of the company, the equipment and organization of its business force, cost of advertising, solicitors etc.?

Ans. No sir;

51. In your judgment what would be the reasonable cost of such services and equipment?

A. I would not be able to give any estimate of that.

(The MASTER:)

52. Is there any way by which that can be approximated, or accuratety reckoned?

A. I don't think there is any rule for that; I never heard of any; the conditions are so very different in every town you go in; in Peoria they had competition and the expense would naturally run very high in such a case.

(Mr. IRWIN:)

53. In your estimate heretofore given as to the cost of the
264 plant, mains and services of the Peoria Gas & Electric Company have you included in your estimates any amount for service tools?

A. I did not include anything for the tools used in the street construction; it was an error on my part; I should have included something for them.

54. What, in your judgment would a proper amount be for such service tools for carrying on that work?

Ans. $5000.00.

55. In your estimates heretofore given as to the cost of the plant, mains and services of the Peoria Gas & Electric Company, have you in your estimates any amount for meters?

A. I have not, as yet, given you any estimate on the cost of meters.

56. Assuming that there was a meter for each service, what, in your judgment would be a reasonable estimate of the cost of the meters?

A. For meters and connections, the short pipes that connect the meter to the services on each side which are generally included in the cost of meters, my estimate would be $8.00 apiece on the average.

57. Did you make a lump estimate of the number in use by the complainant company in Peoria?

A. No sir. I obtained from the company from their records the number of meters they had which was 2140; these estimates were given me as of September 1, 1900.

58. Is there any other item of expense that you took into consideration in estimating the cost of the Peoria Gas & Electric Company's plant in the city of Peoria, fully equipped for delivery of gas?

A. I have the item of office equipment, books, furniture etc., sufficient generally to stock the company for operation put down at $15,000.00.

(The MASTER:)

265 59. Is that estimate based on the office equiment you found in complainant's plant at Peoria?

Objected to by defendant.

A. No sir.

(Mr. IRWIN:)

60. Is the expense, such as you have last testified to, for office equipment etc., a necessary expense in the equipment of any similar plant of the character of the Peoria Gas & Electric Company?

A. Yes, sir; it is an expense that is always incurred, as much as any other portion of the works.

61. Was such an expense necessary in that case for the prope conduct of its business?

Ans. Yes sir.

62. What candle power, in the case of water gas is required i order to give the public a service as satisfactory as an 18 candl power of coal gas?

Objected to as immaterial and incompetent.

A. I should judge 23 to 24 candle power.

63. What is the highest candle power in coal gas deemed mos efficient for ordinary, general use by consumers?

A. 17 to 18 candle power.

64. Is that candle power for coal gas deemed most suitable fo illuminating purposes?

Ans Yes sir.

65. Is it also deemed desirable candle power for fuel purposes?

A. Yes sir.

66. Why is the higher candle power not desirable in coal gas?

A. The difficulty of burning it without smoking.

67. What elements and forces contribute to the depreciation of a gas plant and its mains, and how and to what extent do they act?

A. The depreciation of a gas plant is due first, to the wearing out, rusting out of the apparatus, which is made of iron, and in the case of the buildings they are generally going to pieces; further in the change and improvements of methods which take
266 place from time to time; prudence in construction requires different buildings, different apparatus, and it is frequently necessary to throw away one piece of apparatus and replace it with another. In the case of the mains and services, the destruction comes about from the action of the soil in which the pipes are laid, the soil being acid, or impregnated with sulphur compounds, which when they become moist, act very rapidly upon iron—particularly wrought iron. Further than that, the action of electrolysis to-day, which is the largest and greatest factor, is probably destroying very rapidly property of this character.

68. In what manner, in your opinion, does good business policy require this depreciation to be taken into account in conducting the business of a gas company?

Objected to as immaterial and incompetent and for the further reason that the witness has not testified to any knowledge as to the soil, or acids in the soil at Peoria, Ill., and consequently is not qualified to testify; also, because he has not shown any depreciation was caused.

A. The best business policy would be the establishing of a fund in which a portion of your earnings should be charged to each year to take care of that depreciation as it occurs.

69. Does such elements of depreciation, as you have named before,

exist to a greater or less extent, in all cities of the size, and character of the city of Peoria?

Ans. Yes, sir.

70. What, in your opinion, would be a proper percentage of the entire cost of the works of the plant of the Peoria Gas & Electric Company, to be charged off annually as the average annual depreciation, taking into consideration the conditions as you found them in your examination of that plant?

A. The average annual charge for depreciation on the works would undoubtedly amount to as much as 5%; I mean by
267 that, 5% of the cost of the works exclusive of real estate.

(Mr. MANSFIELD:)

71. Do you include in that the cost of the mains?

A. No sir;

(Mr. IRWIN:)

72. When you refer to the gas works, what portion of the plant do you refer to?

A. The entire cost of the works exclusive of real estate.

73. What is including in the word "works" as distinguished from the word "mains"?

Ans. The manufacturing plant.

74. How should the depreciation, if any, be taken care of, accruing to the balance of the plant of a gas company?

Objected to because the witness has not shown he is qualified to answer as to the depreciation of the mains, or the condition of the soil, or acids in the soil, in Peoria, and that is the only thing he can found the depreciation upon.

A. I have estimated the depreciation in a general way without studying all the particular conditions that exist in Peoria, and also without making any allowance for electrolysis, because the actual amount of depreciation there is an unknown quantity so far as Peoria is concerned, so far as I know. My estimate for the mains is 1% depreciation per annum of the cost of the mains; 5% on the cost of the services and 7% on the cost of meters.

75. Under your plan of estimating depreciation, what accounts do you carry depreciation on of other items accruing to the plant or works, such as repairs etc.?

A. I suppose I h-ve covered the general grounds of depreciation in my figures.

76. About what percentage would the repair account be on the cost of the plant outside of real estate?

Objected to because the witness has testified he has taken all matters into consideration in the figures already given by him.

A. I expect my figures of depreciation cover absolute re-
268 pairs but do not cover general expense items of taking care of mains or works. For instance, considerable money would

be spent each year in the streets and in the works which, under n custom, is charged to expense account, and which is not strictly repair account. These figures of depreciation I have expected cover the strictly repair accounts as well as depreciation.

(The MASTER:)

77. Is that depreciation 5 % on the manufacturing plant p annum?

Ans. Yes, exclusive of real estate.

(Mr. IRWIN:)

78. From your experience and observation in the manageme and investigation of gas plants, are you able to state what would l a fair and reasonable return to investors, taking into considerati the hazard of the investment on account of new inventions and com petition concerning which you have testified?

A. I think investors in gas properties are entitled to 10 % on the money invested.

79. Name some of the hazards aside from general depreciatio concerning which you have testified about, that face the busine of the manufacture of gas?

A. The general hazards are the conditions that exist so far a competition may effect the business; the constantly new and im proved things that are arising in connection with the business whic may, at any time, amount to a considerable cost and loss on the par of the company; the instability of the business generally, on ac count of the interference by legislative bodies. I think that is on of the greatest hazards.

80. How does electricity affect it?

A. Electric light as a competitor is a constant hazard.

81. Does natural gas have anything to do with it?

A. Natural gas very greatly enters into it in districts where natu ral gas exists, or is likely to be found.

82. Are you familiar with the general prices which prevailed
269 for coal, labor and materials entering into the manufacture o coal gas during the period from May 1, 1900, to September 4, 1900?

Objected to unless it is confined to the material and sale of the products entering into the manufacture in Peoria.

A. Yes sir;

83. Assuming that the Peoria Gas & Electric Company had been in operation from May 1, 1900, to September 4, 1900, and on Septem ber 4, 1900, was manufacturing and selling coal gas at the rate of about fifty millions cubic feet per year; and assuming that the pur chase of materials, the wages of labor and the expense of general operation were fair and reasonable, considering the location of the plant; and assuming further, that the management and superin tendency of the plant was sufficient and competent, what in your

opinion would be the actual cost per thousand cubit feet of the gas manufactured and delivered to consumers by said company on September 4, 1900, excluding the value of residuals, and excluding also, any charge for depreciation or interest on the investment?

A. That is a hard question to answer and I would like to answer it in my own way?

84. Do so. That is what I am asking for—your judgment about it?

A. I consider that the cost of gas, which I will give you per thousand cubit feet, after the company is well started or established and in good running order, would be according to the figures I will give you; but, during the first period of the operation of the company, particularly during the first four months—ordinarily I would say during the first year, the cost I will give would be greatly exceeded, and it would be impossible for me to give you an estimate of the fair cost during the first year's operation of the company; I can better establish the cost after the first year, and you can add anything you have a mind to to it. I understand you to ask for the cost of gas excluding residuals and excluding depreciation
270 or interest on the investment?

85. Yes sir.

A. It costs 83c. per thousand cubit feet after the first year's operation of the plant. The cost during the first year I could only make a rough guess at, but I should say you might add 50c. per thousand cubit feet to that up to the end of the first year.

86. Are you familiar with the prices charged the consumer for gas throughout the United States in cities say of 50.000 inhabitants and upwards?

Objected to as incompetent and immaterial.

A. Yes sir.

87. About how many cities are there in the United States of 50.000 inhabitants and upwards where there are gas plants?

Objected to same grounds as before.

A. I believe there are 78 cities of 50.000 inhabitants and upwards.

88. How many of the cities of 50.000 inhabitants and upwards throughout the United States sell gas to consumers at less than one dollar per thousand cubit feet, if you know, and name the cities?

Objected to same grounds.

A. There are 5 cities out of the 78 that have an established price for all their gas under $1.00., viz:—Dayton, Toledo, Cincinnati and Cleveland, Ohio I don't remember the other city, but I think there is one other outside of Ohio.

89. Can you tell how many of the cities in the United States of 50.000 inhabitants and upwards sell gas for a price exceeding $1.00 per thousand cubit feet?

Objected to same grounds.

A. Something like 25 which are more than a dollar.

90. How about the balance of the 78 cities?

A. The price is in and around about $1.00.

271 91. Were those the prevailing prices for gas, on or al
September 4, 1900, in cities of 50.000 inhabitants and
wards throughout the United States?

Objected to as immaterial and incompetent.

A. I don't believe there has been any change in more than 3
of the cities since that time; these figures are given as of the pres
time.

92. What were the conditions in the Ohio cities you have na
on or about September 4, 1900, for the economical manufactur
gas, compared with the conditions prevailing in the city of Peo

Objected to same grounds.

—. The Ohio cities were all far better located so far as getting t
coal was concerned, that is, they could obtain their coal at a c
siderable less figure than they could in Peoria, and otherwise,
plants in the Ohio cities named are old established plants, whe
the Peoria Company is a newer company in this particular c
which always tells against the company.

93. Assuming that the plant of the Peoria Gas & Electric Co.
the city of Peoria manufactured from May 1, to September 1, 1
about 18.942.213 feet of gas, and that the leakage during that per
was about 3.467.000 cubit feet of gas, is that an unusual leakage
the first four months of the operation of a plant of the charac
size and capacity of the Peoria Gas & Electric Company's plant?

A. No sir.

94. What is the general percent of leakage for the first
months' operation of a new gas plant?

A. 15% to 20% of the amount manufactured.

Cross-interrogatories by Mr. MANSFIELD:

1. From your description of the plant that was installed by
Peoria Gas & Electric Company in the city of Peoria, what wou
be the capacity of that plant as to the manufacture of gas
day?

272 A. Strictly speaking its capacity is 540000 cubic feet
day; ordinarily I would call it a plant of the capacity of h
a million feet a day.

2. Is that in your opinion one of the most modern and w
equipped plants, or is it one of the most modern and best equipp
plants that could be installed at the time of its installation in t
city of Peoria?

Ans. Yes, sir.

3. What was the bench capacity of that plant at the time of its installation?

Ans. 540000 feet a day.

4. What was the capacity of the condensing plant?

A. Half a million; I should think its capacity was 500000.

5. What was the capacity of each of the purifying boxes testified to by you per day?

A. It is necessary to take the two together. Taking the two together, it would be considered capacity for half a million feet a day.

6. What is the capacity of the storage holder per day?

A. 300000 cubic feet.

7. Is any part of the plant installed in the city of Peoria by the complainant company constructed for the purpose of taking care of the ammonia manufactured from the gas?

Ans. Yes, sir.

8. What is the capacity of that part of the plant constructed for the purpose of taking care of ammonia?

A. I should consider it had capacity to take care of half a million feet of gas per day, otherwise 50 tons of coal.

9. What is the technical name of that part of the plant which is used for the purpose of taking care of the ammonia?

A. The concentrator.

10. What is the name of the concentrator that is installed in the complainant's plant?

273 A. I do not know what the name of it is; I believe it was constructed by the Michigan ammonia works.

11. In the manufacture of 18 million cubic feet of gas from the first day of May, 1900, to August 31st, 1900, would it be necessary to use all the retorts of that plant for the purpose of manufacturing that amount of gas, or would it be necessary to use the whole plant for that purpose?

A. I presume that they used during that period about three out of the six benches.

12. In the manufacture of 51,178,000 cubic feet from September first, 1900, to September first, 1901, was it necessary for the Peoria Gas & Electric Company to use the whole plant in the manufacture of that amount of gas?

A. I should judge not.

13. What proportional part of the plant was operated by them in the manufacture of that amount of gas during that period?

A. It would be about half.

14. You have stated that the cost of the manufacture of 50000000 cubic feet of gas per year by the Peoria Gas and Electric Company, excluding interest on the amount of the investment and excluding the selling price of the residuals, would amount to about 83 cents per thousand cubic feet. What would be the selling price of the residuals resulting from the manufacture of that amount of gas in your opinion as an expert.

Objected to as not cross examination and because the question assumes the witness made a statement he did not make.

A. To give you the return for residuals it would be different in every place you go into, and it would be different also in the first year's operation of the plant from what it would in an old established company. For instance, in the manufacturing of coke,
274 in order to get a price for that coke, you would have to work up a market and as years go by you work up a better market and get a better price for it; I could not estimate what price the Peoria Company ought to receive for its coke; I would have to take what they did receive.

15. What would be the percentage of tar obtained from the manufacture of fifty million cubic feet of gas?

A. They would receive from 12½ to 15 gallons of tar per ton of coal used.

16. What would be the percentage of the amount of coke produced per ton of coal burned in the manufacture of fifty million feet of gas?

A. It would produce two thirds of the weight of the coal in coke or 65 per cent.

17. What amount of ammonia would be received from the distillation of one ton of coal in the manufacture of gas?

A. Four pounds of pure ammonia per ton of coal used.

18. You testified on direct examination that you had a chemical apparatus connected with all modern installed gas plants. Is there a chemical lab-ratory connected with the gas plant installed by the Peoria Gas & Electric Co. in the city of Peoria?

A. Yes sir.

19. Where is that located?

Ans. In the meter house.

20. In the manufacture of gas is there any by-product obtained called nap-thaline?

Ans. Yes sir.

21. Is the plant constructed by complainant company in the city of Peoria so constructed as to take care of that by-product called nap-thaline?

A. It is intended to be constructed so as not to produce nap'-thaline.

275 22. Is there any nap-thaline produced in the manufacture of gas by the Peoria Gas & Electric Co.?

Ans. I don't know.

23. Do you know anything about the condition of the soil under the paving in the city of Peoria?

A. Only what I have been told.

24. In arriving at your figures, with reference to the cost of laying the mains and pipes in the city of Peoria, did you obtain your knowledge and information of the streets and the places where these pipes were laid from a book of complainant company?

A. No, I obtained knowledge of the character of the soil from inquiry.

25. Do you know where any of the gas pipe of the Peoria Gas & Electric Co. are laid in the city of Peoria?

A. I would know if I could refer to the map and to some of my memoranda here.

26. Look at the map of the city of Peoria now shown you and designate where those pipes are laid, if you know?

A. They are laid on Main street, I recollect; I could not give you all of this from recollection but I recollect distinctly that the mains are laid on Main street from Water street out to Bourland street—I think that is where I stopped; also on this avenue running out here—Knoxville avenue—to Arcadia avenue.

27. Are there any gas mains laid in that district in the city of Peoria lying south and west of Spencer street in said city?

A. Yes, I think they are laid on Adams street.

28. Are there any laid in that district above Adams street, between that and Seventh avenue?

A. I could only answer that by reference to my memoranda.

29. Where was your memoranda obtained from?

A. The amount of mains, the places where mains are lo-
276 cated, I obtained from the superintendent of distribution of the Peoria Gas & Electric Company.

30. Then you have no personal knowledge of that yourself?

A. Only as I took them from the records of the company as he gave them to me.

31. What is the character of the soil below the bluffs in the city of Peoria, if you know?

A. The character of the soil as given to me was practically one half of clay and one half sandy soil.

32. Beneath the bluff?

A. I don't know whether it was beneath the bluff or on top.

33. What is the character of the soil on top of the bluff?

A. I could only answer that in the way I have.

34. Is there any gravel there?

A. Some gravel, yes sir; there is gravel in some portions of the city but I could not tell you whether it is on the bluff or below the bluff.

35. Is it not a fact that most of the gas mains of the Peoria Gas & Electric Co. are laid in the alleys in contra-distinction to the street in the city of Peoria?

A. A considerable amount is laid in the alleys.

36. What proportion of the alleys in which mains are laid are paved?

A. I should judge, from what I saw, that the pipes in alleys were generally under pavement.

37. You say there were 2468 service pipes laid in the city of Peoria of an average length of 85 feet?

Ans. Yes sir.

38. And the average cost was 25 cents per foot to lay them?

A. The pipe and the labor of laying it all complete.

39. You further testified as to a further item of $5,000. for
277 service tools. Were not you mistaken and did you not include in the $58615. that $5,000. which you afterwards added for service tools?

Ans. No, I think not.

40. Will 2468 service pipes of an average length of 85 feet at a cost of 25 cents per foot amount to $58,615.?

A. It will if I figured it correctly; I find on computing it again that I have made a mistake; it should be $52,445.; I figured it before at $23.75 each instead of $21.75.

41. Then your estimate in regard to the cost of service pipe should be decreased from the amount of $58,615. heretofore testified to by you to $52,445.?

Ans. Yes sir.

42. Are you sure you have made no other mistakes in your computations?

A. I don't know of any, although you may find one.

43. As a gas expert what amount of Youghioghenay second pool coal would be required to manufacture 2,437,400 cubic feet of gas?

A. 253 tons, 900 pounds.

44. What would be the cost of that amount of coal at $2.75 per ton?

A. $696.99.

45. How much boiler fuel would it take to manufacture 2,437,400 cubic feet of gas made by complainant company in its plant at Peoria?

A. I should figure that at 25 pounds of fuel per thousand feet manufactured; it might not take that much, but I have known plants where it took that much and I have known plants where it did not take more than two thirds or three fourths of it.

46. What would be the amount of bench fuel required to manufacture 2,437,400 cubic feet of gas?

A. Ordinarily I would figure that at about 40 pounds per thousand cubic feet, but to put it in the shape I suppose you want
278 it, it would take 25 to 30% of the coke manufactured.

47. About what would be the approximate cost for purification supplies used by the Peoria Gas & Electric Co. in the making of 2,437,400 cubic feet of gas?

A. One half a cent per thousand.

48. What would be the cost of the enrichers used in a plant like the Peoria Gas & Electric Company's plant, for the manufacture of 2,437,400 cubic feet to enrich the gas to 18 candle power?

A. About a cent a thousand cubic feet.

49. You have testified there were two modern processes for the manufacture of gas? Are those the only modern processes you know of?

Ans. Speaking in a general way, yes sir.

50. Do you know anything of a new process that has lately been introduced in Germany and England for the manufacture of gas?

A. The manufacture of coal gas?

51. For the manufacture of any kind of gas, whether for illuminating or fuel purposes.

A. I don't know to what you refer by your general question.

52. Has there been any process to your knowledge recently introduced in Germany or England for the manufacture of gas?

A. I suppose you refer to the coke oven process; if that is right, then I can answer your question.

53. What do you mean by the coke oven process?

A. The coke oven process is what is known as the by-product oven process for the manufacture of coke and the gas is one of the residuals; it is not a gas process but a coke process, gas becoming the residual in that case; such a plant has been built and is in operation in this country, but to my knowledge there are no such plants in operation in Europe that are manufacturing a gas for general distribution of that character.

279 54. In the manufacture of gas in a plant constructed similar to the gas plant of the Peoria Gas & Electric Co., does not the revenue received from the by-product equal the cost of the gas in the holder, not taking into consideration interest on the investment made for the plant and excluding depreciation?

A. I don't believe there is a gas plant in this country that is receiving for its residuals the cost of its gas in the holder.

55. Then according to your ideas of the manufacture of gas by the by-product oven process it would be practically impossible to manufacture gas for illuminating or fuel purposes?

A. There has as yet been but one plant of that kind built and it has not been established that that plant is a success.

56. Where was that plant built?

Ans. At Boston, Mass.

57. What difference in the cost of gas is represented by the difference of one candle power in the light of gas?

A. In answer to that, I believe I stated my estimate would be one cent per thousand for increasing the cost of manufacture of coal gas to 18 candle power; raising that to 19 candle power it would cost more than one cent per thousand and each candle power higher would increase in greater proportion.

(The MASTER:)

58. Suppose you raised it from 17 to 18 candle power, what would be the cost per thousand cubic feet?

A. I stated that would be one cent but if you were to raise it to 21 candle power I should judge it would be 8 cents per thousand cubic feet.

(Mr. MANSFIELD:)

59. What difference would there be in the cost of water gas rais ing it from 23 candle power to 24?

A. It would be a small fraction of a cent.

60. Which is the cheaper gas to produce, water gas or coa gas?

280 A. It is generally considered in this part of the country a the present time that coal gas is the cheaper.

61. Then how do you account for the difference in the cost o raising coal gas one candle power and the difference in the cost o raising water gas one candle power?

A. In the first place, the different chemical makeup of the gas is quite different, and in the second place, you have all the facilities in making water gas to change the candle power at will from low to high or high to low but in coal gas you have not the facilities for increasing the candle power without additional apparatus and considerable expense in rehandling of the gas.

62. Is it customary in plants like the one constructed in the city of Peoria by the complainant company to use any air in the purifi cation process of their gas?

A. It has become the accepted practice throughout the country to use air in connection with the purification where oxide of iron is used for that purpose.

63. What percentage of air would you use in the purification process in a plant constructed like complainant's plant in the city of Peoria?

A. I would not advise the use of over one per cent.

64. What effect, if any, could be determined by the mixing of one per cent. of air with the gas by testing the gas as to its candle power before and after the mixing of the air with it?

A. There would undoubtedly be a slight decrease of the candle power of the gas by even admitting one per cent. of air but it is scarcely noticeable when you do not exceed one per cent.

(The MASTER:)

65. Do you mean it is scarcely noticeable in its illuminating power?

Ans. Yes sir.

(The SAME:)

66. Does it tend to increase the amount of consumption?

281 A. No sir, it tends to decrease the amount of consumption because air makes the gas heavier and the heavier your gas the greater the tendency to decrease consumption.

(The SAME:)

67. How does the gas plant of the complainant company at

Peoria compare with the one with which you are associated for the prudent and economical manufacture of gas as a gas plant?

Objected to by complainant as immaterial.

A. I think it compares favorably.

(The SAME:)

68. What kind of coal do you use in your plant?
A. The same kind—Youghiogheny coal.

(The SAME:)

69. How much does the coal cost you laid down at your plant?

Objected to by complainant because such matters in other cities cannot be gone into in this case unless the whole cost is gone into and the same investigation is made that we are now making of the complainant company's plant; complainant's counsel have asked the witness nothing on that line and they don't think it proper investigation in this case; the only investigation and only question to try being the Peoria plant so far as the cost of material or cost of anything else is concerned.

(The MASTER:) The witness may answer subject to the objection.

(Mr. IRWIN:) I will have to instruct the witness to refuse to answer.

(The MASTER:)

70. Have you personal knowledge of the cost of the coal Mr. Cowdery?
Ans. Yes sir.

(The MASTER:)

71. Now, under the advise of your counsel in this case, you can answer or not as you see fit.

(The WITNESS:) I decline to answer.

(Mr. MANSFIELD, resuming:)

282 72. What did you testify as to the number of benches there are in a stack in complainant company's plant?
A. Six, I think or seven—no six benches.
73. In making your computation with regard to the cost, did you do it upon the basis of six or seven benches?
A. Six benches.
74. What would be the difference in the cost of a stack containing six benches and a stack containing seven benches?
A. An additional bench would be $3500.
75. How many retorts did you say these benches contain?
A. Nine each.
76. You testified in your direct examination with regard to the

cost of the pipes in and about the complainant company's plant in Peoria. What pipes did you mean?

A. I meant the pipes that connect the different pieces of apparatus in the works, that is, all of the gas mains and their valve connections with the exception of those that usually go with the different pieces of apparatus.

77. Will you take the plat marked Exhibit "1" and designate thereon, if you can, the pipes and the valves making the connections about which you have testified?

A. I can do it as well without the plat. It would be the connections between the hydraulic main which is on top of the stack in the retort house and the first piece of apparatus in the condensing room; that between the condensing room and the purifyers; between the purifyers and meter; between the meter and holder; between the holder and the street governor and the pipes connecting into the street mains at the works.

78. You testified as to the value of the station meter—what do you mean by station meter?

283 A. That is the meter which measures the gas manufactured; it is usually measured before it enters the holder.

79. If the demand in the city of Peoria were limited to 50 cubic feet of gas per year, would you as a gas expert recommend the construction of a gas plant of the kind and character constructed in the city of Peoria by the Peoria Gas & Electric Co.?

A. Yes sir.

Adjourned by agreement until Thursday, November 21, 1901, at 10 o'clock a. m., to meet in the United States circuit court room at Peoria, Ill.

283a *Cost of Gas Plant and Property of Peoria Gas and Electric Company as at September* 1, 1900.

EXHIBIT 3. I. C. Pinkney, Master.

283c *Results of Operations of Peoria Gas and Electric Company Four Months, from May 1 to August 31, 1900.*

Total amount of gas sold	15,475,200 cu. ft.
Total expenditures	$26,413.46
Value of residuals made	5,399.03
Depreciation	9,178.44
Interest on cost of plant at 5% per annum	7,237.53
Interest on cost of plant at 10% per annum	14,475.06

Total Cost of All Gas Sold and Cost per Thousand Cubic Feet.

	Total cost.	Cost per thousand cubic feet.
Excluding residuals, depreciation and interest	$26,413.46	$1.706
Excluding residuals, including depreciation, excluding interest	35,591.90	2.300
Excluding residuals, including depreciation and interest at 5% per annum	42,892.43	2.767
Excluding residuals, including depreciation and interest at 10% per annum	50,066.96	3.241
Cost after deducting value of residuals, excluding depreciation and interest	21,014.43	1.358
Cost after deducting value of residuals, including depreciation without interest	30,192.87	1.963
Cost after deducting value of residuals, including depreciation and interest at 5% per annum	37,430.40	2.419
Cost after deducting value of residuals, including depreciation and interest at 10% per annum	44,667.93	2.886

Exhibit 4. I. C. Pinkney, Master.

283d *Results of Operations of Peoria Gas and Electric Company One Year, Septe*
1, 1900, *to August* 31, 1901.

Total amount of gas sold	51,178,300 cubic f
Total expenditures	$60,257.25
Value of residuals made	20,372.91
Depreciation	27,535.42
Interest on investment at 5% per annum	21,712.62
Interest on investment at 10% per annum	43,425.24

Total Cost of All Gas Sold and Cost per Thousand Cubic Feet.

	Total cost.	Cost pe thousan cubic fe
Excluding residuals, and depreciation and interest	$60,257.25	1.
Excluding residuals, including depreciation, excluding interest	87,792.67	1.
Excluding residuals, including depreciation and interest at 5% per annum	109,505.29	2.
Excluding residuals, including depreciation and interest at 10% per annum	131,217.93	2.
Cost after deducting value of residuals, excluding depreciation and interest	39,884.34	.
Cost after deducting value of residuals, including depreciation without interest	67,419.76	1.
Cost after deducting value of residuals, including depreciation and interest at 5% per annum	89,132.38	1.
Cost after deducting value of residuals, including depreciation and interest at 10% per annum	110,845.00	2.

NOTE.—In Detroit, Mich., Louisville, Ky., Toledo, Ohio, and Erie, Pa., the price charged for gas for fuel purposes is determined by the price of natural gas. Company No. 2 in Louisville distributes natural gas or a mixture of natural and manufactured gas.
Company No. 2 in Bridgeport, Conn., distributes uncarburetted gas very low in heat units and candle power.

No. 12. Discounts.—Covers all discounts on gas bills (according to rules of the company) allowed for payment of same on or before the 12th of the month following that in which gas was consumed, and special discounts allowed by general manager.

Manufacturing.

No. 13. Generator fuel.—Includes the cost of all coke and coal, used in manufacture of water gas, expenses of handling same, and freight.

No. 14. Gas coal.—Includes cost of same as determined by storeroom, unit, and cost of handling into retorts.

No. 15. Boiler fuel.—Includes cost of coal or other substances used under boilers, and cost of handling same.

No. 16. Bench fuel.—Includes cost of coal, coke or tar used for firing benches, together with cost of handling same.

No. 17. Manufacturing labor.—Includes wages of engineers, firemen, gas makers and labor of all employés in and about the works for the manufacture of gas not otherwise classified.

No. 18. Manufacturing supplies.—Includes cost of lubricating oils, waste, packing, etc., used in and about engine room and
283a generator room, together with freight and cartage.

No. 19. Oil.—Cost of naphtha or gas oil, together with freight on same, if paid by the company, and cost of handling.

No. 20. Enrichers.—Includes cost of oil, naphtha, or coal used for this purpose, together with cost of handling same.

No. 21. Purification labor.—Cost of all labor in handling of purifying materials in the manufacture of gas, and work in and about the purifying house.

No. 22. Purification supplies.—Cost of all materials used for purifying, together with freight, cartage and handling.

Distribution.

No. 23. Distribution labor.—Includes car fares and wages of meter readers, car fares and wages of men engaged in the distribution of bills, attending to frozen service mains, car fares of collectors and their wages, cleaning tips and pumping drips.

No. 24. Distribution supplies.—Tips and supplies furnished customers gratis, and labor and expense of removing and setting old meters.

No. 25. Street lamp operating.—Cost of all labor and material used in lighting, extinguishing and maintaining street lamps.

Miscellaneous.

No. 26. Miscellaneous supplies and expenses.—This includes al small supplies and renewal of tools which may be furnished to or

incurred *at works*, which cannot be charged to repairs or renewals and includes cleaning engine room, generator room, yard, etc.

Repairs and renewals.

No. 27. Repairs and renewal of meters.—All labor, materials and car fares used in this connection.

No. 28. Repairs and renewal of services.—All labor, material and car fares used in this connection.

No. 29. Bench repairs.—Includes cost of materials and labor used in this connection.

No. 30. Gas house and machinery repairs and renewals.—All labor and materials used in this connection.

283o No. 31. Repairs and renewal of mains.—All labor, materials and car fares, also cost of removing and replacing street pavement.

Plant account.

No. 32. Land and buildings.—Cost of all real estate purchased including fees for examination of title and guarantee policies.

Additions to property.

No. 33. Extension of mains.—Cost of all labor and material and expenses connected therewith; *new work only*.

No. 34. Manufacturing plant.—Includes cost of retorts, generators, purifiers, pumps, exhausters, holders, separators and other apparatus used in the manufacture and storage of gas and its residuals.

No. 35. New meters.—The storeroom unit price of all meters taken from stock for setting.

No. 36. New services.—Cost of all labor and material and expenses connected therewith, which are to be furnished gratis.

No. 37. Tools and implements.—New tools only.

NOTE.—Tools and implements bought to replace those old or worn out, should be charged to the proper operating or repair and renewal account.

No. 38. Furniture and fixtures.—First cost of all office furniture and fixtures. Renewals and repairs to be charged account No. 3

Miscellaneous accounts.

No. 39. Accounts receivable.—This account covers the bills amounts for service sales, stove sales, store-room sales, coke sales, tar sales, ammonia sales and fitting sales.

No. 40. Sales account.—This account will be debited with all material used and labor employed in mercantile sales and job work and credited with the cost of completed work billed. Such completed work will be reported to the general office, by abstract, a

the close of the month, giving the cost of the work and the billed amount charged to customers.

283*p* No. 41. Store-room.—This account represents all materials purchased, and the balance of the account represents the materials on hand. All purchases for stock except as otherwise provided for, to be charged this account. This account to be credited with all deliveries from store-room and the respective accounts for which the deliveries were made, debited.

All coke, breeze, tar, ammonia or other residuals from gas making are to be debited to this account, and this account to be credited with the cost of same when sold or used by the company.

General Instructions.

Time of employés.

Instructions regarding time-books.—Time-books are so ruled as will permit the distribution of each employé's time as the labor is performed. Each company classification account or working order bears its individual number. Each working order will be given a specific number, by which it will always be known until the work is completed.

Time-books will be used for the time returns of all employés, except officers and office men.

These books will be supplied to the proper foreman or deputized assistants. Each foreman or assistant must keep a perfect report of the exact time of all men placed under his charge, including his own.

283*q* Each foreman will use extreme care in reporting the exact number of hours the men under him have labored on any company work, stating specifically what has been done, in order that the labor performed against the proper working order number or account number for which the work was done can be properly distributed, together with any car fare that may properly be included; all extra time to be calculated in regular labor hours, *i. e.*, if an employé works one hour overtime allow him the extra hours in the proper day against the proper distribution. *No overtime allowed except by written order of general manager.*

The salaries of all officers and heads of departments, and clerks in general office, will be assembled by the treasurer.

Semi-monthly time-books, duly approved by foremen, should be in the hands of the general manager on the morning of the 16th for the first half of the month, and on the first day succeeding the first day of the following month for the second half of the month, to be by him transmitted to the auditor.

Semi-monthly pay checks will be delivered on the 20th and the 5th day of each month, provided the 20th or 5th day of month does not fall on a holiday or Sunday, in which event payment will be made on the day following such holiday or Sunday.

Time vouchers given to semi-monthly employés discharged, laid off, or to correct errors for the previous semi-month, must be presented to the general manager for approval before the cashier will honor the same for payment. Foremen should be very careful to properly charge the time of semi-monthly employés to proper accounts. When a time voucher is issued it should state upon its face the length of time and amount of pay the employé is entitled to and the account to which it is to be charged, and the *same period of time and same paid amount and same distribution* should be entered on the *next semi-monthly time-book*, stating on said time-book the words "Paid by time voucher," giving the time voucher number.

The auditor will sign all pay checks and the general manager and president will approve all time of employés before entry on company's books.

All changes affecting semi-monthly time-books assembled
283r in the accounting department must be presented to the auditor, duly approved by proper foreman and general manager, at least two days before semi-monthly payment is made, otherwise such changes will not be considered as taking effect until the following semi-monthly payment is made.

Disposition of invoices.

Foremen will immediately send to the general manager all invoices or statements which they may receive, referring in any sense to the following accounts:

No. 5. Insurance.
No. 6. Rentals.
No. 7. Interest.
No. 8. Taxes.
No. 9. Legal expenses. Loss and damage account.

No writing or stamp impressions should be made on such invoices or statements, the approval of same coming under the jurisdiction of the general manager or other executive officer.

All invoices for petty supplies for following accounts should be sent direct to the general manager as soon as received:

No. 3. General office sundries.
No. 4. Canvassing department (petty supplies or petty expenses).
No. 10. Stationery, printing and postage.

The general manager after checking such invoices against the corresponding requisition will stamp such invoices with his charge direct stamp, and forward invoices so stamped to the clerk originally ordering the supplies. The clerk, immediately upon receipt of supplies, will approve such invoices, if correct, and return the same at once to the general manager, who in turn will transmit direct to the treasurer. The general manager should never send such invoices through the store-room.

All petty expense bills of clerks concerning any of the foregoing accounts, should be properly made out on petty cash slips. Such petty expense bills should always be approved by the clerks and

submitted to the general manager for approval, before cashier will honor same for payment.

283*s* Invoices covering material purchased for company accounts.

All invoices covering materials purchased for any company account chargeable to any working order, or account number (except such account numbers as are otherwise provided for as above) should be sent direct to the general manager, who will check such invoices with corresponding requisitions. The general manager will stamp such invoices with store-room stamp, and transmit to general foreman in charge of the work, who will approve the invoices, if material, as quoted, has been received and is to be used for the work specified. Such invoices will be returned at once to the general manager, who will approve prices quoted, and immediately send same to the store-keeper for proper charge on company account supply tickets. Invoices should always be attached to the supply tickets covering the charges appearing on the invoices, before supply tickets and invoices, as approved by general manager, are submitted to the accounting department.

Credit invoices or bills for goods returned should be handled and checked, and credit shipping tickets issued in the same manner as debit invoices.

Invoices covering additions to stock.

All invoices covering additions to stock in the store-room should be sent direct to the general manager. The general manager will check such invoices with corresponding requisitions, and will stamp such invoices with the store-room account stamp, and forward same immediately to store-keeper, who will check as to receipt of goods called for by invoices. The store-keeper will return such invoice properly checked to the general manager, who will approve, if correct, and immediately transmit to treasurer. Invoices covering purchases for *stock* should never be charged on supply tickets. All charges on company books to the ledger account, known as "store-room account," to be made by the accounting department.

283*t* NOTE.—As all supply tickets that are issued (except for freight or cartage) become a credit to the ledger account known as "store-room account," the general manager should be very careful that no supply ticket is ever issued for any charge (except freight and cartage and such charges as interest working orders) that does not specifically represent material that could at any time be inventoried as part and parcel of the stock in the store-room.

The most careful and prompt attention should be given to the handling of invoices. The foremen should permit no invoices to remain on their desks unattended to. It is of the utmost importance that all the liabilities of the company should, at the earliest

possible moment, be placed on the company's books; and great c
should be taken by all foremen to have every invoice concern
any one month's accounts in the hands of the general manager
or before the third day of each month for the month previous.
excuse will be accepted for any exception to this rule, except in
case of disputed bills, and such disputed bills should at once rece
prompt attention with a view to immediate adjustment.

Store-room.

Materials purchased.—The general manager is authorized to p
chase such general supplies as are requisite to keep the necessa
stock in the store-room, and all approved invoices for petty supplies
expenses not chargeable to a working order, and which are chargea
to following accounts (Nos. 3 to 11 inclusive), should not go throu
store-room, unless they represent a debit to "store-room accou
but should be sent after proper approval, direct to the general m
ager. Invoices which *do not represent* materials purchased, exc
for freight and cartage chargeable to specific work, should never
through the store-room, but should always be sent, after proper
proval, direct to the general manager. All approved invoi
chargeable to a working order's number should always be s
through the store-room. (See page 14 disposition of invoices.)

Rules governing delivery of material from store-room.

Foremen or properly deputized assistants will order from sto
room such material as may be required for their respective depa
ments, stating specifically on the order the working ord
283*a* number or company classification, account number, to whi
such material is to be charged. Foremen will be held
sponsible for all orders. Orders issued by subordinates shou
always bear the signature or approval of the foreman, as per rul
of the company, otherwise they will not be accepted by the gener
manager.

Orders for material will go to the general manager, who will i
mediately O. K. same if proper to do so, and immediately transm
to the store-room.

*The general manager is expected to question the propriety or necessi
of all orders, and is authorized to refuse all orders not in line wi
economy or the policy of the company.* The store-keeper will at on
furnish the material desired, on supply ticket, being careful to fi
out all requirements of said supply ticket, as per its form, notin
particularly on the supply ticket the working order or classificatio
number in the original order.

In case the goods are not in stock, the general manager will issu
a requisition from requisition book, covering each specific order, o
such outside parties as may be necessary.

When such material is received, the amount of invoice will b
charged through store-room to proper working order number

direct to proper company classification number or to store-room, and then charged to the working order numbers or accounts for which it was ordered.

When unused material is returned to the store-room on account of any working order or company classification, the store-keeper will at once issue a credit return ticket, each credit ticket corresponding to material returned. The allowed amounts of such credit return tickets are a debit to store-room, and a credit to working order number or company account interested.

Upon close of business for the day the storekeeper will send all supply tickets and all credit tickets issued during the day to the superintendent, who will "O. K." and forward to the general manager, who will "O. K." same and forward to treasurer.

Special instructions governing material and labor.

283e Rule 1.—Working order requisition stating character and probable cost of work to be performed must be sent to superintendent for approval and working order signed by general manager will be issued authorizing the work. All labor and material should be charged to the working order number until the work is completed, and when completed the foremen should sign, and working order be sent to the office of the general manager. Foremen will issue supply orders direct on the general manager, or foreman will issue foreman's orders direct on the store-keeper for such material as may be necessary for the work to be charged to any particular working order number. No approval of the general manager is required on supply orders governing the use of materials chargeable to any working order which has been already approved by him. Working orders will only be issued where labor with material are *both* required or labor *alone* is required to complete a specified undertaking.

Rule 2.—Supplies required, which do not interest working orders or such company accounts as come under other rules, may be had on application to the general manager, who will issue necessary requisition for same and pass invoices through store-room, as per instructions on page 14, disposition of invoices. Store-keeper will notify accounting department of issues as stated above by proper journal entry covering account to be charged.

Special rule.—In case of any urgent repairs or sudden break in machinery in the company's plant, or street service requiring immediate attention, foremen in charge are authorized to proceed immediately to do the urgent work or repair the break, they obtaining from the general manager, as soon as possible, however, a working order covering the necessary work to be performed, all material and labor being charged to such specific working order number. Foremen will be expected to justify their action in such cases to the general manager if called upon to do so.

Permanent working orders.

Permanent working orders do not include any authority fo
curring expenses at any one time exceeding ten dollars, exce
especially provided for by authority or approval of ge
283*w* manager. Permanent working orders only cover ex
and repair, and renewal accounts.

Permanent working orders will be distinguished from the
nary working orders by the letter "P" following the working
number to which the charge is to be made.

283*x* EXHIBIT 9. I. C. Pinkney, Master.

To the special commissioner:

In order to save the time and expense incident to making fu
formal proofs of the cost of the construction and operation o
plant of the Peoria Gas and Electric Company and to avoi
necessity for introducing several thousand vouchers.

It is here stipulated and agreed by and between the respe
parties by their respective counsel, that the witness F. W. Little
testify as to the total amount of expenditures made by the
plainant company in and about the construction and operati
the gas plant of said company from the time of the organizati
the complainant company to September 1, 1901, as shown b
vouchers and books of the company, stating the totals of the va
accounts under which said expenditures are entered;

It is further stipulated that in the event that said Little shal
tify that said totals are true totals, as shown by the books and v
ers of said company, and represent all the actual expenditures
by said company during said period in and about the constru
and operation of the gas plant of said company, and that the v
ers, duplicate vouchers and sub-vouchers showing all said exp
itures in detail are present in court for inspection and examin
by the special commissioner and counsel for the parties, then
in that event no objection shall be made by the defendant, t
competency of such evidence, but it shall be and hereby is
mitted that such expenditures were in fact made and that the
expenditures are charged to the proper accounts.

283*y* It is further stipulated that for the purpose of attac
and verifying such expenditures, or any of them, the
vouchers, duplicate vouchers and sub-vouchers, throughout
pendency of this suit before said special commissioner, shall be
ject to examination by counsel for defendant or by any qual
public accountant in his behalf, at all reasonable times during
ness hours at the office of the company in Chicago, subject to
regulations as may be imposed from time to time by the court.

Testimony taken in the above entitled cause before Judge I. C. Pinkney, special commissioner, at Peoria, Illinois; Minneapolis, Duluth, and St. Paul, Minn., and at Kansas City, Mo., on the several dates set forth in the following pages.

Mr. W. T. Irwin, Mr. E. C. Ritcher and Mr. W. T. Abbott, appearing for the complainant.
Mr. Henry Mansfield, appearing for the defendant.

284 United States circuit court room.

PEORIA, ILL., THURSDAY, *Nov.* 21, 1901—10 a. m.

Parties met pursuant to adjournment.
Present: Judge I. C. Pinkney, special commissioner Mr. W. T. Irwin & Mr. E. C. Ritsher appearing for complainant. Mr. Henry Mansfield appearing for defendant.
On account of the absence of witnesses, the hearing was adjourned by agreement until Friday, November 22, 1901, at 9:30 a. m.

United States circuit court room, Government building.

PEORIA, ILL., FRIDAY, *November* 22, 1901—9:30 a. m.

Parties met pursuant to adjournment.

Present: Judge I. C. Pinkney, special commissioner. Mr. W. T. Irwin appearing for complainant. Mr. Henry Mansfield, appearing for defendant.

On account of the absence of Mr. E. C. Ritsher, of counsel for complainant, and on account of the absence of witnesses, the hearing was adjourned by agreement until Saturday, November 23, 1901, at 9:30 a. m.

United States circuit court room, Government building.

PEORIA, ILL., *November* 23, 1901—9:30 a. m.

Parties met pursuant to adjournment.

Present: I. C. Pinkney, special commissioner. Mr. W. T. Irwin & Mr. E. C. Ritsher, appearing for complainant. Mr. Henry Mansfield appearing for defendant.

GIDEON H. DIALL, called on behalf of complainant, being first duly sworn, deposeth and saith:—

Direct interrogatories by Mr. IRWIN:

1. State your name and business.

285 A. Gideon H. Diall; my business at present is a newspaper man.

2. With what newspaper are you connected?

A. Chicago-American.

3. How long have you been connected with that paper?

A. Since about the middle of last October.

4. In what capacity?

A. In the capacity of a man who is handling the gas news for the paper.

5. You have been furnishing that paper with the gas news during that period, have you?

A. Part of the news, not all.

6. Has all the gas news which has been furnished to that paper during that period been furnished by you or under your direction?

Ans. Not all of it, no sir.

7. Has it largely been under your control?

Ans. No sir.

8. Who has control of the gas news furnished that paper?

A. The man that controls the gas situation in the American is A. M. Lawrence, the managing editor of the Chicago American; he is also the president, I believe, of the Chicago-American Co.—stock company.

9. Are you the same gentleman that attended this hearing in Chicago on the 15th of the present month, sat with counsel for the City of Peoria and assisted in the examination of witness?

Mr. MANSFIELD: I object to this examination as immaterial and incompetent and I do not think the master ought to allow it to go on unless counsel states for what purpose the investigation is being made.

The MASTER: I cannot tell what the purpose of the investigation is. The witness may answer subject to the objection.

286 A. I don't remember the date but I was with Mr. Mansfield; so far as I remember I think the only question is as to the date.

Cross examination by Mr. MANSFIELD:

1. Did you personally propound any questions to any witness that appeared on the stand at that time?

A. I did not.

2. Read the article now shown you and state whether or not you were the person that furnished that article to the Chicago-American for publication?

A. I did not write it or furnish the facts from which it was written; as a matter of fact, the first I knew of the article in question was from reading it in the paper after it was published. (And it happened that the day this article was published I was out of the city of Chicago.)

Defendant's counsel objects to that part of the foregoing answer enclosed in brackets as not responsive and moves the court to exclude it.

Re-direct examination by Mr. IRWIN:

1. Where were you on that day?

Mr. MANSFIELD: I object to the question as immaterial, incompetent, not proper re-direct and direct the witness not to answer.

A. On the advice of the city attorney I refuse to answer the question.

2. How do you know you were out of the city on the date that article was published?

A. Because I remember the date and the paper in which the article appeared, and knowing the date of the paper I know I was out of the city on that date.

3. What date was it?

287 Objected to as immaterial and incompetent.

A. At this time, I could not answer.

4. How do you know it was on that date that you were out of the city if you cannot tell the date?

Objected to same grounds.

A. I say that at the time I read the article I noticed the date of the paper in which it appeared but the date I have now forgotten, the fact remains in my mind, however, that after noticing the date of the paper in which it appeared I said to myself at the time: "I wonder who wrote this," because I was out of the city. It came to me instantly that I was out of the city after seeing the date of the paper.

5. Do you still refuse to state where you were on that day?

A. I refuse to answer that question on the advice of the city attorney.

6. That article appeared in one of the regular issues of that paper, did it not?

A. I could not tell you whether it was an extra or regular issue.

7. But the fact is that it did appear in the Chicago-American, the paper with which you are connected?

Ans. Yes sir; but let me say here that so far as the gas situation for the Chicago-American is concerned—interrupted.

Mr. MANSFIELD: Just answer the questions propounded to you and nothing else.

The WITNESS: All right sir.

8. You say you did not ask the witnesses any questions during their examination in this case, did you suggest any questions to be asked or form any questions to be asked by counsel for the city.

Ans. I may have suggested the form of some questions to him.

288 9. And the substance of the questions?

A. I might have, yes sir.

10. How long were you engaged in the business of suggesting questions or the form or substance of questions to be asked the witnesses during the recent hearing of this case at Chicago?

A. Do you mean on the days I appeared at the hearing in Chicago?

11. How long were you engaged in that?

A. I could not say.

12. Have you no judgment as to the length of time?

A. I could not say.

13. Didn't you come into the room about 11 o'clock in the morning and remain the balance of the day?

A. As to the question of time, I have forgotten; I cannot recall the exact hours.

14. Did you come in before or after lunch time that day?

Mr. MANSFIELD: I object; it seems to me the master ought to make some ruling on this matter for it is immaterial and encumbers the record.

Mr. RITSHER: Why don't you admit, then, that he came in at 11 o'clock and stayed the balance of the day.

Mr. MANSFIELD: Certainly, I will.

Complainant's counsel in connection with the testimony of this witness offers in evidence the article in question, appearing on page 10 of the Chicago-American of date November 15, 1901; also, offers in evidence another article appearing in the same paper on page 4 of date of November 19, 1901.

Objected to as immaterial, incompetent, irrelevant and not proper re-direct examination.

The MASTER: The articles may be admitted subject to the objection.

288¼ Whereupon said articles were read to the master in the words and figures following to-wit:

Chicago American, November 15, 1901.

Gas trust must pay cash for favors.

Vice President Little testifies that desired legislation costs the Peoria companies ten per cent. of profits.

Francis W. Little, vice president of the Peoria gas trust, was yesterday subjected to cross-examination before the special chancery court in the Chicago National Bank building, where is being tried the rights of the citizens of Peoria to legislate for 75 cent gas.

The official of the trust held tenaciously to the story and figures he gave in the direct examination. Henry Mansfield, city attorney of Peoria, went deep into the affairs of the gas company and demanded to know upon what basis Mr. Little's figures were given. The examination of the witness, it is said, may consume the remainder of the week.

Mr. Little maintained in the cross-examination that 6½ per cent. upon investment should be allowed for cost of repairing the plant, the danger of new processes accruing from the possibility of the discovery of natural gas making the artificial plant valueless and probable electrolysis to pipes which would incur much expense. He furthermore maintained that 10 per cent. should be allowed for the profits of the corporation and the defraying of expenses in the effort to secure favorable legislation. "What do you mean by an effort to secure favorable legislation?" asked Attorney Mansfield. "I do not mean bribe money," replied Mr. Little with a smile. "The gas companies must spend money to secure legislation that they are entitled to in all justice. Even though they are entitled to it there is no certainty of receiving it and in the event of failure there is a dead loss."

288½ Chicago American, November 19, 1901.

Peoria gas trust dividend is 53 per cent.

Cost of manufacture shown in court to be 18 cents and it is sold to consumers for $1 a thousand cubic feet.

Figures for last August show that $495.19 was paid for making illuminant, which brought company $2,950.

The Peoria 75 cent gas fight, which was on hearing for several weeks in Chicago, has been adjourned to Peoria, where it will be resumed Thursday. The reason for taking the case to Peoria was to give the officers of the Peoria gas trust an opportunity to produce their book before Master in Chancery Pinckney, who is taking the testimony.

City Attorney Mansfield of Peoria, who is conducting the people's side of the case, has fortified himself with a knowledge of the Peoria gas plants, which is as comprehensive and detailed as that of the gas officials.

Costs 18 cents a thousand.

The cost of making gas in Peoria is about 18 cents a thousand. In the month of September 1901, the net cost of making gas in Peoria was 18.6 cents in the month previous, August, 1901 the net cost of making gas by the Peoria Gas and Electric Company was less than 17 cents, or, to be exact 16.78 cents.

Thus far the only official of the Peoria Company who has been on the witness stand is Francis E. Little vice president and manager of *of* the trust. Mr. Little was not asked by his own lawyer what it cost *it cost* his company to make gas. It is promised, however, that he will be asked that question, and when he is Mr. Mansfield will be in possession of the reports of the gas company and prepared to ask some annoying questions.

According to the confidential reports of the Peoria Gas and Electric Company every item in the cost of making gas in the company's plant is known.

289 Chicago-American, November 19, 1901.

Specified figures given.

For the month of August last the Peoria Gas Company paid for material $1,420.63, and for labor $752.84 making a total outlay for the month of $2,173.47. The residaals or by-products, were sold for $1,678.28. This leaves a net cost of the gas for the month of August at $495.19.

In that month the net sale of gas was 2,950,000 cubic feet. At $1 a thousand this would be $2,950. After deducting the cost of making

the gas, this leaves a net profit for the month, of $2,454.81. That means $30,455.32 net profit for a year.

The output of gas for that month was small, however, compared with the present consumption in Peoria. The reports of the company for November 1, 1901, shows that the consumption of gas in Peoria that day was 549,300 cubic feet. That would be $17,028,301 cubic feet a month. Deducting 2 per cent. for leakage, the net consumption of gas for the month would be 16,660,000 cubic feet. At $1 a thousand this would be $16,660.

Profits estimated.

At the rate of 17 cents a thousand cubic feet, that amount of gas would cost the gas company $2,832.20. The net profit for the month to the gas trust would be $13,827.80. Using these figures as a basis the gas trust's profits for the ensuing year at $1 a thousand cubic feet would be $165,933.60. Taking the value of the plant at $300,000, which is an excessive valuation on the actual value of the working plant, the dividend would be for the year 53 per cent.

If the city of Peoria were to win its suit for 75 cent gas the net increase of the gas trust would be reduced to $12,450 a month, or $140,400 for the year. This would give the gas trust owners a dividend of 39.75 per cent.

290 15. I will ask you if you are not here at the present time for the purpose of participating in the further examination of witnesses in this case?

A. That remains to be seen, so far as my connection with the case is concerned; I think Mr. Mansfield is the gentleman who is conducting the city's case.

16. So far as you know, what are you here for?

A. I am here to represent the Chicago-American in the fight.

17. In what fight?

A. In this gas case.

18. In this particular case?

A. No, not in this particular case but to represent the American so far as evidence is concerned for facts and news.

19. And also to assist in furnishing facts in the proceedings of the trial?

A. I am here as the representative of the Chicago-American newspaper.

Re-cross examination by Mr. MANSFIELD:

1. Does any one else furnish articles on the gas question to the Chicago-American except yourself?

A. Yes, sir, there are two other gentlemen that I know of.

2. Who are those gentlemen?

A. A man named Webster and a man named O'Shaunessy: They have been connected with the American in this fight.

291 JOHN H. EUSTIS, called on behalf of complainant, being first duly sworn, testified as follows:

Direct interrogatories by Mr. IRWIN:

1. State your name, age and residence.

A. John H. Eustis; 45; Chicago, Ill.

2. In what business are you engaged?

A. In the manufacture and distribution of gas.

3. What position do you hold with reference to the business named?

Ans. I am engineer of the People's Gas Light & Coke Co. of Chicago, and have held similar positions in the business for the last 30 years.

4. Are you familiar with the business of manufacturing and the distribution of gas?

Ans. Yes sir.

5. How long have you made that a specialty?

A. About 30 years.

6. Are you familiar with the different processes entering into the manufacture of gas?

Ans. Yes sir, most of them.

7. From the time you commenced the study of the manufacture and delivery of gas for consumption, what different positions have you held during that period in that line or profession?

A. I commenced business in the gas industry about 30 years ago and during the past 20 years I have filled positions for different companies as follows:—I was superintendent of the Consumers' Gas Light & Fuel Co. of Chicago; engineer of the Chicago Gas Light & Coke Co.; I was also employed in the gas works at Rutland, Vermont.

8. And how long have you held your present position?

A. About 4 years.

9. Will you give us a brief history of the art of manufacturing gas for illuminating or fuel purposes?

292 A. Coal gas was first successfully introduced for illuminating purposes about 100 years ago in the city of London; it was introduced in this country in Boston about 1822 and in the city of New York about 1827 and in the city of Philadelphia about 1835. The process at that time was known as the coal gas process, and the system of furnaces in use was the old open fire or common furnace and at that time about the benches were arranged with 3 retorts per bench.

10. What advancement or improvement- have been made in the manufacture of coal gas in the last 25 years?

A. This common old style furnace, as I have stated, was in use at that time, but about 20 or 25 years ago regenerative furnaces were introduced and that style of furnace has been very generally used since that time. In this style of furnace the retorts vary from 3 to 9—9 being most generally used at the present time, that is, 9 retorts to the bench.

11. What changes or improvements have been made in the purification of coal gas during that period?

A. In the early history of coal gas making, lime was used almost exclusively for purifying purposes; about 20 years ago, as nearly as I can remember, oxide of iron was substituted for lime and has been used almost exclusively since that time; at a few works throughout the country some lime is still used but not to any great extent.

12. Will you give in detail the present process of manufacturing and purifying gas from the time the coal enters the retort until it is ready for delivery to consumers?

A. In the process of manufacturing coal gas, the system of retorts are heated to the proper temperature by means of regenerative furnaces which are placed underneath the retorts and when the
293 proper temperature has been obtained bituminous coal is placed in the retorts and due to the heat, the gasses are driven off from the retort through into the hydraulic main and from that point to a condensing and washing apparatus consisting in the first instance generally of a primary air condenser; from there up to what is known as a P. & A. tar extractor, or other apparatus of that character, from there to a secondary air condenser and on to the multi-tub-lar or tub-lar condenser, from that point to washers and finally into the scrubbing apparatus; from that point it goes on to the purifying department where it goes through the process of purification and from there to the station meter where it is registered as to volume and finally to the storage holder and from there to the consumer.

13. What are the bi-products now produced in the manufacture of coal gas?

A. The bi-products produced in the manufacture of coal gas is carbon, or what is known as coke, tar and ammonia.

14. Give a brief history of the bi-products produced in the manufacture of coal gas and their development?

A. Do you wish to know the quantity of each that is produced per ton of coal?

15. Just a brief history of their development—when they began to produce those bi-products and as to the market for them.

A. So far as my knowledge of the business goes, ammonia, coal tar and coke have been produced during all of the time that I have had any experience in the business—that has been one of the parts of the business.

16. Has there been any development, during your experience in that line of business, in the manner, quality or amount of the bi-products produced from the manufacture of gas?

294 A. Yes, the amount of tar produced per ton of coal averages about 12 to 14 gallons per ton of coal; concentrator ammonia about 4 pounds to the ton of coal; and the amount of coke produced is about 65% of the amount of coal put in the retort.

17. Under the plan of modern benches used in the manufacture

of coal gas, has there been any improvement as to the amount of fuel required in driving off the gasses from the coal?

A. Yes sir, since the adoption of the regenerative furnace, the quantity of fuel required to produce the necessary heat for distilling the coal has been greatly reduced, that is to say, the amount of coke necessary to produce the heat has been reduced from what it was in the old style benches.

18. With what different coal gas plants are you familiar and what different coal gas plants have you examined during the past 25 years?

A. As stated before, I was first connected with the People's Gas Light & Coke Co. at Rutland, Vt.; they manufactured coal gas with the old common furnace benches, 3 retorts to the bench; I have visited and examined coal gas plants at Milwaukee, Wis., Louisville, Ky.; there they have what is known as the incline retort system; Evanston, Ill.—they have the regenerative furnaces, I think, with 9 retorts to the bench. I have also visited the works at Waukegan, Ill.—they have regenerative furnaces there; I have also visited the works at Worcester, Mass.—they have the coal gas process and water gas also. I have also visited a number of others which I do not recall just now

19. What development has been made in the last 25 years in the use of coal gas?

A. It has been used for fuel purposes as well as illuminating purposes.

295 20. About how long since has it become in general use for fuel purposes?

A. Well, I have known coal gas to be used for fuel purposes for something over 10 or 15 years at least.

21. How long since in your judgment has it come into general use for fuel purposes?

A. Well, it has been used for fuel purposes and for general use to my knowledge for 30 years.

22. Do you mean for fuel purposes?

A. For fuel purposes and illuminating purposes.

23. Is it not a fact that the use of coal gas for general fuel purposes in cities is of very recent date—I don't mean for exclusive purposes but for general use for fuel purposes in cities?

A. As a matter of fact, both coal gas and water gas have been used extensively for fuel purposes for only a short time—I think most generally within the past 5 years, but I have known it to be used as I say earlier than that.

24. Have you examined the plant of The Peoria Gas & Electric Co., the complainant in this case in the city of Peoria?

A. Yes, sir.

25. You have visited complainant's plant on several occasions, have you not?

Ans. Yes, sir.

26. About what time did you first see the plant of the Peoria Gas & Electric Co. in its completed condition?

A. As nearly as I can remember about one year ago.

27. I will now call your attention to Exhibit "1" in this case and ask you if it is a fair representation of the plant of the Peoria Gas & Electric Co. in the city of Peoria in its condition at the time you saw it about a year ago?

Defendant objects to the witness testifying from the plat Exhibit "1" unless he describes in the first place what the plant of
296 the Peoria Gas & Electric Co. contains in a general way.

A. From the examinations I have made of the plant of the Peoria Gas & Electric Co. I should say that this plat Exhibit "1" represents the plant as I saw it at that time.

28. Will you please describe the plant of the Peoria Gas & Electric Co. with reference to its general equipment and capacity?

A. In the examination of the plant of the Peoria Gas & Electric Co., I was impressed with the way the plant was laid out and, in my opinion, it is a well designed plant and capable of doing the work for which it was designed in every way in a first class manner.

Defendant objects to the foregoing answer as not responsive and moves the court to exclude it.

29. Will you describe the parts in detail including the machinery, buildings and apparatus that is contained in the plant of complainant company?

A. The plant of the Peoria Gas & Electric Co. consists of a retort house in which are located 7 benches of retorts, 9 retorts in each bench, with the necessary hydraulic mains and connections for the same; a primary air condenser, two exhausters of the Root pattern, a secondary air condenser; a tubular water condenser; then there are two other washers and I believe a washer known as the Choller washer; two water scrubbers; two purifying boxes, with the necessary connections and supports; station meter; gas holder; one oil tank; tar tanks and ammonia tanks; coal storage sheds and coke sheds.

30. Did you find engines, boilers and their connections?

A. Ammonia concentrator; I found two boilers, pumps and water tanks, elevators, conveyors and the necessary fittings and machinery for operating meter and street department. That is about all I think
of just now.

297 31. Are you acquainted with the general location, size, improvements and topography of the city of Peoria?

A. Yes, sir, I have a fair knowledge of the city, as I have visited Peoria a number of times.

32. Assuming the population of the city of Peoria, and territory tributary to said plant of complainant, is about 63,000 inhabitants, what in your opinion should be the size, nature and character of a

gas plant to be constructed for the manufacture and sale of coal gas in the city of Peoria?

A. In my judgment the plant as erected by the Peoria Gas & Electric Co. is of ample capacity to take care of the business of the city and I think, if I were designing a plant, I would design one of about the same capacity. My judgment of this matter would be influenced, of course, to a certain extent, because of the fact there was already a gas plant existing here and at the most this plant could expect to get but a part of the business.

33. As an expert what is your opinion of the plant of the Peoria Gas & Electric Co. with respect to its fitness as to size, character and equipment for the manufacture and sale of coal gas in the city of Peoria, taking into consideration the element of future growth?

A. In my judgment the plant is of sufficient capacity, and I think it is designed on lines which make it as economical as most plants for the manufacture of coal gas throughout the country.

34. What in your judgment is the nature and character of the plant of the Peoria Gas & Electric Co. with reference to the manufacture and delivery of gas economically considering the location and local conditions?

A. I think the location of the plant is very good indeed, about as good a location as could be had; it has good railroad facili-
298 ties, good water facilities and I think its arrangement is all right in every respect for the economical manufacture and delivery of gas.

(The MASTER:)

35. Are you speaking now with reference to its location for that purpose or as to the construction and location combined for that purpose?

A. As to the construction and location combined.

(Mr. IRWIN:)

36. Are you familiar with the cost in the city of Peoria, during the years 1899 and 1900, of the various items of labor, machinery and material entering into the construction of a gas plant of the capacity and character of the plant of the Peoria Gas & Electric Co.?

Objected to because no proper foundation has been laid showing the familiarity of the witness with the cost of labor, machinery or material in the construction of a gas plant.

A. Yes sir.

37. From your examination of the plant of the Peoria Gas & Electric Co., and from your knowledge of the cost of construction of similar plants, are you able to state what would be the reasonable cost price of the plant and mains of the Peoria Gas & Electric Co.?

A. Yes sir.

38. From your examination of the plant of the Peoria Gas &

Electric Co. and from your knowledge of the cost and price of labor, machinery and materials in the city of Peoria, please state what in your opinion would be the reasonable cost of the construction of said plant, fully equipped tested and ready for the delivery of gas to consumers, assuming that the said plant was contracted for and erected during the year preceding September 1, 1900, excluding from your estimate the cost of real estate and also excluding the cost of mains, and services, and other expenses outside of the construction and equipment of the manufacturing property—give items
299 in detail if you can?

A. I estimate the cost as follows:—Retort house $12,000.; purifying house and boiler house $18,000.; office and meter shop $4,000.;—the meter shop refers to the shop where meters are stored and repaired—meter house $2,000.; oil house $500.; coal & coke sheds $12,000.; stack of benches, connections, hydraulic mains complete $23,000.; two purifyers and connections complete $7,000.; condensing apparatus $12,000.; 2 boilers $3,000.; ammonia concentrator $2,500.; holder and foundation $28,000.; meter and connections $3,000.; fixing bench $2,500; pumps, water tanks, elevators, and conveying apparatus $3,500.; tar and ammonia wells $3,000.; photometric and chemical apparatus $1,000.; Connelly governor and connections $1,500.; gas mains and valves $4,500.; gas, steam and water pipes, sewers and tools $5,000.; I have added 10 % for sundries and superintendence in the erection of plant, etc., $14,700.; making a total of $162,700. for the manufacturing plant exclusive of real estate.

39. Were those valuations taken by an examination of the plant on the ground in the city of Peoria where located?

A. Yes sir, I have visited the plant on two or three occasions and have noted the different apparatus and placed the value on that basis.

41. Who was with you, if anyone, at the time you made this investigation at which the prices you have named were fixed?

A. Mr. E. G. Cowdery was with me and the superintendent of the works.

43. Did you make any estimate at that or any other time of the cost of the mains and the laying of the same in and through the several streets and highways of the city of Peoria?

A. Yes, sir, we did.

44. Where did you get the data from which you made
300 such estimate?

A. From the books and records of the Peoria Gas & Electric Company.

45. State what estimates you made as to the cost of the mains and the laying of the same in and through the several streets and highways of the city of Peoria, based upon the data given you?

A. From an examination of the records, books and maps of the company we found that there were 1709 feet of 16 inch main laid in the streets at $2.25 per foot, amounting to $3957.75.

46. Did you get that cost from your examination of the reco
or simply the size and number of feet?

A. We simply got the size and number of feet of mains from
records. 21,229 feet of 12 inch pipe at $1.50 per foot, amounting
$31,843.50; 3483 feet of 10 inch pipe at $1.00 per foot, amount
to $3483.; 19,465 feet of 8 inch pipe at 90 cents a foot, amount
to $17,518.50; 12807 feet of 6 inch pipe at 70 cents a foot, amou
ing to $8,964.90; 79,486 feet of 4 inch pipe at 40 cents a fo
amounting to $31,784.40, making a total of $138,229 feet a
total cost of $97,562.05. We found that about 37,864 feet of th
mains were laid in streets and alleys under pavement and we es
mated the cost of the paving at about $1.00 per foot, amounting
$37,864., making the total cost of mains $135,426.05.

47. Do you mean in your answer that in each instance the s
and length in feet of each pipe was secured from the records of t
company and that the cost of the pipe and the laying of the sa
were your estimates?

A. The number of feet of pipe of each size was taken from t
records of the company and as shown by its map, but the cost
the mains was made up from our own figures and our own exp
rience in the work of laying gas mains.

301. 48. That includes the labor and repaving?

A. Yes, all the work complete.

49. Did you in a similar manner estimate the cost of laying t
service pipes from the main into the premises of the consumers?

A. Yes sir.

50. Please give us that estimate?

A. The number of services, as shown by the records of the com
pany, was 2426, the average length of each service being estimate
at about 85 feet. In fact, we figured them at 85 feet each at 2
cents per foot or $21.75 each, making a total of $52,445.

51. Did you make any estimate of the service tools required i
the laying of the mains and service pipe?

Objected to as leading and suggestive.

A. Yes sir.

52. What if any estimate did you make of the cost of the servic
tools required in the laying of the mains and services mentioned?

A. The estimate for the cost of tools to be used in the street and
meter departments and for the work of laying mains we estimated
at $4,000.

53. Did you receive any data as to the number of meters used
and owned by the complainant company?

Ans. Yes sir.

54. Did you make an estimate as to their cost?

A. Yes sir.

55. What was the number of meters and the estimate you made
as to the cost of such matters?

A. According to the records of the company, it has 2140 meters

and we estimated the value of the meters and connections complete at $8 per meter or a total of $17,120.

56. In your estimate heretofore given as to the cost of the plant of the complainant company in the city of Peoria, did you include in your estimate any amount for the legal organization
302 of the company and the equipment and organization of its business office, cost of advertising, soliciting, etc.

Ans. No sir.

57. What in your judgment would be the cost of equipping and organizing the office of the Peoria Gas & Electric Co. in the city of Peoria, including the expense of testing the plant ready for the delivery of gas to consumers, that is, the office equipment, books and everything?

Objected to because no foundation has been laid showing that the witness is familiar with the cost of furnishing such an office and the cost of office supplies.

A. We estimated the expense of the material and furniture, fixtures, testing apparatus, etc., to be about $13,000.

58. Does that include the legal organization of the company? such as attorney's fees, securing franchise, etc.?

A. No sir, I made no estimate and I don't know that either of us discussed that point, because of the fact it is an expense which is pretty hard to determine under the conditions which existed here at the time.

59. It is a necessary expense, however, in the organization of a company and its equipment for business?

Ans. Yes sir.

60. What in your judgment would be a proper candle power in the manufacture of coal gas for general use?

A. 17 to 18 candle.

61. What elements or forces contribute to the depreciation of a coal gas plant and its mains and how and to what extent do they act in your judgment?

A. In the case of the plant or manufacturing departments there are many causes which tend to rapidly depreciate the value of a plant. First, the retort benches. They are constructed of
303 fire clay material, the flue arrangement is very carefully calculated out and if in starting up the benches they are heated through rapidly—unequally, expansion and contraction takes place, often disturbing the internal construction of the flue work, often in overheating it causes sagging of the retort, oftentimes breaks in different places causing leaking. In the purifying department, since the use of oxide of iron has been adopted, the oxides attack the cast iron work of the boxes and covers and the sulphur and the acid attack the metal and it is rusted out, cut out in a very short time. The drums of meters, which are very expensive, are cut out or rusted out by coming in contact with the vapor of oxides carried over; I have known meter drums to be entirely de-

stroyed in the course of three or four years. The holders are subjected to considerable wear and tear; in the winter season of the year when extremely cold I have known the water in the pits to be frozen and the holders will become locked and in attempting — open them they have been strained and broken. In the matter of buildings, there are constant changes going on and a great deal of expense incurred in keeping them in proper repair. Those are some of the items in the manufacturing plant.

Now, in the case of street mains. The destruction of the mains go- on rapidly, due to several causes; among some of these causes is the fact that the streets and alleys have been filled and graded with cinders, boiler ashes, street sweepings and sometimes garbage, and these various materials create acids which attack street mains and cause them to rust out in a short time. There is another matter which I wish to speak of in particular, that is destroying the mains and services of gas companies and water companies very rapidly at the present time, and I refer to the matter of electrolysis;
304 I think that is one of the greatest dangers or hazards that the gas mains and services of a gas company has to contend with today; in my own experience I have known gas mains so seriously affected from electrolysis that it is possible to take the pipe and whittle or cut it with a knife; I have seen services perforated and I think that is a matter that is bound to cause great loss to gas companies in the near future.

62. In what manner in your opinion does good business policy require this depreciation to be taken into account in conducting the business of a coal gas company?

A. I think the better way to take care of depreciation of that kind would be to charge off yearly about 5% of the total cost of the plant, not including real estate.

63. Does that include mains, services, meters, etc.?

A. That includes the entire manufacturing plant complete, mains, services, and meters—all apparatus used in the manufacture and distribution of gas.

(The MASTER:)

64. Do I understand you so say that that amount charged off annually from the original cost of the plant is adequate in your judgment to replace and repair the depreciation from the sources you have referred to?

A. I should say in my judgment that ought to be sufficient, although, of course, in some localities and under some conditions it might not be sufficient.

(Mr. IRWIN:)

65. It is a conservative estimate?

A. I consider it a conservative estimate, yes sir, and I would add further that I believe a careful examination into this subject will fully substantiate my position.

66. Aside from general depreciation, concerning which you have testified, what are some of the hazards of the gas business as an investment?

A. In the first place, electricity enters into the competition
305 which gas companies have to meet very largely and I sometimes think that electricity may some day supercede gas for illuminating purposes and gas may be used for fuel purposes only.

67. Are any changes taking place in the methods of manufacture?

A. There are other matters that I might add which enter into its hazard and that is the fact that there is constantly going on improvements in the machinery and apparatus for the manufacture of gas.

68. As those new improvements come out, what effect has it upon the old machinery of the company?

A. To be improvements they must necessarily effect the economical production of gas and a gas company equipped with old style apparatus, in order to meet this competition, must necessarily adopt the new machinery which, of course, involves a large expense and a waste of money or money invested in other apparatus.

69. What effect does natural gas in places have upon the hazard to an artificial gas plant?

A. I have in mind several places where natural gas has come into competition with artificial gas and it has, of course, very seriously affected the return on the investment.

70. From your experience and observation in the management and investigation of gas plants, are you able to state what would be a reasonable and fair return to investors taking into consideration the hazards of the investment on account of the new inventions and the competition concerning which you have testified?

A. In my judgment 10 % annually would be a fair return on the investment in such properties.

71. What would be a fair and reasonable return to investors upon the cost of a gas plant taking into consideration the hazards of the business referred to?

306 A. 10 % annually on the total capital invested.

72. Assuming that the Peoria Gas & Electric Co. commenced the manufacture of gas at its plant about May 1, 1900, for delivery to consumers and on September 1, 1900, was manufacturing at the rate of about fifty million cubic feet of gas per year; and assuming that the cost of material and wages of labor and the general expenses of operating were fair and reasonable, considering the location of the plant; and assuming further that the management and superintendence of the plant was sufficient and competent; and assuming that the cost of gas coal delivered on board cars in Peoria at that time was $2.65 per ton, what in your opinion would be the actual cost per thousand cubic feet of gas manufactured and delivered to consumers by said company on or about September 4, 1900,

excluding the value of residuals and excluding also any charge for depreciation or interest on the investment?

Objected to unless it is shown the witness is familiar with the cost of labor in the manufacture of gas in the city of Peoria and is familiar with the reasonable price paid for such labor and materials in the city of Peoria as appertains to the manufacture of gas?

A. In giving you my estimate of what would be a fair cost for the manufacture of gas it would be rather difficult for me to give you a figure which would be very close to the actual cost for that period of time, because of the fact that the plant was a new one and the operations were such that it had not got down to a good working basis; but ordinarily for a plant of this size and capacity I should say that about 80 cents per thousand cubic feet would be a fair cost.

73. Is that assuming that the plant had been running a sufficient time to get into good economical operation?

Ans. Yes sir.

307 74. How long in your judgment does it ordinarily take for a new plant to become in good working order for the economical manufacture of gas?

A. Anywhere from four to six months.

Cross-examination by Mr. MANSFIELD:

1. You are a brother, are you not, of the Mr. Eustis who is superintendent of the Peoria Gas & Electric Company?

Ans. Yes sir.

2. You are the engineer of the People's Gas Light & Coke Co. of Chicago?

Ans. Yes sir.

3. The same men that own the controlling interest in the Peoria Gas & Electric Co. own a controlling interest, do they not, in the People's Gas Light & Coke Co. of Chicago?

Objected to as incompetent, immaterial and not cross examination.

A. I do not know anything about that at all.

4. There is a suit pending now, is there not, against the People's Gas Light & Coke Co. of the City of Chicago which is based practically upon the same cause of action as is this suit brought by the Peoria Gas & Electric Co. against the City of Peoria?

Objected to same grounds as before and also as not the best evidence.

A. I don't know of my own knowledge that that is a fact; I have heard something to that effect but have no positive knowledge it is so.

5. You have not been called upon to give any evidence in any such kind or character of a case in the city of Chicago?

A. No sir.

6. In the early manufacture of gas, or when gas was first discovered, for what purpose was the gas used?

A. For illuminating purposes.

308 7. What do you mean by illuminating purposes?

A. I mean for the lighting of homes, buildings, stores and business places.

8. What was the character of the furnace and the retorts used for the manufacture of gas when gas was first discovered?

A. The style of furnace used when I first became familiar with the business—interrupted.

9. I am not asking you when you first became familiar with it—I am asking when gas was first discovered?

A. The kind first used so far as my information goes was what was known as the open fire or common furnace.

10. That was the furnace used upon the first discovery of gas?

A. Yes, so far as my knowledge of the subject goes in the manufacture of coal gas.

11. Is your knowledge from your own personal experience in the manufacture of gas or is it a theoretical knowledge obtained from the study of the manufacture of gas?

A. My knowledge of the coal gas business is a knowledge one obtains from actually doing the work—working in the retort house, charging and drawing the retorts and doing all or a part of the necessary work to manufacture and distribute gas.

12. Why was the change made in the manufacture of gas from the use of lime in the purification process to the use of oxide of iron?

A. One of the chief reasons for the adoption of oxide of iron as against lime was the fact that very large quantities of lime were necessary to do the amount of work that oxide of iron would do; also the further fact that it was difficult to dispose of the lime after it had been used; lime can only be used once for purification purposes unless it receives a revivifying treatment whereas oxide

309 of iron can be used over and over for a period of years; I might say also economy is one of the reasons for the change.

13. In the use of oxide of iron is there any bi-product obtained from its use that can be sold in the commercial world?

A. Yes sir, in the use of oxide of iron for purification purposes there is a constant increase in the percentage of sulphurous compounds which the oxide holds and I have known of it being treated for the purpose of extracting those sulphurous compounds and other chemicals.

14. Then the sulphur products obtained from the use of the oxide of iron in your opinion is a bi-product in the manufacture of gas?

A. There is, as I say, a substance which is extracted from the oxide of iron, but it is not of sufficient consequence to cause gas companies to take any steps to retain it; they simply sell the spent oxide, as it is called, to chemists who are in the manufacture of chemical

matters and they make some use of it; gas companies to my knowledge have never done so.

15. And they have no apparatus connected with their plant for the purpose of extracting these sulphurous compounds?

A. No sir. We have apparatus in our plants for the purpose of determining the percentage of sulphur which the oxide contains and when they have reached a certain percentage we discard the use of them because of the fact the oxide will not purify the same amount of gas under those conditions as it formerly did.

16. What do you mean when you say "our plants"?

A. I refer to the plants of the People's Gas Light & Coke Co.

16. How many plants has the People's Gas Light & Coke Co.?

Complainant's counsel objects to the question as immaterial and not cross examination and directs the witness to refuse to
310 *refuse to* answer the question.

A. Under the advise of counsel, I refuse to answer the question.

17. In the manufacture of gas, is there any such bi-product known to the commercial world as nap-thaline?

A. In the manufacture of gas naphthaline is produced in small quantities but not to such an extent that it can be made as a bi-product exactly to be disposed of and returned in revenue.

18. Do gas companies when they produce any of that dispose of it?

Ans. Not to my knowledge.

19. Is there a gas plant in the United States, to your knowledge, that does do that?

A. There is not a gas plant that would manufacture or dispose of naphthaline as a bi-product; if it did it would be doing business under a very wasteful process according to my way of thinking because of the fact that naphthaline, which is condensed out of the gas, is one of the properties which acts as an illuminant and adds to the value of the gas for illuminating purposes.

20. In the process of manufacture where is it obtained from the gas?

A. In the manufacture of coal gas, naphthaline is one of the enrichers which go to enrich the gas and in the washing and condensing process by two suddenly lowering the temperature, or other local conditions, naphthaline may be precipitated and thus lost.

21. You say by proper treatment naphthaline is considered as an enricher of gas. Do you know whether they have the means of treatment, as indicated by you, in the Peoria Gas & Electric Co., to convert naphthaline into an enricher of gas?

A. I am not prepared to say whether the plant of the Peoria Gas & Electric Co. manufacture or generate naphthaline. In fact,
311 I am sure they would take all possible steps in their power to prevent it.

22. In your opinion, as an expert, is the gas plant, as constructed and installe- by the Peoria Gas & Electric Co., a modern

plant and one of the best equipped plants that could be installed at the time of its installation in the city of Peoria for the manufacture of gas?

A. Yes sir, in my judgment and opinion, the plant of the Peoria Gas & Electric Co. has all of the modern apparatus and is well equipped in every respect to manufacture coal gas as economically as any other plant of its size in the country.

23. In your opinion, is the plant of the Peoria Gas & Electric Co. a modern and well equipped plant taking into consideration that said plant makes or is furnishing all the gas that is used in the city of Peoria?

Objected to as incompetent, immaterial, not cross examination and not supported by any evidence in this case and not pertaining to the issues.

A. In my opinion, as before stated, the plant of the Peoria Gas & Electric Co. is well equipped to take care of the business for which it was designed. I am not prepared to say it is capable of supplying all of the gas that might be needed in the city of Peoria;

24. What is the bench capacity of the Peoria Gas & Electric Co. per day?

A. The bench capacity of the Peoria Gas & Electric Co. under ordinary working conditions ought to be between 550,000 and 600,000 cubic feet—possibly 550,000.

25. What is the working capacity of the condensing plant of the Peoria Gas & Electric Co.?

A. The condensing, scrubbing, washing and purifying capacity of the Peoria Gas & Electric Co. was designed to take care of
312 about 500,000 or say 550,000 per day and I think it is fully capable of doing its work.

26. What is the capacity of the purifying boxes?

A. I should judge it would be from possibly say 600,000 to 800,000 per day; the plant, of course, is so arranged that at times one of these boxes may be empty, as the material therein becomes foul; at such times it is necessary that all the gas pass through one of these boxes, therefore one of them should be equal to the capacity of the plant in case of necessity.

27. What is the capacity of the storage holder of the Peoria Gas & Electric Co.?

A. 300,000 cubic feet.

28. What is the capacity of the ammonia condenser of the Peoria Gas & Electric Co.?

A. The capacity of the ammonia concentrating plant was also designed to take care of the maximum make of the plant and I think is capable of doing its work thoroughly.

29. What is the size and make of this ammonia concentrator?

A. I could not give you the actual dimensions because I have never taken a measurement of them.

30. What would be the size necessary to take care of the manufacture of 600,000 cubic feet of gas per day of 24 hours?

A. The size of the plant necessary to take care of that amount of gas should be about the size of the one they have there. As I say, I have not gone into a measurement of it but it is capable of taking care of about 50 or 60 tons of coal per day.

31. You state you have been down to complainants' plant at various times when the plant was working. State whether or not from your examination of that plant the ammonia concentrator would take care of 50 tons of coal per day?

Objected to as assuming the witness had said certain things
313 he did not testify to.

32. Well, from your inspection of the plant, state whether or not the ammonia concentrator of the Peoria Gas & Electric Co. will take care of 50 tons of coal per day?

A. As I said, in investigating the plant, I looked over the apparatus but did not take the exact measurement of it in every detail, but from the size and general appearance of it, as compared with other apparatus in use for that purpose, I should say it would do its work.

33. In estimating the cost of the ammonia concentrator, did you estimate that cost upon the size of the ammonia concentrator as found there or did you estimate it upon the ammonia concentrated which should take care of the product of that gas plant?

A. In estimating the cost of the ammonia concentrator from the view I had of it, I estimated on the plant as I saw it there.

34. That is, in relation to the other parts of the plant and not as to its size?

A. In relation to the plant generally what would be required to do the work.

35. Then if this ammonia concentrator is not sufficiently large to take care of 50 tons of coal a day, you have made a mistake in your estimate of the cost of that plant?

A. If the plant is not up to what I believe it to be.

36. You are talking with reference to the ammonia concentrator?

A. Yes sir. In my judgment the plant has sufficient capacity to take charge of the requirements of the plant and I base——

37. (Interrupting.) And as an expert witness, you don't know what size amoonia concentrator would be necessary to take care of 50 tons of coal per day?

A. I know about what would be necessary from my expe-
314 rience with apparatus of the kind in the past.

38. What would be necessary?

A. Well, a plant for the size of the works at Peoria it would be necessary for it to be sufficient to take care of the amount of ammonia which would be produced from about 50 to 60 tons of coal per day.

39. What would be the size of such an ammonia concentrator?

The MASTER: What Mr. Mansfield means is, what sized ammonia concentrator would be required to take care of the ammonia produced from 50 or 60 tons of coal a day?

A. Well, they are generally rated in their capacity, with the number of tons of coal they are able to take care of; that is the way they are bought; when we buy a set of apparatus for use in works of that capacity we specify that the apparatus must have a capacity of taking care of a certain number of tons of coal per day and, as a rule, we do not go into the height *h*, depth or diameter or things of that kind, but that it shall have the capacity of taking care of a certain amount of coal per day.

40. Will the size of that ammonia concentrator take care of 50 tons of coal per day?

Ans. In my judgment it will.

41. Where was that ammonia con-trator manufactured, if you know?

Ans. I think it was manufactured in Michigan by the Michigan ammonia works.

42. In the manufacture of gas, is it customary to use air in the purification process?

A. Yes sir, in most of the works throughout the country today air is introduced to assist in the work of the purification of gas.

43. How much air do they generally use in that purification process?

315 A. Anywhere from one half of one per cent. to one per cent. of air.

44. From an examination of the plant of the Peoria Gas & Electric Co., what percentage of air would you recommend as an expert in the purification of gas?

A. I should be governed largely in my work by the candle power and other matters, but I should say one per cent.

45. What per cent. of air is used in the manufacture of gas for purification purposes by the Peoria Gas & Electric Co., if you know?

A. I don't know that they use any air at all.

46. Did you see any connections around that plant for the use of air?

Ans. No sir, I did not.

47. State whether or not in your opinion, as an expert, it is customary in the construction of a modern plant to have a tar still for the purpose of reducing the tar to pitch?

A. It is not customary as a rule for gas companies to distill their own tar products; they usually dispose of the tar products to parties or companies which make a specialty of that class of work.

48. Has the People's Gas Light & Coke Co. of the city of Chicago a plant for the distillation of the tar obtained from the manufacture of gas by them?

Mr. IRWIN: Complainant objects to the question as incompetent,

immaterial, and not cross examination, and I direct the witnes- not to answer. We are investigating no plant but the Peoria plant.

A. Under the advice of counsel I refuse to answer.

49. Have you knowledge of the fact as to whether they have or not?

Complainant's counsel objects to the question on the same grounds as before and instructs the witness to refuse to answer.

316 A. Under the advice of counsel I refuse to answer the question.

50. You have testified that you have been connected with various gas plants in the United States for the last 30 years—have you been connected with any gas plant during the last 30 years that owned a plant for the distillation of the tar obtained from the manufacture of gas?

Ans. No sir.

51. Does the cost price of gas decrease or increase in proportion to the volume of the gas manufactured?

A. The cost of gas in some of its accounts decreases as the volume of gas increases.

52. What do you mean by accounts?

A. I mean to say that some of the items of expense—what I meant to say was that the cost of gas decreases as the volume increases; some of the items which go into the cost of gas decreases as the volume is increased.

53. The Peoria Gas & Electric Co.'s plant in the city of Peoria consists of a stack of 7 benches which contain 9 retorts and each bench contains also a regenerative furnace of the full depth type for heating retorts; the gas after being driven off of the coal passes over into a preliminary air condenser and from this condenser it passes through a tar extractor, of the type known as P. & A., it then passes through two air coolers, then through 2 water coolers, then through a washer, then through 2 scribbers, after leaving the scrubbers the gas passes through purifyers containing oxide of iron for the purpose of removing the impurities and for the purpose of removing the impurities known as sulphuretic hydrogen and carbolic acid, after leaving the purifyers the manufacture of gas is complete and it then passes through a station meter where it is reg-

317 istered as to volume and forced into the storage holder from which it is distributed to the proper mains in the streets. From this description of the plant of the Peoria Gas & Electric Co. in the city of Peoria, would you consider it a modern and one of the best equipped plants that could be constructed at the present time for the manufacture of coal gas?

A. Yes sir, I would.

54. Supposing the plant was as described in the former question and to that plant so described there was added an ammonia condenser of a capacity to take care of the ammonia obtained from the

manufacture of 165,000 cubic feet of gas per day, would you then consider this gas plant to be a modern gas plant and so constructed as to reduce the cost of the manufacture of gas to the minimum, assuming that the gas plant as described does manufacture 500,000 cubic feet of gas per day?

Ans. No sir, I would not.

55. Supposing you had a plant consisting of a stack of 7 benches which contained 9 retorts each and each bench contained also a regenerative furnace of the full type for heating retorts; also a preliminary air condenser and tar extractor of the type known as P. & A.; 2 air coolers; 2 water coolers; washers and 2 scrubbers; 2 purifiers containing oxide of iron; a station meter and a storage holder; the bench capacity being from 500,000 to 600,000 cubic feet of gas per day of 24 hours, the condensing plant of a working capacity of slightly over 500,000 cubic feet per day; purifying boxes of a capacity of from 800,000 to one million cubic feet per day; a storage holder of the capacity of 300,000 cubic feet per day, and an ammonia condensing apparatus added of a capacity sufficiently large to extract all the ammonia from the gas made; also a tar still attached for the purpose of reducing the tar to pitch and extracting the several grades of oil from all the tar produced from the manufacture of the gas; also an apparatus for
318 purifying of the naphthaline produced from the manufacture of the gas; also an apparatus for extracting the sulphur and preparing it for commercial use; also a thoroughly equipped chemical laboratory attached through which a chemical analysis of the gas was made daily. Would not the plant above described be in your opinion a more modern and better equipped plant for the purpose of reducing the cost of the manufacture of coal gas to a minimum than the plant as described in my last interrogatory propounded to you on cross examination?

Objected to as incompetent, immaterial, not cross examination.

A. In answer to that question, I would say, that the works of the Peoria Gas & Electric Co. contain all of the apparatus enumerated in the question with the exception of a still for reducing the tar product for obtaining the sulphurous compounds, as I think you have stated, and the chemical laboratory. In fact, I believe the Peoria Gas & Electric Co. have at their works an amount of chemical apparatus sufficient for the proper guidance of its superintendent. As to the matter of apparatus for distilling tar, I am not prepared to say from any personal experience as to whether it would be an economical feature of that plant or not, that is, as to the tar distilling apparatus. All companies with which I have been connected have usually disposed of that at a figure satisfactory to themselves and have not gone into that matter.

56. From your expert knowledge of the manufacture of gas, would a plant as described above be a better equipped plant for the manufacture of gas and the reduction of the cost of the gas manufactured

to a minimum than the plant of the Peoria Gas & Electric Co. if such plant were located in the city of Peoria?

A. As I have before stated, I have had no experience with
319 any company having apparatus for the purpose of distilling tar or extracting sulphurous compounds, and I do not feel competent to answer that question exactly.

57. You don't know then?

A. I could not state of my own knowledge whether that is a fact or not.

58. What effect, if any, does the use of the Wellsbach burner by consumers of gas manufactured by gas companies have in reducing the commercial use of the electric light by merchants and residents of a city generally?

Objected to as incompetent, immaterial, not cross examination and not pertinent to the issues.

A. I have never made any investigation of the subject to ascertain just what effect the use of the Wellsbach burner or lamp has in reducing competition as against electricity; therefore I do not feel competent to answer.

59. Then you do not take into consideration the use of the Wellsbach burner by consumers of gas when you testify as to the risks of competition by electric light companies with reference to the sale of gas by gas companies for commercial lighting?

A. No sir, I did not take into consideration the matter of Wellsbach lights; it is quite apparent to the ordinary observer, however, that gas companies have and are losing constantly consumption of business on account of electrity.

60. The Peoria Gas & Electric Co. being engaged in the electric light business at the same time as the gas business would not be subject to any loss on that account would it?

Objected to as incompetent, immaterial, not cross examination.

A. I don't know that the Peoria Gas & Electric Co. is engaged in the business of electric lighting.

320 61. In the manufacture of gas, is there any carbon obtained which is of value in the commercial world?

A. Yes sir, there is a carbon which adheres to the retort in the process of the manufacture of gas.

62. How much is that a pound—what is the selling price of it per pound?

A. I could not state what the market price of that is at the present time, for I have not gone into that matter; it is but very small however.

63. From your knowledge as a gas expert what in your opinion would be the cost of coal gas in the holder of a company per thousand cubic feet to a gas company whose gas factory or works consisted of the following apparatus:—A stack of 7 benches which contained 9 retorts each and each bench contains also a regulatio

furnace of the full depth type for heating retorts; the gas then passing through to a preliminary condenser; from this condenser it passes through a tar extractor of the type generally known as P. & A.; the gas then passes through 2 air coolers; then through 2 water coolers; then through a washer and then through 2 scrubbers, from whence it passes through purifyers containing oxide of iron and afterwards passes into the holder. In answering this question, take into consideration also the fact that the bi-products, tar, ammonia and coke are extracted and sold, the tar for 5 cents a gallon, the ammonia for 8 cents a pound, and the coke at the average price of $3.25 per ton; also, take into consideration that 22% of the coke made is used in heating the furnaces and that gas coal costs $2.65 per ton f. o. b. Peoria; also, take into consideration all expenses of the company in the manufacture of gas up to the holder and all the revenues of such company obtained from the sale of residuals, coke, tar and ammonia, basing your estimate on a daily
321 make of 115,00– cubic feet of gas, and the boiler fuel, otherwise than the coke, worth $1.10 per ton?

A. In answering that question, I would say that the cost for coal and retort house labor, steam, fuel, labor for boiler firemen and engineers, cost of purification supplies, superintendency and repairs would be about 53 cents per thousand cubic feet in the holder.

64. Do you mean that including the selling price of the residuals?

A. That is the cost price including the value of the residuals. Deducting the residuals from that price, which I would estimate to be somewhere around 22 cents, it would bring the net cost of the gas in the holder at about 30 cents.

65. Knowing the cost of labor in the city of Peoria and taking the cost of gas coal to be $2.65 per ton, bench fuel $1.10 per ton, other than the coke used, what in your estimation would be the cost of the gas in the holder of the Peoria Gas & Electric Co. per thousand cubic feet of gas manufactured, based upon a manufacture of 500,000 cubic feet of gas per day?

A. On the increased amount of gas made as stated in the question, I should say that the cost of gas per thousand cubic feet in the holder ought to be something less than before stated and the net cost might be in the neighborhood of say 28 cents per thousand.

66. What would be the percentage of tar obtained from the manufacture of fifty million cubic feet of gas—the average percentage?

A. We figure, at least I estimate on the basis of this make we ought to get about 12 gallons of tar per ton of coal distilled.

67. What would be the percentage of the amount of coke
322 per ton of coal burned in the manufacture of fifty million feet of gas?

A. About 65 % of the tonnage of gas coal.

68. What amount of ammonia would be received from the distillation of one ton of coal in the manufacture of gas?

A. About 4 pounds.

69. From your experience as a gas expert and your connection with the business of gas companies, is it customary in the construction of a plant to provide the service pipes to consumers from the curb line into the residence or store room of the various customers who take gas?

Objected to as incompetent, immaterial, not cross examination.

A. I should say it is customary for gas companies to do that in all cases; companies I have been associated with for the past few years have furnished the necessary connections from the main in the street to a point inside the premises of the consumers free of charge.

(The MASTER:)

70. Do you mean by that to a point inside the house or lot?

Ans. Inside the house.

(Mr. MANSFIELD:)

71. What companies that you are connected with do that?

Complainant's counsel objects to the question as incompetent, immaterial, not cross examination and not pertaining to the issues in the case, and instructs the witness to refuse to answer.

A. Under the advice of counsel, I refuse to answer.

72. You testified on direct examination that 22 % of the coke manufactured in the production of gas is used for fuel purposes. State whether or not in your opinion with slack coal selling at $1.10 it would be cheaper to use slack coal or coke for the purpose of heating retorts as affecting the cost of manufacturing gas?

Objected to as immaterial.

323 A. In answer to that question, I would say that in my judgment the use of soft coal at the price named would not tend to cheapen the production of gas.

73. What in your opinion would be the approximate cost for purification supplies used by the Peoria Gas & Electric Co. in the making of 2,437,400 cubic feet of gas?

A. I should say that material would cost about one cent per thousand cubic feet.

74. What would be the cost of the enrichers used in a plant like the Peoria Gas & Electric Co.'s plant for the manufacture of 2,437,400 cubic feet of gas to enrich gas to 18 candle power?

A. I suppose the cost, if enrichers were used, might approximate to about a cent per thousand cubic feet.

75. You have testified that there were two modern processes for the manufacture of gas. Are those the only modern processes you know of—I ask you as a gas expert?

Objected to as not cross examination, and assuming that the witness did testify to that.

A. In stating that there were two modern processes for the manufacture of illuminating gas, I had in mind, of course, the two processes most generally used for the manufacture of illuminating gas which is the coal gas process and the water gas process.

76. In estimating the office fixtures of the Peori- Gas & Electric Co., did you take into consideration the fact that the Peoria Gas & Electric Co. had a gas as well as an electric plant to its business?

Objected to as immaterial.

A. In making these estimates, we did not take into consideration whether there were any other offices associated with it or not; we simply assumed or understood, that the furniture there be-
324 longed to the Peoria Gas & Electric Co.

77. You testified from a memorandum this morning—did you prepare it yourself?

Ans. Yes sir.

78. To whom did you dictate that memorandum?

A. This memorandum was made up in my office by me in company with Mr. Cowdery who was then associated with me in the work.

79. Who dictated that memorandum?

Ans. I did.

80. To whom did you dictate it?

A. To a stenographer named Mr. Gocke in our office.

81. What do you mean by your office?

Objected to as immaterial.

A. The office of the company where I am employed.

82. Was Mr. Cowdery present when that was done?

Ans. No sir.

83. What do you mean then when you say that we arrived at these estimates?

A. I mean that the figures were made up and the estimates made while we were making the investigation and examination of the plant, mains and services of the company here.

84. When was that?

A. I do not remember the exact date; it might have been about two weeks or more ago.

85. Do you know whether any changes have been made in that plant since September 1, 1901?

Objected to as incompetent, not cross examination, and immaterial to the issues.

A. I do not think of any changes.

86. Do you know of your own knowledge whether or not any changes have been made?

Ans. No sir, I do not—any material changes; if there were any changes made, they must have been very slight.

325 87. From your knowledge as a gas expert, don't all coal gas companies in operating their plant arrange their schedule of men employed and number of benches necessary for making all gas required daily on the plan that the coal gas business is a continuous process. In other words, would not a coal gas company if its daily consumption of gas was 165,000 cubic feet operate only enough benches to make that amount of gas required in 24 hours and employ only such men as would be necessary to operate the required number of benches?

A. So far as my knowledge goes, with reference to the number of men employed about the work, they would only keep in operation such number of benches as were necessary to take care of their daily output; it is customary in certain seasons of the year when a very decided increase in consumption is liable to take place for them to have one bench with fire started in order to bring it into service quickly if necessary; this necessarily comes of the fact that in heating up a bench of retorts they have to be heated gradually, heated slowly, otherwise, as I have stated in my previous testimony, the expansion and contraction would seriously damage the settings.

88. State as a gas expert whether the depreciation is less or greater in a bench containing 9 retorts than in a bench containing 6 retorts—the possibility of depreciation?

A. In my judgment, the depreciation in the settings of retorts would be about the same, taking of course into consideration the fact that there are three more retorts in a bench of 9 and if they were destroyed you would get a corresponding increase in the depreciation.

89. Is not there more chance, more possibility, of the benches settling or warping in the case of 9 retorts than in the case of 6 owing to the heat?

326 A. In a properly managed coal gas works and properly handled benches, or economical handling of benches, a certain amount of heat is required to properly distill the coal and in my judgment the chances for injury to benches of 6 retorts are fully as great as they are in benches of 9, taking into consideration the heat.

90. The depreciations you have spoken of to the plant of the Peoria Gas & Electric Co. are depreciations which occur and are liable to happen in any gas plant in the country, are they not?

A. I should say so, yes sir.

91. They are simply a normal risk in contra-distinction to an abnormal one?

A. They are risks which every gas company has to bear in mind in their work of providing for the reconstruction of a plant.

92. In the construction of a gas plant in the first instance, don't the gas companies put in the best material to meet those conditions?

A. Yes sir, that is what they generally try to do.

93. Where did you get your figures to estimate the number of gas pipes that were laid under paved streets in the city of Peoria?

A. I got them from the records of the company and from the superintendent of distribution.

94. From your knowledge of the city of Peoria, would you say that the pipes as laid in the streets and alleys of the city were laid with the view of obtaining the greatest amount of business that it was possible for the complainant company to obtain?

A. Yes sir.

95. Are you acquainted with the distance where these pipes are laid?

A. In making up our estimate of the mains and services and as to the conditions which exist as to paving, etc., we drove
327 about the city and ascertained as closely as possible from personal observation just what the conditions were.

96. In your examination of the streets of the city of Peoria, made two weeks ago, I will ask you to state whether you found the gas pipes of the Peoria Gas & Electric Co. in all the residence portions of the town?

A. We did not go on to every street in the residence portion of the town, we merely went on streets on which the records of the company showed there were mains laid and as directed by the superintendent of distribution who had charge of the work.

97. Have you got the records of the company from which you obtained the information as to where these pipes were laid?

A. No sir, I have not.

98. Can you obtain those records?

A. I think I can.

99. Will you do so?

A. Why, I would have to ask the officers of the company for them but I can give you a number of the streets from memory.

100. Will you obtain those records from the officers of the company?

Ans. I will if I can.

101. In estimating the cost of gas to consumers in the city of Peoria at 80 cents, did you estimate that cost upon the manufacture of 160,000 cubic feet of gas per day or upon the manufacture of 500,000 cubic feet of gas per day?

A. That was estimated on the manufacture of about fifty millions a year.

102. What in your judgment would be the cost of the manufacture of gas delivered per thousand cubic feet where the company manufactures 500,000 cubic feet of gas per day?

A. On a make of fifty million a year I place the cost at
328 about 80 cents per thousand; I think the cost might be reduced a matter of 2 or 3 cents per thousand possibly with the greater make mentioned.

103. You testified that on the manufacture of 500,000 cubic feet of gas per day the cost to the company in the holder would be about

28 cents, deducting residuals, and that the cost of that gas at the point of consumption to the company would be 77 cents. What does the 49 cents per thousand cubic feet represent?

A. It represents the cost of distribution and taxation.

104. What are you basing the cost of taxation upon?

A. Upon the taxation as I understand it to be.

105. What do you understand it to be?

A. Something like $5500 per year or thereabouts.

106. Upon what valuation?

A. I don't know as to the valuation, I am just giving the lump sum.

107. Look at the map of the city of Peoria now shown you and state whether or not there are any gas mains of the Peoria Gas & Electric Co. located north of Adams street and south of Spencer street in the city of Peoria, and did you base your estimate upon any pipes being laid in that locality?

Objected to as immaterial and not cross examination.

A. Yes sir, I think there are some in this locality here marked on the plat "6th ward"; I noticed there were mains on Spencer street, on Adams street, on Persimmon, on Elizabeth, on Franklin, Main and Forsythe streets—all around in this locality here.

108. Is Elizabeth street in that locality?

A. Elizabeth street is, I think, somewhere in that locality.

109. At a rate of manufacture of 500,000 cubic feet of gas per day, how much would be the total amount of gas manu-
329 factured in the year of 365 days?

A. I am not here to make such figures; I am in a hurry to get away but I will give you a rough estimate on it.

110. Would not the total amount be 182,500,000 cubic feet?

A. About that, somewhere round there.

111. You state that you were told that the taxes paid by the complainant company amounts to $5500.00 per year, what would that make the cost per thousand cubic feet of 182,500,000 cubic feet—would it not be 3 cents per thousand cubic feet?

Objected to as immaterial, not cross examination, irrelevant and frivolous.

A. In arriving at the price, which I placed as a fair cost price for the gas manufactured in the city of Peoria, my figures were not based on a make of 500,000 cubic feet per day but on a make of about fifty millions per year.

112. Would not the taxes represent in your estimation about 3 cents per thousand cubic feet where the total amount of gas manufactured in a year amounted to 182,500,000 cubic feet?

A. I am basing it upon whatever the taxation might be; I could not tell.

113. You mentioned $5500.00?

Ans. When I did that, I had in view the make of fifty millions per year.

113. Basing the taxation at $5500.00 per year and the total manufacture of gas by the Peoria Gas & Electric Co. at 182,500,000 cubic feet per year, would not the cost per thousand feet for taxation purposes be represented by 3 cents?

Objected to as immaterial and frivolous.

A. I should say that would be a fair amount on the basis you put it.

Adjourned by agreement until Tuesday, November 26, 1901 at 9:30 o'clock a. m.

330 United States circuit court room, Government building.

PEORIA, ILL., TUESDAY, *November* 26, 1901—9.30 a. m.

Parties met pursuant to adjournment.

Present: Judge I. C. Pinkney, special commissioner; Mr. W. T. Irwin and Mr. E. C. Ritsher, appearing for complainant; Mr. Henry Mansfield, appearing for defendant.

EDWARD G. PRATT, called on behalf of the complainant, being first duly sworn, deposes and says:—

Direct interrogatories by Mr. RITSHER:

1. State your name, age and residence.

A. Edward G. Pratt; 45; Des Moines, Iowa.

2. In what business are you engaged?

A. Manufacturing and selling of gas.

3. What position do you hold in that business?

A. I am the president and general manager of the Capital City Gas Light Co. of Des Moines, Iowa.

4. Are you familiar with the business of the manufacture and sale of gas?

Ans. I am.

5. And are you also familiar with the different processes which enter into the manufacture and sale of gas?

Ans. I am.

6. How long have you been connected with the manufacture and sale of gas and in what capacities—state in detail as nearly as you can?

A. About 25 years. I started in the gas business about 1875 at Newton and Watertown, Mass., cleaning street lamps; I did that for a year and a half; I went from there to Providence, R. I. and two years of the time I was there I was night clerk at the works and for the two succeeding years, I was night foreman; after that I went

to Newport, R. I., and for a year was superintendent of dis-
331 tribution; the following year I became the assistant superintendent of the Newport, R. I., Gas Co. and served in that capacity for about a year and a half; from there I went to North Attleburg, Mass., as superintendent of the North Attleburg Gas Light Co. and served in that capacity for four years; from there I went to Des Moines, Iowa, as manager of the Capital City Gas Light Co. and have been there 14 years; during the past 4 years I have been the president of said company as well as the general manager.

7. What are the different processes in general use throughout the United States for the manufacture of gas to be sold through a general distributing system laid in the streets for illuminating or fuel purposes?

A. I assume you do not care for any of the small minor processes; of course there are an innumerable number of processes but what you want are the fundamental processes.

8. Yes sir.

Ans. Coal gas and carbonated water gas.

9. Describe in general terms the natures of those two processes?

A. Coal gas is a gas produced by the destructive distillation of coal that will yield gas having in mind coal that will yield the most gas, the best coke and containing the smallest percentage of impurities; this coal is placed in retorts or ovens which are externally heated by means of some fuel, either coal, coke or gas; the gas is driven off from the coal, which has been previously placed in the retorts, into what is known as standpipes; then into hydraulic mains, thence through condensing, scrubbing, purifying and measuring apparatus, and finally finds its way into the storage holder. That in brief is a description of the manufacture of coal gas. Coal gas might be distinguished from water gas in that its production
is constant and steady, that is to say, the gas is being
332 produced all the time. To distinguish the manufacture of water gas from that of coal gas I will say, that process is intermittent, that is to say, there is a period of time when gas is made and another period of time when the apparatus is being put in condition to make gas. Briefly, in the types of water gas apparatus in general use there is what is known as a condenser in which the primary fuel is placed, the carbonaters into which the heat from the generator is driven by means of an engine and blower, the superheater into which the heat is still further driven by the manipulation of valves from the generator and carbonator into the superheater and in which the gas is finally fixed as a salable product. Now, in the generator fuel is placed, either coal or coke, fire is started, and the condition of the coal or coke is perfected by means of a blast introduced, or brought to such a temperature, that by the introduction of steam in the bottom of the bed of fuel and its passage through the bed of fuel the hydrogen or blue gas is made; by means of blasting pipes and valves, and the manipulation of valves, heat is carried over from the generator into the carbonator and super-

heater; this heat can be regulated to most any degree to suit the trained eye of the gas maker; ordinarily the temperature in the carbonator is several degrees higher than that in the generator and the temperature in the superheater is less than that in either the carbonator or generator. Simultaneously with the introduction of steam in the bottom of the generator oil, either crude or nap-tha, is introduced into the top of the carbonator; hydrogen or blue gas goes over into the carbonator and mixes there with the rich gasses generated from the oil and together they pass on through the superheater where they are converted into a fixed gas, thence through a washing box, scrubbers and condenser and into what is known
333 as a relief holder; from there the gas is usually brought back to a point midway between the generating apparatus and the holder by means of the exhauster and finally delivered through the station meter into the storage holder.

10. Please give a brief history of the origin and development of the business of manufacturing and selling gas covering its use both as an illuminant and as a fuel?

A. I may get a little bit mixed on my dates but I think in 1777 William Murdock of England first discovered that from coal placed in an ordinary cast iron kettle and subjected to heat, gas would be generated; I think some four years later he perfected a very crude apparatus for the manufacture of coal gas by putting coal into a cast iron vessel subjecting it to heat and lighting his own house; I think it was in 1836 that the first coal gas was manufactured in New York city; in 1837 coal gas was manufactured in Philadelphia and about 1847 the first gas, I think, was made in Chicago.

(The MASTER:)

11. Was that the time of the first manufacture of coal gas in Illinois?

A. Yes sir: 1847, I think; it may be two or three years one way or the other but I think that is practically the date. Originally the retorts used in the manufacture of coal gas were made of cast iron; owing to the fact that they were very destructible, very expensive and impracticable to raise the heat to a point from which all of the gas could be taken from the coal, clay retorts were produced; I think that was about 20 or 25 years ago; the benches containing the retorts and retort furnaces originally were simple in their construction, the heat being derived primarily, and almost solely, from the fuel consumed in the furnace; these furnaces and the benches, or settings in which the retorts are placed, have been made from time to time principally in the size, shape, number of
334 retorts and the construction of the furnaces, with a view of getting the best combustion of fuel used and the best distribution of heat generated, together with the best distribution of the coal placed in the retorts, from which gas is to be produced; clay retort benches, originally consisted of but three retorts, frequently but two; but in more recent years, as a general rule, either five or six retorts,

conforming to the size of the city or town, the number of benches required and the quantity of gas to be produced; in more recent years there has been constructed what is known as a regenerative and a recuperative bench of furnaces, the object being to reduce the fuel consumption and utilize the materials produced about the works with as little loss as possible. That is to say, in the drawing of a charge of coke from a retort, from which the gas has been extracted, instead of the delay and expense of drawing coke in wagons, hauling it off into the yard, quenching it and returning the same to the retort house, this coal is drawn directly from the retorts, or as much of it as is required, into the furnaces; there is, therefore, no loss of heat or energy in bringing the condition of the coke from that cold condition, which would be the case if taken into the yard and weighed as compared with the condition of fuel when drawn from the heated retorts from which the gas had been extracted; this regenerative bench is so perfect in its construction that the primary air, which is taken in through under the grate bars and through air ports provided for the purpose, has to assist in the primary combustion of the coke, but there is also a provision for the conducting of secondary air through ports and ducts which conduct this air, by means of a circuitous route about, around and above the furnaces, and finally finds its way into the combustion chamber, in which chamber, any gasses that may have escaped the primary
335 combustion chamber, are certain to be consumed in the secondary combustion chamber. These benches are constructed for either 6, 8 or 9 retorts, the advantage in having a large number of retorts in a bench is economy of space and the heating of a large number of retorts with practically an equivalent amount of fuel, because the closer such apparatus is placed the better the general results obtained. I think I have covered pretty well the construction of the bench unless you want me to go into the arrangement of mouth pieces, stand pipes and hydraulic mains.

(Mr. RITSHER:)

12. I think that is sufficient for the present. With what different coal plants are you familiar and what different plants of that character have you seen and examined during the last 25 years?

A. With my own at Des Moines, Iowa; Minneapolis, Minn.; Milwaukee, Wis., Kansas City, St. Joseph, Mo.; Ottumwa, Iowa. To keep in mind all the works that are just manufacturing coal gas is hard—Providence and Newport, R. I., Lynn, Charleston, Mass.; Atlanta, Ga.; Philadelphia, Pa. Those are about all that occur to me now.

13. Have you examined the plant of the Peoria Gas & Electric Co. in the city of Peoria?

Ans. I have.

14. Please describe the works of the Peoria Gas & Electric Co. with reference to the buildings, machinery and equipment constituting the physical manufacturing plant.

A. Do you want me to describe it off hand or from a plat?

14. Suppose you describe it from your recollection first.

A. As I remember the plant, it has two large frame coal and coke storage buildings, one I believe having a capacity of about 6,000 tons and the other about 4,000 tons; these building are conveniently placed with respect to railroad sidings for the easy and convenient unloading of coal and the loading of coke. It has a retort
336 building of brick, the dimensions of which are not quite clear in my mind without reference to my notes; this building is ample in size for 7 benches of 9 retorts each; it has a tile roof well supported with trusses and girders and a floor with steel and iron supports and trusses finished in tile and brick; it has a building used for boilers, ammonia apparatus, exhaustors and engines, condensers, scrubbers, tar separator, purifyers, elevator, and engine for operating elevator; it has also a building in which there is a station meter for measuring the gas made at the works; also a storage holder of about 300,000 cubic feet capacity erected in a steel tank which tank is erected on a suitable foundation of concrete; it also has a building containing office, meter and shop room, pipe and fitting room, meter testing room, room for storage for stoves, meters and appliances, and a building for the storage of small pipe fittings and specials; attached to and forming a part of the retort building is a brick and steel smoke stack; in addition to the buildings described there is the yard connections, drainage and sewer pipes, water, gas and steam pipes. That is about all I think of now.

15. Have you mentioned whether or not there were any tar or ammonia wells?

A. It has just occurred to me that I omitted to mention the tar tank, ammonia tank, oil tanks, water well and well for the ammoniacal liquor.

16. Look at the plat now shown you which has been offered in evidence and marked Exhibit "1," examine the same and state whether or not it is a fair representation of the plant of the Peoria Gas & Electric Co. which you have just described?

Objected to because the plat Exhibit "1" does not show the size of the buildings and for that reason it would be only evidence for the purpose of showing the location of the buildings.

337 A. This plat marked Exhibit "1" agrees with my notion and remembrance of the location of the buildings, the general lay-out of the side tracks and the relative location of different buildings to each other with respect to the location of the real estate.

17. Are you acquainted with the general location and size, improvements and topography of the city of Peoria?

A. I am in a general way.

18. Assuming that the population of the city of Peoria and the territory tributary to the plant of the Peoria Gas & Electric Co. was in the spring of 1900 about 60,000 inhabitants; and assuming

that the city is located upon the westerly bank of the Illinois river gradually sloping and rising westerly for the distance of a mile and a half or thereabouts and extending along the Illinois river for a distance of about 4 to 4½ miles, with the gas plant located about the center thereof on the bank of the river, would the size and character of the plant of the Peoria Gas & Electric Co. as described by you and shown upon Exhibit "1," be, in your judgment, a proper plant to be constructed in the city of Peoria during the year preceding September 1, 1900?

A. If it were the first works constructed here and if it were the only works in existence, I would say the works were not constructed large enough for a city the size of this, but in view of the conditions which I understand to exist, that is, the presence of another company in this city, I would say that the works were very judiciously constructed with respect to location, etc.

19. What, in your judgment, is the character, size and capacity of the plant of the Peoria Gas & Electric Co. with reference to judicious investment and outlay as appears from the nature of the plant as seen by you and the size, character and location of the city, assuming the plant was constructed during the year preceding
338 September 1, 1900, substantially upon the plan shown in Exhibit "1"?

A. I should say that the works were modern in every respect and built with a view to economical and efficient operation.

20. Assuming that at the time of the construction of the plant of the Peoria Gas & Electric Co. the population of the city of Peoria and the territory tributary to said plant was about 60,000 inhabitants; and assuming also that at the time Youghiogheny coal could be furnished and delivered at the works at about $2.80 per ton; and assuming further, that at the same time there was a local market for coke at the average price of $3.25 per ton, that the tar bi-product could be sold at an average price of 5 cents per gallon, that the ammonia by-product could be sold at the average price of 8 cents per pound, that cannel coal for enriching could be bought for about $3.00 per ton, and that gas oil for making water gas could be bought at about 3¾ cents per gallon, and that coke suitable for water gas making could be bought for about $4.00 per ton, and that the company was not bound by any requirement as to the candle power of gas to be furnished, would it have been more expedient during the year preceding September 1, 1900, to have erected a coal gas plant or water gas plant and why?

A. By all means I should say a coal gas plant owing to the peculiar conditions of being able to purchase coal at a very reasonable figure and being able to find a ready market for the coke, tar and ammonia. I understand there are some peculiar advantages here in the production of the coke, that there are some manufacturing industries here that use it generally and the comparative cost of gas coal with that of oil and the fact that there are no residual products in the manufacture of water gas would certainly decide for me

the question beyond doubt that coal gas would be the cheaper
339 and better to make in this community.

21. Are you familiar with the cost during the years 1899 and 1900 of the various items of labor, machinery and materials entering into the construction of a gas plant of the capacity and equipment of the plant of the Peoria Gas & Electric Co.?

Objected to unless limited to the city of Peoria and also because no foundation has been laid.

A. I am.

22. From your examination of the plant of the Peoria Gas & Electric Co. as shown on Exhibit "1" and from your knowledge of the plant and from your knowledge of the cost of construction of similar plants, are you able to state what would be the reasonable cost of the plant and improvement of the Peoria Gas & Electric Co. if constructed during the years 1899 and 1900?

Ans. I am.

23. From your examination of the plant of the Peoria Gas & Electric Co. and from your knowledge of the cost and price of labor, machinery and materials, please state what, in your opinion, would be the reasonable cost of the construction of said plant fully equipped, tested and ready for the delivery of gas to consumers; assuming that the plant was contracted for and erected during the year preceding September 1, 1900, excluding from your estimate the cost of the real estate and also excluding the cost of mains, services and other expenses outside of the construction and equipment of the manufacturing property; and assuming further, that the price of ordinary labor was $1.50 per day, and in your estimate please give itemized statements of costs so far as seems best?

Objected to because the witness has not shown any qualification to answer as to the cost of materials laid down in the city of Peoria which entered into the construction of the plant.

A. (Witness referring to memorandum.) Coal and coke
340 storage $10,450.; retort building $9,145.; boiler house, condensing house and purifying building $12,000.; seven benches of 9 retorts each $24,500.; one brick and steel stack $2500.; two boilers of 100 horse power each with settings $3500.; steam and water connections about boilers $250.; boiler stack $350.; ammonia apparatus $2500.; fixing bench $2000.; one dry condenser $1200.; two exhausters and engines $1500.; one P. & A. tar extracter $350.; one tar separater $250.; one other dry condenser $1200.; two water condensers $2,500.; one washer $750.; two scrubbers $2,500.; 9 pumps $1950.; foundation for apparatus, taking in all the apparatus I have mentioned, condenser, scrubbers, tar separater, exhausters, exhausting engines and pumps $1750.; two purifyers 24 x 24 $5000.; carriage for handling and conveying the same $1500.; center seal and connections $1,000.; elevator and engine for handling purifying material $350.; meter house $935.; meter and connections

$3,000.; office building, meter shop, store room and appliances — store room $4077.50; gas holder and tank $33,000.; concentrator, wells and tanks, including tar well, ammonia well, concentrator, nap-thia tank, water feed tank and water well $5775.; yard connections for gas, including pipe, specials, valves, drip pots, etc. $5,000., drains and sewers $1200.; Connelly governor $1250.; photo meter and chemical apparatus $850.; gas, steam and water pipes about works $2,000.; tools, $3500.; furniture and fixtures at works $1000.; making a total of $151,057.50, to which I have added 10 % for plans, specifications and superintendency of construction $15,105.75, making the total estimate of costs of works $166,163.25.

24. Does the totals as given by you of $166,163.25 constitute in your judgment, the fair market cost value of that plant on September 1, 1900, assuming that some one wanted it for the manufacture and delivery of gas?

341 A. In my judgment it does.

25. Have you examined the city of Peoria with reference to its streets and alleys in which mains are laid?

Ans. I have.

26. In what manner did you acquire your information in regard to the streets and alleys in which mains are laid?

A. I first studied the maps and records showing the streets in which mains have been laid and the location and afterwards spent the afternoon in riding over the city and over the streets where mains had been laid.

27. Who accompanied you on that drive?

—. The superintendent of distribution of the Peoria Gas & Electric Co.

28. Did he point out to you the streets and alleys upon which mains were laid?

Ans. Yes sir.

29. The map and records you speak of were where?

A. At the office of the company.

30. Were you also advised as to the size and lengths of the various mains and services laid by the company?

Ans. Yes sir.

31. Where did you acquire that information?

A. From the maps and also from the records of the company.

32. Who gave you that information?

A. The superintendent of distribution, I don't remember his name showed me the records and gave me the information.

33. What data did you so receive with respect to the size and character of the mains and services—will you kindly give us what you understood to be the size, length, etc. of the mains and services?

A. (Witness referring to memorandum.) 1758 feet of 16 inch cast iron pipe; 20768 feet 12 inch ditto; 3484 feet of 10 inch ditto 20,229 feet of 8 inch ditto; 12,874 feet of 6 inch ditto; 80,852 feet of 4 inch ditto; and 260 feet of 2 inch, making a total of 140,223 feet

342 or 26 55 / 100 miles.

The service connections were as follows :—872 feet of 3 inch

wrought iron pipe; 374 feet of 2½ inch ditto; 37,244 feet of 2 inch ditto; 111,369 feet of 1½ inch ditto; 29,393 feet of 1¼ inch ditto; making a total of 2425 services or 179,252 feet of wrought iron pipe of the different sizes.

34. Assuming that the mains of the Peoria Gas & Electric Co. are of the sizes and lengths as stated by you in your preceding answers and that the same were laid during the year prior to September 1st, 1900, in the streets and alleys in the city of Peoria pointed out to you by the superintendent of distribution of said company and shown by the records of the company examined by you, and assuming that the cost of ordinary labor during the year preceding September 1, 1900, was $1.50 per day, please give an estimate of the fair and reasonable cost of laying the mains of the Peoria Gas & Electric Co. including labor, materials, cost of repaving streets and all other expenses incident to laying said mains ready for use?

Objected to as immaterial, incompetent and founded upon hearsay evidence.

A. "Witness referring to memorandum.) 1758 feet 16 inch pipe at $2.25 per foot $3,955.50; 20,768 feet of 12 inch pipe at $1.65 per foot $34,267.20; 3482 feet of 10 inch pipe at $1.25 per foot $4,352.50; 20,229 feet of 8 inch pipe at 95 cents per foot; $19,217.55; 12,874 feet of 6 inch pipe at 65 cents per foot $8,368.10; 80,852 feet of 4 inch pipe at 45 cents $36,383.45; 260 feet of 2 inch wrought iron pipe at 25 cents $65; making a total for the pipe of $106,609.25. Then I have added to that for valves and valve boxes $5,330.46, making the total cost for laying these mains, provided they were laid in
343 streets not paved, $111,939.71. Then to that I have added the cost of laying a certain portion of these mains in paved streets which portion amounts to 38,200 feet at 80 cents per foot, amounting to $30,560, making the total cost of mains, laying, labor and all material, $142,499.71.

35. Assuming that the services of the Peoria Gas & Electric Co. are of the size and length stated in your previous answer, and that the same were laid during the year previous to September 1, 1900, and assuming that the cost of ordinary labor during the year preceding September 1st, 1900, was $1.50 per day, please give an estimate of the fair and reasonable cost of the services of the Peoria Gas & Electric Co. including labor, materials and all expenses incident to laying such services ready for use.

Objected to same grounds as before.

A. I estimate that 179,252 feet of wrought iron service pipes of the different sizes mentioned cost on an average 20 cents a foot for the pipe and labor or $35,850. To that I have added for service boxes and shut offs $2425., making a total of $38,275.

36. Assuming the premises heretofore given with regard to the plant and mains of the Peoria Gas & Electric Co., what in your opinion would be the fair and reasonable cost of the service tools and

equipment required by said company for use in street construction of such plant as it existed according to the premises on September 1st, 1900?

A. Including tools, carts and wagons $6500.

37. What in your judgment would be the fair and reasonable cost for equipping and organizing the office of the Peoria Gas & Electric Co. including the expense of office equipment, books, etc. for the purpose of operating the gas business of the plant you have described as said plant existed September 1, 1900.

344 A. $12,500.

Mr. MANSFIELD: The defendant moves to exclude the foregoing answer because the witness has shown no knowledge as to the cost of equipping an office or the cost of the books that pertain to an office.

38. Were you given data as to the number of meters?

A. Yes sir.

39. How many were there on Sep. 1, 1900?

A. 1758 was the number given me.

40. Assuming then that on September 1, 1900, the meters of the Peoria Gas & Electric Co. were 1758 in number, what in your opinion would be the value of said meters and the cost thereof at that time?

A. I have itemized it as follows:—412—3 light at $6.00 $2472.; 1228—5 light at $7.50, $9.210.; 85—10 light at $10.00, $850.; 20 lights at $15., $150.; 14—30 lights at $25., $350.; 6—45 lights at $40., $240.; 1—60 light $50.; one-100 light $100.; 1—150 light, $150.; making the total value of the meters $13572. To this I have added for lead pipe connections $1758., making a total of $15,330.

41. In your estimate heretofore given as to the cost of the plant, mains, services, etc. of the Peoria Gas & Electric Co., have you included in your estimate any amount for the legal organization of the company, the equipment and organization of its business force, cost of advertising, soliciting, and the general expense of putting said plant into operation?

A. I have not for the reason I have no means of getting such information; the conditions would be so different in different places.

42. In these figures you have given you gave no estimate
345 of the cost of the real estate?

Ans. I did not.

43. It is not included in any of your totals?

Ans. No sir.

44. Are there any other estimates which have been made by you for which I have not called. In other words are there any estimates I have not covered by some of my questions that you took into consideration?

A. No, I think I have checked them all.

46. Assuming that the Peoria Gas Light & Coke Co. commenced the manufacture and delivery of gas to consumers May 1, 1900, and assuming further that on or about September 4, 1900, it was manu-

facturing and selling coal gas at the rate of about fifty millions cubic feet per year and that the length and character of its mains and services conformed to the figures given in your previous testimony and that the cost of Youghiogheny gas coal at the works of the company was about $2.80 per ton and that the cost of boiler coal was about $1.10 per ton, that the wages of ordinary labor were $1.50 per day, and the wages of general stokers were $65.00 per month and $70.00 per month for head stoker; assuming further, that coke could then be marketed at an average price of $3.25 per ton, breeze at the average price of $1.00 per ton, tar at the average price of 5 cents per gallon, ammonia at the average price of 8 cents per pound, retort carbon at the average price of $12.50 per ton; assuming further, that the purchase of materials in general and the expenses of the general operation of the plant were fair and reasonable, considering the location of the plant, and that the management and superintendency of the plant was efficient and competent, what in your opinion would be the actual cost per thousand cubic feet of the gas manufactured and delivered to consumers by said company on Sep.
4, 1900, excluding in your estimate the value of residuals
346 and excluding also any charges for depreciation or interest on the investment?

A. My estimate would place it at 85 cents per thousand cubic feet.

46. In your estimate do you consider that the plant at that time was in operation a sufficient length of time to put into smooth operation the economies of which it was capable?

A. No sir, I should say not; it would take some time to get the work settled down, force organized and in a condition to get the best results.

47. What general changes, if any, have taken place during the past 10 or 15 years in the method of the management and operation of gas properties which affect the cost of the delivery of the gas from the holder of the company to the consumer, and in what way do such changes effect the cost of such delivery?

A. I would suppose that question had more reference possibly to questions of policy than methods.

48. That was my idea if there were polices in general force and recognized by the gas fraternity as proper policies to be pursued?

A. It does not seem more than 12 or 15 years ago when men in charge of gas business seemed to be satisfied with taking care of what business came to them. That is to say there was no effort made to extend the mains to conform to the growth of cities and towns and no great effort made to extend the use of gas after the mains were laid unless there was a promise on the part of the consumer or consumers in certain localities to use a certain quantity of gas before the mains were laid, or before any effort was made to get the business; but the gas business in more recent years, more especially during the past 8 or 10 years, has become more of a mer

cantile business. That is to say, the progressive gas man of
347 the present day exerts himself and uses every means and
methods possible to find a market for his product and there is really more attention given now by progressive gas managers to find a sale for the product than there is in the manufacture of it. The manufacture of gas has become, it would seem, as greatly reduced as possible, the saving made at the works and inattention to detail and saving here and there of some slight waste which might amount to a fraction of a cent, but the principal thing now is to secure a market for the product and the energy which is displayed by some gas men in certain cities and many cities is remarkable. The gas manager at the present time is not an up-to-date manager unless he exerts himself at all times to get all the business it is possible for him to get. At the present time money is spent in advertising, in soliciting, in making displays and in demonstrating, by means of agents employed, how gas can be used and how it can be used economically and effectively more especially with a view to its use as a fuel, seemingly stopping at nothing that will extend the use of gas for all purposes.

49. What effect has this policy had, if any, upon the cost of delivery as compared with the cost of delivery 10 years ago?

A. It has greatly increased the cost of distribution.

50. In your testimony this morning, you stated in answer to a hypothetical question that under certain conditions therein named the cost of the manufacture of gas on September 4, 1900, would be 85 cents per thousand cubic feet—in fixing that figure as I understand you, you did not deduct the value of the residuals?

A. I did not.

51. Assuming that the Peoria Gas & Electric Co. commenced the manufacture and delivery of gas to consumers on May 1, 1900, and
assuming further that the length and character of its mains
348 and services conformed to the figures given in your previous
testimony, and that the cost of Youghiogheny gas coal at the works of the company was $2.80 per ton, that the wages of labor were $1.50 per day for ordinary labor, $65.00 per month for general stokers and $70.00 per month for the head stoker; assuming further that coke could then be marketed at $3.25 per ton, breeze at $1.00 per ton, tar at 5 cents per gallon, ammonia at 8 cents per pound, retort carbon at $12.50 per ton; assuming further that the purchase of materials in general were at fair and reasonable prices, considering the location of the plant and that the management and superintendency of the plant was sufficient and competent; and assuming further that from May 1, 1900, to September 1, 1900, there was manufactured about 18,942,213 feet of gas and that the leakage during that period was about 3,467,000 cubic feet, what in your opinion would be the actual cost per thousand cubit feet of the gas manufactured and delivered to consumers by said company during the first 4 months of its operation without deducting the value of residuals

and excluding from your estimate any charge for depreciation or for interest on the investment?

Objected to as immaterial and incompetent.

A. In the starting of new works, such as those works were, it would require some little time to get the help organized, to get the benches and retorts in good operative condition as well as getting the rest of the apparatus down to a point where it would do its work efficiently and effectively besides excluding all the air from the mains about the works and the apparatus about the works, the gas holder and the street mains. The cost during the first 4 or 5 months would be considerably in excess of what it would be after everything was in good working order and I would place that cost at $1.19 per thousand cubic feet at the point of combustion—the burner.

349 52. What candle power in coal gas is deemed most satisfactory for ordinary use by the consumer?

A. From 16½ to 18.

53. What candle power in the case of water gas is required to give the public a service as satisfactory as 18 candle power in coal gas?

A. I should say 22 candle power carbonated water gas would be the equivalent of 18 candle power coal gas.

54. What elements and forces of any kind contribute to the depreciation of a gas plant and its mains and how do they operate and how rapidly or how slowly do the different causes operate?

Objected to as immaterial and incompetent unless it is confined to the limits of the city of Peoria.

A. There is wear and tear, destruction and deterioration going on at the works all the time, by reason of the fact and essentially in a community like this where there is so much native coal used which coal is charged heavily with sulphur impurities the iron about the works, especially the iron about the roof, in iron stacks, gutters, down spouts, everything metal-ic about the buildings being attacked by the sulphur compound constantly; in addition to that, there is the presente of ammonia about the works which is destructive to all sorts of metal work, also to the mortar in the masonry and the general wear and tear that any manufacturing plant that is subjected to the severe operation of a gas works would naturally follow; so far as the mains are concerned I do not feel that there is so much depreciation going on, I think whatever depreciation there may be as to street mains through acids in the soil, or attack of the soil upon cast iron pipe is practically compensated for by the protection that is given them by reason of the tarry matters that are in the gas which passes through the mains and finds its way to the surface of the pipe through the pores

350 in the iron; so that, in the mains proper, so far as any destructive influence is concerned, I would not count that as being very great; at the same time, in growing western cities where

the grades are changed as a general thing with every change of administration, there is the necessity of lowering the mains and in communities where possibly we had not anticipated so great a growth in the population and larger mains are necessary the smaller ones have to be displaced frequently with the expense of excavating and removing the old mains which is too great to pay to undertake, and consequently the smaller and older mains are abandoned when the new and larger ones are substituted. I have found that particularly the case in a great many western cities.

So far as the service pipes are concerned, there is a great deal of depreciation going on there; the attack of the acid in the soil upon service pipes, wrought iron pipe or steel pipe, is much more rapid than possibly would be the case on cast iron pipe; the depreciation to individual or consumers' meters depends entirely upon the composition and temperature of the gas delivered to the consumer, but the depreciation under the most favorable circumstances to meters is quite an item; I suppose no gas meter would last without some repair to some of its parts exclusive of the case of the shell of the meter longer than 12 or 15 years.

55. What in your opinion would be a proper percentage of the entire cost of construction of the plant of the Peoria Gas & Electric Co. to be charged off annually as an average annual depreciation?

A. I have made a good many figures upon that question and have given it a good deal of study and I believe that 7 per cent. is a fair average.

56. That percentage you would compute upon the cost of
351 the manufacturing plant, mains, services, meters and the entire cost of construction?

A. Yes sir, that would include everything incident to the manufacture and operation of the entire system.

57. Aside from the general depreciation, concerning which you have testified, what are some of the hazards of a gas business as an investment? I intend to cover by this question the hazard which an investor of money would take into consideration in determining whether he would invest in a gas plant or something else?

A. It is a peculiar sort of business in that respect; very much depends in the operation of a gas works upon the extreme care of the individual or individuals in charge; gas, we all know, is a dangerous substance and there are plenty of opportunities where the results in the use of gas can be destructive. For instance, employés about the works unless they are well and carefully posted, there is danger of their getting into positions or places where leakage of gas might cause asphyxiation. For instance, in the purifying house or in the valve house or pit. The same thing, of course, could extend to the use of gas by the consumer; that part of the business seems to require the constant care of somebody all the time and if a gas company escapes without serious accident to its employés it can be frequently attributed more to good luck possibly than to good judgment always because we are compelled to employ

en sometimes who have not as good judgment as we would like them
have. Then there is the question of competition with electricity,
th kerosene, isolated plants in the shape of gasoline generators,
cetaline, and then there is danger from destruction of the dis-
buting system through the instrumentality of electrolysis; there
a danger which to my mind is more important than any other,
and that is the fact that all public corporations are subjected
2 to the whims of legislative bodies in States and cities where
they are doing business. I think that covers the question.

Defendant's counsel objects to the foregoing answer as not respon-
ve and moves the court to exclude it.

58. From your experience and observation in the management
d investigation of gas plants and gas business, are you able to
ate what would be a reasonable and fair return to investors in gas
operties, taking into consideration the hazard of the investment
account of the conditions and dangers concerning which you
ave testified, and if so, state what would be a fair and reasonable
turn to investors upon the cost of the plant of a gas company,
king into consideration the hazard?

A. I should say from 10 to 12 % per annum on the investment.

59. You have spoken in answer to the last question but one in
gard to competition in its various forms, naming gasoline, kero-
ne and ascetaline, are there any other competing forms of gas?

Objected to as immaterial, incompetent, irrelevant.

A. Nothing that occurs to me now except natural gas. I entirely
verlooked that because that is a matter that I do not take into
nsideration in considering the question of artificial gas, but in
rtain sections of the country that threatens to be a very serious
ing and it has resulted seriously and disastrously to artificial gas
mpanies in a number of cities in the United States; it can be
adily understood that by the introduction, or discovery of natural
as where it is sold anywhere from 12 to 25 cents per thousand cubic
et, a gas that is several degrees hotter in its combustion than arti-
cial gas, that it would be very desirable as a fuel and that its in-
tense heat makes it also very desirable for use in connection
53 with the Welsbach burner because the greater the heat with
that burner the better the results, the higher the illuminating
alue of the burner.

(Mr. MANSFIELD:) I move to strike out that part of the foregoing
nswer referring to natural gas because it has not been shown there
any natural gas fields within such a distance of the city of Peoria
s will result in any competition there.

Cross-interrogatories by Mr. MANSFIELD:

1. You say you are president and manager of the Capital City
Gas Co. of Des Moines, Iowa?

Ans. Yes sir.

2. Were you manager of that plant at the time a similar suit to the one that is being tried here was tried in the city of Des Moines?

Ans. Yes sir.

3. Did you give evidence in that case?

Ans. Yes sir.

4. Is John R. Walsh connected in any way with that plant?

A. No sir.

5. In estimating the price of the various buildings located on the property of the Peoria Gas & Electric Co. in the city of Peoria, did you take into consideration the size of the various buildings located thereon?

Ans. Yes sir.

6. State what was the size of the brick boiler house erected upon those premises?

A. 142 feet long, 66 feet wide at one end, 62 feet wide at the other and about 41 feet in height.

7. What did you say the value of that brick boiler house was the cost of erecting it?

A. $12,475.

8. What was the size of the one story brick meter house erected upon the plant of complainant company?

A. 21 feet 6 inches by 28 feet 6 inches and about 12 feet high.

354 9. What were the footings?

Ans. Concrete.

10. How wide were those footings?

A. I did not excavate below the walls to discover.

11. Do you know what the character of footings were under it?

A. Broken stone and cement.

12. I mean how much material was placed in them in order to arrive at your estimate of the material in those footings?

A. I did not excavate to determine the depth or width of those footings.

13. You don't know whether those footings are 24 inches wide or 8 inches wide?

A. No sir; but I judged by the character of the building that such footings would be in good construction.

14. What would they be according to your idea?

A. My idea would be that those footings would be in the neighborhood of 30 inches wide at the top and at the bottom probably 36 inches; in the particular location and in that particular soil I would say those footings went down to a depth of at least 4 feet.

15. State if you know the size of the wall up to grade line?

A. You mean the foundation wall?

16. Yes sir.

A. I think I gave that in my estimate the width of the footings.

17. What was the thickness of the wall above ground?

A. 12 inch wall.

18. What did you testify that building was worth?

A. $935.

19. What did you estimate the tile roof on the retort house, purifying house, boiler house and office to cost?

A. I estimated the value of the tile roof on retort house
355 at $2000; the steel beams and flooring for the building $3000; the foundation for the building $1500.

20. What did you estimate the cost to be of the tile roof on the purifying house?

A. I have not those figures with me here but I can give it to you very closely. (Witness figuring) $3250.

21. Now on the boiler house?

A. That includes the entire building; I include purifying building, boiler house and room that contains the condensers, scrubbers, exhausters, etc.

22. Is not the boiler house the house that contains the ammonia plant?

A. It is the same building, the same room.

23. Does it also contain the dry condensers?

Ans. Yes sir.

24. And the tar extracters?

A. Yes the exhauster, exhaust engines and tar separator.

25. What did you calculate the cost of the tile roof for the office at?

A. The building proper I estimated at $1025, the roof $750 and foundation $750; that does not include any carpenter wood-work, windows, doors, etc.—add $1252.50 for that item.

26. What would you say was the total cost of the brick office?

A. $3777.50.

27. That includes what?

A. The brick work above ground, the foundation, the roof and the woodwork—carpentering; it does not however include a pipe shed that is attached to the building.

28. What was the cost of that pipe shed?

A. I estimated it at $300.

29. What was the size of that one story brick office building?

A. 103 feet long, 29 feet 8 inches wide, 9 inch walls sepa-
356 rating the different rooms.

30. What were the footings in that office building?

A. Concrete.

31. What is the thickness?

Ans. I did not excavate to ascertain the thickness.

32. In making your estimate what did you estimate their thickness to be?

A. I estimated the thickness of that foundation to be about 20 inches at the top.

33. How high was that above the ground?

Ans. 16 feet.

34. What was the size of the joists of that building?

A. I did not notice; if I remember rightly the joists were enclosed in sheathing finish.

35. In the store room attached to that what was the size of the joists if you know?

A. Do you mean the pipe shed I spoke of?

36. Yes.

Ans. That was just a cheap shed; I don't remember the size of the timber used; in a building of that size should be used 2 x 6 and 2 x 4.

37. What was the thickness of the walls above ground?

A. 12 inches.

38. You have a one story coal ware house estimated—what was the size of that building?

A. Do you mean the larger one of the two; I have designated them as No. 1 and No. 2.

39. What was the size of the largest one?

A. It was a peculiar shape, 119 feet and 6 inches on the south side, 127 feet on the west side and 44 feet wide; one of the legs on the north side—that leg was 56 feet long to an angle formed by a side running east; the width of that leg is 56 feet.

357 40. How long and high was it?

A. 75 feet 6 inches long, 30 feet high.

41. What would you say would be the estimated cost of a brick building located on the Peoria Gas & Electric Co.'s property in the city of Peoria of a size 65 feet by 38 feet 5 inches wide by 28 feet high with 36 inch footings, the wall to be up to the first floor window sills?

A. What would be the height of that wall to the first floor?

42. The average height just as they are in the buildings erected on the Peoria Gas & Electric Co.'s property?

A. I did not notice what that height was to the window sills.

43. You estimated that did you not, when you estimated that building?

A. No sir, I took the entire height of the building to the eaves, not to the windows.

44. What would be in your opinion the cost of a brick building, erected on the Peoria Gas & Electric Co.'s property in the city of Peoria of a size 29 feet 6 inches by 28 feet 3 inches, being 16 feet high with footings 16 inches wide, 12 inch wall up to grade and 8 inch brick wall up to the roof with a 12 inch column in center to support trusses?

Ans. About $665.

45. What would you estimate the tile roof on that building to be worth?

Ans. $175.

46. Was there a tile roof on that meter house?

A. I did not know you were inquiring about the meter house.

47. Is there a tile roof on the meter house of the Peoria Gas & Electric Co.?

A. My notes show there is a tile roof on that building.

48. What did you estimate that tile roof to be worth—oh you just stated that, didn't you?

358 A. Yes sir. My estimate of that particular building I gave as $150. I would like to explain, if I can, that there is a difference between figuring the value of a building having that building before you and figuring upon a hypothetical building such as you suggest.

49. How many squares of tile did you estimate it took to cover the meter house building?

A. I did not count them nor did I measure them; I looked it over and made my estimate by looking at the roof.

50. Do you know what tile sells for of the kind and character that is on the building of the Peoria Gas & Electric Co. in Peoria? the cost of the tile?

Objected to unless the question is limited to September 1, 1900. Mr. MANSFIELD: Yes: on September 1, 1900.

A. No, I would only know by having had some experience in covering similar roofs with tile.

51. What did you estimate the cost of the tile to be?

A. $150 laid.

52. How many squares of tile did it take to cover that roof?

A. I could not answer that question; I did not take into consideration the size of the tile.

53. How many squares of tile did it take to cover the retort house?

Ans. I did not estimate that; I made my estimate just as I did on the other building; I looked the roof over and took into consideration the size of the building.

54. Did you take into consideration any slope in the roof?

A. Not necessarily, no sir.

55. What did you take into consideration in arriving at the dimensions of that roof?

A. The size of the building and the size of the roof.

359 56. What was the size of the roof?

A. I have no memorandum as to the size of that roof; I have given you the size of the building.

57. Is this in your opinion a fair estimate of the cost of those buildings or is it a mere rough estimate as made by you from the appearance of the building?

A. I consider it a very fair and very conservative estimate of the value of the building.

58. What would you estimate the cost to be of a concrete foundation for a gas holder whose diameter, or the diameter of the foundation, was 78 feet 8 inches on September 11, 1899, in the city of Peoria, if you know?

A. You have no reference to this particular holder?

59. Yes sir, I have, that was constructed just about that time.

A. The concrete foundation for that particular holder in my judgment would be $5625.

60. How deep does that foundation go down?

A. I did not excavate to see but I made some particular inquiry as to the nature of that foundation and as to the depth of the concrete and I understand that on one side the concrete extends to a depth of about 11 feet: I asked that same question myself because I was a little suspicious that in that particular locality a good deal of attention would have to be given to the foundation.

61. How deep was it on the other side?

A. On the opposite side from where they had to go so deep?

62. Yes, what was the average depth of it?

A. If there were no peculiar reasons or peculiar circumstance why the foundation on the other side of the holder should be excessive, I would say that a foundation of 6 feet would be about right; I understand it was 11 feet on one side.

360 63. What did you consider the average depth of it to be in making your estimate?

A. I did not figure it in that way. I simply figured what the tank with the sort of foundation and depth of foundation a tank of that description would need under favorable circumstances and conditions.

64. How did you arrive at the amount of concrete which would be necessary to go in that foundation?

A. I arrived at it in another way.

66. Upon what did you base your estimate on the amount of concrete that went in there?

A. From the diameter of the tank and the depth of concrete.

67. What kind of cement did you consider that foundation was made of in making your estimate?

A. The best Portland cement.

67. About how many cubic yards of concrete was there in that foundation to the best of your knowledge?

A. Unless I have made some mistake I estimate there would be 75,501 cubic yards.

68. What was the estimate you placed upon that concrete per cubic yard in Peoria?

A. I did not estimate it in that way; I did not go into the details in this way.

69. What in your judgment would be the cost of concrete per cubic yard made of the best Portland cement and best stone and mixed with whatever sand was necessary to make it of the proper consistency?

A. I think such work would cost not far from $1.90 per cubic yard.

70. In September 1899 what would be the estimated cost of a brick building 42 feet 6 inches by 107 feet 4 inches by 30 feet high,

361 the first 10 feet a 16 inch wall on concrete foundation, the upward 20 feet a 12 inch wall with 16 inch pilasters every 13 feet to support the roof, the concrete footings being 36 inches?

A. Have you reference to any of the buildings I have mentioned here?

71. I am asking about the buildings described in my question.

The MASTER: What would be your estimate of the cost of that building at that time?

A. I thought I could save time if Mr. Mansfield was referring to any particular building about the works, by referring to the estimate. (Witness figuring) $3,237.84.

72. What would you estimate the cost to be of a frame building 84 feet 3 inches by 166 feet, outside footings 30 by 30 inches, footings for post 48 x 48 inches, with stone caps 22 inches by 22 inches by 10 inches thick, posts 8 x 8 inches, truss posts 10 by 10 inches, roof rafters 2 inches by 8 inches, and 18 inches in the center, the outside to be made 12 inch plain dressed lumber, shingle roof?

A. I should judge that is what is known as No. 2 coal shed. $9500.

73. In estimating that building, what kind of shingles did you consider were placed on the roof?

A. My observation would be that they were about No. 2 shingles, what builders would term "A Star A."

74. What were those "A Star A" shingles worth in Peoria in September, 1899?

Ans. I don't believe I can answer that.

75. About how much were they worth according to your estimate?

A. You mean by the bundle or the total number of shingles?

76. The total number of shingles?

A. About $750. laid.

362 77. What would you estimate the cost to be of a one-story shed of the following dimensions:—58 feet by 125 feet by 20 feet high, brick piers for footings 5 feet by 5 feet, iron plates 20 inches by 20 inches by one inch thick and posts 12 inches by 125 inches, roof girder 6 inches by 12 inches, rafters 2 inches by 8 inches by 16 inches in center, gravel roof, braces 6 x 6 inches, all anchored together with 1⅛, 8 inch rods and all boarded up inside with 2 inch plank, all the way up.

A. Do you want just the cost of the building on foundation?

78. Yes sir, including gravel roof.

A. About $3250.

79. What would you estimate the cost of a gas holder to be in the city of Peoria in September, 1899, 78 feet 6 inches in diameter and 32 feet high?

A. Do you mean the holder exclusive of the tank and foundation?

80. No, including the tank but not including the foundation.

A. That is not this particular tank that I have already testified to?

81. I don't know whether it is or not?

A. I thought I could correct you possibly in the dimensions you

have given me, if you meant this particular holder; if you want me to figure on another holder, it means quite a good deal of figuring. (Witness figuring) The holder to be located in the particular place where the holder of the Peoria Gas & Electric Co. is located down there?

82. Yes sir.

A. $26,070; that includes the same general rule I have applied in adding 10 per cent. for plans and specifications and superintendency of construction.

363 83. Would you add that 10 per cent. for plans, specifications and superintendency in the event that the manager of the company was superintending the erection of the plant and was paid a yearly salary for so doing?

A. No sir, not if he prepared all his own estimates and plans which is a very unusal thing; as a general thing the manager of a gas company has nearly enough to do without preparing plans and estimates.

84. Is it not a fact where a holder is contracted for that the people from whom the holder is purchased or who contracts for putting up the holder puts it up themselves?

A. No sir, it is very seldom that the people who contract for the building of the holder built the holder tank; that part of the work is the most particular of any, the construction of a tank that is absolutely tight and it is usually done under the supervision of the manager or superintendent in charge and by some careful man who has had experience in that sort of building; it is a peculiar business in itself, the construction of holder tanks—I refer more especially to the construction of holder tanks where constructed of brick or concrete and not steel tanks; where steel tanks are used the holder builder usually constructs the tank.

85. Is this a steel tank here?

A. Yes sir, but they have nothing to do with the construction of the foundation; their interest only extends in the direction of the holder proper.

86. You did not include the foundation for this holder I asked you about in your estimate did you?

A. Yes: on the average foundation of a steel tank.

87. In making your estimate of the cost of the mains of the
364 Peoria Gas & Electric Co. in the city of Peoria, what did you estimate the cost per foot of the 16 inch main to the company in 1899 laid down in the city of Peoria—how do they sell that pipe?

A. By the ton. I was going to say I have not a schedule of the weights of different sizes of pipes with me but have it at the hotel; I can give you the cost of the pipe laid including all labor or I can give you the estimated cost per ton at that time.

88. What was the estimated cost per ton?

A. $26.50.

89. What was the estimated cost per ton for the 12 inch main f. o. b. cars in Peoria?

A. I would like to correct my last answer; the price I gave was the average price for all sizes of pipe; the 16 inch pipe would cost about $23.75 per ton f. o. b. Peoria; the 12 inch pipe $24.25 f. o. b. Peoria.

90. What was the estimated cost of the 10 inch, 8 inch, 6 inch and 4 inch pipe f. o. b. Peoria per ton?

A. The 10 inch $26.00; the 8 inch $27.25; the 6 inch $27.50 and the 4 inch $27.75.

91. In making up your estimate how many tons did you estimate the 16 inch pipe weighed?

A. Those cast iron pipes are all furnished by standard weight for different sizes of pipe and I went entirely by the schedule in figuring the weight of that pipe, and I have not the schedule for the weights of the larger sizes per foot. The 16,12 and 10 in. sizes; the 8, 6 and 4 inch pipe weights I can give you and I have the other information at the hotel and will furnish it later.

92. What was the diameter of the service pipe you testified to this morning as laid by the Peoria Gas & Electric Co. in the city of Peoria?

A. There were several sizes, viz: 3 inch, 2½ inch, 2 inch, 1½ inch and 1¼ inch.

365 93. What were the number of the different sizes?

A. There were 3 3 inch; 2 2½ inch—652 2 inch; 1502 1½ inch; and 266 1¼ inch.

94. Was there any 1 inch service pipe?

A. None mentioned, no sir.

95. What was the price per foot of the 3 inch service pipe f. o. b. Peoria laid by the Peoria Gas & Electric Co. as of date October, 1899?

A. The 3 inch pipe would cost 28 cents per foot.

96. What was the cost per foot of the 2½ inch, the 2 inch, the 1½ inch and the 1¼ inch service pipe f. o. b. Peoria as laid down by the Peoria Gas & Electric Co. in October, 1899?

A. The 2½ inch 22 cents per foot; the 2 inch about 16 cents per foot; the 1½ inch about 11 cents per foot and the 1¼ inch about 8 cents per foot.

(The MASTER:)

97. Are those the market prices?

A. That is about the average market price as I remember at that time; pipe is an article that fluctuates continually, small pipe especially.

(Mr. MANSFIELD:)

98. What is the customary service pipe furnished to residences in a city the size of Peoria?

A. Do you mean the length of the service?

99. No, sir, the diameter?

Ans. 1¼ inches.

100. As a gas expert, is it customary in the management of a gas plant to lay service pipes from the curb to the house, stores or residences free of charge to the occupant or owner of the store- or residences?

A. It is a very narrow and short sighted concern that undertakes to charge at this time for the running of service pipes; that question was partially answered in a previous answer wherein I stated
366 that the progressive gas man of the present day did everything possible to secure business; it is a fact that many owners of property would not run a gas service for their tenant if they thought it was going to cost them anything, nor will the tenant improve the landlord's property by going to the expense of running a service pipe at his own expense, but if he moves into a house and finds gas connection made, he naturally becomes a gas consumer and while the first cost to the company is an item of expense, it is more than compensated for by reason of the fact that the company secured a regular and steady customer. I now have the weights of the pipe inquired about a short time ago.

101. What was the aggregate weight of the 16 inch, the 12 inch, 10 inch, 8 inch, 6 inch and 4 inch pipe?

A. The 16 inch was 94 93/100 tons; the 12 inch pipe 778–90/100 tons; the 10 inch pipe 90–53/100 tons; the 8 inch pipe 404–58/100 tons; the 6 inch pipe 193 11/100 tons, and the 4 inch pipe 808–52/100 tons.

102. Is this estimate made from the books of the company or is it made from your standard of weights you have before you?

A. It is made from the standard adopted by the American Gas Light Association and adopted by most of the foundries.

(Mr. RITSHER:)

103. What scale do you figure on?

A. 4 inch pipe 20 pounds per foot; 6 inch pipe 30 pounds per foot; 8 inch pipe 40 pounds per foot; 10 inch pipe 52 pounds per foot; 12 inch pipe 75 pounds per foot; and 16 inch pipe 108 pounds per foot.

(Mr. MANSFIELD:)

104. What in your opinion as an expert are the commercial departments that are operated by a modern gas plant with the idea of first increasing the gas consumed and second, of increasing the profits on the gas sold?

A. I don't know just what you refer to in your question.

105. Are any commercial departments run in connection
367 with a gas plant?

A. Oh yes, there is usually connected with the office, besides the usual force of clerks and book-keepers, some one person or persons who attend to the setting and removal of meters, give atten-

tion to complaints of consumers such as stoppages of service pipes, poor burners, leaky fixtures, etc., the sale, renewal and repairs of Welbach lights and introduction of same, the introduction of gas stoves by way of cooking demonstrations and other demonstrations as to what gas ranges or gas appliances of all kinds will do, and can do; and then the works, in a town the size of this, I should say it would pay any company to keep in its employ some woman who is competent as a cook to demonstrate all that can be done with a gas stove and follow up the sale of each stove by giving instructions in its use; this would apply to other appliances as well as gas stoves.

106. In your answer then is it to be understood that there are three departments connected with a modern gas plant for the increasing of the gas consumed and for the increasing of the profits on the gas sold?

A. Not necessarily in the increasing of the business but I should divide up the commercial departments in some such way as this:—the office as one department, the meter and complain- department another, the street main and street service department as another; the soliciting of new business another, and under that head possibly would come the question of demonstrating the use of gas as a fuel.

107. Would you have a gas stove department connected with your office?

Ans. Yes sir.

108. Would you have a Welsbach burner *burner* department connected with your office?

Ans. Yes sir.

109. And would you have a gas fixture department?

368 A. Yes sir, I would make my office as attractive as possible both in the display of gas stoves, gas fixtures and Welsbach lights and I should have them so arranged about the office that people could not come in or go out without seeing them.

110. What commercial department has the Peoria Gas & Electric Co. for the purpose of increasing the gas consumed and for increasing the profit on the gas sold, if any?

A. I have not talked with Mr. Little in regard to that, and do not know how the departments are divided or how the work is distributed.

111. As a gas expert state whether or not you think that a gas stove department, including both heating and cook stoves, a Welsbach department, and a gas fixture department should not be attached to a modern gas plant?

A. I should say it should be attached to the business of a modern gas company.

112. In this connection do you consider it is one of the best means of pushing and enlarging the business of a gas company to have these commercial departments attached to the business of the company?

A. Yes sir, I believe that is the only way as far as I know to increase the business of the company, that and the proper treatment

of consumers, prompt attention to all complaints; I believe in doing everything possible to satisfy the consumer.

113. In your opinion as a gas expert would that increase in the consumption of gas as well as the profit be attained as well by a company that did not have an electric light plant as a part of its business and did not push its Welsbach burner as well as one who did have an electric light branch to its business?

A. Well the two lights occupy an entirely different field;
369 it has settled down pretty nearly to this fact, I believe, that the electric light—I refer now more especially to the incandescent light—is used by people who don't figure so much the household expenses and where decoration is required where gas might be dangerous, where the heat would be objectionable and where the question of convenience enters in. That is to say, where you can by pushing a button or turning a switch, light your incandescent light ahead of you or put it out after you have returned; that is a field in my judgment the incandescent light occupies, while gas on the contrary occupies a field of appealing to a larger number of people because it is, in my judgment, a much cheaper light and much more light is furnished for a smaller amount of money than is the case with the electric light, therefore, I can see no reason why one company dealing in both kinds of light, needs to come in contact with each other in their different departments on that account.

114. Then should any risk be taken into consideration as to the business of the Peoria Gas & Electric Co. on account of electric lighting when they own an electric lighting branch themselves?

A. Not where they are competing with themselves and where the same conditions might prevail as at present, but the advance in electricity has been so rapid and wonderful we are prepared for most any surprise.

115. What do you mean by under the present conditions?

A. You referred to the Peoria Gas & Electric Co. as furnishing both gas and electricity and I referred also to that same condition.

116. Could not the improvements or the right to use the improvements and inventions in electric lighting be obtained by this company as well as by any other company that is in the same business in the United States.

370 A. I know of no reason why it could not.

117. What are the bi-products that are sources of revenue to a modern gas plant?

A. Coke, tar, ammoniacal liquor and a small amount of carbon.

118. Is there any other bi-product known to the commercial world from which a gas company obtains revenue?

A. Well, I have known of gas companies selling what is known as drip water, that is, the water that is pumped out of the drips around the holder and about the town, used for some medicinal purposes; I don't know what it is used for; that is all that occurs to me now.

119. Would that be a bi-product called nap-thaline?
Ans. No, sir.
120. Do you know any such bi-product as that?
A. I know of such a term but it is not a bi-product; I know of gas companies who make quantities of it and would like to sell it, but prefer to keep it in their gas rather than sell it, because nap-thaline is an illuminant of the gas and that product is thrown down or deposited under unfavorable conditions and when that product nap-thaline is deposited there is a certain amount or certain proportion of the illuminants of the gas that are deposited with that and it is the aim and endeavor of every gas engineer to so operate his works as to keep the nap-thaline present in the gas and deliver it to the consumer.
121. Is not more or less of this nap-thaline deposited in every coal gas plant?
Ans. Yes, sir; there is.
122. Has it a commercial value?
A. I presume it has; I have never known of any gas company selling it; there are other ways of manufacturing nap-thaline except about gas works.
371 123. The Peoria Gas & Electric Co.'s plant in the city of Peoria consists of a stack of 7 benches, each containing 9 retorts, and each bench containing also a regenerative furnace of the full depth type for heating retorts, the gas after being driven off the coal passes over into a preliminary air condenser and from this condenser it passes through a tar extractor of the type known as P. & A., it then passes through two air coolers, then through two water coolers, then through a washer and then through two scrubbers after leaving the scrubbers the gas passes through two purifyers containing oxide of iron, for the purpose of removing the impurities and for the purpose of removing the impurities known as sulphurated hydrogen and carbonic acid; after leaving the purifyers the manufacturer of the gas is complete and it then passes through a station meter where it is registered as to volume and forced into a storage holder from which it is distributed to the proper mains in the streets. From this description of the plant of the Peoria Gas & Electric Co. in the city of Peoria would you consider it a modern plant and one of the best equipped plants that could be constructed on the first day of May, 1900?
A. Yes sir, I certainly would.
124. What was the capacity of the ammonia concentrator connected with the Peoria Gas & Electric Co.'s plant?
A. It was ample for a works manufacturing half a million cubic feet of gas per day.
125. What is the size of it?
A. I have not the dimensions of that in my memorandum, but I recollect now that the concentrator was about 8 feet high and 3½ or 4 feet in diameter.
126. Supposing the plant was as described in interrogatory 123

372 and to that plant so described there was added an ammonia concentrator of a capacity to take care of the ammonia obtained from the manufacture of 165,000 cubic feet of gas per day, would you then consider this gas plant to be a modern gas plant and so constructed as to reduce the cost of the manufacture of gas to a minimum, taking into consideration the assumption that the gas plant as described does manufacture 500,000 cubic feet of gas per day, and eliminating your idea of the fact that there was an ammonia concentrator of a capacity sufficient to take care of 500,000 cubic feet of gas per day?

A. If I understand your question, you want to know if the present works were manufacturing about 165,000 cubic feet per day would the present ammonia apparatus be sufficient?

127. Would an ammonia apparatus capable of taking care of the condensation of 165,000 cubic feet of gas per day, that is, take care of the ammonia condensed from the manufacture of 165,000 cubic feet of gas per day attached to this plant would that be a modern plant?

A. If the works were making but 165,000 cubic feet of gas per day and never expected to make any more than that, I would not consider it good policy to put in an ammonia apparatus at all, for I do not think it would pay; its apparatus was put in, I suppose anticipating the growth of the business and the necessity of manufacturing more gas and consequently the carbonization of more coal.

128. Supposing the plant of the Peoria Gas & Electric Co. had no ammonia condenser except one which had a capacity of taking care of the ammonia manufactured from 165,000 cubic feet of gas per day, would you then consider the Peoria Gas & Electric Co.'s plant a modern plant?

A. It would be considered a modern plant up to the point
373 of taking care of 165,000 cubic feet of gas per day, but it would not be a modern plant anticipating the natural growth and the natural demand that would be made upon a works of this kind and character.

129. Supposing that the Peoria Gas & Electric Co. were manufacturing 500,000 cubic feet of gas per day and that the ammonia concentrator was only capable of taking care of the ammonia obtained from the manufacture of 165,000 cubic feet of gas per day, would you then consider it a modern and well equipped plant?

A. No, sir.

130. Supposing you had a plant consisting of a stack of 7 benches containing 9 retorts each and each bench containing also a regenerative furnace of the full depth type for heating retorts, also a preliminary air condenser, a tar extractor of the type commonly known as P. & A., two air coolers, 2 water coolers, a washer, 2 scrubbers, 2 purifyers containing oxide of iron, a station meter, a storage holder, the bench capacity being 500,000 to 600,000 cubic feet of gas per day of 24 hours, the condensing plant of a working capacity of slightly over 100,000 cubic feet per day, purifying boxes of a capac.

ity of 800,000 to a million cubic feet per day, a storage holder of the capacity of 300,000 cubic feet per day, and an ammonia concentrating apparatus added of a sufficient capacity to extract all the ammonia from the gas made, also a tar still attached for the purpose of reducing the tar to pitch and extract the several grades of oil from all the tar produced from the manufacture of the gas, also an apparatus for purifying all the nap-thaline produced from the manufacture of the gas, also an apparatus for extracting the sulphurous compounds and preparing them for commercial use, also a thoroughly equipped chemical laboratory attached by which a chemical analysis of the gas could be made daily, would not
374 such a plant, as above described, be in your opinion a more modern and better equipped plant for the purpose of reducing the cost of manufacture of coal gas to a minimum than the plant as described as being constructed and erected upon the property owned by the Peoria Gas & Electric Co. in the city of Peoria?

A. That company has now all these things you referred to except the apparatus for the utilizing, or manufacture as you term it, of nap-thaline and the restoration of the oils from tar and the manufacture of pitch. I hardly think those things would be practical or economical or useful about a gas works of the size of this one. In fact, I think they would be a nuisance and an expense.

131. From your expert knowledge of the manufacture of gas, state at what period in the process of the manufacture of coal gas nap-thaline is extracted from the gas manufactured?

Objected to as assuming that nap-thaline is a bi-product?

A. Nap-thaline is not extracted anywhere; that is a wrong term to use.

132. Is it precipitated—would that suit you better?

A. Well, I am not to be suited. Nap-thaline is always present in the gas, as I stated before the desire is to keep the nap-thaline in the gas until it is distributed to the consumer for the reason that it constitutes the illuminant of the gas——

Defendant's counsel objects to the foregoing answer as not responsive and moves the court to exclude it.

The WITNESS: I am coming up to your question now. Nap-thaline is deposited anywhere between the hydraulic main and the consumer's meter, consequently it can be extracted between either of those points; the deposition of nap-thaline at any point about the works, mains or services, or in the consumer's meter is due to some sudden change in the gas—a shock by reason of a sudden change in temperature or jar of the gas, such as a main crossing under-
375 neath a railroad track or crossing the bed of a stream or river, or where the mains may be suddenly reduced in size, causing friction in the delivery of the gas—all those things tend to the deposition of the gas, whereas if they did not exist the gas might be delivered to the consumer without any deposition of nap-thaline;

nap-thaline is the most serious trouble gas men have to contend with and it is liable to make its appearance anywhere between the hydraulic main and consumers' meters; I have even seen it in the fixtures in houses.

133. If that be true would it not be the part of wisdom in the manufacture of gas to have that nap-thaline deposited if possible at a place certain in or about the manufacturing plant?

A. No sir, you could not arrange any place certain and if you could, if you robbed the gas of that ingredient, nap-thaline, it would be like taking cream from milk, you would be skimming your milk and taking off the cream, and you would have to enrich it by going to an additional expense in the shape of some enricher; nap-thaline is the cheapest enricher I know anything about.

134. In the liquor of ammonia and the tar, don't you find present the bi-product called nap-thaline?

A. It is carried along with the tar, yes sir, to a great extent.

135. Is there any in the liquor of ammonia that comes from the manufacture of the gas?

A. Very little or none.

136. Is it not a fact that some gas companies in the United States extract the nap-thaline from the liquor of ammonia and the tar water?

A. I know of none that do it.

136. What is the nap-thaline, which is obtained from the
376 manufacture of coal gas, used for in the commercial world?

A. I have seen it used to intensify the illuminating value of gas in the shape of a patent gas burner known to the trade as a hydrocarbon burner, and above the burner is a reservoir in which this nap-thaline in its solid condition is placed and the heat from the burner, playing against the bottom of this vessel, volatilizes the nap-thaline and restores it to the gas flame in the manner I have stated before, the gas having been robbed of it, it is simply restored to the gas in another way. It is also used as a disinfectant and used as a preventative against moths, buffalo bugs and things of that kind and probably a number of other things to which it is applied, but they don't occur to me at this time.

138. As a gas expert state what economical reaction occurs in the process of the purification of gas by means of oxide of iron?

A. The unpurified gas coming in contact with the oxide of iron creates heat; this heat puts the oxide of iron in that condition where it has an affinity or ability to attract and hold sulphurous compounds—sulphur impurities; that is the particular impurities which oxide of iron has any affinity for.

139. Is there any commercial use for the compounds of sulphur thus obtained?

Ans. Yes sir.

140. Is that an item?

A. That is considerable of an item, but that work is done by chemical companies who buy up this oxide of iron after it has be-

come foul and spent, that is, after it has taken to itself all the sulphurous compounds it can hold and has ceased to become purifying material; it is then taken by chemical companies and by some process of their own these sulphurous compounds are removed.

141. Could not these sulphurous compounds be removed by
377 means of a chemical laboratory located upon the ground of the gas company?

A. No sir, not properly.

142. Do all gas companies sell this oxide of iron when it becomes completely saturated with these sulphurous compounds?

A. In general only a very few, only the larger companies in the larger cities where they are close to some works who handle that sort of material and where it is an object to them to reduce their cost of purification to the minimum by receiving in return for the old oxide of iron new oxide of iron that will perform the same work that the old originally did, the old oxide, charged with sulphurous compounds being valuable to the chemical works whereas the new oxide is valuable to the gas company.

143. From your knowledge as a gas expert what, in your opinion, would be the cost of coal gas in the holder of a company per thousand cubic feet to a gas company whose gas factory or works consist of the following apparatus: A stack of 7 benches which contain 9 retorts each, and each bench contains also a regulation furnace of the full depth type for heating retorts, the gas then passing over the coal into a preliminary condenser, from this condenser passing into a tar extractor of the type commonly known as P. & A., the gas then passing through two air coolers, through two water coolers, then through washers, then through 2 scrubbers, from whence it passes through purifyers containing oxide of iron and afterwards passes into the holder. In answering this question take into consideration also the fact that the bi-products of tar, ammonia and coke are extracted and sold, the tar for 5 cents a gallon, the ammonia for 8 cents a pound and the coke at an average price of $3.25 per ton; also take into consideration that 22% of the coke made is used in heating furnaces and that gas coal called Youghiogheny coal costs $2.65 a ton f. o. b.; also take into consideration all the
expenses of the company in the manufacture of the gas up to
378 the holder and all the revenues of such company obtained from the sale of the residuals, coke, tar and ammonia, basing your estimate on a daily make of 165,000 cubic feet per day?

A. About 45 cents.

144. What would be the cost of gas in the holder under the same conditions where the daily make was 500,000 cubic feet of gas per day?

Ans. About 39 cents.

145. Suppose that a gas plant of the kind and character described in the previous interrogatory manufactured 3,926,000 cubic feet of gas in a month and that the cost of the gas coal was $1,033.96, the cost of bench fuel $242.28, the cost of boiler fuel, $75.93, the cost of

manufacturing supplies $12.35, the cost of purification supplies $47.13, the cost of enrichers $5.23, the cost of repairs to the retorts $42.92, the cost of the manufacturing labor $700.30, the cost of the purification labor $5.25, the cost of the labor on repairs $28.15, the valve of the coke in the store room $1140.52, the value of the tar $237.55, and the value of the ammonia $136.55. What was the net cost of the gas per thousand cubic feet in the holder of that company?

Objected to as now cross-examination and calling for a computation which anyone can make as well as the witness.

The MASTER: I think that is true but the witness can answer it if he can subject to the objection.

A. Have you the total there of that?

146. The total cost of material was $1459.80?

A. What is the rest of it?

147. Total labor $733.70.

Ans. How much repairs?

148. $42.92?

Ans. Expenses of insurance?

149. No, no insurance.

A. Do these three items you have given me cover all the 379 items you have read?

150. Yes, I think so.

A. So the total expense is $2236.42. Is there any credit there for residuals?

151. The total value of residuals $1534.66?

A. That would leave the net cost then $701.66. If you have given me all the items it would be 17 88/100 cents per thousand cubic feet. That answers your question so far as the information you have given me is concerned.

152. As an expert is not that a fair average price of the cost of gas in the holder to a company in a town where the manufacture of gas amounts to about five million cubic feet of gas per month?

A. No sir, the item of taxes alone would come within four or five cents of that amount.

153. This in the holder, we are not taking in the cost of distribution.

A. Taxes do not apply to anything very much outside of the works.

154. What are the taxes if you know, of the Peoria Gas & Electric Co.'s plant in the city of Peoria?

A. I have looked at statistics a good deal, I think, however, I had not Peoria in my mind, but these western cities and towns don't average very far from 9 cents to 11 cents per thousand feet of gas made.

155. Supposing the amount of taxes paid by the complainant company in the city of Peoria was $5500. what would be the addi-

tional cost per thousand cubic feet of gas on account of those taxes, assuming the manufacture of five million cubic feet per month?

A. 9-16/100 cents.

380 156. Basing it upon a manufacture of five million cubic feet a month?

A. Yes, that would be sixty million cubic feet a year.

157. What would be the cost in the holder to a company who owned a plant similar to that just described per thousand cubic feet, where the total amount of gas manufactured equalled 500,000 cubic feet per day?

A. I have already answered a similar question—39 cents.

158. In the manufacture of twelve million feet of coal gas per month, what would be the expense to a company in a city of the size of Peoria, or about the size of Peoria, to manufacture that amount of coal gas, and what in your opinion would be the cost of the gas per thousand cubic feet at the point of consumption?

A. I suppose in a city similarly located to Peoria?

159. Yes sir.

A. Is that exclusive of residuals?

160. Inclusive?

Ans. About 66 cents.

161. What would you calculate the fixed charges there to be if there are any?

A. I have not taken into consideration any fixed charges such as interest on bonds or anything of that kind.

161. What would be the general expense which you consider in making that up?

A. Do you mean office expenses?

162. Yes sir.

Ans. About 7 cents.

163. What would be the expense for coal gas labor?

A. About 5 cents.

164. What would be the expense for coal gas supplies?

A. What do you mean by supplies? How far would that extend—everything exclusive of coal?

381 165. Whatever you took into consideration when you made your computation?

A. What we ordinarily consider as supplies about 1½ cents.

166. What do those supplies you consider at 1½ cents consist of?

A. I should say of lubricating oils, waste, gasoline or nap-thia which might be used about the works for injecting into the mains or purifyers for the breaking up or removal of nap-thaline, brooms and sundry small articles, stationary and things of that kind.

167. What would be the labor of distribution attached?

A. About 24 cents.

168. What would be the expense of distribution as distinguished from the labor of distribution?

A. I included all expense and labor in my estimate.

169. What would be the net revenue from coke obtained fr the manufacture of that amount of gas?

Mr. RITSHER: Do you assume that a certain amount of coke used for fuel?

Mr. MANSFIELD: I suppose he assumes that a certain portion it is used for fuel.

A. $760.50.

170. What would be the value of the tar obtained from the ma ufacture of coal gas at 5 cents per gallon?

A. $140.40.

171. What would be the value of the ammonia at 8 cents a poun

A. $149.76.

172. As a gas expert do you not know that in a city of about t size of Peoria the gas manufactured in a plant similar to the pla installed by the Peoria Gas & Electric Co. where it manufactur 3,757,400 cubic feet in a month, can be placed in the hold
382 at an average net costs of 22 cents and 5 mills per thousa cubic feet excluding any fixed charges such as taxes in yo computation?

Objected to if the language "where they manufacture" is intend as anything except an assumption.

A. In my judgment it cannot be done.

173. Assuming that the Peoria Gas & Electric Co. manufactu in one month 4,117,400 cubic feet of gas, is it not a fact that it cou put that gas in its holder at a net cost of 21 cents and 4 mills pl per thousand cubic feet?

A. There might be some peculiar conditions by which that cou be done in one single month—there might be some favorable ci cumstances or conditions but month in and month out in my jud ment it could not be done.

174. Supposing the Peoria Gas & Electric Co. in August 19 manufactured 3,926,000 cubic feet of gas, could it not have put th gas in its holder at a net cost of 16 78/100 cents per thousand cub feet?

Ans. No sir.

176. Is there any peculiar conditions under which that could done?

Ans. None that I know of.

177. As a gas expert, is there any air used in the purificati process of the manufacture of gas?

A. Yes sir, it is used in a great many works for revivifying th oxide.

178. About what percentage of air is used?

A. Not to exceed one per cent.

179. I understood you to say on direct examination that September 4, 1900, the cost of gas at the point of consumption furnished by the Peoria Gas & Electric Company would average

cents at that time taking into consideration the fact that the plant was new and was not operating nicely—is that so?

383 A. No, that figure was established after the first preliminary four months when the works were operating well.

180. You testified to that as being of date September 4, 1900, did you not, four months after the installation of the gas plant?

A. Yes, but I think I qualified my answer by stating it was after the works had gotten into successful operation, the air had been excluded, the benches heated up and the oxide and everything of that kind was in the best working order.

Re-direct interrogatories by Mr. RITSHER:

1. At that time, September 4, 1900, when you fixed the price at 85 cents, how near would the plant be to being in good running order?

A. I think I stated it would require four or five months to get the force organized and all apparatus in the best working condition.

2. Do you assume that at that date it was running smoothly?

A. Yes, sir, but during the first four months it was in a sort of experimental stage or period.

3. In your cross-examination, you fixed the cost price for gas to the consumer and were questioned in regard to various items which went to make it up. You were questioned concerning office expenses, coal gas labor, coal gas supplies, labor of distribution—now what other items would go into that cost—you need not state the exact amount but a general classification of them.

A. There is an item of expense works and other labor employed about the works, as to works, as to mains and services, meters and distribution expenses.

4. You testified on cross-examination to the measurement of certain buildings down at the works—where did you get those measurements?

384 A. I made them with the assistance of one of the young men at the works with a tape line.

5. In that estimate you made as to the cost of gas to the consumer, did you include anything for depreciation or interest on the investment?

Ans. No sir.

Re-cross interrogatories by Mr. MANSFIELD:

1. Where a gas company has its plant insured and where the repairs are made as they are needed, did you take that into consideration when you stated that the depreciation to the plant would be 7 per cent.?

A. Yes, I took that into consideration for the reason when one piece of property becomes worn out or too small, that of necessity is abandoned when new apparatus is substituted.

Adjourned by agreement until December 11, 1901 at 10 o'cloc a. m. to meet at such place as may be designated subject to the ca of the special commissioner.

385 Masonic Temple building, # 520 Hennepin avenue.

MINNEAPOLIS, MINN., *December* 11, 1901—10 a. m.

Parties met by agreement.

Present: Judge I. C. Pinkney, special commissioner. Mr. W. T Irwin, Mr. E. C. Ritcher, Mr. W. T. Abbott, appearing for complain ant. Mr. Henry Mansfield, appearing for defendant.

HARVEY W. BROWN, called on behalf of the complainant, bein first duly sworn, deposes and saith :—

Direct interrogatories by Mr. IRWIN:

1. State your name, age and residence?

A. Harvey W. Brown ; 61 ; Minneapolis, Minn.

2. What business are you engaged in?

A. I am president of the Minneapolis Gas Light Company, that is my chief business.

3. Are you familiar with the manufacture of gas and the differen processes?

Ans. I am.

4. How long have you been connected with the manufacture and sale of gas and in what capacity? Please answer in detail.

A. I went into the gas business in 1860; I have been in it con tinuously ever since that time and have done everything in the gas business from shoveling coal up to the position I now hold ; there is no position in a gas company, either in its manufacturing depart ment, its commercial department, its executive department, or its construction department that I have not filled.

5. What are the different processes in use throughout the United States for the manufacture of gas to be sold through a general dis tributing system laid in the streets of a city for illuminating and fuel purposes?

A. The two principal processes are what is known as the
386 coal gas process, or works, and the other is what is known as the water gas or oil gas process as some people designate it.

6. Please describe in a general way the nature of the water gas process you have mentioned?

Objected to as immaterial and incompetent.

A. Water gas is manufactured, as the name indicates, from water principally ; the gas consists chiefly of hydrogen or what is known as the blue gasses ; the water is converted into steam and it is caused to pass through a large body, say a bed of six or eight feet in depth, of incandescent coal or coke—I do not mean by that to say soft coal,

but either hard coal or coke, any substance as near pure carbon as possible. I wish to say in this description that I am trying to avoid all technical phrases that are not generally known and will try to make it as plain as possible so anybody can understand it. The process of the steam passing through the incandescent, or red hot coke, serves to oxidize the oxygen in the water, water being composed largely of oxygen and hydrogen, the oxygen combines with the incandescent coal or coke and liberates the hydrogen or blue gasses in the water and as they pass up from the body of coal, oil is injected either in a spray or in a condition where it will easily vaporize, the vapors mingle or blend with the hot blue gasses from the water and they pass together into the super-heater; those super-heaters contain about 2700 cubic feet of space to every square foot of grate surface as a rule; sometimes those super-heaters are 20 and 30 feet high and even higher than that; the brick in those super-heaters are laid crosswise, being one tier this way and one crosswise, leaving tiers or spaces which in the aggregate capacity of the super-heater is equal to the outlet pipe that goes from the super-heater; this super-heater is also red hot; the two gasses, the vapors of
387 petroleum and the blue gasses generate in the water, passing together through the super-heater, going through the chemical change of breaking up all the particles, that is to say, each one of these minute particles is broken up so fine by the heat they lose their specific gravity and will not again condense into a liquid; from this super-heater the gas passes into what is called wash-boxes which serve the purpose of taking out the tar particles in the gas as nearly as possible; from the wash-boxes it goes into condensers and scrubbers and then proceeds to what is termed a relief holder. The object of this relief holder is, the gas generates so rapidly it is impossible to treat it in purification and cooling sufficiently rapid in generation without having an exceptionally large plant. From the relief holder the gas is supposed to become quiescent and if you could examine the inside of a relief holder when quiescent and quiet it would resemble the dew falling from the heavens at night, the little fine infinitesimal particles being contained on the surface of the water in the holder during the process of cooling; from the relief holder it is taken by the exhausters; it is then put through what is known as the scrubbing or finishing process—through the scrubbers or washers that have been erected for that purpose; from the washers it passes through purifyers where the sulphur compounds of carbonic acid and the objectionable constituents of the gas are removed; from the purifyers it passes through the station meter where it is registered or measured; thence on to the distributing holder and after reaching the distributing holder it is treated precisely the same as any other gas as it is carried to the consumer Such in brief is the water gas process.

7. Please describe in detail the modern method and apparatus for the manufacture of coal gas as now in general use?

388 A. You start from what is known as the benches te
cally of retorts; the modern bench of today is a benc
what is known as 9's, otherwise 9 retor-s in one oven. They
practically a two story affair, that is to say, the generators u
neath, or the heating furnaces underneath, in the cellar or
ment, or story by itself; a floor is built over to a point where
convenient to charge the 9's and draw them; you start from a b
at the bottom and put in, what is called regenerative or recu
tive furnaces, both mean the same thing, a large mass of fuel,
in an incandescent condition, that is, a slow burning conditi
condition evolving or generating the gas from the fuel; that is
is known technically as the primary air process; that is ca
through ports until it becomes necessary to complete combustio
adding more atmosphere to it which is done by what is know
the secondary ports and the combustion is completed in the
bustion chamber; the combustion chamber immediately under
retorts or the retorts are heated up to a point say of about 2800
grees of heat—what might be technically known as a lemon he
the coal is charged into these retorts in various quantities accor
to the necessity of the company and from there the gas from the
is eliminated by the heat; the charges usually occupy about 4 h
to burn them off, although it may take 4, 5 or 6 hours accordi
the necessity or requirement of the company; after the charg
burned off the coke is drawn and goes into the cellar where
taken care of by the men placed there for the purpose and
benches are again refilled and so it is repeated. The gas
leaving the retorts goes up the ascension pipes and goes into w
is known as the hydraulic main; that is a main that is sealed
sufficient water so the gas has to pass through water before it
escape out of the pipe into the hydraulic main, the pur
389 being to have a perpetual seal against any back press
which may come when the retort lids are open and thus cr
an explosion by the fact of gas escaping back to the retorts; f
the hydraulic main it is taken up by an exhauster immediately
the hydraulic main, that is to say an exhauster is working on it
the time so as to neutralize the pressure upon it, the aim being
to have any pressure or vacuum; the exhauster pushes the
through what is known as condensers; these condensers usually
a multibular affair, that is to say, they are composed of as ma
tubes as can be put within a given shell, whatever the size of
shell may be, in some of the condensers the tubes are filled w
water, in others the space outside of the tubes is filled with wat
whatever it may be, the spaces are filled with water and the
passes through the other space, the object being to reduce the t
perature of the gas—cool it; from the condensers it goes into
washing scrubbers and these scrubbers are repeated successively
various numbers according to the ideas of the manufacturer of w
the necessity of scrubbing is; from the scrubbers it is very of
taken up by what is called a P. & A.—technically known by

men as P. & A., but it is called Pelouze-Adoriun tar separator; the object of this is to strain or take out all the small particles of tar that may be left in the gas that has not already been condensed out of it; this P. & A. separator consists of very fine minute sieves which are exposed to the gas so that the ascent of each one of these sieves when all added together equals the capacity of the main; the theory is that the tar particles are in little globules or round *sh*peres like little toy pellets and in passing through these fine sieves they press against them and break them from their round or spherical shape and they go down mingled together and pass off without being carried through with the gas;
390 after the gas passes the series of condensers and scrubbers it next goes to the purif*y*ers; purification takes place in the usual way with either lime or oxide as the case may be most advantageous to the company, and from there it goes through the station meter, is registered and measured, thence from the station meter into the holder and thence taken up and passes into the street. Such in brief are the outlines of the two processes. There are other processes used in a very small way in isolated places. For instance, what is known as the Wood process, in some of the remote, small towns in the south where they are close to the pitch pine fields, where they can get pitch pine knots but not coal, and they use pitch pine for the purpose; but I presume it don't aggregate one tenth of one per cent. of the production in the United States. This process and others are hardly worth speaking of. Then, of course, we pass into the field of what may be called smaller operations. For instance, you can take ascet*a*line gas, isolated plants, gasoline gas, as they call it, or carbureted air process, but none of them are in use serving a community; they are only isolated plants.

8. Will you give a brief history of the origin and development of the manufacture and sale of gas generally covering both the illuminating and fuel part of it?

A. The discovery of gas was made in England about 100 years ago and came to this country, I should say roughly off hand without refere*n*ce to records, about 70 years ago; it was first introduced in New York and Philadelphia and from there it spread over the entire continent of America, in fact, all over the world until today, I think, there are about 1100 gas companies in the United States. I don't think you want to go into the particulars do you?

9. No sir, I do not care to do into the different changes
391 of process of all the different kinds.

A. So far as the manufacture and production of what is technically known as water gas is concerned, its first inception—

Interrupted.

Mr. Mansfield: I object to the statement in regard to water gas as irrelevant and immaterial.

The Master. It is merely preliminary, as I understand it, for the purpose of qualifying the witness as an expert.

Mr. IRWIN: It is simply to show the technical knowledge of the witness in order to qualify him as an expert.

The WITNESS: Water gas originated about the time I went into the business 40 years ago; it was the first inception of the use of liquid hydrocarbon in the manufacture of gas instead of solid hydrocarbon. In other words, the liquid hydrocarbon is known as any substance particularly petroleum and the solid hydrocarbon is coal of any kind. It was first introduced by myself and my associates in various works throughout the country, but we felt the lack and need of hydrogen as a dilutent; experiments were made along that line for about 7 or 8 years until finally the scheme of extracting the hydrogen and blue gas from water was taken up; then the old process, known as the Gale & Ram process I have spoken of, was abandoned for the water gas process, or united with it; since that time it has been introduced in various quantities until I presume today one half of the gas in the United States is made by the water gas process; I have already described that process unless you wish me to enumerate the works using water gas. I have stated enough to cover the idea.

10. Yes, I think you have covered that matter sufficiently for the present. Please give a brief history of the use of gas for fuel purposes.

392 A. Gas was introduced for fuel purposes about 15 or 16 years ago; it was found by calculation that a given quantity of food could be cooked using gas for fuel much to the advantage of the food cooked and the uniform heat that could be obtained and also quite as economically as it could be cooked by any other fuel, therefore, gas stoves were originated and taken up by the different gas companies and it has been vigorously pushed from that day to this for all possible applications where it could be used for fuel with economy, and the result of it is that the companies throughout the country that have advocated and advanced it are to-day enjoying the advantages of it to the extent at least of 50 per cent. of their consumption; I know my company is selling more than one half of its output for fuel.

11. Please describe the changes which have taken place in the last 25 or 30 years in the type of benches, number of retorts, setting furnaces and condensing apparatus, the change in the type of purifyers and purifying materials and the changes and advance in the recovery of bi-products and state in general terms the reasons of such changes?

A. Probably 30 years ago—I should say roughly—a clay retort was practically unknown, the retorts in use at that time being cast iron; the gas was generated under what was known at that time as a condition of low distillation or low heat and the yield from the cast iron retorts using our best gas coal would very rarely equal 4 feet per pound and the benches at that time run from a bench of one to two and three; they had no regenerative furnaces whatever and

it would consume nearly all the coke that the benches produced to heat the retorts, that is to say, they had very little coke left for sale as a residual, the low distillation, or lack of capacity in the iron retort, or low yield of gas, consumed or used
393 up nearly all of the bi-product known as coke; at that time Adam Webber, I think, of New York, conceived the idea of building a clay retort and clay retorts were substituted in these benches instead of iron; it was found that with the clay retorts you could carry a higher heat in a well regulated bench at that time it would increase the yield from the coal perhaps from 15 to 20 per cent., which was quite a saving; the furnaces, however, were the same, they were the old furnace set in the retort on a level with the floor you were working on and you would simply open the door, shove it full and let it burn up to heat the benches; subsequently I believe a man by the name of Klone, a German in Munich, I think conceived and introduced what was known as a regenerative furnace or regenerative bench which I have heretofore described; those benches came over to this country about 16 years ago and we were the first to introduce them; they were brought here by a man named Bredell; we contracted with him to set us up 8 benches of 9's and we have used them constantly since until last year and they are now being destroyed in order to be rebuilt; of course, with the introduction of the regenerative bench of 9's, a man who had before that time been equal to charge and draw what would be about 7000 or 8000 feet of gas capacity in a day, would work up to a point where we could get 20,000 out of him, and it made a great saving of labor; the size of retorts were also increased, they used to be 10 x 12 and 8 or 9 feet long, now we have them up to 14 x 28 and 9 feet long; a charge of coal that used to go into the iron retorts if it reached 200 pounds was regarded as excessive, now a charge of coal amounting to 450 pounds in a retort is not regarded as excessive; the improvement has been a general extension, a general increase of the capacity, a general increase in the productiveness of the benches and economy in the saving of coke; the genera-
394 tive bench of 9's is unquestionably today the greatest advance that has ever been made in the manufacture of coal gas and they are in almost universal use wherever the requirements are large enough to warrant putting one of them in.

12. Have those changes increased the saving of bi-products?

A. Of coke, yes sir.

13. Have they increased the production or saving of any of the other bi-products?

A. The change of itself necessarily, no, that is, of the bench, but the development of the country, the introduction of ammonia for the manufacture of ice, for the cooling of breweries, and its various introductions for other purposes has made a demand for ammonia which has caused the gas companies to save their product known as ammoni-cal liquor; that has been caused by the demand for the article itself and not by the process of regenerative benches. I wish

to say this in explanation. Ammonia is an artificial compound you throw coal into a red hot retort and the coal being filled wit little fine infinitesimal air sells the moment it commences to heat u the air is driven off, the oxygen of the air is burnt up liberating th nitrogen, the nitrogen combines with the hydrogen and produce ammonia; so it don't make any difference in a sealed tight vesse whatever the process is where air is contained in the article you ar using and hydrogen is one of the resulting compounds, the two wi combine and make ammonia. I can make it artificially anywhe outside of gas works as well as in.

14. What changes have taken place, during your experience i the gas business, in the manner of purifying and purifying materia in the manufacture of gas?

A. Do you mean since the introduction of gas or during my ow experience?

395 15. During your knowledge of the gas business?

A. When the London works started they did not purify a all, so I was informed, and the sulphuretted compounds they used t shoot off into that end of the town and the result was it stunk every body out and their nicely gilded rooms and polished plated war and all those things turned black at once; Parliament took it up commenced looking into the matter and found out it was caused b the filthy compound thrown into the rooms by the combustion o gas, and they enacted an act which has been followed as the stand ard throughout the world from that time with reference to th purity of the article, stating that there should not be to exceed s many grains of sulphur to the hundred feet, etc. 30 years ago an before that lime was universally used; in lime either manufacture from oyster shells where they are convenient or any lime containin over 85 per cent. of pure lime—you have plenty of it that don't con tain 50 per cent. of lime, the balance being clay, mud or differen soils, but the lime that contains 85 per cent. and more pure lim was slacked, the purifyers were op-ned and the lime put in on trays it usually was so slack that it was rolled up into little roun! ball about the size of a marble; these were put on the different trays i the purifyers and four boxes were connected in circuit, three o which were in use, one being known as the idle box to be turned o when required; the gas was driven through these boxes, made t pass through the lime, the lime would take up the carbonic acid and sulphuretted hydrogen, a good deal of the free ammonia and the solid sulphur compound; after passing the third box it was supposed to be free of these impurities; this was established by testing the second box and when the second box would show foul the fourth box was turned on and the second box became

396 the first box, the third box the second and so on rotating around and around; today what is known as the oxide process, the oxide of iron or sulphide of iron, as you like, is uni versally used; in the use of oxide you can use a great deal deeper box, perhaps twice as deep as you could in the old lime process be-

cause you are not liable to the back pressure by coking to such an extent; it enables you to use less boxes than you used before they connected them; now they fill, for instance, what is known as the Choller process, only using one box; that, however, is comparatively new, not very well tried yet, and we cannot pass judgment on it, but it is regarded as perfectly safe, if properly constructed boxes are made, to use two boxes with the oxide of iron; the oxide of iron does the same thing exactly that the lime did. Now the chemical changes are practically the same as with the lime, all impurities being removed; of course, the gas passing into a box containing gas, carbonic acid, sulphuretted hydrogen, ammonia and what are known as the solid sulphur compounds, the first thing to be eliminated and taken off, that is, the first thing that the material will combine with the quickest is the ammonia compound, that with the iron or oxide generates the heat; the moment you generate heat the carbonic acid commences to go to the material, after the material becomes charged with the carbonic acid and ammonia to a point when it is full of it, the acid will remove itself and the second box takes up its satchel and walks on, then the sulphur compounds will commence to nest in with the rest of it and so it goes on one after the other it will combine with first and when it gets loaded or charged to a certain extent with one it has the greatest affinity with, it goes to the other and the other becomes absorbed and the next goes on and deposits itself again at the point where the conditions are such it will unite with it to the greatest advantage and ease.

397 For instance, ammonia will immediately leave any compound and unite itself with water if you bring it in contact with water; take weak ammonia, three or four ounce liquor, and it will leave water to combine with its own again. These chemical changes are wonderful when you commence to study them. For instance to show you the different elements and the dangers of them, you take nitrate of glycerine composed of one fourth pure glycerine—the glycerine is perfectly harmless, you can drink it or use it, it is simply a sweet substance, then take nitric acid for the other three parts of it—it of itself is perfectly harmless, you can do anything with it and it don't disturb anybody, but you put them together in the proportion of three of one and one of the other and you have nitro-glycerine, and you know what that will do. Now to go into the realm of gasses, take pure hydrogen and nitrogen gas, the hydrogen is perfectly harmless, almost odorless, perfectly colorless, but you put the two in two pipes, turn on the cock, and let them come together and they will go off like a pistol; they fight immediately, yet they are both part and parcel of the same original element; it is just so with the vagaries of the purification of gasses; in certain proportions they will unite perfectly with material, the material becomes charged to a certain extent with this compound and then it has an affinity for compounds it would not touch before and it immediately goes to, absorbs and takes it up, and when it has taken up a certain quantity of it, partially loaded itself with it, these

other elements taken up first get up and leave and go somewhe
else. It has been quite an exhaustive study with me as a matter
curiosity.

16. With what different gas plants are you familiar and what di
ferent gas plants have you examined during your experience i
the gas business, and in naming these plants will you plea
398 state whether they are coal or water gas plants as nearly
you can recollect.

Objected to as incompetent, immaterial, irrelevant.

A. Ten years ago I don't think there was a gas works in th
United States I had not visited in person—interru-ed.

The MASTER:

17. What was the number in operation at that time or approx
mately the number?

A. Perhaps in the neighborhood of 1000. I will say for the fir
13 years of my connection with the gas business I was constantly o
the move almost; we were introducing a process and, of course,
brought us in communication and connection with a very larg
number of works, it was constant examination of works, sonstan
advice as to what they ought to do or what they thought the
ought to do, sometimes in a scientific way, sometimes in a constru
tion way and sometimes in a business way, and therefore my bus
ness led me to the examination of a very large number of plants;
have been connected with the alterations of the Citizens' gas work
in Brooklyn, N. Y.; I also was associated and connected with th
construction of the Mutual gas works of New York.

(Mr. IRWIN:)

18. State as you go along whether they were coal or water ga
plants.

A. They were all coal gas plants at that time. I was connecte
and associated with the formation of that line of companies, nearly
all of them, in the United States known as Mutual gas light com
panies. For instance, the Mutual of Buffalo; I was also one of th
originators and connected with the erection of the Mutual ga
works in Detroit, Mich.; I also spent nearly one year in overhaul
ing and reconstructing the Memphis gas works at Memphis, Tenn.
I was called in to consult with Mr. Forstall and Mr. McCullough
who were then the general superintendent and chief enginee
399 of the New Orleans Gas Company at New Orleans; I also wa
one of the promoters of the opposition company in San Fran
cisco, Calif., known as the Metropolitan works; I have been called
in consultation with the president of the San Francisco Gas Ligh
Company repeatedly; I have also acted in an advisory capacity with
Charles H. Simpkins of the Los Angeles gas works of Los Angeles
I have also visited nearly all important gas works on the continent
and in England, coal gas works among the rest at London, at Paris

the gas works in Rome, in Vienna, in Berlin and unquestionably the best gas works in the world at Amsterdam, Holland. I state these things not from an egotistical standpoint but simply to answer the question in a general way.

19. Are you familiar with the cost in the open market during the years 1899 and 1900, of the various items of machinery, apparatus, material and equipment entering into the construction of a coal gas plant.

A. Yes sir, I am, that is to say, I would not attempt to tell you the cost, for instance, of an iron wheel barrow for I do not charge my memory with such things as that, but in a general way I am, that is, I would not be bound down to the fraction of a six-pence but in a general way I am.

20. How recently have you reconstructed or built any gas plant?

A. The Minneapolis Gas Company has for the last three years been going through a period of reconstruction.

21. And you have been president of that company during that period?

A. I have been president of the company for 16 years past.

22. I will now call your attention to the plat marked Exhibit "1" in evidence in this case which purports to be a plan of the gas plant of the Peoria Gas & Electric Co. at Peoria, Ill., and ask
400 you to examine it and then state whether or not it represents a proper plan for a modern up-to-date coal gas plant in your judgment?

A. I should say it was very complete for its capacity.

23. Are you familiar with the general location, size, improvements and topography of the city of Peoria, Ill.?

A. I visited the old Peoria works, I should judge about 20 years ago; I am not familiar except with what I saw there. In other words, I am familiar to this extent; I know there is a river there, and that Peoria is principally on one side of the river; I know that after you go back a little ways from the river it slopes up, sort of a bench or higher land; I have a distinct recollection of the old hotel I staid in and that is about all.

24. In your examination as a witness in this case, you will please assume that on September 1st, 1900, the manufacturing plant of the Peoria Gas and Electric Company in the city of Peoria, Illinois, consisting of the following buildings, machinery, apparatus and equipment, to wit:

Retort house.

107 ft. 4" x 42 ft. 2"—brick building with gable roof. Walls 32 feet above grade, 18" thick, for 12 feet and 12" balance of height, with 16" pilaster, spaced 13 feet apart.

Ludowici tile roof, built onto steel frame work supported by seven steel trusses. 30 ft. clere story entire length of building.

Foundations 6 feet below grade and laid on footing of concrete 12" deep by 2 feet 9" wide.

Main floor laid with 9″ x 9″ x 2½″ tile.

Operating floor build upon nine hollow tile arches sprung from 15″ iron I-beams, one end of beam resting on wall and other end next to benches being carried on iron column. Operating floor covered with 9″ x 9″ x 2½″ tile, except 4 feet on front of the benches, which is covered with cast iron plates.

Retort house contains seven Parker-Russell full depth regenerative benches of nine 16″ x 26″ x 9 feet deep retorts to each bench. Each retort provided with mouth piece with self-sealing lid and connects to hydraulic main through 6″ stand-pipes, and
401 bridge pipes provided with self-sealing lids or covers.

Steel hydraulic main is 2 feet 7½″ deep, by 2 feet 5″ wide, build of boiler plate, and provided with four cast iron cleaning pockets fitted with covers bolted on, for each bench.

Hydraulic main is connected to condenser room with a 16″ cast iron pipe in which is placed a 16″ Western Gas Construction Co. gate valve, at hydraulic main. 16″ pipe is covered with magnesia cement.

A 9″ H. & M. angle thermometer is attached to 16″ pipe at hydraulic main.

Hydraulic main is provided with a 4″ tar take-off pipe and connected to both ends of main through 4″ valves.

4″ tar pipe runs entire length of benches, then drops to below floor and is carried to separator in condenser room.

Hydraulic main is also provided with ammonia take-off, which discharges into a cast iron seal-pot which is connected to 4″ tar pipe.

Benches are drafted through a main flue constructed entire length of benches, and discharging into 90 feet by 48″ steel stack, built upon a brick foundation, 12 feet in diameter at base by 13 feet. Foundation 6 feet deep.

Benches and hydraulic main are supplied with water through a 1¼ inch water pipe, laid under retort house floor. Same pipe also supplies water for quenching hot coke, through five stand-pipes, each stand pipe being provided with a stop-cock set in the ground, and fitted with a curb box brought two feet above floor.

5 and # 6 benches and heating coil in elevator pit are supplied with steam through a one inch pipe brought from condenser room. Heating coil contains 150 feet one inch pipe.

For cleaning stopped stand-pipes, a platform of 2″ planks has been constructed the entire length of hydraulic main, in front of stand pipes. Platform is carried on channel iron, bolted across top of hydraulic main.

A 10″ diameter x 13 ft. 6″ travel, direct acting elevator with 6 ft. 6″ x 6 ft. 6″ platform, is provided to elevate coal and coke to the operating floor. Elevator is connected to elevator pump and surge tank in boiler room, with one 5″ and one 4″ pipe, laid underneath boiler room floor.

A 1″ gas pipe is run along the wall entire length of building on each floor, from which eight gas jets on each floor are taken.

Boiler house.

38 feet 5″ x 65 feet brick, with gable roof. Walls 20 feet high, 18″ thick. Roof covered with Ludowici tile built onto steel frames supported by one steel truss. Foundation 6 feet deep, on brick footing 2 feet wide. Floor paved with paving brick.

Pump pit 8 feet x 10 feet x 8 feet deep, 12″ brick walls, wooden stairway and wooden hand-rail.

402 Boiler house contains: two 66″ x 18 feet tubular steel boilers with 36″ x 40″ domes, set in independent brick settings; connected together by one 6″ steam header, from which is taken one 4″ pipe to supply heating apparatus, and oxide elevator engine and one 4″ steam line to pump header; and also connected by one 2″ header from which is taken steam supply to exhausters. All live steam piping and domes of boilers are covered with magnesia covering.

Two 5¼″ x 3½″ x 6″ single acting boiler feed pumps connected so that either one or both may be worked.

One 8″ x 5″ x 10″ single acting pump, drawing water from river and set in pit 8 feet deep.

One 5¼″ x 3½″ x 6″ single acting ammonia pump pumping crude liquor to ammonia still and scrubbers, set in pit.

One 10″ x 6″ x 12″ single acting tar pump for loading tar into tank wagons or cars, set in pit.

One 4½″ x 2⅞″ x 5″ single acting ammonia pump for pumping concentrated liquor from storage tank.

One 8″ x 5″ x 10″ single acting pump for elevator and fitted with 1½″ pump governer and guage,—Fisher.

One 9½″ x 8″ x 10″ Crane air compressor, used in connection with the elevator apparatus.

One 12″ x 19 foot stand pipe for elevator.

One 10 foot 2″ x 1 ft. 4″ x 1 ft. 5″ open surge tank for elevator.

One 7 ft. 10″ x 7 ft. 10″ diameter steel tank supported on iron columns resting on boiler and fixing bench setting, used for water tank.

One fixing bench consisting of an 18″ x 20 ft. retort built into a setting containing a Parker-Russell semi-recuperator furnace, and provided with two mouth-pieces fitted with self-sealing lids, and connected to 4 ft. x 4 ft. x 4 ft. deep hydraulic main by means of a 6″ stand pipe, and a bridge pipe fitted with self sealing lid. Hydraulic mains provided with a tar pot, into which an overflow pipe from hydraulic main discharges.

Fixing bench is connected with outlet of purifier boxes, with a line of 6″ pipe, which also serves to connect vaporizer, and another line of 6″ pipe leads from fixing bench hydraulic main to inlet of exhausters.

One vaporizer for vaporizing nap-tha, consisting of a closed st
tank, 3 feet x 4 feet x 6 feet, containing eleven steel shelves on wh
rest eleven coils of 1" steam pipe made up of thirteen pipes to e
coil, and each coil provided with two ½" valves, so that steam n
be cut off from any coil independently of the others.

6" connecting pipe is provided with three 6" valves, one in pu
fying house, one at vaporizer and one in condenser room.

403 One ammonia concentrator, made by Michigan ammo
works, of a capacity of 15,000 tons of coal per annum, c
sisting of a steel overhead tank supported on a timber frame wo
a cast iron still on foundation on boiler room floor, a condenser c
sisting of a coil of 2" lead pipe, contained in an open steel tank s
ported on a timber frame work; an absorber consisting of a clo
steel tank set on a brick foundation, and a second absorber set alo
side of first absorber.

One #2 B Baragwanath plain tubular water heater with br
tubes.

One 3" exhaust header into which all pumps and exhausters
charge, each exhaust pipe from each piece of apparatus being p
vided with a valve. 3" pipe is also provided with three 3" val
in order to by-pass feed water heater.

One 3" discharge pipe from river pump to tank, provided w
3" valve so that water may be diverted from tank and pump
directly into water lines leading to condenser room and ret
house.

A 1½" connection provided with a float valve supplies the op
elevator tank with water from the 3-inch discharge pipe from ri
pump.

A 3" connection provided with a 3" valve is taken from pi
leading from elevator standpipe to supply water to condenser roo
purifier house and retort house.

Water pipes are so arranged that either well pump located
condenser room or river pump, or elevator pump, may supply wa
required in condenser, purifier and retort houses, and meter roo
or well water from well pump, may be supplied to purifier a
condenser houses, and river water to retort house.

A gauge board on which are placed gauges for each of the follo
ing pieces of apparatus;—exhauster, P. & A. air cooler, No. 1 co
denser, No. 2 condenser, washer, No. 1 scrubber, No. 2 scrubber, N
1 purifier and No. 2 purifier, ten gauges.

Gauges consist of two glass tubes connected top and bottom wi
brass connecting pieces, provided with stuffing boxes, each gau
provided with a brass connecting pipe fitted with a ⅜" gas cock,
& A. air cooler, and condenser gauges are 18", others are 1
gauges.

One cast iron enameled wash out water closet and flush tank.

One cupboard or wardrobe for firemen's clothes.

A line of 1" gas piping supplying 12 foot burners placed in boi
room.

Purifying and condenser house.

107 feet 4″ x 65 feet 1″ brick, gable roof. Walls 43 feet high to eaves, 22″ thick for 25 feet and 16″ balance of height.

404 Condenser room divided off by partition wall built up to the roof, 16″ thick for 25 feet, and 12″ balance of height. Foundation 3 feet 6″ deep. Roof covered with Ludowici tile (except two spaces over condenser room which are covered with glass tile to make sky-light), built onto steel frame-work, supported on six steel trusses, and partition walls.

Condenser room is provided with a frame stage and wood floor around condenser apparatus, and purifier house is also provided with a stage and floor around purifier boxes.

A wooden stair-way leads from basement of condensing room to stage floor, another leads from stage floor in condenser room up to stage floor in purifier house, and a third stair-way leads from purifier house floor to a stage floor around boxes.

A plank run way is built from purifier house to drive-way between store room and purifying house. Entire floor both in condenser room and purifying house, is paved with paving brick.

Condenser room contains:—One preliminary air cooler, 20 feet 6″ high, by 5 feet diameter, provided with two 12″ valves, and one 16″ by-pass valve, and one 9″ H. & M. angle thermometer.

Air cooler is set on brick foundation eleven feet high, foundation is hollow, or of concentric construction and space inside is connected through opening in wall of building and through aria built outside and carried two feet above ground, to atmosphere.

Two P. H. and F. M. Roots No. 5 exhausters, with engines on same bed plate, set on brick foundations, 3 feet below condenser room floor, and 8 feet above floor. Each exhauster furnished with an automatic gas governor and steam valve and two 12″ gas valves with floor stands.

One 16″ automatic by-pass valve is provided for each exhauster.

Steam piping, both supply and exhaust, is provided with valves, so that either one may be cut off independently of the other.

One P. & A. tar extractor set on brick foundation 3 feet below condenser room floor, and 8 feet 4″ above floor, and provided with two 12″ valves, and one 16″ by-pass valve, all with floor stands and one differential gauge and one 9″ H. & M. angle thermometer.

A seal pot to seal the drips from both exhauster and the P. & A. is set on floor below P. & A.

A tubular air condenser, 20 feet 6″ high, by 5 feet 6″ diameter, set on brick foundation, 3 feet below condenser room floor, and 8 feet above floor, and provided with two 12″ *inch* valves, and one 16″ by-pass valve, all with floor stands and one 9″ H. & M. straight thermometer.

404½ Foundation is of concentric construction, to permit air to be brought through arched opening, left in base, and circulated through condenser.

Two tubular water condensers, each 5 feet 0″ by 20 feet 6″ upon brick foundation, 3 feet below condenser room floor, and 8 f above floor, each condenser provided with two 12″ valves and b condensers provided with one 16″ by-pass valve with floor stand

Each condenser is connected by separate drip pipe to seal pot under washer. A 1¼″ ammonia cock in each drip pipe. Each c denser is also provided with two water connections, so that eit well or river water, or both may be supplied to condensers. 1″ ov flow pipes lead from each condenser to catch basin in boi room.

405 No. 2 condenser provided with two man holes, one top a one bottom, for cleaning.

One improved Chollar washer, built of cast iron, 5 feet x 6 feet feet 6″ deep, set on foundation, consisting of two brick piers, 8 f long, extending from a point three feet below condenser room fl to a point 6 feet 6″ above floor, and provided with two 2″ val and one 16″ by-pass valve, all with floor stands, and one differ tial gauge and one 9″ H. & M. straight stem thermometer. Was is also provided with device for varying height of water in wash

Two scrubbers 6 feet diameter by 24 feet in height, set up foundation, 3 feet below condenser room floor, and 8 feet above flo each scrubber provided with two 12″ valves and one 16″ by-p scrubber, also provided with one 9″ H. & M. angle thermometer.

No. 1 scrubber is provided with two 2″ drip connections, with 2″ cock in each connection, so that crude liquor may be run i washer, or else discharged into seal pot on condenser room fl under scrubbers.

No. 2 scrubber is provided with a 2″ drip pipe, fitted with 2″ co discharging into seal pot on condenser room floor.

Each scrubber is fitted with three layers of trays and seven 11′ 17″ oval self sealing man holes, and removable sprinklers. The scrubber is fitted with a double connection so that it may be su plied either with *dresh* water or crude liquor.

The tar and condensation from the various pieces of apparatus gathered into three seal pots, one set below scrubbers and one below washer and one set below P. & A. A separate line of 4″ c iron pipe is run from these seal pots to a tar and ammonia separat set below the P. & A. This 4″ line is supported on brick piers. the seal pot below the P. & A. an opening is left for a three in wrought iron header, which is run along the entire length of t 16″ gas main, to carry away the tar and condensation collecting the 16″ gas main between the by-pass valves.

There are eight syphon drips in the 16″ gas main, each drip ma of 1¼″ pipe, fitted with a 1¼ inch ammonia cock and a ½ inch t and steam connection provided with a half inch steam valve, so t any drip or any portion of the 16″ gas main may be steamed at a time. These drips discharge into the 3″ wrought iron head through 3″ by 2″ tees, and the drip header is also provid

with a steam connection with valve at each end, so that any stoppage may be steamed out.

One tar and ammonia separator set on condenser room floor below P. & A., and consisting of a steel tank 5 feet diameter by 5 feet 3″ deep, provided with a vertical steel partition, dividing separator into two compartments, and also provided with one 4″ tar outlet and two 2½″ ammonia outlets, fitted with devices for varying the height of the liquor contained in the separator, and also fitted with a clean-out in the bottom of the side of the tank. A line of 4″ cast iron pipe to tar well, and a line of 3″ wrought iron pipe to ammonia well, both pipes laid under condenser room floor, take the tar and ammonia away from the separator.

406 The 16″ gas main is provided with specials now closed by blank flanges, so that the present apparatus, excepting the exhausters, may be duplicated at any time, thereby doubling the capacity of the condenser room. The 16″ main is supported on brick piers, and all elbows are provided with clean-out holes fitted with self-sealing covers.

One 4½″ x 2¾″ x 5″ single acting pump is set on condenser room floor and connected to well in yard by a line of 2″ pipe. This pump is fitted with a half inch Fisher pump governor and pressure gauge, and supplies well water to meter room and scrubbers and condensers.

Condenser room is heated by one coil of 450 feet of one inch pipe, built onto railing of stage floor, and one coil of 384 feet of 1″ pipe built onto walls of condenser room.

A steam trap set into floor of condenser room takes care of the condensation from these coils, as well as the condensation from coils in purifying house and meter room. A line of 1¼″ pipe paralleling the 16″ gas main supplies steam to the drip seals for steaming out stoppages.

Condenser room is lighted at night by fourteen incandescent electric lamps, with wiring arranged so that lights on stage floor and lights on condenser room floor may be controlled independently of each other, from switches placed in boiler room.

There is one gauge board in condenser room, provided with one gauge, connected with inlets of exhausters.

Connections are also provided for introducing air for revivifying oxide, through a meter set on condenser room wall near gauge board.

Connection, consisting of a line of half inch pipe, carried across condenser room, and provided with half inch cocks and seal, is also provided for introducing nap-tha into gas main at inlets of exhausters.

A 2″ connection fitted with a 2″ ammonia cock is also provided to return a portion of the gas from the outlet of the exhausters to the inlet.

Another 2″ connection fitted with two 2″ ammonia cocks is run from the outlets of the purifiers to the inlets of the exhausters.

A line of 1″ pipe is run from the inlet of each piece of app
to the gauge board in boiler room. All of the turns in thes
are made by means of 1″ tees with opening plugged.

A cupboard is provided for holding waste, packing, etc.

Purifying house contains:—Two 24 ft. x 24 ft. x 5 ft. deep
ing boxes, constructed of cast iron plates, bolted together an
ported by eight 12″ x 31½ pounds steel I-beams, 36 feet 6
carried by walls of purifying house and 16 cast iron columns
upon sisteen 21″ x 21″ brick piers, with 42″ x 42″ footings, a
tending from a point 3 feet 6″ below purifier house floor, to
above floor.

407 Each box is provided with one layer of reversible oak
supported on seven 3″ x 5½ pounds steel I-beams, 24 fee

Each box is provided with 12″ discharge opening, in b
each opening fitted with a hinged self-sealing cover, or doo
above each opening is fitted a special trap tray provided
handle so that foul material may be dumped without digging
to the trays.

Each box is provided with a steel cover, 24 feet 6½″ x 24 fe
deep, at sides, and 34″ deep in center of ends.

Each cover is provided with a 7″ ground joint blow-off.

Each box is provided with a 10″ opening to which is con
a 10″ mercury sealed valve. A line of 10″ pipe from the
leads to a 10″ steam jet exhauster, and from the exhauster
outside of purifying house. A 9″ H. & M. angle thermom
placed in 10″ pipe.

Six 16″ valves, with floor stands and connections, so arr
that the gas may be conducted through both boxes, tandem
either box first, either box independently of the other, o
boxes together.

Valves and piping are supported by hangers from I-beams
ing boxes and tees are left for two additional boxes.

One power travelling crane carried by two steel I-beams
ing boxes.

Crane built of two heavy, latticed steel girders, connected a
by lighter girders, travelling on four flanged and turned w
Two wheels carry gear wheels, operated by pinions secured to
shaft, which is in turn driven by chain sheave and hand chai

Lifting apparatus consists of two cross heads, one with right
screw and one with left hand screw, working upon a threaded
which is driven by a gear wheel set in the center of the leng
the shaft and operated by a pinion secured to a second shaft
is in turn driven through a train of reducing gears by a
sheave and hand chain. Four chains working over four s
chain sheaves of two sheaves per set give the travel of the
heads to the covers of the boxes.

One oxide elevator consisting of a receiving boot built under
fier house floor in a pit covered with removable floors, a buck
vator encased in a wood case, and discharged into a head secu

a frame work built on to the tie bars of the purifier roof trusses. A galvanized iron spout to carry material from head to either box, and provided with rope and blocks for lowering and raising spout.

A countershaft with a link chain belt reaching from wall of purifier house to head shaft in center of house.

A 4 h. p. upright steam engine set on brick foundation on purifier house floor and connected to countershaft with a leather belt.

408 Purifying house is heated with two coils containing 288 feet 1″ pipe and built onto side of purifier boxes.

Two coils containing 500 feet of 1″ pipe built under boxes.

One coil of 1″ pipe containing 544 feet of 1″ pipe and built on purifier house wall.

A 1″ water pipe brings water from well pump in condenser room to a point in center of house near elevator, and from there to wall between purifier and condenser rooms, where a hose connection and 100 feet of half inch hose are placed above stage floor. 1″ water pipe is continued on to meter room.

A 4″ steam pipe covered with magnesia pipe covering brings steam to a point below stage floor at center of wall between purifier and condenser rooms from which point steam is distributed to the heating apparatus in purifier house, store room and meter room. A 2″ steam line carried along walls of purifier house, carry steam to oxide elevator engine and to store room. Another 2″ steam line carried along walls of purifier house, carry steam to steam jet exhauster, where a half inch pipe is taken off and run to center of purifier house for heating water required in making oxide; and to meter room, where a 1¼″ steam line is carried to nap-tha house. All steam piping is covered with magnesia covering.

A 2″ gas pipe carried on walls of purifier house, supplies gas through a meter placed in meter room, to store room and boiler room, and retort house.

Two lines of 1″ pipe connect inlets of boxes to gauges on board in boiler room. All bends and turns in these pipes are made with 1″ tees having one opening plugged.

One line of 1″ pipe carried on walls of purifier house carries nap-tha to vaporizer in boiler room from basement of meter room.

Meter and governor room.

28 ft. 3″ x 29 ft. 6″ brick, flat roof. Walls 20 feet above grade, 9″ thick. Foundation 8 feet below grade 12″ thick on brick footing 21″ wide. Roof carried on 2 x 8 joists supported in center by 10″ x 12″ trussed girder and covered with tin. Floor is Georgia pine and ceiling is also ceiled with Georgia pine. Five sliding sash windows. One wall built with blind arch so that meter may be taken through wall is necessary.

Building contains: One 10 ft. Maryland station meter set on brick foundation to bring base of meter above meter room floor. Meter is fitted with two 16″ valves and one 16″ by-pass valve with floor

stand and one 9″ H. & M. angle thermometer. Two 16″ valves and one 16″ by-pass valve, all with floor stands, for holder connections.

Connections covered with blank flanges for additional holder.

One 10″ Connelly automatic governor fitted with reducing flange connections so that larger governor may be set in future. Governor is provided with three 16″ valves with floor stands.

409 All specials in 16″ gas pipe are provided with cleanout openings closed with self sealing covers.

16″ gas piping and valves and fittings are all supported on 12″ x 12″ brick piers.

One gauge board fitted with syphon gauge to show pressure on mains.

One photometer room 9 ft. 10″ long by 4 ft. 10″ wide by 7 ft. 4″ high ceiled with Georgia pine matched, tongued and grooved ceiling.

One American Meter Company style B. 60″ bar photometer.

One lab-ratory 9 ft. 9″ long by 4 ft. 4″ wide by 7 ft. 4″ high, ceiled with Georgia pine matched, tongued and grooved ceiling fitted with 16″ x 24″ enameled steel sink set in work bench running along length of lab-ratory.

One Perry L. Hobbs ammonia testing outfit.

One American Meter Company ammonia test meter.

Laboratory is supplied with gas connections and with water from well pump in condenser room.

Meter room is heated by one 120 ft. iron pipe radiator.

Office, store room, and shop building.

103 ft. 1″ x 29 ft. 6″, brick walls, gable roof. End walls 19 ft. high at eaves at Grove street end and 23 ft. 6″ high at rear end, height taken from foundation. Walls 12″ thick.

There are two 9″ partition walls, one 20 ft. high from foundation and one 22 ft. high from foundation.

There are four 9″ cross walls carrying floors, one 5 ft. high from foundation and one 8 ft. high from foundation. Two walls 7 ft. high. Foundations are 3 feet deep and 12″ walls have 2 ft. 5″ brick footings and 9″ walls have 1 ft. 9″ brick footings.

Roof covered with Ludowici tile, built onto 1″ sheathing supported by 2″ x 6 rafters tied together by 2″ x 8″ joints.

Office is 27 ft. 6″ x 24 ft. 3″, plastered walls, floored, ceiled and finished with Georgia pine.

Office fitted with toilet room containing syphon jet water closet and overhead flush tank and enameled iron corner wash stand. One standing desk, with cupboard and drawers. One hand rail, from desk to wall. One drafting table. One black board. One roll top desk.

Storeroom is 27 ft. 6″ x 46 ft., floored with Georgia pine flooring laid over 2″ flooring spiked diagonally to joints.

re room is partitioned off for meter repair shop by ⅞″ partition.

Meter shop contains three sets meter shelves 3 feet deep x 20 feet long x 14 feet high, having a capacity for storing 600 rs. One set of shelves 3 feet deep by 20 feet long by 14 feet containing 12 shelves. Two sliding ladders hung from over- tracks in front of shelves. One work bench 10 feet long by 2 wide. Top fitted and glued together and containing three ers provided with Yale padlocks. One five foot meter prover. gasser for testing meters for tightness. One 2 ft. 6″ x 3 ft.

re room contains: One set fitting bins 20 ft. long, 14 ft. high 3″ deep containing 180 bins. One sliding ladder hung from ead track in front of bins. One set fitting bins 3 ft. by 6 ft., ining 18 bins 15″ deep. Two sets fitting bins 3 ft. x 5 ft. 6″, ining 30 bins, each 2 ft. deep.

e tool room consisting of a platform 12 feet by 19 ft. 6″, sup- d by store room wall on one side and four 2″ pipe posts on other Tool room provided with shelves for tools.

ting shop is 29 ft. 6″ x 26 ft. 6″, floored with Georgia pine ng laid over 2″ flooring spiked diagonally to joists. Contains: e type C. Westinghouse alternating current 7½ h. p. motor, nted on a platform made of 4″ x 4″ sticks, framed together. main shaft 2″ x 10 ft. hung in two shaft hangers. One 48″ x odge wood split pulley. One 12″ x 15″ face Dodge wood split y. 60 feet 3″ double leather belting. 36 feet 5″ double leather ng.

e # 7 Jarecki pipe machine, with extra set of dies, extra head ld dies, and countershaft. Pipe machine is set on steel pans 7 ong by 3 ft. 6″ wide by 1″ deep.

ve fitters' benches, each bench consisting of a 2 ft. x 5 ft. white top, provided with two sliding drawers, with Yale padlocks, d to two 2″ x 2″ x ¼″ angle iron standards, 2 ft. 6″ high, and t. x 5″ x 2″ thick white wood shelf, bolted to angle iron sup- rivited to standards. Standards braced by two ½″ rods.

e work bench 2 ft. 6″ wide x 10 ft. long. Top fitted and glued her and containing three drawers provided with Yale padlocks.

e white wood standing desk secured to wall.

e roll top desk for foreman.

e small cupboard for small drills, tacks, etc.

e 20″ x 30″ cast iron sick fitted with steam connection for ng water.

ilding is piped for gas with 13 ell burner cocks, in fitting shop, e ell burner cocks in store room and meter shop, one 4 burner, hed brass fixture, and nine polished brass stiff brackets and pendent cock in office.

ilding is heated with steam, brought by a 2″ line from purify- ouse, by one iron pipe radiator, of 120 square feet in office; ron pipe radiator of 60 square feet in office; four coils contain-

ing 585 feet of one inch pipe in store room; one coil containing 203 feet of 1" pipe in fitting shop.

Condensation is taken care of by steam trap located in basement of building.

411 Holder.

300,000 cubic feet capacity. Consists of inner section of 83 feet diameter x 28 feet deep. Outer section of 85 feet diameter by 28 feet deep. Set in steel tank 87 feet 6" diameter x 29 feet deep. Tank is set on concrete foundation 10 feet deep on river side and 2 feet deep on opposite side. Connections are 20" and are set in a brick pit 15 feet wide x 18 feet x 8 ft. 3" deep, divided in center by 12" partition walls. Walls are 12" thick. 11 ft. 6" of pit under holder covered with railroad iron joists spaced 16". Two 20" drips set in pit. Connections outside of drip are 18". Pit outside of holder is floored over with $\frac{7}{8}$" flooring.

Coal house No. 1.

Consists of an irregular L shaped building, 166 feet 8" long on long side of ell, 84 feet 5" long on short or bottom side of L, 118 ft. 6" back again, 27 ft. in towards long side, 35 ft. 1" up towards top of L, and 51 feet across top of L. Covered with a gravel roof carried on sixty-one 8" x 8" posts varying in length from 21 ft. 8" for posts on side of house, to 23 ft. 4" for posts in center of house. Posts rest on 22" x 22" cap stones built upon 2 ft. 6" x 2 ft. 6" brick piers, 3 ft. deep. House is sheathed with $\frac{7}{8}$" siding from a point 10 ft. from ground to eaves.

Walls of cold storage room are constructed independently of coal house and consist of 3" plank walls 13 ft. high, held in place by 8 6" x 6" oak timbers, 16 feet long, tied together at top, by 166 1" rods about 16 ft. 6" long, and bottom ends buried in trench 3 ft. deep.

10 lines of 6" x 8" timbers across coal shed and four lines of 6" x 8" timbers along length of coal shed, all timbers intersecting and bolted to posts carrying roof, with wrought iron angle pieces to act as braces.

Floor of coal house consists of 3" plank spiked to 4" x 4" oak sleepers. Roof is fitted with galv. iron hanging trough along each side and six galv. iron down spouts.

Coal shed is wired for two arc lamps with switch placed on post near scales. Coal house contains one 4 ft. x 6" miners' scale manufactured by H. N. Strait Mfg. Co.

Coal house No. 2.

Is an L shaped frame building, each side of ell is 128 feet long and width of each side is 58 feet. Gravel roof supported on frame work carried by 35 12" x 12" posts varying in length from 19 ft.

for posts along sides to 23 ft. 6″ for posts in center of ends of se; and 39 6″ x 6″ posts varying in length from 20 ft. to 21 ft. 6″. posts are bolted to cast iron shoes built upon brick piers from 3 feet deep and are tied together across tops with 6 x 18″ stringers ed on and braced between posts with 6″ x 6″ braces bolted to ts with cast iron angles. Posts are also tied together by 98 1″ rods about 16 ft. long.

Coal storage is provided for by 2″ plank walls carried from floor to eaves on 12″ x 12″ posts, and on 35 additional 12″ 2″ posts 11 feet long bolted to cast iron shoes built onto brick rs from 3 to 4 feet deep. Posts are held in place at top by a line 2″ x 12″ waling extending entirely around coal house. Waling olted to each post. Entire floor is paved with paving brick. Coal shed # 2 is connected to retort house by means of a wooden tle 1160 feet long, consisting of a 3″ plank floor spiked to four x 10″ stringers carried on 4″ x 10″ framed bents about 2 feet h and spaced approximately 10 feet apart.

Coke platform.

Consists of a 2″ plank floor having an area of 8 ft. 10″ x 59 ft. at end of retort house and an area of 103 ft. 3″ x 19 ft. 6″ along ve Street side of retort house. Platform is carried on 12″ x 12″ ts and is bolted securely to retort house wall. Platform has stor- capacity for six car loads of coke. Side and ends of platform ng side of retort house are sheathed with 1″ boards to make rage shed underneath platform.

Coke storage in yard.

s an irregular shaped area of 110 feet long along # 1 coal house, feet along switch, 80 feet back to trestle, and 60 feet back along tle to coal house; floored with 2″ plank spiked to 4″ x 4″ sleepers ced 4 feet apart.

Tar well.

Consists of a brick cistern 23 feet 4″ inside diameter and 14 ft. 6″ p with walls 18″ thick, brick laid in cement mortar. Tar well plastered with Portland cement and is covered with a roof of $\frac{1}{8}$′ gued and grooved ceiling.

Ammonia well.

Consists of a brick cistern 14 feet 8″ inside diameter and 13 ft. 9″ p with walls 18″ thick, brick laid in cement mortar. Ammonia l is plastered with Portland cement and is covered with a roof of tongued and grooved ceiling.

Concentrated ammonia tank.

Consists of closed steel tank 10 ft. 3″ diameter by 7 ft. 2″ deep, set in a brick cistern 17 ft. inside diameter and 10 ft. 3″ deep. Brick laid in cement mortar, walls 12″ thick. Cistern is roofed over with 4″ x 6″ plank set on edge and spiked together.

Naphtha storage.

Consists of a closed rectangular steel tank 14 feet long by 8 ft. 11″ wide by 8 ft. 7″ deep set in a brick cistern 17 feet long by 11 ft. 11″ wide by 10 ft. 6″ deep with 12″ brick wall laid in cement mortar.

413 An elevated closed steel tank 4 ft. 1″ diameter by 3 ft. 10″ high set in a tank room 10 feet square by 7 ft. 2″ high raised 16 ft. 5″ above floor over lower tank in ground.

Framing supporting tank is sheathed with 1″ sheathing covered with building paper.

Building is also used as pump house and contains: One 4½ x 2½″ x 5″ single acting pump; one heating coil containing 100 feet of 1″ pipe.

Well.

Brick walls are 18″ thick. Is 5 ft. 2″ diameter by 30 ft. deep.

Drainage system.

Consists of 64 feet of 30″ sewer laid from end of city sewer and joining iron pipe under R. R. tracks; 94 feet of 20″ sewer; 230 ft. of 12″ sewer; 220 feet of 8″ sewer; 545 feet of 6″ sewer; 125 feet of 4″ sewer.

Depth of sewer runs from 7 feet at junction with 30″ sewer to 5 feet at west corner of retort house.

Six manholes—one at junction of 30″ sewer 12 feet deep; one in boiler room 5 ft. deep; one in passage between retort and purifier houses at upper end 5 ft. deep; two in retort house 5 ft. deep; one in yard near well 3 feet deep.

All manholes excepting one at junction with 30″ sewer are provided with cast iron covers fitted in cast iron frames.

Yard connections.

One line of 6″ wrought iron pipe 200 feet long from river pump in boiler room to river.

One line of 4″ wrought — pipe from tar well to tar pump, 30 ft. long.

One line of 3″ pipe 180 feet long from tar pump to side track.

One line of 2″ pipe 150 feet long from well to well pump in condenser room.

One line of 2″ pipe 50 feet long from tar pump to end of boiler
ouse to load tank wagons.
One line of 1½″ pipe 60 feet long from crude ammonia well to
ude ammonia pump.
One line of 1½″ pipe 120 feet long from concentrated ammonia
ell to concentrated ammonia pump.
One line of 1½″ pipe 190 feet long from concentrated ammonia
ump to switch to load tank wagons.
One line of 1¼″ steam pipe 115 feet long from meter room to
aphtha house.
One line of 1″ pipe 115 feet long from meter room to naphtha
ouse to carry naphtha to boiler room for vaporizer.

14 Pipe shed.

Consisting of frame building built onto store room building
eathed with ⅜″ tongued and grooved ceiling fitted with racks to
old 1½ car loads of pipe and having two pair double doors in
ont.

Scales.

One wagon scales, H. N. Strait Mfg. Co. six ton, 8 ft. x 22 ft. plat-
rm set in brick pit with 18″ walls 4 feet deep.

Track scales.

H. N. Strait Mfg. Co. 80 ton 44 ft. scales set in brick pit with
alls 18″ thick and 5 feet deep.

Side tracks.

One P. & P. U. side track along coke platform.
One P. & P. U. side track across track scales, through # 1 coal
ouse, across yard and along # 2 coal house.
One C. R. I. & P. side track along river side of property and # 2
al house.

Fencing.

280 feet (not including gates) of 8 ft. tight board fence carried on
osts spaced 7 ft. 6″.
One wagon gate at scales 11 ft. 9″ wide x 7 ft. 4″ high. Gate posts
arried up 15 feet high and braced across tops.
One foot gate at scales 3 ft. 6″ x 7 ft. 4″.
One double gate over track at # 1 coal house, gates 8 ft. 1″ x 7 ft.
1″.
One gate in fence between # 1 and # 2 coal houses. Gate 11 ft.
″ x 8 ft. 2″ hung from posts carried up 15 feet and braced across
ops.
One double gate across tracks at # 2 coal house. Gates each 6 ft.
½″ x 6 ft. 4½″.

One gate in fence along Rock Island track 7 ft. 7 ft. 4" hung from posts carried up 15 feet and braced across tops.

415 You will assume in your further examination as a witness, that on September 1st, 1900, the plant of the Peoria Gas and Electric Company had mains and services laid in and through the streets and alleys of the city of Peoria for the distribution of gas as follows, to-wit:

Mains.

1758 feet of 16" main of which 160 feet is under pavement.
20768 feet of 12" main of which 11225 feet is under pavement.
3482 feet of 10" main of which 58 feet is under pavement.
20224 feet of 8" main of which 13234 feet is under pavement.
12874 feet of 6" main of which 5474 feet is under pavement.
80852 feet of 4" main of which 9792 feet is under pavement.
260 feet of 2" main.
Total of 140223 feet of main of which 39943 feet is under pavement.

Services.

3	3"	services, total length	872 feet
2	2½"	services, total length	374 feet
652	2"	services, total length	37244 feet
1503	1¼"	services, total length	111369 feet
266	1"	services, total length	29393 feet
Total of 2426 services, total length			179252 feet

416 You will further assume that on September 1, 1900, the city of Peoria, Illinois, and territory adjacent thereto, was located upon the westerly bank of the Illinois river near the center of said city upon ground gradually sloping westerly for a distance of about 1½ miles, and extending along the river for a distance of about 5 miles and had a population of about 65,000 inhabitants; and that on September 1, 1900, the plant above described of the Peoria Gas & Electric Company, as shown upon Exhibit "1," was then located about the center thereof on the bank of the Illinois river, which plant was constructed during the year preceding September 1, 1900, with a capacity of about 500,000 cubic feet of coal gas per day; you may also assume that on September 1, 1900, there was in the city of Peoria another gas plant owned by an independent company which said last named plant had been in operation for about 40 years and had a capacity of about 500,000 cubic feet of gas per day; you may also assume that Exhibit "1," which has been shown you and which is in evidence in this case, represents the general plan of the plant of the Peoria Gas & Electric Company upon September 1, 1900, and that connected with said plant was a gas main system of about 26½ miles in length extending through a large por-

tion of said city consisting of 16, 12, 10, 8, 6, 4 and 2 inch mains properly connected for the distribution of gas; and that connected with the gas main system there were 2426 services of an average length of 80 feet each, extending into the premises of the consumer, that said plant was constructed during the year preceding September 1, 1900, and was on that date manufacturing and delivering gas to consumers through its pipes, mains and services and meters at the rate of about 50,000,000 cubic feet per annum; you may also assume that at the time of the construction and completion of said gas plant the wages of ordinary labor were $1.50 per day, that stokers could be employed at the rate of $60 per month, head stokers at $70 per month, that Youghiogheny coal could be purchased and delivered at the works at $2.80 per ton, that there was a local market for coke at an average price of $3.25 per ton, that the tar by-product could be sold at 5c. per gallon, that the ammonia by-product could be sold at 8c. per pound, that cannel coal for enriching could be bought at $3.00 per ton, that gas oil for making water gas could be bought at 3¾c. per gallon, that coke for making water gas could be bought for $4.00 per ton and that the company was not bound by any requirement as to the candle power of gas to be furnished to consumers; you may further assume that the Peoria Gas & Electric Company was incorporated under the laws of the State of Illinois in the spring of 1899, for a period of 50 years, that being the limit of time allowed by the laws of the State of Illinois for which a gas company could be incorporated; you may also assume that in the month of May 1899, the Peoria Gas & Electric Company received a license or franchise from the city of Peoria authorizing it to construct a gas plant and lay pipes, mains and services in and through certain of the streets, avenues and highways of said city, and distribute and sell gas to said city and the inhabitants thereof, extending for a period of 99 years, and that said license-franchise in said city is not exclusive. What in your judgment would be the fair and actual cost price of the construction of said plant assuming that the same was constructed during the year preceding September 1, 1900?

417

Objected to as incompetent and because no proper foundation has been laid for the evidence.

The MASTER: I do not think any proper basis has been laid in this case for a large portion of the hypothetical question.

Mr. RITCHER: Counsel for complainant before resting its case proposes to prove each and every hypotheses mentioned in the question.

The MASTER: The witness may answer subject to the objection.

A. I place the value of the construction of the plant described in the question, independent of the cost of the land, independent of any charges against it for interest during the course of construction, independent of any cost of organization, cost of franchise or cost of superintendence, meaning to include the native cost

418

of the material and the labor necessary to erect it and put it together, at $175,000.—$25,000. per bench.

25. Assuming the premises aforesaid in your judgment would it have been more expedient to have constructed a coal gas plant in said city of Peoria, at the time the same is assumed to have been constructed, than a water gas plant, if so why?

The MASTER: More expedient for what purpose?

Mr. IRWIN: More expedient as a investment.

Defendant objects to the question because proper foundation has not been laid.

The MASTER: I think the witness has qualified himself as an expert both as to coal and water gas.

A. I believe a coal gas plant is better than a water gas plant.

The MASTER: The question is would it have been more expedient in the city of Peoria under those conditions?

The WITNESS: Yes, I think it would. Now do I give the reason why?

The MASTER: If the counsel desires you to.

Mr. IRWIN: Yes sir.

The WITNESS: In the first place the price of oil is very fluctuating and that is the basis of your cost in a water gas plant; it is not uncommon for it to fluctuate from 100 per cent. to 150 per cent.; it is a commodity that is handled by the Standard Oil Company who
419 controls, as I am informed, 93 per cent. of the entire out-put of petroleum in this country and, therefore, you are subject to their whims and caprices; if the Standard Oil Company controls the product you have to use, then they control your profits and it is only a question of their figuring how much they want to take out of your business and then help themselves to it; that is a reason sufficient of itself alone. I will say that if the price of the commodities entering into the manufacture of water gas could be depended upon then the question of whether a man owned water gas plant or a coal gas plant would depend upon the cost of producing the gas. Now, I maintain that in Peoria you can produce coal gas cheaper than you can water gas for the reason you have no residual product of any account whatever from water gas, a little infinitesimal amount of oil tar and you are through, and for the further reason that the specific gravity of water gas is about 600 and a fraction, reckoning the atmosphere at 1000; the specific gravity of coal gas is about 420 rated on 16 to 18 candle gas. Now, it follows that a heavy gas, as heavy as water gas, must be very sluggish in movement, in traveling through the pipes, the friction greater, whereas gas of lighter specific gravity is a good deal quicker, moves better and gives better satisfaction to the consumer.

26. I understand you to have testified on the premises before stated with respect to the manufacturing plant of the Peoria Gas & Electric Co. in the city of Peoria on the assumption set out in the previous question, that it would cost constructed during the year

previous to September 1st, 1900, the sum of $175,000. What in your opinion would be the fair market value of said plant, on the assumption aforesaid with respect thereto, on the first day of September, 1900, assuming that at that time the company was manufacturing and selling to consumers gas at the rate of about
420 fifty million cubic feet per annum?

A. You mean the plant including mains—the whole establishment?

27. The same portion you testified to before that would cost $175,000.

A. That would only apply to the machinery upon the ground and the works themselves.

28. Then the works themselves you testified to that would cost $175,000.—the question is what would be the market value of the same thing at that time?

A. To anybody that wanted it, the market value of that particular machinery located at that particular point would be $175,000 plus what would be a reasonable profit for the construction—understand me that I am only alluding to the machinery on the ground and buildings at the works.

29. Yes, I am trying to confine my questions to what you confined your answer to. Assuming the premises set out in the previous question with respect to the mains, pipes and main system of the Peoria Gas & Electric Co. in the city of Peoria, what in your judgment would be the fair actual cost of said mains and the laying of them in the streets and connecting them ready for the delivery of gas to consumers?

Objected to as incompetent and because no proper foundation has been laid.

A. To answer that intelligently requires me to assume certain things; in the first place I assume that the soil in the streets you have to excavate in does not consist of rock, heavy boulders, quick sand, clay or such soil as will cave in, but such soil as you can ordinarily shovel in a ditch. I should say that from the out-
421 let of the holder to the end of the last main 80 cents a lineal foot would cover it plus a proper allowance for anything in the way of boulders, clay, quick sand or rock you might encounter; also, I do not assume that there are any paved streets; if there is any pavement to encounter, of course it will increase the expense to the extent of the removal and return of the pavement to its place.

30. What is the ordinary cost of excavating through and the replacement of an asphalt pavement laid upon a concrete foundation for the purpose of laying a gas main in the street?

Objected to same grounds as before.

A. In answering that question, I would have to be governed by what it costs us here in this city; I am too rusty in my memory to remember the exact cost we incurred years ago in laying mains,

but we paid the city of Minneapolis for replacing asphalt pavement on a six inch concrete foundation where we disturbed it $2.42 and $2.47 per yard. Now in the running of a ditch where you are laying pipe, you will disturb the paving about a yard and one half in width, if you do it properly, if there is no quick sand, therefore, you would have a yard and one half of expense to every three lineal feet and if you will put those figures together you will get at the cost.

Defendant objects to the foregoing answer as incompetent and moves the court to exclude it.

31. What in your judgment would be the cost of replacing a brick pavement laid upon a six inch concrete foundation for an excavation for the purpose of laying a gas main in the streets?

Objected to same grounds as before.

A. We have just laid several thousand yards of brick pavement of the character you have described which cost us here $1.82 a yard. Now it would differ from that practically whatever
422 the difference is in the cost of transportation from Illinois where we get the brick to Minneapolis and to Peoria and I am not informed what that would be. We recently paved our yard at the works here this fall and that is why I am so familiar with it.

32. I understood you to testify that you have constructed a number of gas plants. During the construction of a gas plant up to the time of the commencement of the manufacture and delivery of gas to the consumers, is interest upon the investment, that is on the money invested from time to time up to the time of completion a proper charge against the cost of the plant?

Objected to as immaterial and incompetent.

A. I have always regarded it so.

33. Is it among gas men in the construction of gas plants considered & taken as an ordinary portion of the cost of the plant up to the time of completion and ready for the manufacture and delivery of gas?

Objected to as immaterial and incompetent.

A. Most assuredly it is a portion of the expense just the same as any other part of the investment. It is not confined to gas plants particularly; I own several buildings here in town and I have always charged them interest during construction.

34. In the organization of a gas company, is an expense ordinary and necessary in and about the incorporation, organizing of the company and the organization of its business force?

A. It is.

35. Assuming that a gas plant cost fully completed ready for the delivery of gas in a city of about 65,000 inhabitants where another gas plant was previously located and doing business and had been for about 40 years previous thereto and was then doing business,

and where the new plant fully complete and ready for the
423 manufacture and delivery of gas to consumers cost about the sum of $432,000., what in your judgment would be a reasonable expense in and about the legal incorporation and organization of the company and the organization of its officers and business force.

Objected to as incompetent, immaterial and because no proper foundation has been laid so far as the city of Peoria is concerned.

The MASTER: I suppose it simply calls for the knowledge of the witness based upon his general experience in the organization of gas companies at different places.

Mr. IRWIN: Yes sir.

A. I am simply including in my answer now the cost of organization, incorporation, expense of securing franchise, time and labor, putting your company into shape so you are ready to commence business, including the election of officers and the time that may elapse between the inception of the enterprise up to the time you are ready to go to work. In my estimate of those things, I have always figured on 5 per cent. of the cost of the property incurred in those expenses and I have not been very far away from it.

(The MASTER:)

36. When you refer to the franchise, do you mean the right from the city?

A. Yes, some of those are more expensive than others.

(Mr. IRWIN:)

37. Assuming the premises aforesaid with respect to the construction and character of the plant of the Peoria Gas & Electric Co., and that the company was organized, chartered, during the 18 months previous to September 1, 1900, would the salaries of the officers and managers of the company be a proper charge against the cost of the plant during the period of construction and up to the time of the commencement of the manufacture and delivery of gas?

424 Objected to as incompetent and immaterial.

A. Most assuredly; I don't know of anybody that will work 18 months for nothing.

38. What in your judgment would be a reasonable amount to be charged against the cost of a plant of the character and size of the plant of the Peoria Gas & Electric Company, as described in the previous question, for superintendence of the building, construction and completion of the plant, assuming that the plant was built by the company itself and not by contract?

Objected to as immaterial, incompetent and because no proper foundation has been laid.

A. During how long a period in construction?

39. Assuming that the construction continued for a year previous to September 1, 1900.

A. I should say from 5 per cent. to 7½ per cent. of the cost of the construction.

40. Assuming the premises aforesaid with respect to the service pipes of the Peoria Gas & Electric Co. leading from the gas mains in the streets into the premises of the consumers, about what would be the reasonable cost of such service pipes laid and connected for the delivery of gas to the consumer?

Objected to same grounds.

A. I will have to answer the question assuming there was about the average amount of stores, residences, etc.

41. Yes sir.

A. I should say, taking all grades and sizes of service pipe from the street mains up to the meter connection that 20 cents per lineal foot would be about the average price; that includes pipe, ditching and filling with an addition to be added to that of a proper and necessary amount in case rock or clay was encountered, or in case paving had to be removed and replaced. I am answering on
425 the supposition it is straight soil to be excavated.

42. Assuming that the Peoria Gas & Electric Co. on the first of September, 1900, had in its service about 1758 meters, what in your judgment would be the fair cost price of such meters tested ready for the measurement of gas to the consumer?

Objected to same grounds as before.

A. Have you any prepayment meters; my company have about 4000 prepayment meters in use and they are very expensive.

43. No, ours are straight ordinary meters.

A. For instance, you take a five-light meter and a prepayment meter is worth double nearly the value of an ordinary meter. Would they average all sizes?

44. Yes sir.

A. I would put it at $7.50 to $8.00 a meter.

45. Would that be the fair market price of them at that time—the average meter?

Ans. I think so.

46. What in your judgment would be the fair cost of the settings of the same number of meters set in the premises of the consumer ready for the measurement of gas together with the connections?

Objected to as incompetent and because it has not been shown that the witness has any knowledge of the cost of labor in the city of Peoria.

47. Assuming that ordinary labor was $1.50 per day.

A. You cannot use ordinary labor for that work, it takes a gas fitter or plumber. I should place it at $2.50 a meter; that includes the unions, the lead connections, the soldering of them, the shelf and the cock.

48. Would that in your judgment be the fair market price of such
bor and material in making such settings?

26 Objected to as incompetent.

A. That is a very close price in my judgment.

49. What elements and forces contribute to the depreciation of a
as plant and its mains and how and to what extent do they act?

A. You mean the destruction by the elements?

50. Yes, all forces that contribute to destroy a plant.

A. Well, I will commence at the works. I have explained about
ie regenerative benches; those benches have to be filled on the
verage about every 18 months, that is, the retorts burn out and we
ave to renew them; every time they are fired up and let down
ey go through a heaving process; they are bound as close as they
n be and they crack and heave in every conceivable shape; the
enewing of the retorts we always charge, and I think it proper to
o so, to repair account and sink it in our expenses for that year,
ut ultimately the bench becomes absolutely destroyed a[illegible] we have
o tear it down to the foundation and rebuild it new; as I have be-
ore stated we are rebuilding 8 benches of that character now that
ere originally built 16 years ago, so the destruction of those benches
ompletely has taken place within 16 years. From that you can
ompute the depreciation on that item, which would be about 6¼
er cent. per annum. Now, you can take the iron work pertaining to
he connections and that will not depreciate so fast except the mouth
ieces; you will have to renew the mouth pieces maybe in about 10
ears, the mouth pieces are made of clay and it is constantly heated
ed hot and within 10 years—we have never had one last but
hat it would crack, break and fall down in ten years; I should
ay that would be about 10 per cent. The hydraulic main and con-
ecting pipes to the scrubbers I don't think would depreciate over 3
er cent. The scrubbers themselves would probably not depre-
ciate over 3 or 4 per cent. Now, we come to the exhauster
27 and the moving machinery; that you can place at 10 per
cent.; it is run continuously day and night and after it has
un 10 years you will find it has to go to the scrap heap. The puri-
ying boxes will go to pieces considerably faster; the purifyers will
o to pieces, lids and covers will be eaten up entirely in three or
our years, I put that at the outside at a depreciation of 20 per
ent. The holders can be counted upon to depreciate 5 per cent.
nd it is very favorable to the holder at that; the roof will go down
efore that time. Now coming to the mains in the street; the depre-
iation of mains in the streets depends upon two or three things;
irst the condition of the soil; if you have filled ground that contains
shes and all sorts of refuse, it decomposes and sets up acid action;
have had pipes that had to come out inside of 18 months and I
ave had pieces of it that would come out inside of 12 months, and
hen perhaps 100 feet from that point it would be good again; in
hat class of soil it is very difficult to determine depreciation; it is

one of those things you have to take just about as it comes to you, but I should say in that class of soil that an average of ten years as the life of the pipe would be all you could expect of it; now you take sandy soil, soils that don't contain any acid, and I should put the life of the pipe at 30 years before it would go out; that would be practically 3 per cent.; going into clay soils that contain acid like blue clay and I would not think the pipe was of any value after 15 years. Now that is so much for the destructive elements. I wish to say that I was called by Mr. Forstall to go to New Orleans where they had clay soil throughout the city and there after they took all the precautions possible in the way of tarring the pipe and even in some instances hauling sand and making a sand bed to lay the pipe in and surrounding the pipe with it they could not get a main to stand over 10 years.

428 (The MASTER:)

51. They have salt water there have they not?

A. It is a sort of salty clay or clay containing salt and acids; some clay contains more and some less, nobody can tell anything about it untill after he has analyzed it and knows. Roughly speaking in my mind—we have had experience right here in Minneapolis covering 25 years—last year we took up two blocks of pipe and removed it that was just simply a hole in the ground with a lot of rust lying there, yet it was not a clay soil, it was a sort of a mixed loam most of it, some of it had been filled a little. Now understand we are only 30 years old here since the first pipe was laid; I don't know when this particular pipe was laid; but I don't count a main of any value whatever, it is absolutely worthless and gone, you might as well drop it off your books if it lives 25 years and I should sooner say that 20 years was the fair average life of the street main.

(Mr. IRWIN:)

52. What depreciation is there to services and meters generally?

Objected to as incompetent and immaterial.

A. I am only giving you the result of my experience generally and I don't profess to be infallible; another man might take another view of it; of course, these things depend on a man's experience and every man has a different experience in those things but it is a subject I have thought of and have had to fight pretty strongly a good many years and I have had enough experience at least to give my opinion on the subject—interrupted.

The MASTER: The question only calls for your knowledge based on your experience.

The WITNESS: Now, another thing enters into the depreciation of mains, viz: The changing of grades in streets; for instance the cutting down of a grade or the filling of it; we have had
429 experience here where we have abandoned our pipe caused by the city changing the grade of the street; during the chang-

ing of the grade we could not cut our customers off and we preferred that the city fill on top of us and afterwards we cut the pipe off and laid a new one; of course, that is a waste to that extent; those contingencies may or may not arise in Peoria, I don't know anything about it; again we have had losses by the renewing of different public work of different kinds where it disturbed me, for instance sewers; our pipe is laid in the street and a sewer comes along, the soil is sandy, it caves in, carries our pipe with it and leaves it a total wreck when they get through with the sewer and we have to take the pipe up and throw it away or patch it up, piece it and fix it up which is practically renewing the expense of the main; the same thing applies to a certain extent particularly here where we have to go so deep to avoid frost. Now there is another source of depreciation, for instance, every gas works is laid out and built on the best judgment of the promoters with reference to the future consumption and trunk lines are laid through streets with the view of furnishing that consumption; you go on for three, five or ten years and you find your heavy consumption shifts from this particular locality and has gone to another place and this trunk main is practically useless; you might as well have an ordinary feeder; you have no business on it any more than an ordinary main would take care of but you have to take that up, relay it in another place or be satisfied to let it lay there and do the work of a smaller main and lay a larger main in the other district; if you take it up you have to cut all joints, you have to waste 6 inches or more at every length, you have to waste the laying, waste the gaskets, all the work that is incident to the connecting up of the services to a new main put in and it is a practical destruction of the main when you have to take it up and remove it; such alterations and changes are a constant source of expense; you are never without it. For instance we may have tomorrow a case of electrolysis and if we find we have a trunk main all cut to pieces and honey combed by electrolysis, or anything of that kind, of course the repairing of it we charge to repair account but as to the destruction of the main, what are you going to do about that, you go to an electric company and charge them with it and one lays it to the other and there is no human ingenuity that is able to prove where the current comes from; we have had instances of electrolysis in a street where there was not an electric wire, which had unquestionably come down from another avenue following the rails of the street railway until it had come to some certain point and then cut through the block jumped on to our pipe and pitted it; it is the most frisky thing you can imagine; we had one case where it went through a block of buildings where there was no other way for it and there was no other electricity to get there except that; it is a constant source of destruction and renewals of gas companies.

430

53. What depreciation arises to service pipes and meters which are in the premises of consumers?

A. The same rule applies to service pipes except in a more rapid ratio; the iron is thinner and it takes less time to eat it out.

54. What depreciation is there to an ordinary meter?

A. We place the ordinary meter at 10 per cent.; that is the result of our experience. Of course, I want you to understand these are simply averages I give to you; I don't say to you that every meter is destroyed in ten years but the result of our experience is that on the average they go to pieces in that time. I will tell you why. Here is a meter I set in this room on the shelf; it is only moder-
431 ately worked, it is dry and well taken care of and will last a long time; then say I go across the street and set one in an area way where it is damp and wet and they are piling wood and coal down on it or tumble boxes up against it and it is overworked, that meter will go to pieces very quickly; those are the chances we have to take and on the average, my experience tells me the life of a meter cannot be counted on for over 10 years.

55. Taking an ordinary gas plant as a whole, what in your judgment is the general annual average depreciation of the plant, that is upon the cost of the plant?

Objected to as incompetent and immaterial.

A. From 6 to 7 per cent.

56. Does that cover the manufacturing plant and distributing system necessary in and about the manufacture and delivery of gas to the consumer?

A. Absolutely everything from the coal pile to the cash box, that is what I figure.

57. In figuring that general average annual depreciation, do you include the value of the real estate?

A. No, that is just as liable to appreciate as it is to depreciate.

58. In what manner in your opinion does good business policy require this depreciation to be taken into account in conducting the business of a gas company?

A. I will answer that by saying that we do ourselves. We set aside, and it enters into our cost, every year 6 per cent. of the structural value of our property as we consider it.

59. By structural value, do you mean the structural cost?

A. The structural cost of our property. Now, this we set aside as a fund, known to us as a fund to make good depreciation and destruction of the property. Say it takes about $75,000. a
432 year for that purpose; I don't mean to say that we take $75,000, put it over in the bank and let it lay there, but we take that $75,000. and expend it in extensions, in betterments and additions to the plant—not in repairs. Now, that goes into our depreciation account and stands and is not capitalized by us at all. For instance, last year we spent $117,400. in extensions and betterments, not in repairs; that goes as an uncapitalized sum and never will be capitalized; now when we get around to the point—this year it will be in the neighborhood of $100,000., perhaps next year

we will not put in $50,000., but I think we have about $300,000. unexpended in that fund at the present time which we have laid aside for that purpose and that $300,000. will wait to make good the destruction of buildings, etc. To illustrate, we this year tore down a building we built 20 years ago, it was shaky, unsafe, we ripped it down and we charged only into extension account that portion of that building represented by the good brick we cleaned off and the balance was sunk out of the depreciation fund.

60. Why do you set aside that amount and use it in the manner you have stated?

A. Simply because if we should set aside $75,000. this year and put it in the bank that amount of money would be idle until we wanted to rip out something and renew it and it might be years before that time came. For instance, take the Peoria works, they are now new, but she will commence to feel this depreciation in about 10 years from now; they would not care to set aside a large sum of money and let it lay idle for ten years but if they take it and add it to the property they increase the value of the property as much as the depreciation has reduced its value.

61. Aside from the general depreciation, concerning
433 which you have testified as resulting to a gas plant what are some of the hazards of the gas business as an investment?

A. One of them is an indiscreet city council granting an opposition franchise and it is a very great hazard too. To illustrate my meaning: the Peoria Gas Company was equipped to do the business at Peoria, that is the old company, and you let the Peoria Gas & Electric Company in to split its business right in two, so you have practically duplicated the capital in order to supply one community; certainly in the end the Peoria Gas Light Company's property has been depreciated just to the extent of the addition of the new capital. Now you gentlemen of Peoria can understand how much that is as well as I can. When you take into consideration this that they cannot do business outside of their district, they cannot sell nor they cannot do anything but stay there and take what comes to them; a merchant that goes in business with a stock of goods can, if he meets competition that is ruinous to him, take his goods and move to another town and his goods are valuable and he loses practically nothing except the expense incident to removal; you cannot take up a gas company, however, and move to another town; you either live or die there and you are ruined absolutely, totally or partially as the case may be. Now, I ask any gentleman here present if he had stock in the Peoria Gas Light & Coke Co. when it was assaulted by the Peoria Gas & Electric Co. what would have become of it, it would most assuredly shrink in value. That is one of the hazards; a city council when it grants another franchise to another company places both companies in a position where they cannot do justice by the people; it splits the town say of 65,000 people in two, making two towns practically of 30,000 people each and when you consider

further the dangers incident to manufacturing gas you will find
434 the ability of a gas company to reduce its price is just in a ratio to its increased output all the time; the Minneapolis company charged $6.50 per thousand when it first turned a light on this town and it is now charging $1.25 a thousand; it lost money at $6.50 a thousand and it is making money to-day at $1.25 a thousand which is due simply to the large bulk of business it does, and when you took away one half of the business from the old Peoria company you took away its ability to sell you cheap gas; that is the fact and absolutely true.

62. Is there any other hazard you think of?

A. There is the hazard of competing lights. For instance, as I have heretofore described, we have various kinds of house machines for lighting houses; you have the kerosine business, the acetoline and electricity. Fifteen years ago we gas men used to sit in our office and if a man wanted gas he would come in and ask for it and we put it in when we got ready; we did not exert ourselves at all to get business, taking it for granted that the people knew we were here in business and if they wanted gas they could come and get it. In those days a man had to come into the office with his hat in his hand and be very polite or we would kick him out; today all that is changed, we have solicitors on the street, we have all manner of advertising, we try to bring our goods to the attention of the people, we are doing our best to build up business and push it forward, for if we don't do it we will go into bankruptcy.

63. Is electricity a strong competitor of the gas companies now for illuminating purposes?

Ans. I should say it was.

64. Is natural gas another hazard of the business?

A. That is a very great hazard in the natural gas fields.

65. Do you think of any other particular hazard to the business?

435 A. Oh there are remote hazards, of course. I saw Chicago burn and we all know how destructive it was to the gas companies there; their property was absolutely ruined, thousands and thousands of service pipes and mains in the streets absolutely ruined. Then there may be an explosion and your holder blow up tonight and ruin you, rendering you absolutely helpless for three or four months, during which you cannot furnish a foot of gas; your purifying house may blow up before morning and put you in a crippled condition; you may have an earthquake that shakes you all to pieces so far as the street mains are concerned; I have seen whole gas districts ruined in California by earthquakes, the pipes all broken up and destroyed; of course, these hazards are remote but they are probable or possible.

66. From your experience and observation in the management and investigation of gas plants, are you able to state what would be a reasonable and fair return to investors, taking into consideration the hazards of the investment on account of new inventions, com-

petitions and the other hazards of the business concerning which you have testified?

Ans. Yes sir.

67. What would be a fair and reasonable return to investers upon the cost of the plant of the complainant, taking into consideration the hazards of the business?

A. I don't know of any manufacturing business that would be willing to work on a less basis than 10 per cent. or more; I should not want to own any gas property that would not return me at least 10 per cent. I want to illustrate that a little bit. For instance you take a company that has a franchise for occupying the streets for the usual period of time, say 30 or 40 years, if for 40 years, I maintain that company is entitled to set aside 2½ per cent. of its structural cost to pay back to its owners at the
436 end of the time the capital they put in, under the assumption that at the end of the time they have no right whatever to go a foot further, or do business a day longer; I am aware that people go on and say, "I will fat up my own pocket and let posterity take care of itself," but in the end where they are dependent on a city for the right to occupy the streets, without that right they cannot do business and in the end they have to face the inevitable and take their medicine, and what the medicine is you can judge by reference to the old St. Louis company; when its franchise run out it had nothing, it could not get any concessions from the city, and they simply told another company that had a right to do business to take their works and do what they pleased with them—give what they could; then, take the case of the Portland, Oregon, works; the city turned around and said, "We will buy your works but will only give you about 40c. on the dollar of what it cost you and you will have to take city bonds;" there was no alternative; they could not do business and had to accept it; then take the Kansas City water works; its franchise run out, the city wanted the water works and said, "We will take it for so much" and it returned 65c. on the dollar to its bondholders. Now, it is a very serious menace to a man that contemplates the outcome of his property at the expiration of his franchise rights, and when the matter is in the hands of a city council—some of the aldermen like to make a record for themselves, and if they can work upon the prejudices of the ignorant voters it don't make any difference who they sacrifice in the case. I regard it as essential to the owners of property to at least earn sufficient money so that year by year they can set enough money aside so when it comes to the time when the destruction of their property is before them and inevitable they can say, "We have got our money we put in; it has been returned to us; we have had the earnings during the time; here is the skeleton and we will get
437 what we can out of it."

68. Assuming that the Peoria Gas & Electric Company commenced the manufacture and delivery of gas to consumers on May 1, 1900; and assuming further, that the character of the plant, the length

and character of its mains and services conformed to the premises heretofore stated, and that the price of gas coal, common labor and stokers were as heretofore given, and the expenses of general operation were fair and reasonable, considering the location of the plant, and that the management and superintendence of the plant was efficient and competent; and assuming further, that said plant had been in operation a sufficient length of time to put in smooth operation the economies of which it was capable, and that it was manufacturing and selling gas at the rate of fifty million cubic feet per year on or about the 1st, of September 1900, what in your opinion would be the actual cost on that date per thousand cubic feet of gas manufactured and delivered to consumers by said company, excluding from your estimate the value of residuals, and excluding also any charge for depreciation, or interest on the investment?

Objected to as incompetent because no foundation has been laid showing that the witness has any knowledge of the cost of materials laid down in the city of Peoria which enter into the manufacture of gas, or the price of manufacturing labor and other labor that enters into the cost of the production of gas in the city of Peoria.

Mr. IRWIN: The question does not ask for the knowledge of the witness as to these things; we are assuming the price of ordinary labor etc.

Defendant further objects to the question because the statement as to the cost of the material does not represent all the cost of material or labor that enters into the manufacture of gas.

The MASTER: The witness may answer subject to the objection.

438 & 439 A. Anticipating this question and knowing it was a matter of some little computation to answer it correctly, I went into the matter in detail yesterday afternoon on the basis of $2.86 per ton for coal in Peoria; $60 and $70 per month for stokers; $1.50 per day for ordinary labor and the usual and customary outlays incident to it following through on those lines and have worked them out in detail and have them here and in order to abbreviate the thing to some extent I will call off from the figures I have made the different items and the cost per thousand which make up the figures—Interrupted——

(The MASTER:)

69. Did you have knowledge of the conditions at the time you made the estimates?

A. I had knowledge of the conditions in a general way; that is to say, we have among all gas companies what is known as a gas directory which circulates only among gas companies and I can turn to that directory and tell you the conditions that exist with any gas company in the United States, and it is based on that information, which the facts brought out here has been shown to be substantially correct, that I have made my figures. Assuming that the average yield was 10.000 feet to the ton, or 5 feet to the pound of coal used,

it would be 28c. a thousand; the labor, stokers, purifying house men, yard men necessary to man up those benches, would cost 14c. per thousand—I am going now as though I was going into the works to run them—Taxes, I estimate the entire property as equal to 10c. per thousand, under the assumption that the taxes on that property is $5000 a year, which would be 10c. per thousand; that item would vary according to what the actual taxes are which I am not aware of, but as a rule gas works run from 8c. to 12c. a thousand; I estimate your boiler fuel at 3c. a thousand; I estimate your fuel for your works under retorts and outside of that at 4c. a thousand; I estimate your purifying material at 1c. a thousand; your re-
440 pairs at works 4c. a thousand—I will state I have no doubt that the repairs are less than that at the present time on account of the works being new, but you will have to renew one of those benches on an average every 12 months and it will cost you $1000 for each bench to renew it and that would be 2½c. per thousand on that one item if there were no other repairs; you have the general repairs throughout your works all the time. I estimate incidental expenses about the works not enumerated, little things which occur incidentally and incessantly, a few cents here and there, a valve leaking which has to be ground in, your collar bars and eccentrics out of order and have to be fixed, your coke barrels being eaten out by fire and have to be fixed and every little incidental expense which is constantly occurring, at 2c. a thousand. Now, if I am correct in this, it will cost you 67c. at the outlet of the holder.

Now, I will take up the distribution. I figure your leakage at 5c. a thousand—unaccounted for gas; I figure your expenses generally—I don't know whether your classification is the same as ours or not—at 1c. a thousand; your office expenses at 4c. a thousand; your distribution labor at 2c. a thousand; repairs to meters at 2c. a thousand; repairs to service pipes at 1c. a thousand; repairs to street mains, renewing pavement wherever you have to disturb it, at 4c. a thousand; officers' salaries at 10c. a thousand; repairs to tools 1c. a thousand; expenses extraordinary, litigation etc., at 5c. a thousand—I think this year you will go over that; solicitors at 2c. a thousand; worthless accounts charged off 1c. a thousand and advertising 1c. a thousand, making the total for distribution 39c. a thousand, to which add the 67c. and your gas costs you $1.06 per thousand. Those are the best figures I can make at Peoria. From that amount should be deducted whatever the value of the residuals are, to which sum depreciation and interest should be added.

70. You say you refer to a gas directory among gas man for information with reference to gas plants and the price and cost
441 of gas—to what directory do you refer?

A. It is known as Brown's Directory, published in Philadelphia.

71. Is that considered among gas men as a reliable directory for information concerning the price of gas, materials and other matters pertaining to the gas business throughout the country?

A. The information it gives is derived directly from the gas companies themselves who fill out blanks and return them to them; I don't think the work is subscribed for by anybody except gas men.

72. Is it among gas men considered a standard and reliable book for such information?

Ans. Oh, absolutely so.

73. Is it in general use by gas manufacturers and producers?

A. I don't think there is a gas company in the United States that don't have a copy of that book.

74. Is it considered a standard authority among the gas fraternity in this country?

Ans. I so consider it.

75. How long has it been considered an authority and a standard work for information on questions pertaining to gas throughout the country?

A. I could not say for how long, but for a good many years.

Cross interrogatories by Mr. HENRY MANSFIELD:

1. When were you asked to give evidence in this case?

A. I was notified by Mr. Lovings, who had a letter from some of the gentlemen present, stating that they would be here to take my testimony on Wednesday in this case, and if I could not testify to please telegraph them; that letter, I think, was received here last Monday morning.

2. Did you see anybody connected with this suit previous to the giving of your testimony here to-day, other than as stated?

A. I saw Mr. Little.

3. Did you have a copy of the questions that have been asked you here to-day left in your possession for perusal?

442 A. No sir.

4. Did you see a copy of any of the questions that have been asked you to-day previous to testifying?

Ans. No sir.

5. Are you acquainted with the conditions that exist in the city of Peoria as to the nature of the soil, the cost of material and labor that might enter into the cost of the construction of a plant similar to the plant erected by the Peoria Gas & Electric Co.?

A. Only in a general way as I have stated.

6. Then you base your estimate as to the cost of the plant erected by the Peoria Gas & Electric Co., merely upon your general knowledge of the cost of labor and materials which entered into the construction of the plant, do you?

A. In estimating the cost of the plant, as I have stated in my testimony, I estimated it from the average of $25.000 per bench, which in my experience is a very close estimate of the actual cost that will be incurred in any place in the United States where freights are not excessive. For instance, I would not make that estimate in Portland, Ore., or in Tacoma, Seattle or San Francisco, because freights are

excessive across the continent, but anywhere within the central States here; of course, I assume that the bench work came from St. Louis, inasmuch as we put in 14 of those benches last year, and inasmuch as we are further away from there than Peoria is, I don't assume they cost any more in Peoria than they would here but about the same.

7. Do you know what the cost of the lumber was that entered into the construction of the plant of the Peoria Gas & Electric Co. in the city of Peoria—in its buildings, etc.?

Ans. No sir.

8. Do you know the cost of the brick, mortar and cement?

A. No sir.

9. And material generally that entered into the buildings there of the plant?

443 A. No sir only in a general way; an approximate is all I could give and some things I might over estimate and some I might under estimate.

10. In basing your estimates of the cost of the organization of a company, did you take into consideration the honesty of city councils in so doing or did you put an item in there for the expense of getting the franchise through the city council?

A. Of course, I would not for a moment say that the city council of Peoria was composed of anything but strictly honest men; I assume, however, they all smoke and some of them drink; I also assume they like to go to theatres and like to go riding and it all costs money.

11. How much of that 5½ per cent. did you estimate it would cost to take the city council around and treat them to cigars, whiskey and theatre tickets?

A. Well, I don't think I particularized those items at all; I have had the organization papers of a company drawn up and the legal work attended to on a charge of $500, and I have been charged for less work with another company $5000.

12. Was this an average estimate based on the figures—

A. (Interrupting.) It was such an estimate as I would make if I contemplated making an investment to construct that property.

(The MASTER:)

13. Was it an estimate based upon your experience in matters of this kind?

Ans. Yes sir.

(Mr. MANSFIELD:)

14. You are not acquainted with the character of the soil in the city of Peoria, are you?

A. No sir, I am not.

15. From your knowledge as a gas expert, what in your opinion would be the cost of coal gas in the holder of the Peoria Gas &

444 Electric Co., assuming they manufacture five million cubic feet of gas per month, taking into consideration also the fact, that the bi-products of tar, ammonia and coke are extracted and sold, tar for 5 cents a gallon, ammonia for 8 cents a pound and the coke at an average price of $3.25 per ton?

Objected to as incompetent, not cross examination, and no basis presented on direct examination upon which to make any such an assumption.

The MASTER: I think, Mr. Mansfield, your estimate of the gas produced is higher than has been estimated; fifty millions per year has been the highest estimate, but the witness may answer subject to the objection?

A. I should want some time to figure that out before I could answer it; in making up my estimate of expenses, as I have just testified, you will see there is a large item of them of what might be called fixed expenses; I would like to say also that there are months in the year, with a gas company of the size of the complainant company, when I venture to say they do not make cost—during the summer months, the hot months they actually lose money; in order to arrive at the cost of gas, you have to take the aggregate of the 12 months' consumption, or else you have to take each month separately on a given amount of consumption and figure it out on that basis. For instance, the fixed charged would be infinitely less per thousand feet, would be just one half less practically, on 2½ millions a month as it would be on five millions a month; it changes the figures all the way through and I could not answer your question consistently without computing it and figuring it up. If you will give me a couple of hours, I will work it out for you.

16. I will not require you to do that, Mr. Brown.

A. I would be glad to answer the question off hand if I could intelligently.

445 17. Assuming that the Peoria Gas & Electric Co. manufactures 5,187,200 cubic feet of gas, and that the cost of gas coal was $1460.92, the cost of bench fuel $295.26, the cost of boiler fuel $177.47, the cost of manufacturing supplies $20.97, the cost of purification supplies $47.13, the cost of enrichers $23.85, and the cost of retort repairs $30.71, would it in your opinion as a gas expert be able to put that gas in its holder at a total net cost of 24 74/100 cents per thousand cubic feet?

Objected to as not cross examination and simply a matter of figures that the witness is not expected or bound to figure out for counsel. In other words, this is not a mathematical school to work out proolems.

A. It is just a mathematical calculation and if the figures work out 24 cents, that would be all there is of it, but the items given do not cover the cost of manufacturing gas and putting it in the holder;

my computation of the cost has been based on a run of fifty million cubic feet in 12 months.

18. What would be the other items of cost that would enter into the cost of the production of that gas in the holder to the company other than those I mentioned?

A. I have given them here; based on coal at $2.80 per ton, averaging 5 feet to the pound, that coal would cost 28 cents a thousand alone; I estimate the labor at the works at 14 cents; taxes at 10 cents; boiler fuel at 3 cents; fuel under retorts 4 cents; purifying material 1 cent; insurance 1 cent; repairs to works 4 cents, etc., making a total of 67 cents per thousand; that is based on a 12 months' run producing fifty million feet; you cannot fix your charges to suit each month, nor you cannot reduce your labor. For instance as an illustration; tonight is a dark night, it will shut in dark perhaps an hour earlier than usual and we will prob-
446 ably send out from two thousand to two hundred and fifty thousand feet more gas tonight than we will tomorrow night if tomorrow is a bright day; we have, however, to be manned up so we can make it. In other words, we always have to be manned up for the maximum consumption and not for the minimum; there is no two months in the year that our cost price is the same.

(The Master:)

19. In your illustration of the short, dark days, do I understand you to mean by that that this additional 250,000 cubic feet of gas you send out costs you less to produce it than the cost would be of the first 250,000 feet?

A. Most assuredly; suppose we had to make 250,000 feet of gas more today; it would cost us simply the price of the raw material less the value of the residuals that went into the gas; it would not be one cent more for labor, distribution, taxes or for any of the expenses of the company with the exception of the value of the coal less the value of the coke, ammonia and tar; you see, therefore, the making of the additional 250,000 feet would amount to a mere bagatelle; there would be 25 tons of coal used, perhaps, and deducting from that 10 pounds of coke, 10 gallons of tar, the balance would be exactly what the 250,000 feet cost you; it would not cost you 10 cents a thousand; but you know a gas plant must be manned up for its maximum consumption and not for its minimum consumption. For instance, we have 5036 street lamps which we are lighting on a moonlight schedule; they will burn 4 feet an hour; those lamps burn 20,000 feet an hour and when they burn all night they burn approximately 275,000 feet a night this week; next week they will be off because the moon will be up; we stand ready to make that additional 250,000 feet and we have to incur the expense of it with the exception of the value of the raw material.

447 (The Master:)

20. In other words, your fixed charges are there whether you sell the gas or not all the time?

A. The fixed charges of our company are more than the absolute cost of the manufacture and you cannot avoid it; we have to have a street force to look after the mains, we have to have a shop force to look after frost cases, meters and complaints, we have to have a force at the works to look after the manufacture, we have to have a force of lamp lighters consisting of 40 men to look after that who are under pay, no matter whether it is light or great consumption; our leakage is practically the same—take the item of leakage on 50,000,000 cubic feet; you figure that at a cost of 5 cents per thousand; suppose you increase your output to a hundred million cubic feet per year, then the item of leakage would be but 2½ cents a thousand; the mains are the same, they are filled with gas all the time under pressure, and they would leak no more passing a hundred million feet than they would fifty million, but it reduces your cost on that item 2½ cents a thousand; increase your output to two hundred and fifty million or three hundred million and you get that item down so it is very small.

(The MASTER:)

21. Do all these conditions prevail in proportion to all the plants you have been connected with?

A. Yes, it is part of the business; we hear about Cleveland, Toledo and Cincinnati—by the way I had a letter from Mr. Hinkle about some matters a few days ago from Cincinnati—he is a very warm friend of mine, and they are selling gas very cheap; Mr. Fabin, I understand, is so situated as to be able to utilize some natural gas and, of course, turning that in with a valve, carburet it a little and you get cheap gas; take it in Cleveland where it is said they manufacture and sell gas at a little less than a dollar a thousand. What are the facts in this case? When they had a
448 suit in that city—the president of the company was here to see me; they are a close corporation earning money at high prices, they declare reasonable dividends and put the rest in the extension of the plant and charge it to expense account, don't capitalize it at all, they have low capitalization—and the judge ruled they elected to put it there and they could not afterwards capitalize it. They are selling gas at a low price but considering the fact they are selling 1250,000,000 feet per year in Cleveland—what are the peculiar conditions surrounding Cleveland? It is the largest manufacturer of edged tools situated in the United States and edged tools require to be tempered in oil, oil has to be heated up with gas in order to have it absolutely uniform that the temper of these fine tools may be made all right, and they have a large consumption by reason of their location and the conditions of the community; they are using 1250,000,000 feet per year which is 25 times more than the company in question here sells; you take and reduce the fixed charges of the Peoria Gas & Electric Co. by 25 times and you can have cheap gas in Peoria; the trouble is you don't sell enough there

to entitle you to cheap gas; you cut your own throats by letting in another company.

(Mr. MANSFIELD:)

22. What if there is a combination between the two companies?

Objected to as immaterial, not cross examination.

A. I answer that by saying you have two properties either one of them equal to supplying the city of Peoria and you have two capitals invested there and you have to pay two dividends on two capitals as long as you elected to divide it.

23. What in your opinion as a gas expert would be the cost of 4,383,100 cubic feet of gas in the holder of the Peoria Gas & Electric Co. where the total cost of material was $1740.69, and the
449 total labor which entered into the manufacture of the gas was $752.84, excluding therefrom the value of residuals?

Objected to because it is simply a mathematical problem and not one for an expert and not cross examination on any matters concerning which the witness was interrogated about and the witness is not bound to work out mathematical problems in this examination.

A. That is a question of mathematical calculation and the same answer I made to a previous question would apply to this.

24. What in your opinion would be the value of the coke obtained from the manufacture of 4,383,100 cubic feet of gas by the Peoria Gas & Electric Co. where the cost of the gas coal entering into the manufacture of the gas was $1220.03 the gas coal as laid down in the city of Peoria costing $2.80 per ton?

Objected to same grounds as before.

A. What is the price of coke? I can answer the question in another way perhaps by per cent.

25. What would be the percentage of coke obtained from the manufacture of that amount of gas per ton of coal?

A. I will answer that by saying that after deducting what the works need to maintain its own fires under its benches and boilers, they should have about 800 pounds of coke for sale from every 2000 pounds of coal carbonized.

26. How much coke is used for bench fuel—how much coke do you assume is used for bench fuel in the manufacture of gas in the city of Peoria—the percentage?

A. The percentage that is used—that involves an explanation. Every gas works that depends on coal gas must have benches fired up for a capacity 25 per cent. in excess of its daily consumption, to take care of dark and cloudy days, extra heavy consumption Saturday nights and any contingency that might arise which would
450 be liable to put them out of gas. Now, the amount of coke that a bench would consume in per cent. would depend altogether upon the amount of coal going into the charges. For in-

stance, if the output from your holder was such that you could charge oftener than 6 hours the per centage of coke used would be a great deal greater than it would if you could charge 4 hours; in one instance you get 4 charges in 24 hours and in the other you get 6 charges in 24 hours; whether you get in 4 or 6 charges depends on the state of your holder, whether you have room to take care of the gas; to take up this discrepancy various works pursue various policies; the average charge for a bench of 9's would be 3600 pounds of coal, 400 pounds to a retort; that would be the average charge; if your holder was full and would not take the gas, you might cut that down to 300 pounds and if you were compelled to cut your charge down to 300 pounds the coke used would be 25 per cent. less than if you run 400 pounds; it is a question of mathematical calculation; so in practice we observe this rule, we take the average per month, or average per year of coke saved per pound or ton of coal and, as I say, after deducting for the use of our own fires in the works we average about 800 pounds for sale per ton of coal month in and month out and this variation is made up by the causes which I have just enumerated.

27. What is the average per cent. of coke used in the manufacture of gas then on the same basis?

A. I will answer that by starting from a different standpoint and will try to make it more intelligible; a ton of first-class Youghiogheny coal will give you—well I will say a ton of second pool of Youghiogheny coal will give you on the average abou 1320 pounds of coke—the total production from 2000 pounds—the difference between that and 2000 pounds weight is made up in gasses, tar
451 etc. taken out; of that 1320 pounds we estimate to take on the average about 400 pounds for our benches and the balance is used up under the boilers and wasted in breeze and various ways so our net sales average us about 400 pounds.

28. What per cent. of tar is obtained from the burning of a ton of coal?

A. If you were to put a ton of coal into your retorts and actually catch all the tar that would come out you would have about 12 gallons under proper distillation, but in practice you cannot get but about 10 gallons, the balance of it is made up of thick stuff which settles at the bottom of the well and gradually fills it up until you have to clean it out and throw it away or burn it up; we average to sell 10 gallons of tar out of every 2000 pounds of coal we carbonize.

29. What would be the per cent. of ammonia obtained from the distillation of one ton of coal?

A. The gas people figure that also in a different way; ammonia is a quantity that you reduce as your necessities require you to. For instance, you may go along with what we call weak liquor, 4 or 5 ounce liquor and let it accumulate in the receptacle where we accumulate this weak liquor for 4 or 5 or 6 months; we don't take into calculation the value of that ammonia until we concentrate it

down to 80 ounce liquor, that is, about 15 per cent. ammonia and when we get it down to that we sell it at once, ship it to the Michigan ammonia works and take the proceeds, and at the end of the year we take the total amount of ammonia, divide it into the tons of coal we have carbonized during the year and estimate its value per ton of coal; that is the way we arrive at our figures and those figures give us about 18 cents' worth of ammonia in a ton of coal.

(The MASTER:)

452 30. It also gives you the pounds of ammonia, does it not?

A. Yes sir, it is then a question of chemical figuring to get it into pounds. For instance, 80 ounce liquor is what is known as 15 per cent. of free ammonia and then it is crystal-ized and they will not give you anything for the crystals; they deduct that; that is a question I have fought over for the last 5 or 6 years with the Michigan ammonia works; we shipped them a car of ammonia, took its strength, calculated its value and were unable to agree as to the value of the ammonia; we finally took samples down to our chemist, we maintain a laboratory here and a chemist all the time at work, but even then we could not agree as to the strength of the ammonia; we finally agreed to leave it to Professor Love of New York and sent him samples; the Michigan ammonia works, however, said the crystal-ized ammonia was of no use to them, that they wanted the free ammonia; the question of the value of ammonia has been a live subject with us.

(Mr. MANSFIELD:)

31. You stated on direct examination that there was a commercial department connected with the operation of a modern gas plant with the idea of increasing the gas consumption?

A. Yes sir.

32. What does that commercial department consist of?

A. It consists in the sale of gas stoves, the soliciting of consumers, the sale of Welsbach burners, the setting up of gas stoves, the sale and setting up of all gas burning appliances of various kinds and descriptions and the general pushing of the business to secure consumption; as I have before stated the gas business has got down to a point where it is like any other business and we have to push for business all the time or else drift into the rear; we cannot sit and wait for business, we have to go after it.

33. Would you consider a gas company that had eliminated
453 from its commercial department the Welsbach lamp department a company that was forcing and attempting to increase its business or not?

Objected to as not cross examination.

A. I consider that a Welsbach department is an absolute necessity to increase its business.

34. Would you consider that the risk attached to electric plants

in a city would be a risk that should be taken into consideration where a gas company had also an electric branch connected with its business?

A. I think that an electric branch to a gas business is like the fifth wheel to a coach; I don't believe it belongs to the gas business at all and I will tell you why—I don't know whether I am hitting my friends or not but it don't make any difference—the business of a gas company is to sell gas and sell all it can; it is not its business to monopolize any particular method of lighting, whenever it acquires an electric plant it is for the purpose of monopolizing the lighting system and I hold as a principle that is wrong; I have never yet seen in my experience a gas company that has added an electric annex to its business but what its gas business has suffered. To illustrate what I say, our friends in St. Paul put in an electric annex for the purpose of running an opposition to themselves, instead of spending the money and energy to develope their gas business they spent it in an effort to corner the people, monopolize the business and the result is while at the time they took on their electrical annex they were selling more gas than we were, today we are selling over 150,000,000 feet a year more than they are and we have not touched the electric business at all. When electricity first came in, I spent a good deal of time investigating it, and the result of my investigation was that it did not contain the elements of success within itself, it had
454 not the element of money making in itself, it had not the element of competition as against the other light in itself, it was a special light adapted to special purposes and had its own field and would thrive in that field if it did not extend itself too far. Our company when electricity first came out wanted to stand by gas if it was all right but we did not want to be cut off altogether if it was going to be superceded by something else but after an investigation covering a good many months and very extensive traveling from the Pacific coast to the other extreme of the continent I came back and made my report that we did not want to have anything to do with electricity; that being the case we could not object to anybody else having all they wanted to do with it, but we never put a cent into electricity in any way, shape or form, and I will further state that if I had been in a foreign country and only had our daily or monthly reports before me and not knowing whether we were in electricity or not, I would not have known there was any in the town, as we were going right along as fast as we ought to.

35. Does the amount of gas manufactured increase or decrease the price or cost of the gas?

A. Decreases it largely.

DAVID DOUGLAS, called on behalf of complainant, being first duly sworn, testified as follows:

Direct interrogatories by Mr. ABBOTT:

1. State your name, age and residence.
A. David Douglas; 56; Eau Claire, Wis.
2. What business are you now engaged in?
Ans. Gas business.
3. What position do you hold?
A. President and general manager of the Eau Claire Gas
455 Light Company.
4. Are you familiar with the business of the manufacture and sale of gas?
Ans. Yes sir.
5. State what if any particular training you have had in the schools with reference to preparation for that business?
A. When I was a child, my father was chief engineer of a large gas company in London, England; I was educated with the intention of following the profession of a gas engineer; I graduated at the university of St. Andrews in Scotland, my education having been specially designed in the engineering line.
6. What practical experience have you had since that time in connection with the manufacture and sale of gas?
A. I was assistant engineer to the Phœnix Gas Company in London, England, for four years; I was assistant engineer of the New Castle and Gateshead Gas Company, a very large city; I had the entire management of the Chesterfield Gas & Water Works in Devonshire, England; I was lessee and part owner of the Aldershot Gas Works of Waverly, England, and was associated with a number in the construction of important extensions at Portsmouth naval dock in England; I also designed and constructed a large number of small works as well as the additions necesarily belonging to these larger operations; I left England and then had experience in the management of the chemical works and gas works at Rockville, Canada; I constructed and afterwards operated gas works at Sarnis, Canada; from there I went to Savannah, Ga., and was president and general manager of the combined business of gas there with the United Gas Improvement Company; while in the employ of the United Gas Improvement Company, I was called upon to assist in the construction and management of various gas works in other cities in this country
and made *made* so-called examinations of the manufacture of
456 fuel gas especially with reference to the Welsbach burner
when it was first brought out; from there I came to Minneapolis, where for four years I was general superintendent of the Minneapolis Gas Light Co. and in the year 1894 I purchased an interest in the Eau Claire Gas Light Company where I have remained until now. During the last seven years I have re-constructed the gas works at Red Wing, Minn., and have been called in to examine several plants of more or less importance and claim now to be in the busi-

ness not only as manager of the gas works at Eau Claire, but consider myself in the business of advising in the construction and undertaking the construction of gas works and other kinds of undertakings. I am also a fellow of the Chemical Society of London, England. I think roughly speaking that is my record.

7. What are the different processes in use throughout the United States for the manufacture of gas to be sold through a general distributing system laid in the streets for illuminating or fuel purposes?

A. There are three generally known; one is practically obsolete, the manufacture of oil gas diluted with air; it was limited as a rule to very small towns and villages, but there are quite a few of those plants around in this northern country yet. The other is carburetted water gas and coal gas. Coal gas, however, is the parent gas of the gas business.

8. Are you familiar with the processes involved in both the manufacture of water gas and coal gas?

Ans. I am.

9. Describe briefly but in detail the modern method and apparatus for the manufacture of coal gas that is now in general use.

A. The manufacture of coal gas is nothing more or less than the destructive distillation of coal in a retort and a separation of the tar and water by condensation and a subsequent purification
457 of the gas from ammonia by scrubbing or washing and the absorption of the sulphur and other deleterious gasses in purifyers.

10. Describe briefly the process of the manufacture of water gas?

A. The manufacture of water gas is the decomposition of steam in the presence of highly incandescent carbon; that carbon may be made in the form of anthrocite coal, coke or charcoal; that decomposes and produces what is known as blue water gas which is a mixture of hydorgen gas and carbonic acid; that gas has no illuminating quality, and therefore, oil is added above the blue water gas generator and the oil is decomposed, broken up and mixed with the blue gas and that is known as carburetted water gas; the carburetted water gas after being obtained is treated practically as coal gas is treated; it is condensed so as to remove the tar and water, passed through scrubbers and purifyers and finally sent to the gas holder practically with the same apparatus and same method.

11. What if any changes have taken place in the last 25 years in the type of benches and number of retorts which are in use in manufacturing coal gas and what are the reasons for such changes?

A. The benches are made larger with a larger number of retorts of larger size; the style of heating has changed from what was known as brick firing benches to recuperative firing benches.

12. Has there been any change in the material of which the retorts were made?

A. Originally, retorts were made of cast iron, now they are made altogether of fire clay but that is further back than 25 years.

13. When was that change made?

A. It was 40 years ago; I was 16 years of age at the time and am now 56; and further back than that they were being used, but they were exclusively in use 40 years ago.

458 14. What changes or advances has there been in the type of purifyers and the purifying materials?

A. The old style of purification was lime purification, now oxide of iron is practically the sole purifying agent; the boxes are made deeper and the purifyers instead of working all in one direction, are made reversible so as to be able to get more efficient use of the purifying material; there has always been the revivification of the inside of the box itself by a slight addition of air; of course, in the making of the articles themselves they have been very much improved in design and are made better than they used to be made, having dumping doors and better facilities for filling and emptying.

15. What changes or advances has there been in the recovery of the bi-products?

A. The tar was always obtained, all of it as much as now, because there was none ever lost; it was all condensed; the bi-products consisted as they do now practically only of tar, coke and ammonia, but the new style of retort bench uses less fuel for the same amount of ammonia than the old style bench, and therefore, there has been a considerable larger amount of coke sent to the yard for sale than there was under the old style; there has been several devices, of one kind and another, devised for the removal of the ammonia, but I don't know that any of them have improved very much upon the old style; there has been some little change in regard to the scrubbers and saving of ammonia, but the ammonia is not a very valuable product, I mean, taken per ton of coal it is not of as great relative value as the other.

16. Look at the plat now shown you marked Exhibit "1" and in evidence in this case, and assuming it to be a plan of the gas plant of the Peoria Gas & Electric Co. at Peoria, Ill.; further as-

459 suming that on September 1, 1900, the population of the city of Peoria and the territory tributary thereto, was 65,000 inhabitants, that said city of Peoria was located upon the westerly bank of the Illinois river, upon ground gradually sloping westerly for a distance of about 1½ miles, and extending along the Illinois river for a distance of 4 or 4½ miles, and that the plant of the Peoria Gas & Electric Company was then located at about the center thereof on the bank of the river; assuming also, that on September 1, 1900, there was in the city of Peoria another gas plant owned by an independent company, which plant had been in operation for about 40 years and had a capacity of about 500,000 cubic feet of gas per day; and assuming further that the plant of the Peoria Gas & Electric Co. was constructed during the year prior to September 1, 1900, what is your opinion of the plant of the Peoria Gas & Electric Co. in the city of Peoria, with respect to its fitness in size, char-

acter and equipment for the manufacture and sale of gas in said city, taking into consideration the element of future growth, etc.

A. It is well designed and a good plant; it is located approximately in the center of the city and there can be no doubt that it is well erected.

17. State whether or not in your opinion judging from the plat marked Exhibit "1" it is the plan of a thoroughly modern and up to date coal gas plant?

Ans. Yes sir it is.

18. Assuming that at the time of the construction of the plant of the Peoria Gas & Electric Co., the population of the city of Peoria and the territory tributory to said plant was about 65,000 inhabitants; assuming also that the wages of ordinary labor were $1.50 per day, that at the same time Youghiogheny coal could be purchased and delivered at the works at $2.80 per ton; assuming further that at the same time there was a local market for coke
460 at an average price of $3.25 per ton; that the tar bi-product could be sold at 5 cents per gallon; that the ammonia bi-product could be sold at 8 cents per pound, that cannel coal for enriching could be bought for $3.00 per ton, and that gas oil for making water gas could be bought at 3¾ cents per gallon, and that coke for water gas making could be bought for $4.00 per ton, and that the company was not bound by any requirement as to candle power of gas to be furnished, would it have been more expedient, in your opinion, to have erected a coal gas plant or a water gas plant, and why?

A. I would recommend the erection of a coal gas plant for the reason that the production of coal gas would be cheaper than that of water gas and that the coal gas produced would be as valuable both for lighting and all heating purposes as the water gas which would be produced at a higher cost.

19. Are you familiar with the cost on the open market during the years 1899 and 1900, of the various items of machinery, apparatus, materials, equipment and labor entering into the construction and operation of a coal gas plant of the capacity and character of the plant of the Peoria Gas & Electric Co., as shown on Exhibit "1"?

A. I always keep myself fairly well posted upon the market values of all goods used by gas companies, whether in the construction or operation of their works.

20. From your examination of this plat, from your knowledge of the cost of construction of similar plants, and your knowledge of the cost in the open market, during the years 1899 and 1900, of the various items of machinery, materials, apparatus, equipment and labor entering into the construction and operation of a coal gas plant of the capacity and character of the plant of the Peoria
461 Gas & Electric Co., assuming that it has a capacity of 500,000 cubic feet per day, are you able to state what would be the reasonable cost price of the plant of the Peoria Gas & Electric Co.,

as shown on Exhibit "1," assuming that said plant was constructed during the years 1899 and 1900, and that the various items of machinery, materials, apparatus, equipment and labor were purchased in the open market?

Objected to as incompetent and for the reason the witness has not shown any knowledge as to the wages paid at that time in the city of Peoria, or the cost of materials, as laid down in said city, which enter into the construction of the plant.

A. I should say about $180,000.

21. Assuming that on September 1, 1900, the Peoria Gas & Electric Co. had mains and services laid in and through the streets and alleys of the city of Peoria for the distribution of gas as follows, to-wit:

Mains.

1758 feet of 16" main of which 160 feet is under pavement.
20768 feet of 12" main of which 11225 feet is under pavement.
3462 feet of 10" main of which 58 feet is under pavement.
20224 feet of 8" main of which 13234 feet is under pavement.
12874 feet of 6" main of which 5474 feet is under pavement.
80852 feet of 4" main of which 9792 feet is under pavement.
260 feet of 2" main, making a total of 140223 feet of main of which 39943 feet is under pavement.

Services.

3	3"	services, total length	872 feet
2	2½"	services, total length	374 feet
652	2"	services, total length	37244 feet
1503	1¼"	services, total length	111369 feet
266	1"	services, total length	29393 feet
		Total of 2426 services, total length	179252 feet

462 and assuming that the cost of ordinary labor during the year preceding September 1, 1900, was $1.50 per day, please give an estimate of the fair and reasonable cost of laying the mains of the Peoria Gas & Electric Co. and the services of said company, including labor, materials, cost of repaving streets, and all other expenses incident to laying said mains ready for use?

Objected to as incompetent and immaterial and because the witness has not shown he knows what the cost of material is laid down in the city of Peoria nor is he shown to have any knowledge of the character of the soil in which the mains and services are laid?

A. I am not able to answer a question of that kind at this time with perfect exactness for I have not myself gone through all the detailed calculation of those figures, but experience enables me to

judge of a set of mains of this character under ordinary conditions and ordinary soil. How many miles of main are there?

22. About 26½ miles.

A. I would roughly estimate that those mains cost about $4,000. per mile; the cost of those mains would vary from $2200. or $2300. per mile up; the cost of those mains apart from paving would be about from $100000 to $105,000. aside from the cost of removing and replacing pavement. Now, I don't know the nature of the paving and therefore could not very well testify as to the cost of its removal.

23. Assuming that a portion of these mains are laid under asphalt pavement on a 6 inch concrete base and that other portions of it, that are under pavement, are under a brick pavement with a 6 inch concrete base, what if you know would be the added cost per foot for such portions of the mains as are under either of said pavements?

463 Objected to unless the witness knows how much of the mains were laid under asphalt and how much under brick.

A. The relaying of asphalt would be about $1.25 per foot run of the trench; the relaying of the brick I should not estimate at over 35 cents per foot run of the trench, because the brick, all of it that was taken up, or practically all of it, would go back in and be used over again, whereas the asphalt would be practically destroyed and would have to be all melted up.

24. Assuming the premises heretofore given in regard to the plant and system of the Peoria Gas & Electric Co. and that the said plant and system were constructed during the year prior to September 1, 1900, what, in your opinion, would be the fair and reasonable cost of equipping and organizing the office of the Peoria Gas & Electric Co. for operating said plant and conducting its business, including the expense of office equipment, books, etc.?

A. I don't know; it all depends upon how the offices are fitted up, whether with pine or mahogany furniture.

25. Assuming that on September 1, 1900, the Peoria Gas & Electric Co. was the owner of 1758 meters purchased new during the year preceding September 1, 1900, what, in your opinion, would be the fair and reasonable cost of said meters so purchased, including the cost of connections and settings?

Objected to as incompetent for the reason the witness has not shown himself to be familiar with the cost of labor of the kind and character to set meters in the city of Peoria.

A. The larger number of meters would be 5-light presumably and 10 and 20; the average cost of the meters would be about $8.50 or $9.00 and the cost of setting would bring up the amount to about $12.00 per meter; I mean the cock, lead connections, the
464 meter shelf and the work incidental to making and placing them; many of those meters have to be taken out singly for

different people and it is not like going along in bunches, but the approximate cost of a meter set under such conditions to the gas company would be about $12.00.

26. In your estimates heretofore given as to the cost of the plant, mains, and services of the Peoria Gas & Electric Co., have you included in your estimate any amount for the legal organization of the company, the equipment and organization of its business force, cost of advertising, solicitors and the general expense of putting the plant into operation?

Ans. I have not.

27. Are expenses of the kind mentioned in the last interrogatory expenses properly incident to putting such a plant into operation?

Ans. Necessarily so.

28. Assuming the premises heretofore given, and also having reference to plat marked Exhibit "1," and the premises given with reference to the location, character and size of the city of Peoria, and assuming that the plant of the Peoria Gas & Electric Co. was put in operation for the manufacture and sale of gas to consumers on May 1, 1900, and assuming further that the cost of the real estate upon which said manufacturing plant is located was $51,500., and that the cost of the legal organization of the company, the equipment and organization of its business force, cost of advertising, solicitors, etc. and the general expense of putting said plant into operation was $42,000. and that on September 4, 1900, after four months of operation, it was manufacturing and selling gas to consumers at the rate of fifty million cubic feet per annum, what in your opinion, was the fair market value on September 4, 1900, of the manufacturing plant, mains, services, meters, office equipment, books, service tools and equipment of every kind which
465 might properly be considered a necessary part of its plant, assuming in answering this question, that said plant so existing and in operation was then sought to be purchased by parties having the need of such plant, and having the right to operate the same, and excluding from your estimate of market value any value which might lie in the license or franchise of the company. In answering this question you need not include the purchase of material to be manufactured into gas?

Objected to as incompetent and also because the witness has not shown he knows anything about the cost of material or labor that went into the construction of the building situated or located on the ground of complainant company; and for the further reason that the question assumes facts not proven in this case.

A. According to my estimate, it amounts to about $440,000.

29. How would that market value of $440,000 compare with the actual cost of the plant in your opinion?

A. That is the cost which I have given.

30. Then, if I understand you correctly, the estimate you have just given is as to the cost of the plant complete, assuming the

various premises which have been given you. If such is the meaning of your answer, please state how, in your opinion, the fair market value of the plant corresponds to the figures you have given as your opinion of the cost?

Objected to as incompetent and also because the witness has not shown that he knows anything about the value of the materials that went into the construction of the buildings upon the premises of the Peoria Gas & Electric Co., nor has he shown that he has any knowledge of the cost of the labor that entered into the con-
466 struction of the building and the manufacturing plant?

A. I would say in answer to that question that it was largely covered by the price which I have already given; it is a new plant well located in a good city; it has a prospect of doing a large business and earning money, and therefore, as a market proposition, the plant should be certainly worth all it has cost if not more.

31. Assuming that the Peoria Gas & Electric Co. commenced the actual manufacture and delivery of gas to consumers about May 1, 1900; and assuming further that the character of the plant and the lengths and character of its mains and services conform to the premises heretofore stated, that the cost of Youghiogheny gas coal at the works of the company was $2.80 per ton, that the wages of labor were $1.50 per day for ordinary labor, $65.00 per month for general stokers and $70.00 per month for the head stoker; assuming further that the purchase of materials in general, and the expenses of general operation were fair and reasonable, considering the location of the plant, and that the management and superintendence of the plant was efficient and competent; and assuming further that said plant had been in operation a sufficient length of time to put into smooth operation the economies of which it was capable, and that it was manufacturing and selling gas at the rate of fifty million cubic feet per year, what, in your opinion, would be the actual cost per thousand cubic feet of the gas manufactured and delivered to consumers by said company, excluding from your estimate the value of residuals and excluding also any charge for depreciation or interest on the investment?

A. I would say that the average price of labor from Wisconsin down to Georgia is approximately the wages mentioned in the question, viz: $1.50 for laborers and $60.00 for ordinary stokers—
467 $70.00 in towns of 50,000 and 100,000 people is a fair average price. The conditions governing the management of the gas works in Peoria are not, so far as I know or can imagine, essentially different from the management in any other town, therefore, the cost of the production of gas, excepting so far as the cost of coal and the price obtained for the bi-products may vary, is practically the same in most cities of like character and like output. Under these conditions coal produces 10,000 feet of gas per ton, the cost per ton being 28 cents per thousand feet. The cost of manufacturing the

gas, including the stokers, laborers, purification and repair of works, may be lumped together—it is very hard to separate them because men work one into the other and when you begin to classify you only land in trouble—it is approximately 25 cents per thousand feet. The cost of distributing gas covers a great many things; it covers repairs of mains and services, meters, attention to customers and such things that happen to transpire, and is generally found to cost about 25 cents per thousand feet. An ordinary estimate for taxation is generally taken at about 10 cents per thousand feet; without knowing what the complainant company is taxed at, I should add 10 cents per thousand feet for taxation. For office salaries and general management expenses 10 cents per thousand feet. Now there is the question of leakage; you don't sell all the gas you make, and I should figure that leakage account—assuming the mains to be new and services new—at about 8 cents per thousand, making the total cost of gas delivered, exclusive of receipts from residuals, $1.01 per thousand.

32. Does not depreciation enter into it somewhat?

A. Yes sir, I was simply speaking of the manufacturing part; I was not touching depreciation at all.

33. What is the candle power of coal gas most satisfactory
468 to the consumer?

A. Ordinary bituminous coal gas is generally assumed to be 16 candle power but 18 candle power is undoubtedly a very satisfactory candle power.

34. What objection, if any, is there to coal gas of over 18 candle power?

A. When coal gas is enriched by means of oil above 18 candle power, the naked flame especially has a tendency to smoke, it does not burn well, it has a tendency to smoke and generate fumes and vapor.

35. What candle power of water gas is equivalent to 18 candle power coal gas?

Objected to as immaterial.

A. About 25 candle power.

36. Are you familiar with the elements and forces, if any, which contribute to the depreciation of a gas plant and its pipes and how and to what extent they act?

Ans. I am.

37. What are those elements and forces and how do they act?

A. In regard to the buildings the fumes in a gas works are largely charged with ammonia and sulphur compounds, both of which are very injurious to all kinds of metal work, and therefore, get in their work of destruction upon any part of the metal work very quickly; in gas works and buildings, however, as the buildings are as a rule kept plain it is only a limited loss and the brick and stone are not seriously effected. With regard to retort benches they are subjected to intense and long continued heat which is very destructive.

I want to say that the retorts themselves in my opinion ordinarily—the renewal of retorts—would not in my opinion be considered a depreciation charge—interrupted.

38. Let me ask you if you distinguish between charges for
469 repairs and charges for depreciation, if so, please indicate in a general way that distinction?

A. I do very distinctly; I draw a line between so called repairs and depreciation; the renewal of retorts—the retorts themselves, not the arches, not the benches, not the hydraulic main, but the retorts themselves that are worn out by actual use is naturally a repair; if a pipe gets accidentally broken and is mended that is a repair; if a sewer excavation is made and a main settles and is put back again into place that would be a repair; if a meter gets accidentally damaged, punctured, it is a repair. Depreciation on the contrary, is a gradual loss of value which calls at some future date for the absolute renewal of the article itself and a fund must be provided for that renewal. The benches of retorts, large heavy fire brick structures, are continuously undergoing a process of disintegration every year and finally have to be absolutely renewed, which is depreciation. Your engines, boilers and such like may be repaired from time to time, but there comes a time when they must be renewed and that should come from the depreciation fund. So with regard to all the apparatus. This depreciation idea applies very forcibly to street mains and services; they go right along year after year calling for no particular attention except occasional repairs at places where damage is done, but ultimately there comes the end of the life of those mains and services when they must be renewed and that must be provided for from a depreciation fund. There is where I draw the distinctive line between so-called repairs and depreciation.

39. Did you state in answer to my previous question all of the elements and forces which contribute to that depreciation?

A. No, I did not.

40. Please state such further elements and forces?

470 A. The retort benches are subjected to intense and constant heat, I believe I have stated that, and necessarily have a lifetime at the end of which period they must be renewed absolutely; the boilers, exhauster, pumps, of which there are several, always in a gas works of that size, are wearing out from their own movement and must be renewed ultimately from time to time; the gas holder is made of thin sheets of iron or steel, is perishable and the time must ultimately come for the renewal of the gas holder; with regard to the mains, there is a rusting process continually going on on all iron work which cannot be avoided, in the cleanest and best of soil the moisture and air seeps into the ground, begets rust and the process of disintegration begins from the very moment they are made, whether under the ground or above it, but pipes laid in the ground are subject to special dangers; some soils are very destructive to pipes, others less so; some soils are considered in them-

selves in-occulous or practically so; some clays are very injurious and when your pipe begins to rust the rusting process goes on with great rapidity; some clays I have known to destroy pipe in very few years. On the other hand, I have known clays so clean and pure that 40 or 50 years after pipes have been laid I have seen them taken up with scarcely a trace of rust upon them; the clay itself forming a protection against the action of water and air to prevent rust. Another new source of disturbance is electrolysis on pipes; electrolysis, so far as my observation has gone and it has been somewhat extensive, has led me to believe that it results more largely from the electric street cars than from the electric lighting system, but it is a growing and serious danger and the electrolysis of pipes is not limited to the pipes under the street car tracks, or close by a street car system, but it is liable to attack it at long distances
471 from the street cars and in my experience has done so a good many times; the action of the electric current is as much, if not more, at a point where the electricity leaves the pipe as it is where it enters the pipe, so the electric current might lead down into the pipe from a trolley system and travel along that pipe as a conductor and finding some suitable ground, full of moisture or other substance that current would be deflected away and where it leaves the pipe is where the action of electrolysis, as I have found it, is most destructive.

41. Are gas holders subject to depreciation, if so to what extent?

A. As I said, they are made of thin sheets of iron or steel and require a great deal of attention to keep them from rusting but in spite of all the attention that may be given them gas holders will rust out.

42. In your judgment how should this matter of the depreciation of a plant be taken into account in conducting the business of a company, that is in the way of providing a fund or otherwise to meet the expense caused by such depreciation?

A. The question of a fund for depreciation is not a new one; it has been discussed, not only by gas men, but by all other men in manufacturing business and among holders of property generally, even houses where they hold large blocks of houses, and it is generally recognized; I might add shipping, that same thing has been enforced in all shipping offices, that is, charging off a depreciation in the value of the ship from year to year by insurance companies; they know that a ship has a life to it and they write of its value year by year and if you try to sell you would find that every year from the day it was built it becomes less and less salable; the same rule which applies to shipping applies equally to a gas works and those who have had anything to do with gas works have always
472 recognized the setting aside of a regular sum or per cent. for the purpose of making a depreciation fund.

43. From your knowledge and experience as a practical man in gas manufacture and construction, what in your opinion would be a proper percentage of the entire cost of the plant of the Peoria Gas

& Electric Co., exclusive of the cost of the real estate, to be charged off annually as an average annual depreciation.

A. From my knowledge and experience in gas manufacture and construction, I would estimate, taking all of the construction value of the plant—by that I, of course, leave out real estate and brick tanks which are not included in that—brick tanks are liable to last a long time, the destructive forces are not there, but all the metal work and machinery, fire brick work, pipes, meters and other appliances taken on the average I am of the opinion that about 6 per cent. would be a fair estimate of the amount of money that would be required to be set aside from year to year for depreciation.

(The MASTER:)

44. Let me see if I understand you. Do you mean this six per cent. fund should be charged off for that depreciation which follows from natural causes and not from extraordinary causes?

A. From natural causes or it might be an extraordinary cause, but generally speaking it would be natural causes.

(The MASTER:)

45. What I want to get clear in my mind is whether or not you take this six per cent. fund for the purpose of repairing or reconstructing by reason of damage from extraordinary causes, or whether it is from natural causes alone to which this is to be applied?

A. It is the natural depreciation that I was considering; the extraordinary causes, speaking from my own experience and knowledge, are not a very important item. For instance, a retort
473 bench does not as a rule break down suddenly and go to pieces unexpectedly; boilers don't blow up if watched and cared for right.

(The MASTER:)

46. But meters get out of order and pipes burst and all those things?

Ans. Yes sir.

(The MASTER:)

47. This fund don't apply to repairs of that kind at all?

A. No sir, not until it calls for the renewal of your meter; your new meter and new main would come out of that depreciation fund; your new retort bench would come out of the depreciation fund and all such work.

(The MASTER:)

48. I understand that but these things follow from a natural cause and the use they are subjected to in the operation of the business?

Ans. Yes sir.

(Mr. ABBOTT, resuming :)

49. Aside from the general depreciation, concerning which you have testified, what are some of the hazards of the gas business as an investment?

A. Well there is another form of depreciation I have not spoken of; you frequently are under the necessity of making renewals because your plant has become too small or become out of date, that is, it is not the most economical kind in operation. For instance, the old firing benches, as I have already testified, have been superceded by recuperative benches; even if the old style firing benches had been sound and in good shape, they would be valueless because they are not economical to operate, therefore, they would have to be pulled down and that is another eventuality which you have to consider in the line of a natural or an extraordina-y cause and that certainly is an important thing. We are today threatened with a change from the recuperative benches to what is known as sloping retorts which would call for the absolute new construction of the bench.

474 50. Do you mean your gas plant particularly?

A. No, the attention of the managers of gas plants all over the country is being drawn to the advantages of sloping retorts so the coal can be slid in at the top and the coke dropped out without any intervention by shoveling in putting in the coal or pulling out the coke; if that is found to be the most economical way of making gas, all gas companies will be compelled, whether their old retorts are decayed or not, to renew them. Another source of depreciation which is very common, especially in a growing city, is that a main, which has been down 10 or 12 years or 15 years but still has a reasonable life of 10 or 12 years and possibly more in it, is found to be too small and has to be taken up and a larger one laid; the old pipe would have lasted 10 or 12 years more but you have to take it up—what are you going to do with the old pipe? It is not good enough to lay down as a new pipe because its remaining life will not warrant it and the old pipe is lost. That is an important item of depreciation, especially as I know in a city like Minneapolis; this depreciation due to changes has been enormous in this city, as I know from my experience as general superintendent of the Minneapolis Gas Company in the past. The Minneapolis Gas Company has been in existence something over 30 years and I think the works themselves have been practically rebuilt five times in the 30 years due to the rapid growth of the city; its mains have been laid in some instances two or three times and enlarged without the old mains having reached a condition of decay; it is an enormous expense and it has to be met more or less in all cities and especially so in rapidly growing cities.

51. Is the competition from other forms of lighting a hazard to investment in gas properties?

475 A. Yes sir, decidedly so.

52. Is there any hazard to an investment in gas property arising from the possibility of other companies being granted franchises by the city council?

A. At the time of the introduction of electric lighting there was a tremendous drop in the market value of gas securities; we have been seriously threatened also in recent years, as we supposed, by acetaline gas which caused a great feeling of insecurity as to whether the new gas being so much richer and a better illuminant, if it were able to be distributed from small works or in blocks or in private houses even by separate isolated plants, would not throw the gas business out altogether. It was a threat. We have from time to time from the electric men today threats of improved lamps that may throw the gas business very much behind in lighting. The natural gas found in certain sections of the country has made immense inroads in the sales of the gas companies at such points for fuel purposes.

53. Aside from the competition from other forms of lighting, is it a hazard to an investment in gas property, that other franchises may be given to other companies to operate in the city, especially where the franchise of a given company is not exclusive?

A. Undoubtedly that is so.

54. Now, from your experience and observation in the management and investigation of gas plants, are you able to state what would be a reasonable and fair return to investors, taking into consideration the hazards of the investment on account of new inventions and the competition concerning which you have testified?

A. Yes sir.

55. What would be a fair and reasonable return to investors on the cost of such plant, taking into consideration the hazards

476 of the business?

A. My opinion is that a manufacturing business of this character subject to the hazards incident to it should have an interest on its investment amounting to about 8 per cent. per annum.

56. Having reference to the plat marked Exhibit "1" and to the assumption as to the cost of materials, labor, etc., entering into the construction of this gas plant; and assuming further that the superintendence of the entire work was in charge of the vice president, general manager and other officers of the company, and was not being done by architects and contractors, would the salaries of such officers during the time of construction be a proper element to be considered in determining the cost of the plant, and, if so, what in your opinion would be a fair percentage on the cost of the plant to be allowed for such salaries or services?

Objected to on the same grounds similar questions have been objected to.

A. The fees of a gas engineer for the construction of such a plant as is constructed at Peoria would be about 5 per cent. of the cost of

the work, and all the charges of the company of whatsoever nature, whether in the form of salaries, or of interest charges, up to the time that the gas company began its operations should, and properly, be charged to its capital account and entered upon the books as forming part of the investment of that company—all of it. I think that is a clear understood rule with regard to all companies. I don't know of any other account it could be charged up to; there is no profit and loss account and it must be charged to the capital cost.

(The MASTER:)

57. Do you mean the cost of construction?

A. The cost of your secretary keeping the accounts of the construction of your building is as much a part of the cost of
477 those buildings as the brick or lime put into them.

(The MASTER:)

58. You mean, then, these charges should be charged to the cost of construction?

A. Certainly, the cost of keeping accounts is as much the cost of the house as the material that goes into its construction; it is also manifest that upon all large works extending over years that the interest charges must be cumulative and form part of the investment; there is no other place to charge it to; it must come out of the whole original fund.

Cross interrogatories by Mr. MANSFIELD:

1. In estimating the cost of this gas plant, did you take into consideration the amount of money that was paid to the gas engineer and the officers of the company during the period of construction when you state the gas plant was worth $440,000?

A. I did.

2. What value did you place upon the retort house and its contents in making that estimate?

A. I did not divide my estimate.

3. What in your opinion would be the value of the retort house with its contents?

A. I am not prepared to answer that.

4. What would be the cost of the boiler house as shown upon Exhibit "1" in evidence in this case?

A. I am not prepared to answer that; I have not seen the plans or specifications yet; I think I have explained thoroughly but, if not, I will do it now; my estimates were based in the aggregate as a matter of experience with the cost of such plants and not in detail and I am not prepared to answer questions asking me for the details of the cost of that work at the present time.

478 5. What in your opinion would be the cost of the coal and coke storage house as shown upon Exhibit "1"?

A. Same answer as before.

6, What would be, in your opinion, the cost of the 7 benches of 9 retorts as shown upon Exhibit "1"?

A. The same answer although I might be able to give you that nearer, but perhaps I had better not go into details of any kind.

7. What would be the cost of one brick and steel stack, or did you know there was a brick and steel stack on the premises of the Peoria Gas & Electric Co.?

A. I knew there must be a stack.

8. Did you know of what material it was constructed?

A. I did not.

9. Is there any difference in the price of boilers that are used in the manufacture of gas?

Ans. Some.

10. Mow much do they vary, taking two boilers of 100 horse power each, what would be the variation in the cost price?

A. I am not prepared to answer.

11. Do you know what kind of boilers were erected in that plant?

A. I do not but I assume they were horizontal, multitub-lar boilers.

12. Do you know whether there is any steam and water connections upon the plant of the Peoria Gas & Electric Co. in the city of Peoria?

A. There must be.

13. How many stacks are there upon the premises of the Peoria Gas & Electric Co. in the city of Peoria?

A. Two at least.

14. What was the cost of the ammonia apparatus of the
479 Peoria Gas & Electric Co.?

Ans. I don't know.

15. What was the cost of the fixing bench of the Peoria Gas & Electric Co. as erected in the city of Peoria?

A. I don't know.

16. Do you know of what material the retort house in complainant's plant in the city of Peoria is made?

A. I assume it is brick but I don't know.

17. Do you know of what material the office building——

A. (Interrupting.) I know nothing of the o ffice building.

Mr. ABBOTT: Complainant objects to this line of examination as not cross-examination, for the reason the witness has stated fairly and frankly that he is not prepared to give figures in detail on the construction and material and asking him in regard to such matters simply encumbers the record for no purpose.

18. Do you know what the cost of the water condensers were in the plant of the Peoria Gas & Electric Co.?

A. I don't know, the same answer.

19. Do you know what the cost of the two scrubbers erected by the Peoria Gas & Electric Co. was?

A. Same answer.

20. What, in your opinion, as an expert would the two scrubbers erected in a plant of that kind be worth as shown by Exhibit "1"?

A. It would require more time than I have to figure it out in detail.

21. Can you figure that out from the plat marked Exhibit "1" shown you?

Ans. No.

22. Did you obtain any data from Exhibit "1" from which you calculated the value of the manufacturing plant of the Peoria Gas and Electric Co.?

Ans. Yes.

480 23. What data did you obtain from said exhibit?

A. I obtained a general idea of the layout of their plant and approximately what they had and saw that it was a good plant of fair, average, modern construction.

24. State what you found on Exhibit "1" upon which you based your estimate of the cost of the plant?

A. The retort house there, as I understand, consists of 7 benches of 9 retorts each, full depth recuperative benches; there are boilers, engines, exhausters, condensers, scrubbers, tar tanks, gas holder and all the necessary appurtenances of a gas works necessarily attached thereto—buildings, etc.

25. What in your opinion would be the cost of the meter and the connections necessary for a plant of the size and character of the Peoria Gas & Electric Co.?

A. I am not prepared to say.

36. What in your opinion would be the cost of the gas holder and tank of a capacity of 300,000 cubic feet erected upon the premises of the Peoria Gas & Electric Co.?

A. Same answer.

27. Do you know the depth of the foundation of the gas holder on the premises of the Peoria Gas & Electric Co.?

Ans. No.

28. In figuring upon the cost of the plant, in estimating your cost, what depth did you give to that foundation, if you gave any?

A. The ordinary depth would be about 4 feet below the floor line.

29. In making your estimate of the cost of the Peoria Gas & Electric Co.'s plant in the city of Peoria, did you take into consideration a chemical laboratory attached to the plant?

A. I did not.

481 30. Are you familiar with the cost of retorts and the material that entered into the construction of the plant of the Peoria Gas & Electric Co. in the city of Peoria?

A. Except that I am informed that the average price of labor was $1.50 per day.

31. Do you know what kind of lumber is in the plant of complainant's company in the city of Peoria?

Ans. No.

32. What is the effect of electrolysis upon the pipes?

A. It converts the iron into rust, or steel into rust.

32. To what extent might it be converted into rust?

A. All of it—a complete conversion.

33. Where the electric current leaves the pipe would it so pit the pipe that it might break of its own weight?

A. Yes sir.

34. From your experience with gas pipe, have you ever seen a pipe broken completely off by the action of electrolysis like a clear break right through?

A. I have not seen it like a clear break, no.

35. How many cubic feet of gas could the plant of the Peoria Gas & Electric Co. manufacture per day?

A. If all the retorts were in operation?

36. Yes sir.

A. Between six and seven hundred thousand cubic feet; that don't assume, though, that all the retorts are going.

37. Suppose that the plant contains an ammonia concentrator that is only capable of taking care of the ammonia obtained from the manufacture of 165,000 cubic feet of gas per day, would you then consider that gas plant a modern gas plant and so constructed as to reduce the cost of the manufacture of gas to a minimum, taking into consideration the assumption that the gas plant, as
482 described, manufactures 500,000 feet of gas per day?

Objected to as immaterial, incompetent, not cross-examination.

The MASTER: I do not think the hypothetical case is based on the evidence and do not think it competent, but the witness may answer subject to the objection.

A. It is convenient that all parts of the plant should be commensurate, but the question of ammonia is not a very large or important item in the manufacture of coal gas.

38. Would the manufacturing cost of gas bee reduced by the addition of a tar still attached to the Peoria Gas & Electric Company's plant in your opinion as an expert?

A. The distillation of tar is not generally considered as an ordinary addition to a gas works, but profit might be made from it; in all probability a gas works of the size of complainant's plant would operate a tar still at a loss.

39. As a gas expert in computing the cost of the manufacture of gas what residuals are taken into consideration in computing that cost?

Objected to as immaterial, incompetent and not cross-examination because the estimate on direct examination excluded the value of the residuals.

A. I understand you to ask what are the commercial residuals of a gas works?

40. Yes sir;

A. The commercial residuals of a gas works are coke, tar and ammonia.

41. Are there any other residuals known in the manufacture of gas?

Objected to same grounds as before.

A. In every large works where there are sulphuretted acid works near, spent oxide, or oxide of iron, which has become thor-
483 oughly saturated, or mixed with at least 50 % of sulphur is sold; I don't know of any small works that sell it.

42. Is there any such bi-product known as nap-thaline obtained from the manufacture of gas?

A. Not as a bi-product.

43. What kind of a product do you call it?

A. It is a nuisance, that is I mean when we find it in a solid state it is a nuisance and one of the most perplexing and troublesome nuisances we have got; when it deposits itself in a pipe or in any part of the works in a solid condition, it is a big nuisance.

44. In stating the cost of the distribution of gas, did you take into consideration the fact that nap-thaline might be deposited in and along the pipes of the company?

A. Certainly.

46. Would the location of the plant in that regard make any material difference as to the amount of nap-thaline that might be accumulated or contained in the pipes?

A. It is not a matter of the location of the plant in my opinion.

47. If the pipes are laid in a level country, is not there more trouble in clearing the pipes of the nap-thaline which may condense in them, than there would be in a country where a drainage back to the plant itself could be obtained?

A. No, for in a solid state it will not run; all pipes are drained anyhow of everything that will flow and nap-thaline in a solid state don't flow.

48. Is it not a fact that some gas companies have traps in the pipes for the purpose of catching or accumulating this nap-thaline?

484 A. No sir. In all gas work connections there are open elbows T's and such like left so it can be removed and you will find that nap-thaline will choke a vertical pipe as well as a horizontal one.

49. From your knowledge as a gas expert, what in your opinion would be the cost of coal gas in the holder of a company per thousand cubic feet to a company whose plant was such as you have assumed the Peoria Gas & Electric Co.'s plant to be, and in answering this interrogatory, take into consideration also the fact, that the bi-products of tar, ammonia and coke are extracted and sold, the tar for 5 cents a gallon, the ammonia for 8 cents a pound and the coke at an average price of $3.25 per ton; also take into consideration that 22 per cent. of the coke made is used in heating furnaces

and that Youghiogheny coal cost $2.65 per ton f. o. b.; also take into consideration all the expenses of the company in the manufacture of the gas up to the holder and all the revenues of said company obtained from the sale of the residuals, coke, tar and ammonia, basing your estimate on a daily make of 165,000 cubic feet per day; also taking into consideration that the cost of the coal used for fuel purposes, other than the coke used, costs $1.10 per ton?

Objected to as immaterial, incompetent, not cross examination, and as a hypothetical question based upon assumed facts which are not of record.

A. I think I generally understand the question, but there is one point that strikes me as not being in accordance with the facts of ordinary operation, therefore, the answer cannot be taken as my opinion of what the cost of gas in the holder would be; you put an arbitrary 22 per cent. of the coke made used as fuel; that is too low.

485 50. I am assuming it upon that basis and asking you to assume that as a fact and ask you your opinion as to the cost of the gas in the holder?

A. There is a lot of figuring there; in the first place ordinary coal contains so much smoke it could not be used in those furnaces at all. As a gas man, am I going to stultify all my knowledge and assume those things, your honor?

The MASTER: Yes, if you can answer the question on that assumed state of facts.

The WITNESS: We could not run under those conditions.

The MASTER: That is not the question what you could do; it is a hypothetical question.

Mr. MANSFIELD: Other gas experts have answered it and they must have stultified themselves if you call it stultification, and they didn't complain about it either; they were dead willing to answer.

A. I know there are some people who brag about doing a good many things but when you get down to examine them they don't always fulfill what they claim they can do. I have to answer this question, do I?

The MASTER: If you can.

A. I can answer it approximately, of course. What is the connection between the $1.10 per ton for coal and the 22 per cent. for coke; do you propose to use coal for your furnaces or coke?

Mr. MANSFIELD: If you don't use any of your fuel at all there, make it on that basis; if you do use any of your fuel there, calculate it at $1.10 per ton.

A. I am not going to use any of that coal; you say I have to use coke or coal and in those figures I will use coke because there you give me a definite figure; the coal is a very indefinite figure;

486 I will say this with regard to coal; while I know coal has been used with some economy in some places I have had no

experience in using coal in firing retorts. What do you mean by the expenses of the company in the question?

Mr. MANSFIELD: All the expenses of the company, that is, manufacturing expenses, cost of labor, cost of materials, purification material, everything that goes into the manufacture of the gas.

The WITNESS: It include- superintendence, does it?

Mr. MANSFIELD: Merely around the plant there.

The WITNESS: I mean superintendence of the work, foreman in charge of the works; at $3.65 per ton for coal, the labor and other expenses, men, stokers around the works, I figure at 25 cents making 51 50/100 cents; 1320 pounds of coke to the ton of coal less 22 per cent., 290 pounds, leaves 1030 pounds of coke per ton at $3.25 is 1.67 which means .16.73 per thousand; tar 1 gallon per thousand 5 cents; ammonia—I am averaging the net ammonia at 30 cents per ton of coal, or 3 cents, makes the total of these residuals on the basis of those figures 24 73/100 cents; that taken from 51 50/100 leaves 26 57/100; then if you take a foreman's wages in charge of the works at $5.00 per day it makes 3 cents, which makes the total cost of that gas in the holder about 29 57/100 cents on your hypothetical question. Is that what you are trying to get at?

51. Yes sir. What would be the cost of gas in the holder under the same conditions where the total make was 500,000 cubic feet of gas per day?

Objected to as incompetent, immaterial, not cross examination, and based on assumptions not in the record.

A. I don't want to sit here and make calculations, but on the larger quantity, I will say it would be less without going into details.

487 52. About how much less?

A. Perhaps 2 cents, that is, assuming all this data is the same proportions.

53. Would not there be a greater reduction than that?

A. No, I think not. You see it is entirely a question of labor; you figure an absolute quantity of coke, all your percentages are the same of coke and other things are all fixed—there is no change; you could not get these results upon 165,000 per day, however; I will say that but I am answering your question as you present it to me.

54. What would be the cost of the distribution of that amount of gas per thousand cubic feet—what enters into the cost of the distribution of that amount of gas per thousand cubic feet?

A. The items that enter into the distribution of gas are the repairs of mains, services, meters, attention to complaints, changing of meters, meter readings and all the little things outside of the works and outside of the office and it would cost about 25 cents per thousand cubic feet including everything. In other words, the cost of

distribution forms a very important item in the cost of gas delivered at the burner.

Re-direct interrogatories by Mr. ABBOTT:

1. Considering the plant of the Peoria Gas & Electric Co. as the same has been described to you, what, in your opinion, would be the value of the residuals per thousand cubic feet of gas, basing your answer on your knowledge and experience of the amount of such residuals as would result in the operation of a plant of that size and character?

A. That is only asking me what my estimate of the value of the residuals per thousand cubic feet would be.

Mr. MANSFIELD: I object to it as incompetent, as the wit-
488 ness has not shown that he knows anything about the selling price of those residuals in the city of Peoria and also because it is not proper redirect.

The MASTER: I do not think that question or answer competent still he may answer further subject to the objection.

The WITNESS: In plants of that character we find about 800 pounds of coke to the ton of coal available for sale, 10 gallons of tar, and approximately about 4 pounds of ammonia per ton.

2. Then assuming that the market price of those residuals is approximately the same in Peoria as in other places of which you have had knowledge and experience, state what in your judgment is the fair market value of those residuals per thousand feet of gas

A. About 30 cents.

3. In your direct examination you gave your estimate of the cost and of the fair market value of the plant of the Peoria Gas & Electric Co., basing the same upon the inspection of the plat and certain assumptions given you as to the cost of labor and material; in your cross examination you stated you were unable to go into detail as to the cost of the different buildings and appliances. I will ask you to state if as a result of your knowledge and experience in the construction of gas plants, you have formulated a method or system of arriving at the approximate cost of a complete manufacturing and distribution gas plant which your experience has shown to be approximately correct?

Ans. I have.

4. What is that method or system?

A. Taking the volume of gas which a works is able to produce and distribute per day under all normal conditions—average conditions—and a plant capable of manufacturing and distributing including, first, expense of organization, real estate, works, mains, services, meters, office, working capital all goes to a gas works
489 and if I were asked how much approximately that plant would cost complete I would say it would cost about $1200. per thousand of the capacity of the works per day. In other words,

the works complete, with all its mains, which would — probably 40 or 45 miles of mains, with all its services and meters laid, would cost about $600,000; it is an approximate estimate but it is one way of arriving at what the works cost and leaving out all the details and checking it often gets you nearer to the mark. In the same way you ask an architect to tell approximately what a house of a certain size will cost, he cubes the house and having an idea of the character of the house to be completed he averages it at so much per cubic foot; it is a good way of checking and gives you a rough idea of what a building has cost.

5. From your knowledge and experience, does that method of computation furnish an approximately accurate estimate of the cost of the property of this description?

A. It does.

Re-cross interrogatories by Mr. MANSFIELD:

1. Was that the basis upon which you calculated the cost of this manufacturing plant?

A. No, because its manufacturing plant is not complete.

2. In what way is it not complete?

A. It has not got means commensurate with the works; its mains are not all laid.

3. How much of its mains are not laid?

A. I could not say but probably 15 miles more mains would have to be laid to make 40 or more miles of mains.

4. What would be the cost of the 15 additional miles of mains?

A. About $50,000, because they would be small; the larger mains would not come into that estimate.

490 5. Then upon your estimate of the cost of the Peoria Gas & Electric Company's plant, including the 15 more miles of mains you would state that plant was worth $480,000?

A. No, I should say $600,000, because you have to add more services, more meters; there are a lot of things to add which would bring it up to the $600,000.

6. Did you take into consideration when you estimated this that the services were laid into the houses at the expense of the company?

Ans. Certainly that is customary.

7. How long since has it been customary?

A. Wherever I have been in my experience I have always done it everywhere with one exception; for about a year after I first came to Minneapolis we charged part of the cost of putting in service pipes to the consumer but now that is abandoned and has been for many years; this was the only works in my charge where we ever charged anything for services; it is generally recognized as poor business policy to ask consumers to pay for services.

Adjourned to meet at the Spalding house in the city of Duluth, Minn., on Thursday, December 12, 1901, at 2 p. m.

Spalding house, Duluth, Minn., parlor F.

THURSDAY, *December* 12, 1901—2 o'clock p. m.

Present: Judge I. C. Pinkney, special commissioner. Mr. W. T. Irwin and Mr. W. T. Abbott, appearing for complainant. Mr. Henry Mansfield appearing for defendant.

L. N. CASE, called on behalf of the complainant, being first duly sworn, deposes and says:

Direct interrogatories by Mr. ABBOTT:

1. State your name, residence and occupation.

491 A. L. N. Case; Duluth, Minn.; manager of the water and light department of the city of Duluth.

2. Does the water and light department of the city of Duluth include a gas plant?

Ans. Yes sir.

3. State whether the gas plant in the city of Duluth is under municipal or private ownership?

Ans. Municipal.

4. What position do you hold under it?

Ans. Manager.

5. From whom do you receive your appointment as manager?

A. From the board of water & light commissioners.

6. How is the board of water and light commissioners appointed?

Ans. By the mayor for a term of five years.

7. Is the city of Duluth operating under a charter?

A. Yes sir.

(The MASTER:)

8. Is this board of water and light commissioners you speak of one of the municipal departments of the city government of Duluth?

A. Yes sir.

(Mr. ABBOTT:)

9. Look at the document now shown you marked Exhibit "11" and state if that is the charter under which the city of Duluth is now operating as a city?

A. Yes sir; it is our city charter.

Mr. ABBOTT: Counsel for complainant offers in evidence the title page of the document just identified by the witness, entitled, "Duluth city charter," and especially offers in evidence from said document sections 81, 82, chapters 7, 11, 14, and sections 154, 170, 175, 176 and 450.

Defendant objects to the document as incompetent and irrelevant but admits that the same was adopted by the city of Duluth and that — is a correct copy of the laws of the State of Minnesota.

492 Said document marked Exhibit "11" entitled "Duluth city charter" is hereto attached and made a part of the deposition of this witness.

10. State how many commissioners there were on the board of water and light commissioners of the city of Duluth for the 18 months ending December 31, 1900?

Ans. Five.

11. Do you remember who they were?

A. During that time C. A. Duncan during the entire time; Hansen Smith the entire time; Samuel F. Snively, H. H. Martindale and Giles Gilbert.

12. State whether you held your present position during the 18 months ending December 31, 1900?

Ans. Yes, sir, I did.

13. It appears from the charter, and the chapters devoted to the board of water and light commissioners, that a certain annual report is required of the said commissioners. I will ask you to examine the document now shown you marked Exhibit "12" and state whether or not that is a report of the board of water and light commissioners for the 18 months ending December 31, 1900, as provided for in said charter?

Ans. It is.

14. Is it the report for the time it purports to cover, that is, the 18 months ending December 31, 1900?

Ans. It is.

15. By whom was that report prepared?

A. By myself commencing on the 9th page; previous to that is the commissioners' report to the city council.

16. State whether that portion of the document up to page 9 is the report made by the commissioners?

Ans. It is.

17. In the remainder of the document under the heading "Report of the manager," are certain tables and statistics. You may state, if you please, who prepared those tables and statistics?

A. I did.

493 18. Were they prepared by you personally?

Ans. Personally.

19. Are all of the figures contained therein with reference to the gas part of your public work true and correct?

A. They are.

20. And are the figures, tables, schedules and statistics given in the portion of this document from page 9 to the end under the heading "Report of the manager" figures that were prepared by yourself and are true and accurate?

Ans. Yes sir, they are.

(The MASTER:)

21. Who approved the report, if anybody?

A. We had experts appointed by the council who examined our books and records and this report and certified to its correctness to the city council which certificate can be obtained of the city clerk if desired.

(The MASTER:)

22. What action was taken, if any, on that certificate by the city council?

A. It was approved and accepted.

Mr. ABBOTT: Complainant offers in evidence the document identified by the witness marked "Exhibit "12" including particularly the title page reading as follow: "Second annual report of the board of water and light commissioners of the city of Duluth, for the 18 months ending December 31, 1900, together with the report of the manager."

Complainant also especially offers from said document pages 5, 6, 7 and 8 of the report of the board of water and light commissioners; and of the report of the manager complainant offers in evidence particularly page 11 in full and pages 12 and 13 so far as they relate to the gas department; also page 15 in full and page 17 beginning with the words "gas plant;" pages 20, 21 and 22 complete; page 27 beginning with the word- "gas plant" and ending on page 28 at the words "auxiliary accounts."

494 Said document so offered in evidence is hereto attached marked Exhibit "12."

Defendant objects to the document as immaterial and incompetent but admits it was made in accordance with the requirements of the city charter of the city of Duluth and was approved by the city council.

23. You may state the price now charged for gas in the city of Duluth, giving the price charged for both illuminating and fuel gas, if different prices are charged?

A. $1.35 per thousand cubic feet for illuminating gas and $1.25 per thousand cubic feet for fuel gas; 10 cents discount for illuminating gas if paid on or before the 12th, of the month and 25 cents discount on fuel gas if paid on or before the 12th, of the month, making the illuminating gas net $1.25, fuel gas net $1.00.

24. Were those prices charged on or about September 1, 1900?

A. No sir.

25. What prices were then charged?

A. $1.50 per thousand cubic feet with 10 cents discount making $1.40 for light net; fuel gas was the same as it is now.

Cross-interrogatories by Mr. MANSFIELD:

1. How long have you been in the gas business?

Ans. 3 years.

2. Do you consider you have an expert knowledge of the manufacture of gas?

Ans. No sir.
3. You made this report, did you?
Ans. Yes sir.
4. What kind of gas do you manufacture here?
Objected to as immaterial, incompetent, not cross-examination.
A. Water gas.
5. How long have you been manufacturing water gas?
A. All the time.
6. Then these figures you have here are based upon the manufacture of water gas, are they not, in the city of Duluth?
495 A. Yes sir.

Adjourned to meet in the directors' room of the St. Paul Gas & Light Company at St. Paul, Minn., on Friday, December 13, 1901, at 11 o'clock a. m.

Directors' room of the St. Paul Gas & Light Co.

St. Paul, Minn., Friday, *December* 13, 1901—11 a. m.

Parties met pursuant to adjournment.
Present: Judge I. C. Pinkney, special commissioner, Mr. W. T. Irwin, Mr. E. C. Ritcher, Mr. W. T. Abbott appearing for complainant. Mr. Henry Mansfield appearing for defendant.

A. P. Lathrop, called on behalf of complainant, being first duly sworn, deposes and says:

Direct interrogatories by Mr. E. C. Ritcher:

1. State your name, age and residence.
A. A. P. Lathrop; 41; St. Paul, Minn.
2. What business are you engaged in?
A. The gas and electric business.
3. What position do you now hold with reference to such business?
A. I am president and general manager of the St. Paul Gas & Light Co. and vice president and general manager of the Edison Electric Light & Power Co. of St. Paul, Minn.
4. Are you familiar with the business of the manufacture and sale of gas?
Ans. Yes sir.
5. How long have you been connected with the manufacture and sale of gas in any capacity, and in what different capacities, beginning with your earliest experience?
A. I think in March, 1886, I first became connected with
496 the gas business as a clerk in the superintendent's office of the Columbus Gas Light & Coke Co. of Columbus, Ohio, and was connected with that company in various capacities until February 1, 1900; since that time I have been connected with these companies here as mentioned before.

6. With what gas plants are you familiar and what different gas plants have you examined during your experience?

A. I have never made a critical examination of any gas plant other than the ones I have been connected with but I have visited numbers of them in different parts of the country.

7. Your connection with the manufacturing gas business, as I understand you, has been continuous since about 1886?

A. Yes sir but more particularly with the commercial end of the business than with the manufacturing end until my connection with the St. Paul Company.

8. From your experience, knowledge and observation of the gas business, will you please state what elements, forces and causes of any kind tend to depreciate a gas plant and its mains under the ordinary conditions which would exist in any city, say of about 50,000 inhabitants?

A. Commencing with the works. In addition to the natural decay of buildings and equipment, wear and tear, there is a chemical action, which results from the peculiar products used about a gas works, the effect of ammonia on iron, sulphur on iron, and things of that kind; also the extremes of temperature which are liable to be encountered in different parts of the works and out through the dist-ibution department there is more or less trouble now with electrolysis which acts on the mains and services and then the mains and services being covered up in soils of different characters you are unable to take care of them as you would of an appli-
497 ance which was wholly exposed, and you know nothing about the wear on them until evidence is given of it, possibly by escaping gas, or something of that kind, and you cannot get at them to make ordinary repairs as you could to an exposed appliance.

9. Aside from the general element of decay, with regard to which you have spoken, what depreciation or deterioration comes to a gas plant by reason of other causes, such as the shifting of population or demand, things of that kind?

A. It frequently happens in the distributing system of a gas works that pipe which has been put in to supply one territory becomes practically valueless because the population or the people have shown a greater preference for another locality and practically deserted that place; that is true in a good many places I know of and I think it would be in most any city.

10. How does that involve a loss to the company, if any?

A. If you have your investment in there it is practically worthless for it has no earning power and the pipes are not worth taking up as the junk value of it would not pay for the expense of taking it up, so to all intents and purposes it is absolutely a dead investment.

11. In a case where a district is supplied with pipes and grows more rapidly than was anticipated, does the same thing obtain?

A. Well that might obtain in a different way; if the business grew to such an extent that the mains in that territory were insuf-

ficient to supply the demand, you would simply have to put in larger mains, and as I said before, you would have the same condition practically, the mains that are in would not be of sufficient value to pay for removing.

12. How does this matter of unexpected increase of busi-
498 ness or rapid increase beyond original calculation, affect the plant as to buildings, material, etc., if at all?

A. Well, on the smaller lines it would, lack of capacity in the mains; when a plant reaches a certain point so its capacity is taxed, then you have either got to extend your buildings and remove these old appliances, put in new ones because the old ones are of insufficient capacity to take care of the make and, of course, the value you would get out of the appliances you remove would be nothing as compared with the original cost.

13. In your experience as a gas man, does this enlargement take the shape of extensions or rebuilding more frequently. What I want to get at is this, as a general rule when it becomes necessary to enlarge a plant, do you simply add something or is it necessary to reconstruct the whole establishment?

A. When it comes to that point, it amounts to a practical reconstruction of the plant; I would say right here that if you do otherwise than that the economy of operation would be entirely lost, that is if you simply put an appliance in wherever you found a place to put it in.

14. What is the fact with regard to the deterioration of benches in the gas business?—how rapidly do they deteriorate?

A. The benches ordinarily have to be filled every two or three years in a gas works.

15. To what extent, if you have not already fully covered that point, do changes of methods in the matter of the type of benches effect deterioration when it comes to new construction?

A. The changes in those things have been quite marked in the last few years and if you have to make a change you have got to change the entire construction of the retort house; benches are made of different sizes; in some places benches of 4's, that means 4 re-
torts, also benches of 6's and benches of 9's; a plant that had
499 in a bench of 4's could not put in a bench of 9's in the same place; everything would have to be changed about the retorts to conform with the change.

16. Aside from the refilling of benches, concerning which you have testified and which takes places every few years, what is the life of a bench as a bench approximately?

A. That would be the stack you refer to and furnaces.

17. Yes sir.

A. I should say that under ordinary circumstances from 8 to 10 years would probably take care of that.

18. In what manner in your opinion, as an expert, who has had to do with the financial end of these gas companies, does good business policy require this depreciation to be taken into account in con-

ducting the business of a gas company and getting at the cost of gas?

A. Do you mean that as to the amount of a depreciation fund, that should be set aside?

20. I want to know first whether you would set one aside.

A. I think most assuredly there is every reason for doing it

21. In what way would you set it aside?

A. Generally speaking on that line, I would say there is a constant depreciation going on in a plant that is not visible or is not noticeable from time to time, but in the course of a period you will find that an appliance is gone and you don't know where it has gone; now a sufficient sum should be set aside so that by the time this appliance is gone you have a fund with which to replace it it is a proper item to the annual expense account in connection with the operation of a company.

22. What distinction do you make, if any, between this invisible depreciation and the repairs you make to a plant, if any?

500 A. The repair and maintenance charge would be current monthly periodical expense that you go to to repair visible breaks or wearing, whereas, a depreciation account, as I stated before, would be a sum set aside to replace a worn out article at a future time.

23. Then, if I understand you right, even if a plant were kept in good general repair this matter of depreciation would still have to be taken into consideration in getting at the cost of the gas?

Ans. Most assuredly.

24. Taking into consideration all the elements you have mentioned, including special causes such as electrolysis, changing of grade, shifting of population centers, and also taking into consideration your experience and observation with respect to the renewal of plants, mains, etc., in the manner you have testified, what, in your opinion, would be a proper per cent. of the entire cost of a gas plant located in any city of 50,000 inhabitants and upwards, under ordinary conditions, which should be charged off annually in order to cover the general, average depreciation of a plant outside of repairs?

Objected to by defendant as incompetent, leading and because no proper foundation has been laid.

A. That is a somewhat difficult question to answer from the fact that depreciation on various portions of the plant would vary so much, but I should say a sum equal to not less than 5 or 6 per cent. should be set aside to cover items of that kind.

25. Your idea then is, if I understand it, that that amount should be taken out of the gross earnings of the company annually in order to replace a plant when it has to be replaced?

A. Yes sir, I should say that in 16 to 20 years the entire plant would have to be replaced and that item of 5 to 6 per cent. would cover that period.

501 26. Aside from the general depreciation, concerning which you have testified, what are some of the hazards of the gas business from the standpoint of an invester?

A. One of them, of course, is competition from any other gas company, competition from electricity, competition from gasoline and any new form of lighting which may come out, the improvement in kerosine lighting, improvements in lamps and things of that kind work a great injury most any time. Then in addition to that, I think, the fact that the business of a gas company, being a purely local business and confined to one market, makes it especially hazardous; of course, competition is what would hurt it in that case, but in most any other line of business if it is injured in its market, it can go to another market to dispose of its goods and that is physically impossible with a gas company; and in case of this competition and destruction of business, there is comparatively little in connection with a gas plant that has any particular value, of course, you have some old iron that may have some junk value, but at the same time it would not be worth enough to pay for moving and the buildings are not such as are adapted to any other line of business, so if the business dies the whole thing is practically wiped out.

27. In what respect, if any, does natural gas come in as a competitor?

A. It is about as serious a thing as can present itself to an artificial gas company; I have known of quite a number of companies that have come in connection with it and their business has been practically ruined, some of them have stopped entirely and others simply run along and do what they can to save as much out of the wreck as possible.

28. You have spoken of the fact that the market of a gas company is local, that is, that its consumers are within a pre-
502 scribed area usually. To what extent, if any, does the same circumstance make a gas company subservient to the local authorities to a greater extent than any other business?

Objected to by defendant as incompetent and irrelevant.

A. I think it is a very serious menace to the business.

29. From your experience and observation in the gas business, are you able to state what would be a reasonable and fair return to investors in gas properties, taking into consideration the hazards of the investment on account of new inventions, competition and the other hazards you have mentioned, if so, state what in your opinion would be a proper return upon the cost of a gas plant in cities of 50,000 inhabitants and upwards under ordinary conditions and ordinary hazards?

Objected to by defendant as incompetent, irrelevant, immaterial.

A. It should certainly be entitled to as large an earning power as any other manufacturing business and I doubt if anybody would

want to engage in a manufacturing business that would pay them less than 10 per cent.; I should say that at least 10 per cent. ought to be expected as a return on the investment.

30. That 10 per cent. return, if I understand you, is something entirely distinct and apart from the depreciation account?

A. Yes sir, that is after the depreciation account is allowed for.

Cross interrogatories by Mr. MANSFIELD:

1. Are you acquainted with the locality and the general situation of the city of Peoria, Ill.?

Objected to by complainant as not cross examination.

A. No sir.

2. When you speak about depreciation of cities of 50,000 inhabitants, to what cities do you have reference?

503 A. Cities of 50,000 and over I think the question was.

3. What cities did you have in mind when you answered that interrogatory?

A. No particular city but cities in general of about that size.

4. When you figured upon a depreciation of 5 per cent. in the value of a plant and stated that you would set that much aside—what did you mean by setting that much aside?

A. Well, in business parlance it would be charged up to expense account, a sum equal to that, and credit the contingent fund with an item of the same amount.

5. What would you do with the money you set aside?

A. That would depend upon circumstances; if you wished to, you could invest it in securities that were convertible into cash or you could invest it in your own property just as you saw fit, but you would not be piling up false earnings as you might be if you did not charge it up.

6. You testified that the life of a plant was about 16 to 20 years; now, if you were to set aside 5 per cent. of the original cost of the plant for depreciation and if you were to invest that money set aside at 4 per cent., would not you at the end of 16 or 20 years have more money in your treasurery than the total original cost of your plant?

A. Certainly if you set aside a certain sum of money on which you get interest and don't touch either of them at the end of the period you would have a larger amount than you originally started with.

7. In other words, at the end of the 16 or 20 years, you could erect and install a plant that cost more than the original plant you had when you first started to set aside this amount of money

504 for depreciation out of the fund you set aside for this depreciation, could you not?

A. For the same size plant, possibly, yes.

8. You could build a larger plant, could you not, that is all things being equal, materials costing just the same they did originally, if

you set this amount of money aside or invested this amount of money at 4 per cent. interest, you could build a larger plant, could you not?

A. Slightly, 4 per cent. would not cover the whole amount for the whole term of years.

9. Taking a plant valued at $432,000., the depreciation on that plant at 6 per cent. would be $25,920. per year, that invested at 5 per cent. per annum would amount in 20 years to $25,920., the exact amount that your depreciation amounts to for one year?

A. Assuming your figures to be correct, yes, but I have not verified them at all.

10. Then upon that first year's depreciation, if you invested that amount of money at 5 per cent., you would, at the end of the 20 years have a sum equal to the amount of depreciation for the first year, would you not?

A. Practically, yes sir.

11. Then to that extent it would decrease continuously from year to year, would it not?

Ans. Certainly.

12. But to that extent there would be that amount of money over and above the original cost of the plant at the end of 16 or 20 years, would there not?

Ans. Yes sir.

13. Gradually decreasing each year the amount of interest?

A. Yes sir.

13. You know nothing about the character of the soil in the city of Peoria, Ill., do you?

Ans. No sir.

505 14. And in your estimates of the depreciation which would occur you just take that depreciation as generally existing?

A. Yes, I take it from the way those things generally run and from conversations I have had with men in different parts of the country.

15. Is it based on your own practical experience?

A. Yes sir.

16. Would there be any changes in benches of 9 retorts, that is, you would not change a bench of 9 retorts to 4, 6 or 8 retorts, would you?

Ans. Yes sir.

17. After you had constructed your benches with that idea of containing 9 retorts, do you think there would be any case where you would reduce the size of those benches and lessen the number of retorts?

A. That thing might happen.

18. Do you know of any case where it has happened?

A. I think I can recall instances of that kind—I will not say positively whether old and large benches have been torn out, but I know of places that have used larger benches and afterwards put in a new building and in rebuilding put in smaller benches. The

matter of benches is largely a question of fuel. You might in one case put in a construction where fuel might be cheap under some conditions and under other conditions it would not be and the character of the bench is governed by that feature.

(The MASTER :)

19. You mean the character of the bench as to size, style or number?

A. Yes sir, in some cases it might be economy to operate a bench of 4's and in other cases it might be economy to operate benches of 9's, depending upon the fuel conditions altogether.

(The MASTER :)

20. Would the quantity of gas sold have any controlling
506 effect in determining questions of that kind?

A. The cost of fuel used in the benches has a direct connection with the cost of the gas sold or the cost of the gas sold has direct connection with the cost of the fuel and in that way the amount of gas sold would have a direct bearing upon the character of the construction.

(Mr. MANSFIELD:)

21. Would there be any risk attached to the business of a gas company resulting from the use of electric lights where the gas company had an electric branch connected with its plant?

A. There would be as much risk in that connection as any other; the investment is wiped out.

22. Would the company itself get the benefit of the wiping out of that investment provided there was only one electric company in the city and that was owned by the gas company?

A. It might and might not.

23. When might it not?

A. When the electric end of the business was conducted at a loss it might be possible in that case it would make nothing out of it and nothing out of the gas business.

Re-direct interrogatories by Mr. RITCHER :

1. You answered a question on cross examination with reference to what the amount set off for depreciation the first year would amount to in the course of 16 or 20 years. That answer was on the supposition that that fund would be invested without expense, or without loss for a period of 16 to 20 years, was it not?

A. Yes sir, certainly.

2. This setting aside of a fund for deterioration and depreciation, if I understand you, is to make a distinction between that
507 fund and net earnings, rather than set aside for investment in outside securities?

A. Certainly, in the same way a bank every year sets aside a

sum to surplus account to take care of extraordinary losses that may come; you cannot see the wear and tear on a pump or on a holder or on anything of that kind, but the first thing you know the thing is gone, and it has not worn out simply at the time you notice it is gone, but it has occurred through a period of years and this fund is set aside to take care of that thing so you have something to replace it with when it has gone out.

3. As a matter of fact, is that entire sum used in a lump at the end of a given period?

A. No sir, it is used, as I think I have already explained, as this wear is discovered.

(The MASTER:)

4. What is your experience; does the fund remain intact during the period of time in which the whole depreciation occurs, or is it used from year to year?

A. It is used from year to year; one piece of machinery might wear out in 10 years and another in 30 years, but if the average was 20 years this amount would be drawn upon at whatever time the exigency of the occasion required.

(The SAME:)

5. That is your experience in the bnsiness?

A. Yes sir.

Re-cross examination by Mr. MANSFIELD:

1. Would any part of the money set aside for depreciation be used in extending the mains if you had occasion to extend them?

A. That would be a matter of business policy; you might use that money for one purpose or another but you have it to take care of this other business when occasion requires.

2. If you made an extension of your mains at any time,
508 would you charge that up to construction account?

A. Yes sir new work.

3. If you used this money in the extension of your mains and having charged it up to construction account and credited depreciation account with it, would you then calculate upon a fair return upon that investment 10 per cent. on the amount of money you had taken out of the depreciation account and put into the extension of your mains?

A. I should hope to get a fair return from it.

4. Then if you used that money in that manner instead of its amounting to—suppose you took it on the basis of the plant costing $432,000 and the first year you allowed for depreciation 6 per cent. on that and had taken that sum of money out of the gross earnings of the company and had thereupon immediately used that money in the extension of mains, would you charge that up to construction account?

A. We would charge it to expense of construction, yes sir.

5. And you would think that a reasonable profit upon that, or a reasonable return to investors would be 10 per cent. on the amount of that money so used for the purpose of extending your mains?

A. Yes sir, I think we are entitled to 10 per cent.

6. Then upon that basis, instead of having at the end of 20 years the amount of your depreciation for the first year, you would have the amount of your depreciation together with 10 per cent. interest on that amount for 20 years?

A. Not necessarily.

7. Providing the return was 10 per cent. upon the investment?

A. Certainly they invest their money and it is set aside.

Re-re-direct interrogatories by Mr. RITCHER:

1. That money taken from depreciation account and in-
509 vested in construction account represents, does it not, a portion of the original investment which has disappeared?

Ans. Certainly.

2. And if the money that is set aside for depreciation is used for investment account, when it is called for out of depreciation account, where must it come from?

A. The stock holders have to go down in their pockets for it or else they have to mortgage the plant or sell bonds and raise money that way.

3. It is new investment?

Ans. Certainly.

Adjourned to meet at Coates house in Kansas City, Mo., on Wednesday, December 18, 1901, at 2 o'clock p. m.

Cleveland parlor, Coates house,

KANSAS CITY, MO., WEDNESDAY, *Dec.* 18, 1901—2 p. m.

Parties met pursuant to adjournment.

Present: Judge I. C. Pinkney, special commissioner, Mr. W. T. Irwin, Mr. E. C. Ritcher and Mr. W. T. Abbott, appearing for complainant. Mr. Meury Mansfield appearing for defendant.

K. N. MITCHELL, called on behalf of complainant, being first duly sworn, deposes and says:

Direct interrogatories by Mr. IRWIN:

1. State your name, age and residence?

A. K. N. Mitchell; 46; St. Joseph, Mo.

2. What business are you engaged in?

A. In the gas business.

3. What position do you now hold in the gas business?

A. General manager of the gas company at St. Joseph.

4. How long have you been engaged in the gas business?

A. In the manufacture of gas or superintendence of gas

510 works 23 years.

5. Are you familiar with the different processes entering into the manufacture of gas?

Ans. Yes sir.

6. In what different capacities have you been engaged in the manufacture of gas during your experience in the gas business?

A. As superintendent of gas works and general manager.

7. What different gas plants have you been connected with and what positions have you held with respect thereto?

A. St. Joseph, Mo., is the works I have been superintendent and general manager of; those are the only gas works.

8. What are the different processes in use throughout the United States for the manufacture of gas to be sold through a general distributing system laid in the streets for illuminating or fuel purposes?

A. Coal gas and carburetted water gas.

9. From your experience in the manufacture and sale of gas are you able to state from conditions as to the price of coal, labor and the character of plant, what would be the actual cost of coal gas manufactured and delivered to consumers in a general way?

A. Yes sir.

10. You may then assume that on September 1, 1900, the city of Peoria and the territory adjacent thereto was located upon the westerly bank of the Illinois river near the center of the city upon ground gradually sloping westerly for a distance of about 1½ miles and extending along the Illinois river for a distance of about 5 miles; and assuming that the city has a population of about 65,000 inhabitants, and that on that date the Peoria Gas & Electric Co. had a modern up-to-date coal gas plant, then located at about the center thereof on the bank of the Illinois river, which plant was constructed during the year preceding September 1, 1900, with a

511 capacity of about 500,000 cubic feet of coal gas per day; you may also assume that Exhibit "1" in evidence shows the general plan of the plant of the Peoria Gas & Electric Co. upon September 1, 1900, and that connected with said plant was a gas main system of about 26½ miles in length extending through a large portion of said city consisting of 16, 12, 10, 8, 6, 4, and 2 inch mains properly connected for the distribution of gas; and that connected with said main gas system there were 2426 services of an average length of about 80 feet each, extending into the premises of the consumers; you may further assume that said coal gas plant cost at the fair market price for all labor, materials, machinery, equipment meters and whatsoever entered into the same including office and equipment, fully tested for the operation and delivery of gas to consumers, the sum of $434,252.35 and that it was constructed during the year preceding September 1, 1900, and was on that date manufacturing and delivering gas to consumers through its pipes, mains, services and meters at the rate of about 50,000,000 cubic feet

per annum; you may further assume that at the time of the construction and completion of said gas plant, and on September 1, 1900, the wages of ordinary labor were $1.50 per day, that stokers could be employed at the rate of $65.00 per month, head stoker at $75.00 per month, that Youghiogheny coal could be purchased and delivered at the works at $2.80 per ton, what in your judgment would be the actual cost of gas manufactured by said company and delivered to consumers?

Objected to by defendant as incompetent, assuming facts not not shown by the evidence and also because proper foundation has not been laid.

Mr. IRWIN: Please answer the question excluding the value of the residuals, interest on the investment and depreciation.

512 A. 89 cents.

11. Assuming the premises aforesaid and that there was a local market for coke at an average price of $3.25 per ton, that the tar bi-product could be sold at 5 cents per gallon, that the ammonia bi-product could be sold at 8 cents per pound, that cannel coal for enriching could be bought at $3.00 per ton, and that gas oil for making water gas could be bought at 3¾ cents per gallon, that coke for making water gas could be bought at $4.00 per ton and that the company was not bound by any requirement as to the candle power of gas to be furnished to consumers, would it in your judgment have been more expedient to have constructed a coal gas plant in the city of Peoria at the time the same is assumed to have been constructed than a water gas plant and, if so, why?

A. A coal gas plant because coal gas can be manufactured cheaper than water gas.

12. What elements and forces contribute to the depreciation of a gas plant and its mains and how and to what extent do they act?

A. The elements and the rust, the pipes being of iron—the machinery mostly iron, and the destruction goes on inside the pipe as well as on the outside caused by electrolysis.

13. Do the general elements have anything to do with the depreciation of a gas plant?

A. Yes sir as to the buildings and gas holder; the holder is an iron structure exposed to the elements and is rusting all the time; it is exposed, of course, to the heat of the sun and the cold which causes expansion and contract, etc.

14. In what manner in your opinion does good business policy require this depreciation to be taken into account in conducting the business of a gas company?

513 A. To set aside a certain sum annually.

15. What in your opinion, from your experience and observation would be a proper percentage of the entire cost of a gas plant of the character of the plant of the Peoria Gas & Electric Co. as described, exclusive of the cost of real estate, that should be charged off annually as the average annual depreciation?

Objected to by defendant as incompetent and also because proper foundation has not been laid.

The MASTER: I don't understand, Mr. Mansfield, what you mean by saying no proper foundation has been laid.

Mr. MANSFIELD: I mean the witness has not qualified himself to answer.

The MASTER: The witness may answer subject to the objection.

A. I should set aside about 6 per cent.

16. Would that be a proper amount, in your judgment, to set aside annually to take care of the depreciation occurring to a plant under ordinary conditions?

Ans. Yes sir.

17. Would that be an average on the whole plant including the manufacturing plant, mains and total cost of the plant?

A. Yes, I should say so.

18. That would be on the total cost of the plant, you mean, exclusive of the real estate?

Ans. Yes sir.

19. How is a plant kept up ordinarily, and from what fund, from year to year in the manufacture of gas?

A. We apportion a certain amount for benches. For instance, each month for the maintenance of that kind of work; a bench is supposed to last two years and we apportion half a cent each month for the maintenance of works that perish like that.

20. Is that considered among gas men ordinarily as part of the repair account?

Ans. Yes sir.

21. Will you state the difference between what is known as
514 the repair or maintenance account and the depreciation account.

A. The repair account is what it takes to keep the thing in running order, that is, if the pipes are broken we repair them, if the services are broken we repair them, if an engine wears out we repair it, and keep it going as long as it will go.

22. How is that distinguished from what you term as depreciation?

A. Depreciation is when the apparatus becomes useless for the purpose for which it was intended—when it is worn out or becomes useless or is too small and you have to take it out and put something else in its place and when it is worn out to put something new in its place.

23. Aside from the general depreciation, concerning which you have testified, what are some of the hazards of the gas business as an investment?

A. Explosions is one; competition from natural gas is another that is liable to strike you and legislative agitation by city councils and county courts; competition from electricity, coal oil, and new inventions coming out all the time.

24. From your experience and observation in the management and investigation of gas plants, are you able to state what would be a reasonable and fair return to investers, taking into consideration the hazards of the investment on accoung of new inventions, competition and other causes, concerning which you have testified?

A. Yes sir, I am.

25. What would be a fair and reason- return to investers upon the cost of a plant taking into consideration the hazards of the business?

Objected to by defendant as incompetent and because no proper foundation has been laid as to qualification.

515 A. 10 per cent.

26. Will you please name the different gas plants you have seen and examined during your experience in the gas business, that is such of them as may occur to you?

A. I have examined the plant here in Kansas City, at Grand Rapids, Mich.; at Milwaukee, Wis., at Toledo, Ohio; Savannah, Ga. Cincinnati, Ohio; and Louisville, Ky.; I think that is enough; I have examined quite a number more but I cannot recall them at the present time.

Cross interrogatories by Mr. MANSFIELD:

1. You testified that the cost of manufacture of gas would be, under certain conditions, as stated on direct examination, 89 cents, would that vary at all according to the number of feet manufactured by a gas company?

Ans. Yes sir.

2. Would the value of the residuals equal the amount you allow for depreciation and interest—state as a gas expert?

Objected to by complainant as incompetent and not cross examination.

A. It would more than over balance the depreciation.

3. That is upon the assumption that the plant cost four hundred and thirty odd thousand dollars?

Ans. Yes sir.

The MASTER: I suppose the value of the residuals referred to by you, Mr. Mansfield is the value of the residuals stated by Mr. Irwin in his question?

Mr. MANSFIELD: Yes, the selling price.

4. Then the value of the residuals obtained from the manufacture of fifty million cubic feet of gas would amount to over $69,000.? Is that so?

Ans. No.

5. You stated that the amount you thought n invester ought to have as a fair return on his investment was 10 per cent.?

516 A. Yes sir.

6. You also stated that the amount that should be allowed for depreciation of a plant should be 6 per cent. per annum?

A. Yes sir.

8. What would be the life of a bench?

A. Do you mean the filling of a bench?

9. No, I mean the bench itself.

A. I cannot answer that at all; the bench is an arch, your honor,—

Interrupted.

The MASTER: Make any explanation you desire.

The WITNESS: One part of the bench lasts longer than another part; the arch will last, if properly taken care of, about 20 years.

10. Then when you stated on direct examination that a bench would be worn out in 2 years, you had reference to the inside of it?

A. Yes sir.

11. How long will the retorts in one of the benches last?

A. About 2 years.

12. That is what you had reference to then?

Ans. Yes sir.

13. In allowing for a depreciation of 6 per cent., what do you do with the money you set aside for the depreciation?

A. I would use it for betterments, that is, for extensions; that is one way of doing it.

14. Take the Peoria plant for instance, what depreciation would occur in the Peoria plant as shown by Exhibit "1" in the first year?

A. I think that could be well taken care of by putting it in extensions.

15. If you put it into extensions, to what account would you charge the extensions?

A. That would be extension.

517 16. Would it go into construction account?

A. I would call that extension.

17. Then having used this money in extensions, how would you have any money to take care of the depreciation in the plant when you wanted to use it?

A. You could borrow money for that.

18. Then, in other words, you don't use this money for the depreciation in the plant but you use it for extensions, do you?

A. Yes sir.

19. How long would the plant of the Peoria Gas & Electric Co. last, that is, what would be the average life of the entire plant?

A. 20 or 25 years, I would say.

20. Putting aside 6 per cent. for depreciation each and every year, and putting that amount of money so set aside for depreciation into extensions and calculating a return upon those extensions of 10 per cent. to the investors, would you not have from the money obtained by putting aside that 10 per cent. more than the value of the plant at the end of 25 years?

A. I cannot quite get the drift of your question.

21. The first year you set aside for depreciation on the plant roughly estimated at $432,000. the sum of $25,920.; that would be 6 per cent. Now, if you invest that in extensions to the plant, you say the investors should have a right to 10 per cent. upon the amount of money invested—this 6 per cent. would be invested, would it not?

Ans. Yes sir.

22. Now at the end of 20 years, if you set aside that 6 per cent. each year and placed it in extensions and calculated interest upon that 6 per cent. at 10 per cent., would you not at the end of 20 or 25 years have nearly double the value of the plant at the expiration of that time?

Ans. I hardly think so.

23. Is it not a fact that any amount of money calculated
518 at ten per cent. will double itself in 10 years?

Ans. Yes sir.

24. Then would not it double itself in 10 years?

A. I am not figuring that interest doubles.

25. Are you acquainted with the conditions that exist in and around the city of Peoria?

Ans. No sir.

26. Do you know anything about the character of the sub soil there?

Ans. No sir.

27. Do you know anything about the pipes of the Peoria Gas & Electric Co. as to where they are laid with reference to street car lines, if any, in the city of Peoria?

Ans. No sir.

28. You have testified, in computing the hazards of the gas business, you included therein legislative action by city councils—what did you mean by that?

A. They might choose to reduce the price of your gas, or they might choose to give another company a franchise in your town; those are two very serious things.

29. What do you mean by legislative action of county courts?

A. That is in taxation; they might raise your taxation.

30. Do you mean by that that they might unfairly raise the taxation?

A. Yes sir, they are agitating the taxation of franchises in the State of Missouri now.

31. Does the law provide that franchises shall be taxed?

A. I think there is a law that has been passed by the Missouri legislature and the question now is as to whether it is a lawful act or not.

32. Would you take that into consideration in allowing 10 per cent. to investors on the value of a plant?

A. If I was investing in a business, I would certainly take into

consideration anything that would disturb the even running or conducting of the business.

519 33. What percentage of that 10 per cent., which you state would be a fair return to investors, would you allow for legislative action by county courts?

A. I could not say as to that for it might be sweeping in some cases; in some cases it might swamp you entirely and in other cases it might not be burdensome.

34. How much would you allow for that?

Ans. I could not say.

35. Would you allow one per cent. of it?

A. I would not venture to say.

36. Would you allow one half of one per cent. of it?

A. I would not venture to say.

37. Would you allow 6 per cent. of it?

A. I would not venture to say.

38. In other words, then, while you would take that into consideration, you have no idea in your own mind as to what you would allow for that purpose?

A. As I stated before, it might swamp your plant and it might be a very reasonable sum to pay; we all pay what we think is right in taxation, but we don't want to pay any more than anybody else.

39. If the law provided for the taxation of franchises when you organized your plant, would you still take that into consideration?

A. That would be taken into consideration if it were the law and established, yes sir.

40. You testified to having examined the plant located at Louisville, Ky., how long did you spend in the examination of that plant?

Ans. One day.

41. You testified as to having examined the plant at Savannah, Ga., how long did you spend in the examination of that plant?

A. I spent a day there.

520 42. I believe you testified to an examination of the plant at Omaha, did you not?

Ans. Yes sir.

43. How long did you spend there?

A. I think I was there about half a day only.

44. You testified you had examined the plant here at Kansas City. How long did it take you here?

A. I have been here numbers of times.

44. How long have you been here at any one time in an examination of the plant?

A. Several days at a time.

45. When you were at Louisville, did you know or compute from the process there what it would cost for the manufacture of the gas?

Objected to by complainant as not cross examination.

Mr. MANSFIELD: I think it goes to the qualification of the witness as a gas expert and that is the only reason I ask it.

The MASTER: It may be technically proper cross examination but at the same time I don't think it material as to whether he did or not; the witness may answer, however, subject to the objection.

A. I examined the plant at Louisville last spring for the purpose of looking at what they called incline retorts—a new invention for the manufacture of gas in this country; there was a meeting of the gas association there and while there I examined the incline retorts.

46. What kinds of gas are manufactured by your company at St. Joseph?

A. We manufacture coal gas and some water gas.

47. It is not exclusively then a coal gas plant?

A. No sir.

48. Have you ever managed any other plant than theplant located at St. Joseph?

Ans. No sir.

521 49. Has anybody spoken to you with reference to the testimony that had already been given in this case before you were placed on the stand today?

A. I talked with Mr. Irwin and Mr. Little with reference to this case; they came to St. Joe and asked if I could be present here or wherever it would be convenient for me to be.

50. Did they give you a copy of any evidence that has been testified to in this case?

Ans. Yes sir.

51. Did you read that evidence before testifying in this case

A. Yes sir.

52. I noticed when the plat marked Exhibit "1" was shown you that you did not examine the exhibit but merely testified as to what it would cost to manufacture gas in the city of Peoria by the Peoria Gas & Electric Co., that is, I mean delivered to consumers exclusive of residuals, depreciation and interest on the investment. Are you acquainted with the plant of the complainant company located in the city of Peoria?

Objected to by complainant as immaterial, not cross examination and has having been already fully answered.

A. I saw the specifications of the plant of the Peoria Gas & Electric Co.

53. Describe that plant?

A. Since I have been here I have seen Exhibit "1" or a copy of it spread out on the bed and the retort house—I will make a drawing of it if you want it.

Mr. MANSFIELD: No I don't want that.

The WITNESS: The plant consists of a retort house containing 6 benches of 9's; adjoining the retort house is a purifying house and

condensing room; to the right of the purifying house is the boiler house; to the left of the purifying house are the offices and
522 gas fitting shop; just north again of the purifying house is the gas holder; over to the north east corner is a coke shed; to the south east corner is a coal shed; those are the main points; I don't know the directions but assume that the top of the map points to the north.

Re-direct interrogatories by Mr. IRWIN:

1. About what is the value of the residuals per thousand cubic feet of coal gas?

Objected to by defendant as incompetent and not proper re-direct.

A. 25 cents per thousand.

(The MASTER:)

2. Do you mean by that the value of all residuals amount to 25 cents per thousand cubic feet of gas?

A. Yes sir.

(The SAME:)

3. The residuals you refer to are coke, tar and ammonia?

Ans. Yes sir.

(Mr. IRWIN:)

4. Taking the value of residuals at 25 cents per thousand cubic feet of gas manufactured, what would that amount to per year to a plant manufacturing gas at the rate of fifty million cubic feet per year?

A. $14500. I made a mistake in my other examination in making the figures.

5. That is what I thought and that is the reason I am asking you these questions?

A. In making my decimal point I had it $125,000. and it should have been $12,500. which goes to show that you want to look out for your decimal point.

6. Assuming that the cost of the plant of the Peoria Gas & Electric Co. was $434,000.; and assuming that the value of the real estate was $50,000., which would leave the actual cost of the plant, mains and equipment $384,000., what would be the average annual depreciation per annum at the rate of 6 per cent. per thou-
523 sand cubic feet?

Objected to by defendant as not proper redirect.

7. Assuming that a plant cost $434,000. complete with all its equipment, what would 10 per cent. on that amount per annum be to the investor?

Objected to by defendant same grounds.

A. $43400.

8. I will ask you if the value of the residuals arising from the manufacture of fifty million cubic feet per annum would be more or less than the depreciation and interest on the investment that you have testified about?

A. It would be less taking into consideration my blunder in figures.

9. Did you or not make an error in your answer to the interrogatory propounded to you on cross examination as to the value of the residuals amounting to the depreciation and interest on the investment?

A. Yes, sir, I made an error in the pointing off of my figures; I thought it was $125,000. when it should have been $12,500.

10. In fixing your depreciation to a gas plant and its mains, did you assume the ordinary conditions in a city based on the conditions of the ordinary soil, clay, sand, gravel, etc., usually found in a city?

Objected to by defendant, as incompetent, immaterial, not proper redirect and because the witness has not shown any qualification to testify as to the condition of the soil in various cities?

Ans. Yes, sir.

12. On cross examination you were asked concerning the use of the fund set aside annually for depreciation. If that fund is
524 used in extensions, enlargements or betterments, to a plant from year to year, at the time the plant would have been worthless on account of depreciation, would the use of that fund in that manner make the plant at the end of the term, when it otherwise would have become worthless, worth as much as at the time it was fully completed and ready for operation and the manufacture of gas?

Objected to by defendant as immaterial, incompetent and not proper re-direct examination.

A. I don't quite gather what you mean by the question. If you were to put this fund in main extensions, of course, that part would be worth that much more; of course, that is worth just what it costs to put it down less depreciation.

13. And if it were used in enlargements and extensions to your plant, would it not at that time make up for the depreciation?

A. Yes, that would do; that is right; if the holder had depreciated, or had become too small, I would put a new holder in using some of the money to do that with that had been put away for a fund, or if the plant were too small I would put in a larger plant; if I wanted more benches I would use some of that money if I had it there for putting in more benches.

(The MASTER:)

14. There is a point I am not exactly clear upon. I wish you would tell me what you meant by your answer when you said the life of the Peoria plant would be from 20 to 25 years. Did you mean by that, that through natural depreciation and causes incident to the business, in 20 or 25 years it would have to be entirely renewed in order to put it in its original condition?

A. Yes sir; for instance, you take St. Joseph; I built that plant 23 years ago—Interrupted——

Mr. MANSFIELD: I object to this.

The MASTER: I think it is proper for the master to understand what a witness means when he testifies to a fact. Counsel
525 can make objection and have the objection entered of record, but the master will ask such questions as he deems proper and insist on an answer.

The WITNESS: For illustration, take St. Joseph; I built that plant 23 years ago and about 10 years ago we began to make room for a retort house over on the other side of the old retort house and built a section of a new retort house; then the old benches were in a delapidated condition, they had been running about 17 years and were just about ready to tumble down and we had to get ready to put new benches in and take the old ones out as they were rendered useless by the natural wear and tear and we had to have new retorts.

(The MASTER:)

15. How was that depreciation with regard to the holder?

A. The holder, of course, is there now, but it is useless because the sheets have deteriorated by the weather and it leaked so bad we built a new holder and the old holder is down in the pit now.

(The MASTER:)

16. That is from natural causes and causes incident to the business?

Ans. Yes sir;

(The MASTER:)

17. That is the point I wanted to get clear in my mind?

A. Yes sir; I have been there and I have put the stuff in and have taken it out and know what I am talking about. I have taken care of the gas works at St. Jo.; I built them and now have taken down the original works.

(The MASTER:)

18. Is that true as to gas works generally?

A. Yes sir;

Re-cross-interrogatories by Mr. MANSFIELD:

1. Taking into consideration then upon the hypothesis of Mr. Irwin, the value of the residuals and also the depreciation and interest, what, then, in your opinion, would be the cost of gas to consumers manufactured by the Peoria Gas & Electric Company
526 in the city of Peoria upon the basis of 50,000,000 cubic feet per year?

Objected to by complainant as not proper re-cross examination, and simply calling for a mathematical calculation.

A. That would be 6 per cent. on $434,000. or whatever it is.

2. How much would that increase the cost per thousand cubic feet, taking into consideration the value of the residuals and the interest allowed to investors and the amount allowed for depreciation at 6 per cent. per annum?

A. That would be $43,400. and fifty million feet of gas divided into that would make it 87 cents a thousand.

3. That would increase the price 87 cents would it?

A. Yes.

4. Making the cost of gas to consumers $1.73 per thousand?

A. $1.76.

LEONARD KELLOGG, called on behalf of complainant, being first duly sworn, testifies as follows:

Direct interrogatories by Mr. IRWIN:

1. State your name, age and residence?

A. Leonard L. Kellogg; 45; Sioux City, Iowa.

2. What business are you engaged in?

A. Gas and electric light business.

3. How long have you been engaged in the gas business?

A. I have been connected with gas works for 30 years; of course, my early start was as an office boy.

4. What several positions have you held in gas companies?

A. Office boy, book-keeper, foreman, superintendent and manager.

527 5. What different plants have you been connected with during your experience in the gas business?

A. Ironton, Iowa, Galena, Ill., Nebraska City, Neb. and Sioux City, Iowa.

6. What different gas plants have you examined during your experience in the gas business outside of the plant you have named as being connected with as an officer or employé?

Objected to by defendant as immaterial and incompetent.

A. With quite a few of them; Des Moines, Iowa; Omaha, Neb.; Kansas City, Kansas; Lincoln, Neb.; Louisville, Ky.; Atlanta, Ga.; Savannah, Ga.—well I guess that is enough.

7. Are you familiar with the different processes entering into the manufacture of gas?

Ans. Yes sir.

8. What are the different processes in general use throughout the United States for the manufacture of gas to be sold through a general distributing system laid in the streets for illuminating or fuel purposes?

A. There are two prominent systems, viz: coal gas and carburetted water gas.

9. Are you familiar with the cost in the open market during the years 1899 and 1900 of the various items of machinery, apparatus, material and equipment, entering into the construction and operation of a coal gas plant?

Ans. Yes sir.

10. Will you please describe in detail, so far as you now remember, the various machinery, apparatus, material and equipment required in the construction of a modern coal gas plant, fully complete and ready for operation, with a capacity of about 500,000 cubic feet of gas per day, with reference to the buildings, machinery and other equipment constituting the manufacturing plant?

A. I should say, beginning with the retort house, it should
528 be occupied with 7 or 8 full depth regenerative benches with the necessary hydraulic main, stand pipes, exhaustors, tar separators, condensers, scrubbers, washers, purifyers, and ammonia apparatus, with the necessary buildings, boiler house, boilers, necessary pumps for handling tar, ammoni-cal liquor, storage holder, tar wells, ammonia wells, boiler tank, water pant for supplying water, coke and coal sheds, station meter with the necessary building, office meter, shop, pipe fitting dhop, storage shop, etc. In a general way, I think that covers it.

11. I will now call your attention to Exhibit "1" in evidence in this case, which purports to be a plan of the gas plant of the Peoria Gas & Electric Co. at Peoria, Ill. and will ask you to examine that plan and state whether or not it represents a proper plan for a modern up to date coal gas plant in your judgment?

Objected to by defendant as immaterial and incompetent.

A. It does.

12. Have you examined the plant of the Peoria Gas & Electric Co. in the city of Peoria?

Ans. Yes sir.

13. Are you familiar with its construction and equipment for the manufacture of coal gas?

Ans. Yes sir.

14. Will you describe in detail, so far as you now remember, the several buildings, machinery, equipment and apparatus contained in the manufacturing plant of the Peoria Gas & Electric Co.?

The MASTER: What is the use of encumbering the record with

that? Is there any question, Mr. Mansfield, but what Exhibit "1" is an accurate representation of the plant?

Mr. MANSFIELD: I don't know whether it is or not.

Mr. IRWIN: It is offered for the purpose of showing what knowledge the witness has of this plant.

A. The plant at Peoria, as I remember it consists of a re-
529 tort house with seven benches of 9's, full depth recuperative furnaces, occupied complete with the necessary stand pipes, hydraulic main, smoke stack, flues, etc., for generating coal gas; the gas goes from there, carried by the main, through the tar scrubbers, from there to the exhaustors and through the P. & A. condenser, then through the cylinder condensers, through the washers and scrubbers, from there to the purifyers and, as I remember, they are 24 x 24 feet, sufficient capacity in both purifying house, condensers and exhaustor rooms for another set of apparatus of the same kind; from there to the station meter and from there to the holder.

15. I will ask you if Exhibit "1," shown you, fairly represents the general plan of the plant of the Peoria Gas & Electric Co. as examined by you?

Ans. Yes sir.

16. Are you acquainted with the general location, size, improvements and topography of the city of Peoria?

A. In a general way, yes sir.

17. Assuming that the population of the city of Peoria and territory tributary thereto, where this plant is located, was about 65,000 inhabitants in the summer of 1899, what, in your opinion would be the size, nature and character of a coal gas plant to be constructed in said city?

Objected to by defendant as immaterial, incompetent and because no proper foundation has been laid showing the qualification of the witness.

A. All things considered, I should say a plant of 500,000 feet per day.

18. Assuming the premises aforesaid would the plant of the Peoria Gas & Electric Co., as examined by you, in your judgment be a proper and economical plant to have been constructed in the city of Peoria during the year preceding September 1, 1900?

530 Objected to by defendant same grounds.

A. Yes sir.

19. What is the nature and character of the plant of the Peoria Gas & Electric Co. with reference to its manufacture and delivery of gas economically, considering the location and conditions in the city of Peoria?

Objected to by defendand same grounds.

A. I should say it was very well located and very well adapted for the size of the place—the plant and all.

20. Are you familiar with the cost during the years 1899 and 1900 of the various items of labor, machinery and materials entering into the construction of a gas plant of the capacity and character of the plant of the Peoria Gas & Electric Co.?

Ans. Yes.

21. From your examination of the plant of the Peoria Gas & Electric Co. and from your knowledge of the cost of the construction of similar plants, are you able to state what would be the reasonable cost price of the plant and mains of the Peoria Gas & Electric Co. in the city of Peoria?

A. Yes sir.

22. Assuming that common labor could be employed in Peoria, during the year preceding September 1, 1900, at $1.50 per day, from your examination of the Peoria Gas & Electric Co. and from your knowledge of the cost and price of labor, machinery and materials, please state what in your opinion would be the reasonable cost of the construction of said plant, fully equipped, tested and ready for the delivery of gas to consumers, assuming that said plant was contracted for and erected during the year preceding September 1, 1900, and excluding from your estimate the cost of the real estate, also excluding the cost of mains and services and other extensions outside of the construction and equipment of the manufacturing plant proper. Give items in detail so far as you can.

531 Objected to by defendant as immaterial, incompetent and also because the witness has not shown what materials entered into the construction of the various buildings of the Peoria Gas & Electric Co. in the city of Peoria.

A. May I refer to my note book?

23. You can refer to any memoranda that you have made in order to refresh your recollection.

A. How much detail would you like?

24. As much as you please. Take the afternoon to it, if you desire, but confine yourself to the manufacturing plant.

A. Yes I understand that (witness referring to memorandum) The retort house is 107 x 42, walls 32 feet above ground, 18 inches thick at base, 16 x 12 inches above that, 12 inch pilasters with a tile roof supported by a steel frame. I estimate the cost of that at $9,000. Seven full depth benches, 9 retorts to each bench, retorts 16 x 26 x 9 including hydraulic main, stack, foundation, etc., $25,000. Boiler house, purifying house $15,000.—that includes the boiler house and purifying house. Two boilers, 66 x 18 with settings $3500. Ammonia apparatus $2600. Oil and enriching bench $1800. Two dry condensers $2500. Two exhaustors $2000.; one P. & A. tar extractor $400.; one tar separator $300.; two water condensers $2500.; one washer $1000.; two scrubbers $2500. nine pumps $2000.; 2 purifyers, 24 x 24, $6000.; one center seal $1100.;

one carriage for purifying lids $1200.; one conveyor for purifying material $1000.; one station meter house $1000.; one 10 x 10 foot station meter & connections $8000.; one meter shop, office building, store room, etc., $5000.; one three hundred thousand foot gas holder with steel tank $32,000.; tar and ammonia wells $3000.; photometric and chemical apparatus $1000.; Connelly automatic governor and connections $1500.; gas mains and valves of outworks $4500.; gas, steam, water, sewer pipe, tools, etc. $5500.; one
532 water tank, nap-tha feed tank, and water wells $5000.; coke and coal sheds $12000; add ten per cent. for superintendence $14,000., making a total of $166,440.

25. Assuming the premises aforesaid as to the cost of ordinary labor during the year preceding September 1, 1900, and assuming that the Peoria Gas & Electric Co. laid and constructed the following mains in and through the several streets and avenues in the city of Peoria during that year as follows, to-wit:—1758 feet of 16 inch mains, of which 160 feet is under pavement; 20768 feet of 12 inch mains of which 11225 feet is under pavement; 3482 feet of 10 inch main of which 58 feet is under pavement; 20,224 feet of 8 inch main of which 13234 feet is under pavement; 12874 feet of 6 inch main of which 5474 feet is under pavement; 80,852 feet of 4 inch main of which 9792 feet is under pavement, 260 feet of 2 inch main, making a total of 140,223 feet of main of which 39943 feet is under pavement; and assuming that 90 per cent. of the pavement referred to is brick pavement laid upon a 6 inch concrete foundation and asphalt pavement laid upon a 6 inch concrete foundation, what in your judgment would be the cost of the mains if laid during the year preceding September 1, 1900, including the repaving and repairing of the pavement disturbed and of refilling and other work incident and the cost of the material and laying of the mains connected with the plant of the Peoria Gas & Electric Co.

Objected to by defendant because no qualification has been shown by the witness as to his knowledge of the cost of mains laid down in the city of Peoria and no qualification has been shown as to the cost of relaying the pavement under which pipes are assumed to have been laid.

A. I would say it would cost $128,507.35.

26. Have you made a computation as to what the amount of mains mentioned in my preceding question would cost under
533 the circumstances there named?

Ans. Yes sir.

27. In estimating that cost did you take into consideration any extraordinary conditions in the streets such as rock, hard pan, or other extraordinary conditions in the laying of mains?

A. No sir, I assumed it was ordinary conditions from what I could see when there.

28. Assuming the premises aforesaid as to the cost of ordinary labor, and assuming that the Peoria Gas & Electric Co. had on Sep-

tember 1, 1900, the following services connected with their main system, viz:—three 3 inch services of a total length of 872 feet; 2 2½ inch services of a total length of 374 feet; 652 2 inch services of a total length of 37244 feet; 1503 1¼ inch services of a total length of 111369 feet; 266 1 inch services of a total length of 29393 feet, making a total of 2426 services of a total length of 179252 feet, what in your judgment, from your knowledge of the cost of labor and material for such work, would be the actual cost of those services laid into the premises of consumers?

Objected to by defendant as immaterial, incompetent and because the witness is not shown to have any knowledge of how much such labor would cost or as to the cost of material that entered into the placing of the services in the city of Peoria?

A. I would place the cost at $44,286.04.

29. Assuming that on September 1, 1900, the Peoria Gas & Electric Co. was the owner of 1758 meters purchased new during the year preceding September 1, 1900, what in your opinion, would be the fair and reasonable cost of setting said meters, settings and connections, in the premises of consumers for the measuring of gas?

Objected to as immaterial, incompetent and because the witness has not shown any knowledge as to the cost of labor entering into the setting of new meters in the city of Peoria.

A. $19994.80.

534 30. Assuming that the fair market value of the real estate upon which the plant of the Peoria Gas & Electric Co. in the city of Peoria is located was worth about $51,000., what, in your judgment, would be the fair market value of the plant, mains and equipment of the Peoria Gas & Electric Co.'s gas plant, including mains, services, meters, manufacturing plant and real estate on September 1, 1900; assuming further that said plant was constructed, mains and all equipments laid and completed, during the year preceding September 1, 1900, and that said plant was fully completed on May 1, 1900, and commenced the manufacture and delivery of gas on that date, and on September 1, 1900, was manufacturing and delivering gas to consumers at the rate of about fifty million cubic feet per year on that date, what in your judgment, would be the fair market value of said plant, fully complete, as examined by you and as above described, assuming it had the mains, services and meters given you in the preceding question on that date, to parties in the city of Peoria desiring to purchase it and enter into the gas business, assuming that they had the right to manufacture and sell gas in said city.

Objected to by defendant as immaterial and incompetent.

A. Say $450,000.

31. Assuming that on September 1, 1900, the cost of ordinary labor in the city of Peoria was $1.50 per day, that stokers could be

employed at the rate of $65.00 per month, head stoker at $70. per month, that gas coal could be delivered at the plant of the Peoria Gas & Electric Co. in the city of Peoria at $2.80 per ton, and assuming that said plant had been in operation for four months and was manufacturing and selling to consumers at the rate of about fifty million cubic feet of gas per annum on that date, from your experience in the gas business, from your knowledge of said plant
535 and your investigation thereof, are you able to state what would be the fair cost price of gas per thousand cubic feet delivered to consumers on that date, excluding from your estimate any depreciation on the plant and interest on the investment and also excluding the value of all residuals resulting therefrom?

Objected to by defendant as immaterial and incompetent because no proper qualification has been shown.

A. Yes sir.

32. On the premises stated in the preceding question, state what in your opinion would be the actual cost to the company per thousand cubic feet of coal gas delivered to consumers by the Peoria Gas & Electric Co. from its plant in the city of Peoria?

Objected by defendant same grounds.

A. I should say 90 cents.

33. What elements enter into the depreciation of a gas plant if you know, from your experience and observation in that business?

A. The elements entering into depreciation would be the rusting out of the mains, services, meters, etc.; the pitting and rusting of the holder and other iron work around the works; the action of electrolysis: the loss of pipes from being laid in streets that are graded where they are covered up so deep it would not pay to take them up when necessary to be relaid. I believe that would cover the ordinary depreciation.

34. Is there generally ordinary wear and depreciation of buildings, machinery and apparatus throughout a plant?

A. Yes sir.

35. In what manner, from your experience and observation, does good business policy require this depreciation to be taken care of by a gas company?

Objected to by defendant as incompetent because no proper foundation has been laid showing the qualification of the witness.

536 A. The only safe way is to set aside a fund of so much per year for taking care of it.

36. What percentage, if any, upon the cost of a gas plant, exclusive of the cost of the real estate, in your opinion, should be set aside annually with which to take care of this depreciation concerning which you have testified?

A. I should say 5 per cent.

37. Do you mean 5 per cent. of the total cost of the manufacturing

plant, mains, services, meters and all matters entering into a manufacturing plant, its offices and other equipment exclusive of the real estate?

Ans. Yes, sir.

38. Is it customary among gas companies to set aside from their gross receipts or earnings, an amount annually to take care of this depreciation you have testified about?

Objected to by defendant as incompetent because no foundation has been laid qualifying the witness on that point.

A. I could not answer as to the general question for I don't know.

39. Is this depreciation, you have testified about, a proper matter to be taken into account as to the cost of gas delivered to consumers by a gas company?

Objected to by defendant same grounds as before.

A. Yes, sir.

40. Is the amount you testify to that should be set aside to take care of the depreciation that was mentioned in your previous testimony, necessary in your opinion to be set off to take care of the depreciation which results to a gas plant?

Objected to by defendant same grounds.

A. Yes, sir.

41. What distinction do you make, if any, between de-
537 preciation concerning which you have testified, and repairs to the plant?

A. Repairs to a plant would include such items as were necessary to keep the machinery and apparatus, mains, etc., in working order, keep them so they will do their work; that would be called repairs up to the point where it was necessary to abandon the machinery, apparatus, or whatever it was, and when that time came and it was abandoned it would be a depreciation; there would be that much of the property of the company gone.

42. Is this 5 per cent. depreciation you have testified to as resulting to a gas plant exclusive of this account for repairs you mention?

Ans. Yes sir.

43. What are the hazards assumed by an investor in investing in the gas business?

A. Some of them would be as follows:—Explosions, personal injury, competition by other plants, other systems of lighting, gas or electricity, or new inventions that might, and has in the past made old apparatus worthless; political agitation which might carry with it State and city legislation. Those are the particular items I think of now that might be called hazards of the business.

44. Are the hazards to the business mentioned by you entirely aside or different from the depreciation named?

A. Yes sir.

45. From your experience and observation in the management and investigation of gas plants, are you able to state what would be a reasonable and fair return to investors, taking into consideration the hazards of the business on account of competition and the other hazards, concerning which you have testified?

A. I can state my opinion.

46. What in your opinion would be a fair and reasonable return to investors upon the cost of a gas plant, taking into consid-
538 eration the hazards to the business?

Ans. 10 per cent.

(The MASTER:)

47. Do you mean 10 per cent. in addition to the 5 per cent. charged off annually for depreciation?

A. Yes sir.

(Mr. IRWIN:)

48. What is the highest candle power of coal gas deemed as most efficient for ordinary use by consumers?

A. 18 candle power.

49. Measured where?

A. At or near the works.

50. Is it practicable to manufacture and deliver at the place of consumption a coal gas of a uniform 18 candle power throughout a city?

Objected to by defendant as incompetent and irrelevant.

A. No sir.

51. Can a satisfactory coal gas be manufactured and delivered at the point of consumption in a city of the size and character of Peoria at not less than 18 candle power?

A. I should say no.

52. Why?

A. There are a good many reasons why, the most important one would be that the candle power would fall off in traveling long distances through pipes by the deposit of the heavier portion of the gas.

53. Would it have to be manufactured at a higher candle power than 18 in order to be delivered at the point of consumption at that candle power?

A. Yes sir.

54. Why is it not practicable to manufacture a coal gas for general use at a higher than 18 candle power?

A. It would not be satisfactory for lighting on account of
539 smoke; the least draft would cause it to smoke.

55. And would it be practicable to do so and render satisfaction to the consumer?

Ans. No sir.

56. I mean confining it to coal gas?

A. No sir.

Cross interrogatories by Mr. MANSFIELD:

1. So far as 18 candle power coal gas is concerned, if it has 18 candle power at the point of consumption would you notice any smoking or anything else on that account?

A. That would depend, if you had ideal conditions you might not, but you hardly ever have them.

2. You could manufacture coal gas and raise it to such a candle power that at the point of consumption it would practically be 18 candle power, could you not?

A. I don't believe you could with all coal gas.

3. Well, you use enrichers?

A. Yes by means of an enricher you could do it.

4. You stated you were in the employ of the Ironton Gas Co?

A. Yes sir.

6. In what capacity were you in its employ?

A. In various capacities from office boy up to superintendent of the works.

6. How long were you there as superintendent of the works?

A. I think I was there about 10 years the last three of which I was superintendent of the works.

7. What kind of gas did they manufacture there?

A. Coal gas exclusively.

8. How long were you at the gas works in Galena, Ill. and in what capacity?

A. I was manager of the works for six months; I went
540 there to reorganize the works.

9. Was that a coal gas plant exclusively?

Ans. Yes, sir.

10. How long were you at Nebraska City, Neb., and in what capacity?

A. As manager and superintendent two years.

11. You went from there to Sioux City—how long have you been in Sioux City?

Ans. 16 years I think.

12. Then you have been in the business as a manager for gas plants for about 21 years?

A. Yes, about that.

13. When did you examine the plant of the Peoria Gas & Electric Co.?

Ans. A week ago last Monday.

14. Upon whose solicitation did you examine that plant?

A. Mr. Little's.

15. Did you read any of the evidence heretofore given in this case previous to testifying here?

Ans. Yes, sir.

16. How long were you examining the plant of the Peoria Gas & Electric Co. at Peoria?

A. I think about 10 hours; from 8 o'clock in the morning until 7 o'clock at night on Monday.

16. What did your examination most mainly consist of?

A. It consisted in taking a list of the apparatus at the works, sizes of the buildings, and going through the works and checking them up—verifying them practically.

17. What kind of a roof is there on the retort house?

A. Tile roof.

18. How much did you calculate to be the cost of that tile roof?

A. I could not tell you offhand and I have not got the details here.

19. What is tile worth in the city of Peoria?

541 A. $15. a square laid.

20. What kind of material entered into the construction of the coke shed of the Peoria Gas & Electric Co.?

A. It is built of wood with a tar roof.

21. What kind of wood is it?

A. I could not tell you.

22. What was the value of that wood?

A. I did not figure the value of the wood; I figured it as erected.

23. Do you know whether it was first, second or third grade wood that entered into the construction of that building?

A. No I could not give you the grade; I would not say it was first grade and I am sure it was not third grade; it looks substantial.

24. In the brick buildings there—do you know what was the cost of the brick entering into the construction of those buildings?

A. No, I did not go into the details of that.

25. In basing your estimate of the amount that should be allowed investors on account of the hazards attending the gas business do you take into consideration the danger of explosion in the gas works?—supposing that was covered by insurance would you then take it into consideration?

Objected by complainant as incompetent, immaterial and not cross examination.

A. No sir.

26. If covered by insurance, how much then would you allow for the fact it was covered by insurance?

Objected to by complainant as assuming facts not proven.

A. I would not know how much to strike off because you cannot get insurance against explosions and I don't know how much it would be.

542 27. When they insure a gas plant, what do they insure it upon—what is the risk assumed by the insurance companies?

Objected to by complainant as incompetent, not the best evidence and no grounds for it as a hypothetical question.

A. Tornadoes or fire.

28. Suppose the Peoria Gas & Electric Co. expends the sum of about $8000. per year for insurance on its plant, what deductions would you make in the 10 per cent. allowed to investors on account of the payment of that amount of money per year by the gas company, if any?

Objected to as incompetent and not containing the necessary assumptions for a proper hypothetical question.

A. If the insurance was paid for fire and tornedo insurance I would not make any deduction; if it was paid for explosions or against political agitation I might make a little allowance.

29. If it were paid for the purpose of indemnifying the company against any loss or injury that might be sustained by any of the employés in and about the works, or by any stranger there, would you then allow any deduction?

Objected to by complainant same grounds.

A. No sir.

30. You stated in your cross examination that the cost of gas delivered to consumers as manufactured by the Peoria Gas & Electric Co. would be about 90 cents excluding the value of residuals, the amount allowed for depreciation and 10 per cent. interest upon the investment, I will ask you as a gas expert what would be the cost to consumers per thousand cubic feet for gas furnished deducting the value of residuals and allowing 6 per cent. for depreciation and 10 per cent. for a reasonable return upon the investment.

Objected to by complainant as immaterial and not cross examination.

543 A. What do you want me to take as the value of the plant?

Mr. MANSFIELD: The same as you did before.

A. Well, the value of the plant, under the question asked would be one thing while the cost of it might be another; four hundred and fifty thousand dollars is what I said the plant would be worth to a man who wanted to do business and make money after it was all completed and ready for business.

31. What figures did you use when you calculated it would cost 90 cents to the consumer?

A. I didn't use any figures on the cost of the plant.

Mr. RITCHER: Interest on the investment did not enter into that question on direct examination of the witness.

Mr. MANSFIELD: I am aware of that Mr. Ritcher.

32. Assuming that the cost of the plant was $434,000 about and that it manufactured fifty million cubic feet of gas per year?

A. $2.00 per thousand cubic feet if I have made no mistake in my figures.

33. From your knowledge as a gas expert, what, in your opinion, would be the cost of coal gas in the holder of the Peoria Gas & Electric Co. per thousand cubic feet, taking into consideration the fact that the bi-product of tar, ammonia and coke are extracted and sold, the tar for 5 cents per gallon, the ammonia for 8 cents per pound and the coke at an average price of $3.25 per ton; also taking into consideration that about 22 per cent. of the coke made is used in heating the furnaces and that gas coal cost $2.65 per ton f. o. b. in Peoria; also taking into consideration all expenses of the company in the manufacture of the gas up to the holder and all the revenues to said company obtained from the sale of residuals, coke, tar and ammonia, and basing your estimate on a daily make of 500,000 cubic feet of gas?

544 Objected to by complainant as immaterial, incompetent, not cross examination and involving assumptions not in the record and no proper basis for the hypothetical question.

A. About 20 cents.

34. How much upon the same assumption in your opinion would the cost be to consumers, of a like amount of gas furnished by the Peoria Gas & Electric Co.?

Objected to by complainant same grounds.

A. 70 cents.

35. What does the difference between the cost in the holder and the cost to the consumer represent?

A. The largest item is the distribution item.

36. What percentage do you calculate that on?

A. That would be about 27 cents a thousand.

36. What enters into the cost of distribution?

A. Distribution labor, repairing mains, distribution expenses, repairing meters, repairing services, tools, expense office, salaries, expense of collection and expenses generally.

37. In a new plant like the plant of the Peoria Gas & Electric Co., what would be the average expense for the repair of mains during the first five years of its existence?

A. It would be very small, but I never operated a complete new plant and could not say.

38. You say the cost of distribution would be 27 cents?

A. 27 5/100 cents.

39. What other cost enters into it?

A. The items of taxation, advertising, soliciting, giving away small appliances to promote the use of gas, extraordinary expense items including accidents and litigation which I put at 23 cents.

(The MASTER:)

40. Have those matters any fixed data you have last mentioned?

545 A. Nothing except the general experience and history of gas companies.

Re-direct interrogatories by Mr. ABBOTT:

1. You stated in answer to a question on cross-examination that it would be possible to produce coal gas having such a candle power at the works that it could be distributed through the mains and service pipes and have a candle power of 18 candle at the point of consumption by the use, in the manufacture, of certain enrichers. Is it not a fact if such enrichers were used so as to increase the candle power much above 18 candle at the works that the cost of the manufacture of the gas would be considerably increased above the figures which you have given as the cost?

Ans. Yes sir.

2. You also stated that you had read some of the previous evidence in this case. State whether or not the answers you have given with reference to the cost of the plant, cost of producing gas, amount of depreciation, the hazards of the business, and all your remaining testimony was based upon your investigation of the plant itself and your knowledge and experience in connection with the gas business in general, irrespective of the previous evidence in the case?

Ans. Yes sir.

3. You were asked, somewhat in detail, in regard to the cost of the brick, wood, etc., entering into the various buildings of the Peoria Gas & Electric Co.'s plant. State what method or system you used in arriving at the figures you have given as to the cost of the various buildings and appliances?

A. I am just completing works with a half-million feet capacity, just putting in the last piece of apparatus; I have been at it for several years and I have the cost of practically everything except the benches; the way I arrived at my figures was to make an allowance for freight and for the conditions different between

546 Peoria and here and without figuring the details or without finding out what the material was, I took our cost on practically the same things making the proper allowances, as I have stated.

4. Is there any well defined or well known figure which approximates the cost of such buildings by the cubic foot or cubic yard making such allowances for freight or other differences as there may be in the cost between cities in this part of the country generally?

Objected to by defendant as incompetent and not proper re-direct.

A. There is.

(By the MASTER:)

5. What is the price of ordinary day labor here?
Ans. $1.50 per day.

(The SAME:)

6. Is that the price you paid for labor on this plant you have j spoken of?
A. Yes sir, for what we term common labor.

(Mr. ABBOTT:)

7. If it were possible to procure insurance against loss by exp sions so as to remove that element of hazard to the business, and were so procured, what would be the effect of the procuring of su insurance on the cost of manufacturing and distributing gas —wou it increase or decrease it in your judgment?
A. It would increase it to the extent the insurance cost.

Adjourned until Thursday, December 19, 1901, at 10 a. m.

547 Cleveland parlor, Coates house.

KANSAS CITY, KAS.,
THURSDAY, *December* 19, 1901—10 a. m.

Parties met pursuant to adjournment.
Present: Same as before.

ISAAC N. KNAPP, called on behalf of complainant, being first du sworn, deposes and says:

Direct interrogatories by Mr. ABBOTT:

1. State your name, age and residence.
A. Isaac N. Knapp; am about 50 years of age and reside Omaha, Neb.
2. In what business are you now engaged?
A. I am engaged in oil producing.
3. Have you ever been engaged in the operation or constructio of gas plants?
A. Yes sir, for 15 years.
4. Are you familiar with the business of manufacturing and sel ing gas?
Ans. Yes sir.
5. What different positions have you occupied in connection wit that business?
A. The position of constructing engineer, assistant superintende and superintendent.
6. What training and experience have you had in the busine of the construction of gas plants or manufacture of gas?
A. In the construction of gas plants previous to that period I ha

experience in placing foundations and cement masonry and general construction work.

7. Of what organizations, associations or societies of gas men are you a member, if any?

A. I am a member of the American Gas Light Association; the Western Gas Association; the American Society of Mining
548 Engineers, and I am also a member of the Alumni Association of Stevens Institute, Hoboken, N. J.

8. With what different gas plants are you familiar, what gas plants have you visited and what plants have you constructed?

A. I am familiar with the Omaha plant, of which I was assistant superintendent and superintendent; I am familiar with the Kansas City plant here and I have carried on construction operations at Waterbury, Conn., and practically rebuilt the works at Yonkers, N. Y., and Paterson, N. J.; the 25th Ward works of the Philadelphia gas works; the works at Pittsburg, Pa.; Johnstown, Pa.—rebuilt a portion of those works after the flood; Johnston and Gloversville, N. Y.; Atlanta, Ga.; Toledo, Ohio; Jaynesville, Wis.; Des Moines and Burlington, Iowa.

9. As a part of such construction, are you familiar with the labor and general matters involved in connection with the placing of the mains and service pipes, having special reference to paved streets in the cities in which those gas plants have been constructed?

Ans. Yes sir, I have.

10. What are the two principal processes in general use throughout the United States for the manufacture of gas to be sold through a general distributing system laid in the streets for fuel and illuminating purposes?

A. Coal gas and carburetted water gas.

11. Have you examined the plant of the Peoria Gas & Electric Co. in the city of Peoria?

Ans. I have.

12. Will you please describe said works with reference to the buildings, machinery and equipment, constituting the physical manufacturing plant in a general way.

A. I went down across the railway tracks in a westerly direction and went into the works office and into the meter room and pipe
549 shop; then I crossed the alley in a westerly direction and went through the retort house, then southerly into the boiler house, condenser room, purifying house and the meter room; then through the coal sheds; walked around the holder and looked at it; looked into the pits where the overflows were, the different wells, ammonia well, water well and the oil storage tank.

13. Look at the plat now shown you marked Exhibit "1" and after examining the same, state whether or not it is a fair representation of the plant of the Peoria Gas & Electric Co. as you found the same to exist.

A. Yes sir, it is.

14. Are you acquainted with the general location, size, improv ments and topography of the city of Peoria?

A. Well, I was driven over the city and I had the promine points in the city pointed out to me.

15. Assuming that on September 1st, 1900, the population of t city of Peoria and the territory tributary thereto, was 65,000 inha itants, that said city of Peoria was located upon the westerly ban of the Illinois river, upon ground gradually sloping westerly for distance of about 1½ miles, and extending along the Illinois riv for a distance of 4 or 4½ miles, that the plant of the Peoria Gas Electric Co. was then located at about the center thereof on the ban of the river; you may also assume that on September 1, 1900, the was in the city of Peoria another gas plant owned by an indepen ent company, which said plant had been in operation for about years and had a capacity of about 500,000 cubic feet per day; yo may further assume that the plant of the Peoria Gas & Electric C was constructed during the year prior to September 1, 1900. Nou from your examination of the plat and the premises, what is you opinion of the plant of the Peoria Gas & Electric Co. in the city Peoria, with reference to its fitness and size, character an
550 equipment for the manufacture and sale of gas in said cit taking into consideration the element of future growth, et

Objected to by defendant as immaterial, incompetent and assum ing facts not shown by the evidence.

A. The layout of the plant seemed to me to be judicious and such a character as the circumstances warranted.

16. In your judgment, is it a modern up to date plant for the use and purposes for which it is intended?

Ans. It is.

17. Assuming the same premises heretofore given and also basing your answer on your own inspection of the premises, what in you judgment is the character, size, capacity and equipment of the plan of the Peoria Gas & Electric Co. with reference to judicious invest ment and outlay?

Objected to by defendant same grounds.

A. The outlay would seem to be warranted and the investment a fair one.

18. Assuming the premises heretofore given with reference to the size, location and character of the city of Peoria; assuming also that the wages of ordinary labor were $1.50 per day, that Youghiogheny coal could be purchased and delivered at the works at $2.80 per ton assuming further that at the same time there was a local market for coke at an average price of $3.25 per ton; that the tar bi-products could be sold at 5 cents per gallon; that the ammonia bi-product could be sold at 8 cents per pound; that cannel coal for enriching could be bought for $3.00 per ton, that gas oil for making water gas could be bought at 3¾ cents per gallon, that coke for water gas making

could be bought for $4.00 per ton and that the company was not bound by any requirement as to candle power of gas to be furnished, what in your judgment and opinion would have been more expedient, to have erected a coal gas plant or a water gas plant, and why?

551 Objected to by defendant as immaterial and incompetent.

A. Under the conditions given coal gas could be manufactured cheaper and it would be better, with the conditions existing there to build a coal gas plant.

19. Are you familiar with the cost during the years 1899 and 1900, of the various items of labor, machinery, and materials entering into the construction of a gas plant of the capacity and equipment of the plant of the Peoria Gas & Electric Co.?

A. Yes sir, I am.

20. From your examination, inspection and knowledge of the plant of the Peoria Gas & Electric Co., from your knowledge of the cost of the construction of similar plants and from your knowledge of the cost in the open market during the years 1899 and 1900, of the various items of machinery, materials, apparatus, equipment and labor,—assuming that ordinary labor could be had at the price of $1.50 per day—entering into the construction and operation of a gas plant of the capacity and character of the plant of the Peoria Gas & Electric Co., are you able to state what would be the reasonable cost price of the plant and mains of the Peoria Gas & Electric Co., assuming that said plant was constructed during the years 1899 and 1900, and that the various items of machinery, apparatus, equipment and labor were purchased in the open market?

A. Yes sir, I am.

21. Did you in making your investigation of complainant's plant pay such attention to the different buildings and apparatus that from that investigation and the premises assumed in this examination you are able to estimate the value of the different buildings and apparatus entering into the construction of that plant?

A. Yes sir.

22. Did you estimate the component parts of the buildings in detail, or did you use some system or method in connection
552 with your experience in the construction of similar plants, in determining the cost of the different buildings and apparatus.

A. Well, I was furnished a schedule of what there was there, that is, the size of the buildings and the size of the apparatus; I then, in order to verify the schedule took certain portions of it, measured it up, and checked it up and found the portions of the schedule I so checked up to be correct and I then estimated the cost of the buildings by their cubical contents of what in my experience I had found to be the actual cost of similar buildings erected under somewhat similar conditions.

23. Is that a fair and the usual method employed by contractors familiar with buildings and construction of that character?

A. Yes, sir, in my experience contractors in cities in making bids on work as a rule compare the work they are asked to bid on with similar work they have performed and in that way, where they have actually gone through and done the work and know what similar work actually cost, I believe make a fairer estimate on what the actual cost would be than if the actual brick were counted or the number of nails it takes and all that sort of thing.

24. From the premises heretofore given and from your inspection of the premises and your knowledge of the cost of the construction of similar buildings and appliances, and having reference to the fact that this construction and equipment was prepared and built in the year preceding September 1, 1900, what would you estimate the value of the retort house with operating floor and coke platform to be?

A. I estimate that at $11,500.

25. On the same basis, what do you estimate the value of the boiler house to be?

A. $3500.

553 26. On the same basis, what do you estimate the value of the purifying and condensing house?

A. $13,800.

27. On the same basis what do you estimate the value of the heater and governor room?

Ans. $1200.

28. On the same basis, what do you estimate the value of the works office, store room and shop building?

Ans. $5400.

29. On the same basis, what do you estimate the cost and value of the coal, coke and other sheds in the yard?

A. $13,000.

30. On the same basis, what do you estimate the cost and value of the 7 benches of 9 retorts each complete with foundation and stack?

Ans. $26,100.

31. On the same basis, what do you estimate the cost and value of 2 purifyers complete with pipe connections and conveyors?

A. $7800.

32. On the same basis, what do you estimate the cost and value of the condensing apparatus complete with foundation?

A. $14,000.

33. On the same basis, what do you estimate the cost and value of the ammonia concentrating apparatus?

Ans. $2400.

34. On the same basis, what do you estimate the cost and value of two 66 x 18 boilers complete with stack and connections?

A. $5000.

35. On the same basis, what do you estimate the cost and value of the holder, holder tank and foundation?

Ans. $32,000.

36. On the same basis, what do you estimate the cost and value of the station meter and connections?

Ans. $4000.

37. On the same basis what do you estimate the cost and value of the Connelly governor and connections?

Ans. $800.

37. On the same basis, what do you estimate the cost and
554 value of the oil bench for enriching with connections and foundation?

A. $3000.

39. On the same basis, what do you estimate the cost and value of the photo-metric and chemical apparatus?

Ans. $1000.

40. On the same basis, what do you estimate the cost and value of the sewer and sewer connections?

Ans. $1200.

41. On the same basis, what do you estimate the cost and value of the yard connections and valves?

Ans. $800.

42. On the same basis, what do you estimate the cost and value of the elevator and connections?

Ans. $1000.

43. On the same basis, what do you estimate the cost and value of the scales?

Ans. $1200.

43. On the same basis, what do you estimate the cost and value of the tar, ammonia and water wells?

Ans. $3500.

44. On the same basis, what do you estimate the cost and value of the oil tank, pit and connections?

Ans. $1000.

45. On the same basis, what do you estimate the cost and value of the pumps and connections?

Ans. $1500.

46. On the same basis, what do you estimate the cost and value of the tools at the works?

Ans. $2500.

47. On the same basis, what do you estimate the cost and value of the grading and fencing?

Ans. $1000.

48. What, then, is the total of your estimate of the cost and value of the manufacturing plant proper of complainant company?

A. $158,200.

49. When you were in the city of Peoria, did you go about the city with a view of ascertaining its general topographical character as to the streets, etc?

A. Yes sir, but before we went out after lunch, I was shown a map of the mains and a record of the mains which I examined very

carefully, went over them and saw they were well kept and
555 so far as I could judge they were perfectly reliable; then while we were driving around the city, I had pointed out to me the alleys where the pipes were run in the down town districts and we were driven out and shown where there streets had been paved beyond what they were paved when the mains were laid and was also driven around generally and the superintendent of distribution replied to any inquiries I made with regard to the character of the soil, etc.

(The MASTER:)

50. Who was with you at the time?

A. I don't remember the name of the superintendent of distribution but he was with me and also Mr. Summerville and Mr. Kellogg; the same Mr. Kellogg who testified yesterday.

(Mr. ABBOTT:)

51. Are you familiar with the cost of pipe such as is used for main pipes of gas companies in the open market and the cost of laying the same, assuming that ordina-y labor could be had at $1.50 per day during the year preceding September 1, 1900, and are you familiar with such additions to that cost as would be involved in laying pipes under paved streets?

A. Yes sir, I am.

52. Assuming that on September 1, 1900, the plant of the Peoria Gas & Electric Co. in the city of Peoria had mains laid in and through the streets and alleys of said city for the dictribution of gas as follows:—to-wit:—1758 feet of 16 inch main of which 160 feet is under pavement; 20768 feet of 12 inch main, of which 11225 feet is under pavement; 3482 feet of 10 inch main, of which 58 feet is under pavement; 20224 feet of 8 inch main, of which 13234 feet is under pavement; 12874 feet of 6 inch main, of which 5474 feet is under pavement; 80852 feet of 4 inch main, of which 9792 feet is under pavement, and 260 feet of 2 inch main, making a total of 140,223 feet of main, of which 39,943 feet is under pavement; and assuming that 90 per cent. of the said pavement is either
556 of brick or asphalt with a 6 inch concrete base; and assuming that ordinary labor could be had at $1.50 per day, what in your opinion, was the fair and reasonable cost of laying the mains of the Peoria Gas & Electric Co., including labor, materials, cost of repaving the streets and all other expenses incident to laying said mains ready for use.

Objected to by defendant as incompetent and based upon hearsay.

A. I estimated the total cost of the mains at $142,503.50. Now, I have placed a cost of $1.00 a foot on the 39,943 feet for repaving; in the part of the town where that paving is, in the bottom there, it is of a sandy nature and undoubtedly would require sheathing and I was told it did and that $1.00 a foot I estimate for the paving and

sheathing; I add that much to cover the cost of repaving and sheathing; the cost of the mains, after making allowance for freight, is the actual cost of mains that were laid during the years 1899 and 1900.

53. With the result which you have stated?

Ans. Yes sir.

54. Did you in estimating the cost of laying such mains include any estimate for unusual obstructions, such as boulders or rock which might have to be blasted?

Ans. No sir, I did not.

55. What would be the effect upon the cost of laying said mains providing that such obstructions were encountered in the course of the work?

Objected to by defendant as immaterial and incompetent because there is nothing in the evidence to show that any such condition exists in the city of Peoria.

A. Boulders that would require blasting, that could not be lifted out of the ditch with ordinary labor would add to the cost of course.

56. Your estimate, however, is without reference to such obstructions?

Ans. Yes sir

557 57. Assuming that on September 1, 1900, the Peoria Gas & Electric Co. had service pipes as follows, to-wit:—Three 3 inch services of a total length of 872 feet; 2 2½ inch services of a total length of 374 feet; 652 2 inch services of a total length of 37244 feet; 1503 1¼ inch services of a total length of 111369 feet; 266 1 inch services of a total length of 29393 feet, making a total of 2426 services of a total length of 179252 feet; and on the same assumption as heretofore with regard to the cost of ordinary labor during the year preceding September 1, 1900, will you please give an estimate of the fair and reasonable cost of the service pipe of the Peoria Gas & Electric Co. including labor, materials and all expenses incident to laying such services ready for use?

Objected to by defendant as incompetent and founded on hearsay evidence.

A. My estimate is $48,452.

58. Assuming that on September 1, 1900, the Peoria Gas & Electric Co. was the owner of 1758 meters purchased new during the year preceding September 1, 1900, what, in your opinion, would be the fair and reasonable cost of such meters together with the expense of setting the same for use.

A. My estimate is $17,846.50.

(The MASTER:)

59. What kind of meters?

A. The ordinary dry gas meter. My estimate includes the cost of the meter, the freight, before the meter is set it is also tested and

is sent out with cocks and lead connections with a shelf under it—my estimate includes everything complete ready for use. I am able to give those costs for the year 1900 from the average cost of a large number of meters.

(Mr. ABBOTT:)

60. What other element, if any, enters into the cost of the construction of such a plant?

558 A. The element of general supervision to prepare the plant and organize.

61. Is that a usual and customary element to be taken into consideration in determining the cost of such a plant?

A. Yes sir, it is.

62. What estimate do you place upon the cost of superintendence and organization?

A. I add 10 per cent. to my estimate.

63. Have you included in your estimate anything for the value of the real estate?

Ans. No sir.

64. Have you included in your estimate anything for office supplies and equipment?

Ans. No sir.

65. Have you included in your estimate anything for the legal organization of the company, the canvassing and soliciting and other expenses incident to the legal organization of the company before it commenced to do business?

A. The 10 per cent. I mentioned is for the legal organization, the preparation of drawings and general superintendence but it is not for soliciting business.

(The MASTER:)

66. Is that a necessary item of cost in the construction of a plant of this character?

A. The organization?

(The SAME:)

67. The 10 per cent.?

Ans. Yes, it is quite customary.

(The SAME:)

68. Is it necessary?

A. You have to have some head to the thing to get it together.

(Mr. ABBOTT:)

69. Is it not customary in all work in which labor and materials are involved to add practically 10 per cent. for the cost of superintendence?

A. Yes sir, it is where the thing is put in at the cost.

559 70. Would it make any difference in your estimate in that regard whether the work was done under outside supervision and contractors or was actually in charge of the company's officers themselves?

A. If it were actually in charge of the company's officers themselves, there is nothing that would be charged for the supervision of the company's organization or office to the contract price of the work, or to doing the different portions of the work, but the 10 per cent. would come in the general superintendence.

71. I believe you stated you did not include anything in that estimate for advertising, soliciting and expenses of that kind for the procurement of business, getting the plant into operation?

A. No sir, that is not part of getting the thing together, that is after the thing is together to get the business.

72. Then excluding the value of the real estate and the expense attending the advertising, soliciting and general expense of office equipment, etc., what is the total of your estimate as to the cost of the plant of the Peoria Gas & Electric Co. as the same existed on the 1st day of September, 1900?

A. $403,701.10, that is, with the 10 per cent. added; my total net estimate is $367,001.00.

73. Now, assuming in connection with your previous answers that the plant of the Peoria Gas & Electric Co. was put in operation for the manufacture of gas to consumers on May 1, 1900; and assuming further that the cost of the real estate upon which said manufacturing plant is located was $51,000., and that the cost of the legal organization of the company, the equipment and organization of its business force, cost of advertising, solicitors, etc., and the general expense of putting the plant into operation, was $42,000., and that on September 4th, 1900, after about 4 months of
560 operation, it was manufacturing and selling gas to consumers at the rate of fifty million cubic feet per annum, what, in your opinion, was the fair market value on September 4, 1900, of the manufacturing plant, mains, services, meters, office equipment, books, services tools and equipment of every kind which might properly be considered a necessary part of its plant, assuming in answering this question, that said plant so existing and in operation was then sought to be purchased by parties having the need of such a plant, and having the right to operate the same, and excluding from your estimate of market value, any value that might lie in the license or franchise of the company?

Objected to by defendant as immaterial, incompetent and based on assumptions not disclosed in the record.

A. I place the value at not less than $450,000.

74. That in your opinion was the fair market value of the plant as it stood on that date under the assumptions given you in the previous question?

Ans. Yes sir.

(The MASTER:)

75. Do you arrive at that conclusion from your own personal investigations, or from your information as to what the plant cost the company?

A. I might say I consider both sides of the question, but I consider it more from the construction side because my experience has been more on that side. The plant is certainly worth that to anyone that has use for it.

(Mr. ABBOTT:)

76. Assuming that the Peoria Gas & Electric Co. commenced the actual manufacture and delivery of gas to consumers about May 1, 1900, was it in your opinion on September 1, 1900, in smooth and practical operation and running to the extent of the economies of which it was capable?

A. Yes sir, 4 months should bring it into good smooth operation.

531 77. Assuming that the Peoria Gas & Electric Co. commenced the manufacture and delivery of gas to consumers on May 1, 1900, and assuming further that the character of the plant and the lengths and character of its mains and services conform to the premises heretofore stated, that the cost of Youghiogheny gas coal at the works of the company was $2.80 per ton, that the wages of labor were $1.50 per day for ordinary labor, $65.00 per month for general stokers and $70.00 per month for the head stoker; and assuming further that the purchase of materials is general and the expenses of general operation fair and reasonable, considering the location of the plant and that the management and superintendence of the plant was efficient and competent; and assuming further that said plant had been in operation a sufficient length of time to put into smooth operation the economies of which it was capable, and that about September 1, 1900, it was manufacturing and selling gas at the rate of 50,000,000 cubic feet per year, what, in your opinion, would be the actual cost per thousand cubic feet of the gas manufactured and delivered to consumers by said company, excluding from your estimate the value of residuals and excluding also any charge for depreciation or interest on the investment?

Objected to by defendant as incompetent and assuming facts not shown by the evidence.

A. 87 cents.

78. What is the highest candle power in coal gas deemed most satisfactory for general use by consumers?

A. From 16½ to 18.

79. Measured where?

A. The candle power of gas is usually measured at or near the works; we always have, however, at different parts of the town jet photometers that give us the candle power of the gas; 18

562 candle power at the works would average delivered to the consumer between 17 and 18.

80. What are the causes which reduce the candle power of gas between the works and the point where it is delivered to the consumer?

Objected to by defendant as immaterial and incompetent.

A. Changes in temperature and friction in the pipe.

81. What is the objection to the use of coal gas of more than 18 candle power at the works?

A. The increased cost and as soon as you get a higher candle power you have to change your burner, get a better burner for the consumer.

82. Why is that—in other words what happens?

A. I becomes smokey; you have to have a special tip; you can see that in cars where they have oil gas they have to have a special tip and special conditions to burn that rich gas.

83. Assuming the premises heretofore given with reference to the cost of labor and material in the city of Peoria, would it be possible, in your opinion, for the Peoria Gas & Electric Co. to furnish gas to consumers in said city at the price of 75 cents per thousand feet without entailing loss upon the company, even allowing nothing for depreciation or interest on the investment?

Objected to by defendant unless the question is based upon a certain amount of gas manufactured?

A. They could not do it under the conditions and with that size plant.

84. From your experience, knowledge and observation of the gas business, especially in relation to the construction of plants, laying of mains, etc., please state what elements, forces and causes, if any, tend to depreciate a gas plant and its mains, services and equipment under the ordinary conditions which exist in all cities having a population of about 50,000 and upwards?

563

A. Commencing with the benches, the heat wears out the retorts and the changes in temperature destroys the stack after awhile; then there are gasses which arise from quenching the coke that rusts out the roof—the trusses; in a coal gas plant there are the ammonia fumes which sometimes are present and they are extremely bad on iron—starts it to pitting; there is the wear and tear incident to any revolving pieces you use in manufacturing, such as the engines, exhausters, pumps, etc.; there is the motion which wears out the piston rods; in the holder there is the moisture caused from the holder going down in the water and rising and the wind operates on the holder and sways it which wears out the guide pulleys; then in the mains, in a porous soil, there is the percolation of water that is acid which starts rusting and then there is electrolysis, which occasionally presents itself, sometimes in quite a serious form; in the services, the wear in the steel or wrought iron pipes is much more on services than it is on the cast iron pipes because the cast iron pipes are much thicker and do not rust so fast and the cast iron gets an

oxide over it which under certain conditions stops the rusting which does not occur in a wrought iron pipe; then the meters, they gradually wear out and the diaphragms rust out.

85. Is there a depreciation in the plant itself from the ordinary action of the elements?

Ans. Yes sir.

86. State if a change, or shifting of centers of population, renderdifferent size mains necessary at different portions of a city at different times, is an element in the depreciation of a plant?

A. Yes sir, it is; it becomes necessary sometimes to take out smaller mains and put in larger ones.

564 87. In what way would the growth of a city in general which might necessitate the enlargement of portions of the works, act as a depreciative element, if any?

Objected to by defendant as leading and suggestive.

A. That depreciates the works in this way; a station meter which is large enough, for instance, that had a capacity of 500,000 cubic feet a day, if you work it much above that it becomes unreliable and liable to be damaged and you have to replace it with a larger meter, one of a million cubic feet capacity; your street mains, governors, etc., as the business grows becomes too small and has to be duplicated; the exhaustor which will exhaust 500,000 feet a day will not exhaust a million feet and you have to duplicate it or take it out and put in a larger one.

88. I mean to distinguish in this question between such changes as are made in the way of normal extensions of mains into new territory, for instance, and such changes as might take place in the works, for example, where it becomes necessary to enlarge the retorts and benches and in consequence of that enlargement to enlarge the house in which they are contained, or construct a new one. You may state whether in your testimony with reference to depreciation you make that distinction between normal extensions and such changes at the works as might become necessary under the circumstances given?

A. The normal extension of mains is caused by the growth of the city in building up outlying districts; the enlargement of mains occurs from the increased consumption by the old retail districts becoming in many cases wholesale districts which don't require the consumption of gas that the retail districts do, or a retail district shifts to other streets and the streets which have been resident streets become business streets and larger mains are required

565 to be put in. In the works, a large amount of the apparatus is largely outgrown, it becomes too small, it may have been kept in repair and, if the consumption remains the same and the conditions the same, they would continue to do their work longer but under the conditions that arise from increased consumption you are obliged to take them out and discard them.

89. Could that be accomplished economically by a mere addition

to the plant, or would it be more economical to take the whole thing out and reconstruct it as intimated in your last answer?

Objected to by defendant as immaterial and incompetent and not based on any assumption of fact shown in the records.

A. A situation of that kind has to be gone into very carefully; I have in mind a works which within the last 4 years has been entirely abandoned, the city simply outgrew the works and they could not be extended, and although the works were in good operative condition and had been kept in good repair they had to be entirely abandoned, a new site sought and an entirely new works constructed simply because the city had outgrown the old works, and it was impossible to safely manufacture the quantity of gas required.

90. Why was it cheaper to abandon the old works and construct new rather than make extensions to the old works?

A. The cost of acquiring additional real estate at the old works was one very great objection and the apparatus could not be economically duplicated, that is, we could not add to it economically anyway, the thing had gotten too small.

91. Do you distinguish, as intimated in one of your previous answers, between repairs and the various elements of depreciation which ultimately result in renewal in the course of a few years of the entire plant, if so, define or illustrate further in what way
566 you distinguish repairs from this depreciation which ultimately results in renewal?

A. A repair is new packing for a piston rod, the piston rod in a pump gets cut up and it is a repair to put in a new piston rod, but when the pump becomes too small for its use, too small to take to your new works, it is left and becomes practically worthless—it is old iron; a repair is keeping the apparatus and things in good operating condition, but a renewal is where the apparatus is thrown to one side and an entirely new apparatus put in.

92. In what manner in your opinion does good business policy require this depreciation to be taken into account in conducting the business of a gas company?

A. Good business policy requires a sinking fund.

94. By sinking fund what do you mean?

A. Why, it is an accumulation of money laid aside yearly to take care of these renewals and increases.

95. What in your opinion would be a fair percentage of the cost of a plant, similar in character and equipment to the Peoria Gas & Electric Co., to be put into repairs annually on the average from year to year?

A. The repairs in a gas works are usually estimated on the basis of the output; it is put into the accounts; in a plant of the character of the Peoria Gas & Electric Co. I would say the ordinary repairs would amount to 5 cents per thousand on the output, I mean, if its

output is fifty million feet a year that 5 or 6 cents per thousand cubic feet would cover the cost of the repairs.

96. Is the amount you have stated, which should be laid aside every year as a sinking fund for the purpose of taking care of this depreciation and renewal, a proper element to be taken into consideration in determining the cost at which gas can be fur-
567 nished to consumers?

Ans. It certainly is.

97. Now, what in your opinion would be a proper percentage of the entire cost of the plant of the Peoria Gas & Electric Co., excluding the cost of real estate, to be taken into account annually as an average annual depreciation?

A. Not less than 6 per cent.

98. Aside from the general depreciation, of which you have testified, what are some of the hazards of the gas business as an investment, that is, some of the matters which should be taken into consideration in determining the income which an investor ought to receive from his investment in gas properties as compared with other investments?

A. Well, starting with the benches, there is the hazard of a man getting the heat run too high and melting down part of the bench, and there is the danger of loosing your seal, allowing the gas to escape in the works, causing an explosion; when you come to the holder there is an element of danger from tornado-s—a good many holders have been wrecked by wind storms like the storm at St. Louis and Brooklyn, N. Y.—the holders were wrecked by unusual tornado-s. In the street mains electrolysis constitutes a hazard because it occurs in such ways it seems impossible to locate it and the first thing you know you have a leakage which may lead to an explosion or the asphyxiation of people in houses; there is the changing of the grade in streets and sewer extensions—sometimes a city orders a sewer put in which goes below the water and gas pipes and a settlement takes place which causes serious loss, starting your pipes to leaking; then there are personal damage suits and newspaper and political agitation—nobody can figure on that.

99. How about competition from other forms of lighting and heating?

A. There are always new inventions coming out and we
568 cannot tell what there is before us; if the electric light people do what they claim they can upset the gas business pretty thoroughly.

100. How about the competition from oil?

A. The competition from oil comes in improved burners, and solicitors for gasoline stoves are very active.

101. How about natural gas—is that a hazard?

A. It has proven to be a hazard in many places.

102. When you speak of possible legislative action, or action of municipal councils, state whether you have in mind the possibility of franchises being granted to other competing companies?

A. Yes, sir; that is one of the things.

103. In that connection, would the fact that a gas plant is of value only as an entirety and that it cannot be moved from place to place as a stock of merchandise might be, also a hazard of the business?

A. Yes sir; it certainly is a hazard of the business; you cannot take your street mains up and take them away because it costs more to cut the paving than the pipe is worth.

104. Are all of these different elements, about which you have testified, to be taken into consideration in determining the income from an investment in gas properties, as compared, for instance, with the income from farm mortgages, or Government bonds?

A. You have to take that into consideration.

105. Taking into consideration the hazards and risks of the business, about which you have testified, and from your experience and observation in the construction and management of gas plants, are you able to state what would be a reasonable and fair return to investors, taking into consideration the various hazards on the investment, about which you have testified?

A. Not less than 10% on the total investment, including real estate. I have known gas companies, by one explosion, to be
569 put in the hands of a receiver to be sold out at sheriff's sale.

106. Are you familiar, in a general way, with the prices charged for gas in the cities of the United States of a population of 50,000 and upwards, and I will ask you further in that connection, that so far as your answer goes beyond your personal experience and investigation, state from what it is derived?

A. I know what the prices are in a few cities, and there is a directory of gas companies, called "Brown's Directory" which is considered among gas people as an authority and a reliable source of information as to the price of gas in different cities, discounts, stock etc., names of officers.

107. Is Brown's Directory a standard work of authority and recognized among gas men as such?

Ans. Yes, sir.

108. From your knowledge and observation, with reference to which you have testified, state in how many cities of 50,000 inhabitants and upwards in the United States, gas is sold to consumers at a less price than one dollar per thousand feet for lighting and fuel purposes?

Objected to by defendant as incompetent, immaterial and not tending to prove the cost of gas manufactured by complainant.

A. There is Pittsburgh, Penna., and Toledo, Ohio; then there is Cincinnati, Columbus, Dayton, and Cleveland, Ohio. I know personally as to the price in Pittsburgh, Columbus and Toledo; the others I don't know about personally; I simply know it is published in the papers and generally reported that way.

109. What conditions, if any, prevail in the cities you have men-

tioned as compared with the city of Peoria, which would tend to lessen the cost of the production of gas in those cities?

A. The cost of material is much less—I mean the coal; the works are larger and there is also a good price for the residuals—
570 they are easily gotten rid of in those places; then there is the competition they have with natural gas; they have very strong competition, particularly since the Wellsbach burner has come out; that burner enables natural gas people to furnish a satisfactory light; before that burner was introduced, the natural gas people were not able to give a satisfactory light and consequently the gas companies were able to live and get along.

Cross-interrogatories by Mr. MANSFIELD:

1. In making your estimate on the cost of the retort house of the Peoria Gas & Electric Company, what did you include in that estimate?

A. I included the walls of the building, the operating floor and roof.

2. Describe those walls?

A. I checked the measurement that was given me in this schedule with a steel tape and it was 107 feet 4 inches long by 42 feet 2 inches wide; a brick building, with gable roof, walls 32 feet above grade, 18 inches thick for 12 feet and 12 inches the balance of the height, with 16 inch pilasters spaced 13 feet apart; taking the inside dimensions of that building and its height gives me 130,000 cubic feet and taking that at 8½c. a cubic foot gives me $11,500. That was my estimate of the cost; the floor and the tile and the material that entered into that I did not go into in detail, but I do know that the tile on the roof is worth about $16 a square and the brick in the building costs about $6 a thousand and you would have to pay about a dollar a yard for the sand etc.

3. What did you include in your estimate on the brick boiler house?

A. I included the roof and walls with the dimensions given as to the foundation—6 feet deep; I took as a fair estimate because
571 that building had no floor in it, 8c. per cubic foot; the inside dimensions were about 43500 cubic feet and at 8c. a foot I put that down at $3500.

4. What did you estimate the cost of the foundation of the holder to be?

Ans. I estimated that was worth 15c. per cubic foot.

5. How many cubic feet entered into the construction of it?

A. Well, I have not got a memorandum of it here, but my recollection is it came to a little over $4000; I can figure it if you care to have it figured?

6. You need not mind about that. You stated upon certain assumptions the cost of gas to consumers in the city of Peoria manufactured by the Peoria Gas & Electric Company would be 87c., ex-

cluding from such cost depreciation and 10 % interest on the investment, and not deducting therefrom the value of the residuals, what in your opinion, would be the cost of the manufacture of the same quantity of gas under the same conditions as to the cost of materials and labor, in the holder of the company deducting from the cost of the manufacture of the gas the value of the residuals and adding to it the 6 % depreciation and 10 % interest?

A. Well, I estimate the net cost for the material and labor, ordinary repairs and supplies, at 22½c.; then to that, I would have to add what you have asked for: that, as I understand your question, would be 16 % on what I have testified to as the net cost of the works plus the 10 % for superintendence; with 10 % added to the net cost of the works I have a cost of $174.000; I figure the 6 % for a sinking fund and 10 % interest on the works amounts to $27.840; now, on fifty million cubic feet that would be per thousand 55 6/10; the cost of the gas in the holder, after you have sold your residuals, is 22½c.; that would make it 78 1/10c.

7. What would be the cost to the consumer of a like quan-
572 tity of gas manufactured under the same conditions?

A. I would have to add 43c. a thousand for an output of fifty million feet of gas; in the 43c. I include the 11c. taxation which would bring the distribution gas down to 32c.; the distribution gas includes setting the meters, repairs to mains, repairs to services, repairs to meters, soliciting new business, office expenses and salaries of officers.

8. What would that amount to?

A. 43c. and 11c. leaves 32c. as the total cost of distribution.

9. Then, as a gas expert, how do you account for natural gas being distributed in various cities in the country at from 15 cents to 25 cents a thousand?

Objected to by complainant as immaterial, not proper cross-examination and involving assumptions not in the record.

The MASTER: I don't think there is anything of that kind in the record.

10. Do you know of any cities in the United States where natural gas is being distributed and sold to consumers at from 15 cents to 25 cents per thousand cubic feet?

Mr. ABBOTT: Complainant objects to the question on the same grounds as before stated but will state that he will withdraw the objection to both questions if Mr. Mansfield will stipulate he will produce evidence of the cost of the distribution of natural gas on which assumption he is basing his question.

Mr. MANSFIELD: I am not making stipulations at this time.

A. At Butler, Penna., natural gas is sold at 15c. per thousand cubic feet, meter measure; in Pittsburgh it is sold for from 20 to 25 cents; I don't know the price it is sold in other cities; I do know that natural gas is sold in Columbus, Indianapolis, Toledo and it

A. The actual cost of the delivery of the gas at the burner.

The MASTER: What features in connection with it would you consider in determining that question?

Mr. RITCHER: The question is, what should be charged for gas irrespective of the return on the investment and renewal account?

The WITNESS: Why then, you would take into account the
579 actual cost of the material, labor and repairs to the plant; the repairs to the services, maters and mains—the actual cost of doing your business.

(Mr. RITCHER:)

13. State whether or not you consider depreciation an element which must be considered in determining the cost of gas in making a price to consumders?

A. It certainly should be considered and also the return on the investment should be considered; no one would invest anything unless they expected to get some return on it.

Re-cross-interrogatories by Mr. MANSFIELD:

1. When you place the money set aside for depreciation in the renewal account, when you issue the stock, do you take into consideration the fact that that money has been used in the betterment of the plant and calculate interest on that money since it has been put into betterments when you issue the stock?

A. That would depend upon the length of time this money had been carried in the betterment account; if the money had been carried say not to exceed three years in the betterment account, I don't think any interest should be allowed—I don't think that would be expected, but if you carry the betterment account for 5, 6, 7, 8, or 10 years, then certainly interest should be charged for every year whatever the betterments were for that year.

2. In estimating the cost of a plant you estimate interest during the period of construction on the total amount of the plant?

A. No, I would not; I would consider whatever interest on that would come in, would be paid out of that 10% for superintendence and organization.

3. Well, it would be there represented by your 10%?

A. Yes sir; it would.

4. What would be the cost of gas at the point of consump-
580 tion merely taking into consideration the 6% depreciation and deducting from the cost of the gas the value of the residuals upon the same basis you have heretofore testified to?

A. There is fifty million cubic feet a year and a $434.000 investment—$1.15 6/10.

The further taking of testimony was here adjourned by agreement, to meet at the directors' room of the Equitable Trust Company, National Bank building, #150 Monroe St., Chicago, Illinois, on Saturday, December 21, 1901, at 1:30 o'clock p. m.

Directors' room, Equitable Trust Company, National Bank building.

CHICAGO, ILL., SATURDAY, *Dec.* 21, 1901—1:30 o'clock p. m.

Parties met pursuant to adjournment.

Present: Judge I. C. Pinkney, special commissioner; Mr. W. T. Irwin, Mr. E. C. Ritchie, Mr. W. T. Abbott, appearing for the complainant; Mr. Henry Mansfield, appearing for the defendant.

Adjourned by agreement to meet at Peoria, Illinois, in the United States court room, in the Government building, on Saturday, January 4, 1902, at 1:30 p. m.

W. Palmer, chief engineer pumping works.
W. Harper, chief engineer gas works.

580d *Report of the Commissioners.*

Water and light department.

DULUTH, MINN., *Jan.* 31, 1901.

To the honorable common council of the city of Duluth.

GENTLEMEN: In accordance with the requirements of the city charter, we hereby respectfully submit our annual report for the year ending January 1st, 1901. You will note that this report also goes back for six months previous to January 1st, 1900, thus duplicating our report dated January 18th, 1900, and covering the period from July 1st, 1899, to January 1st, 1900. This is done in order to make this report consecutive with the last printed report which was for the year ending June 30th, 1899.

We desire to call your special attention to the detailed statements of our manager and secretary, which are hereto attached. This covers the operation of the department as well as the receipts and expenditures. In it has been thoroughly covered in detail all the points and subjects that we thought might interest your honorable body.

The board desires particularly to call your attention and to discuss somewhat the subject of what is known as the construction fund of the department. Along this line we desire to state that, of the sum of $1,106,000.00 borrowed for the purpose of extending and improving the water and gas works of the city, there was expended through the common council $1,002,969.64, leaving a balance of $103,030.36. This last amount was placed to the credit of this board, to be used for the purpose for which it was intended, namely, the extension and improvement of the works.

Of this $103,030.36 the board has expended, in extensions and improvements, $78,679.33, and, in addition to that amount,
580e $484.95 has been used for repairs to the pumping works machinery, which, however, is chargeable to the builders of the pumping engines, the arrangement under which the same were built, being generally referred to as the Prescott contract. We have still left in this fund $24,351.03 with which to continue the improvement and further extension of the works.

All the resources left in the water and light plant fund, as well as all current bills receivable for gas and water, the inventory of all operating and repair materials on hand and already paid for, are accumulations of this department, with the only exception of the sum of $15,540.52 which accrued to the city as a bonus on the sale of these construction bonds. This latter sum is, however, credited to the interest account, but if considered as a part of the construction fund, it would increase the $24,351.03, before mentioned as the balance in that fund, to the extent of this $15,540.52, making the total amount in the construction fund of $39,891.55.

As evidenced by the manager's report hereto attached, the cash assets of the board on January 1, 1901, amounted to the sum of $85,280.47, leaving after deducting the $39,891.55 mentioned above, the sum of $45,388.92 as the accumulations of this department. Particular mention is made of this fact, because the gradual reduction of the balances in the water and light fund, caused through expenditures for improvements and extensions, have been used by some in criticising the statements made by this department, and pointed out as an evidence that the conditions were not as prosperous as our statements would indicate.

This construction fund will probably provide for construction, improvements and betterments of the plants for the coming two years, before which time it will be necessary for your honorable body to provide for the future, as this department cannot be expected to pay all its operating and maintenance expenses
580f as well as the interest on the bonds, and in addition provide for extensions and construction. While there has been no settled policy on the part of the city in regard to this matter of providing for extensions and improvements, we do not know that it has been advocated, nor do your commissioners believe it to be proper, that the earnings of this department should be used for that purpose. This would impose a much heavier burden upon the present consumers of water and gas than appears to be just.

We believe that the accumulations of this department should go towards reducing the cost of water and gas to the consumer.

It may be proper to enumerate here, in a condensed form, a few of the reductions that have been made in water rates since this department was created. The former minimum family rate of $9.00 per year for household purposes, being for one family in five rooms, with an additional charge of $1.00 for each room over the five, has been reduced to $6.00 per annum, with a charge of 50c. for each room above five rooms.

Baths, closets and wash basins for private families, formerly charged for at the rate of $5.00 each per annum, have been reduced to $3.00 per annum for the first of each of the above enumerated fixtures, and thereafter $2.00 per annum for each fixture, where there are more than one.

Where water was formerly furnished by meter, at the rate of 5c. for each 100 gallons, the rate is now 3½c.

The above, together with other reductions in water and gas rates, have aggregated the reduction in cost to the consumer about 33⅓ per cent.

By the table in our manager's and secretary's report, headed "For comparison," it will be seen that the earnings of this department for 1900 were increased over those of the year 1899 by the amount of $11,012.64. On the other hand, the expenditures for
580g operation and maintenance were only increased $5,811.34. This increase was largely due to the higher cost of coal, oil and other incidentals. It will also appear that the earnings of the

department exceeded the expenses for operation *for operation*, repairs and maintenance by the sum of about $10,000. This is after paying the interest on the bonds, which payment was in the amount of $111,200.00.

The efforts of your commissioners have been steadily directed toward the economical management of this department, without however, losing sight of the increasing demands of a growing business, and we trust that the results appear as satisfactory to the consumers, tax-payers and citizens generally as they do to us.

Very respectfully submitted,

C. A. DUNCAN, *President*,
HANSEN SMITH,
Vice-President,
SAMUEL F. SNIVELY,
H. H. MARTINDALE,
GILES GILBERT,
Commissioners.

Report of the Manager.

Water and light department.

DULUTH, *Jan.* 1, 1901.

To the board of water and light commissioners.

GENTLEMEN: In accordance with your regulations I respectfully submit my report for the year 1900, and, as also directed, submit in conjunction therewith a report for the last half of the year 1899.

The tables, showing the disbursements and receipts, as well as other calculations, are arranged in columns showing semi-
580*h* annual operations of each period by themselves, the two last being united in a fourth column so as to show the operations of 1900 complete.

The earnings of the department amounting to $173,187.80 are in excess of the operation and maintenance expense by $121,216.60. The latter expenses amounted to $51,971.20.

The earnings increased over those of 1899 by $11,012.64, and the expenses but $5,811.30.

The increased earnings of the gas department over those of 1899 amount in round numbers to $8,000, while the expense increased but a trifle over $4,000.

The increased earnings of the water department amount to over $3,000, while expenses were increased a little less than $1,800.

The increased expenses of both departments were largely due to the increased price of materials.

With the interest on the bonds, amounting to $111,200, added to the expenditures of the department, the excess of the earnings over the expenses amounts to $10,000, which, under the circumstances, I consider a most satisfactory result.

The following are the expenditures of the board arranged as previously stated:

580i *Expenditures.*

	July 1st to Dec. 31st. 1899.	Jan. 1st to July 1st. 1900.	July 1st to Dec. 31st. 1900.	Total, 1900.
Engineers and firemen	$2,785.67	$2,709.00	$2,865.91	$5,574.91
Coal	4,869.95	3,502.50	3,359.39	6,861.89
Oil	193.89	108.01	174.13	282.14
Misc. supplies	207.44	176.51	153.66	330.17
Misc. repairs	58.35	24.99	69.04	94.03
Pumping works, total	8,115.30	6,521.01	6,622.13	13,143.14
Office and shop pay rolls	3,322.44	3,836.75	3,805.00	7,641.75
Office and shop rent	340.02	370.02	400.02	770.04
Office supplies	318.03	362.09	377.52	739.61
Repairs, mach. and hyd'ts.	101.45	442.40	289.54	731.94
Repairs, mains and services	1,448.34	1,642.32	1,341.97	2,984.29
Repair, buildings	27.35	1.05	50.32	51.37
Insurance	27.50	24.75	41.00	65.75
Telephone	63.39	29.00	19.82	48.82
Water service, totals	5,648.52	6,708.38	6,325.19	13,033.57
Construction reservoirs	25.10			
Construction mach. & tools	147.18	267.53	812.84	1,080.37
Construction bldgs. & grounds	8,051.81	292.15	459.03	751.18
Construction mains	22,538.85	1,853.71	11,864.07	13,717.78
Construction hydrants	732.08	146.80	389.05	535.85
Construction cocks & boxes	343.48	582.23	297.74	879.97
Water construction	31,838.50	3,142.42	13,822.73	16,965.15
Aggregate forwarded	$45,602.32	$16,371.81	$26,770.05	$43,141.86

580) *Expenditures*—Continued.

	July 1st to Dec. 31st. 1899.	Jan. 1st to July 1st. 1900.	July 1st to Dec. 31st. 1900.	Total, 1900.
Aggregate forward	$40,602.32	$16,371.81	$26,770.05	$43,141.86
Engineers and firemen	1,318.12	1,448.76	1,611.47	3,060.23
Generator coal	1,935.08	1,912.92	2,800.47	4,713.39
Boiler coal	596.23	789.01	560.10	1,349.11
Misc. supplies	37.27	36.88	94.11	130.99
Misc. repairs	.68	84.37	79.51	163.88
Oil	2,579.59	4,055.28	3,442.73	7,498.01
Gas works, total	6,466.97	8,327.22	8,588.39	16,915.61
Office and shop rolls	1,709.14	1,858.10	2,134.50	3,992.60
Office and shop rent	169.98	184.98	199.98	384.96
Office supplies	214.40	327.24	233.60	560.84
Repairs, mach. and app's.	177.13	264.01	114.97	378.98
Repairs, mains and services	1,011.42	1,220.48	840.84	2,061.32
Repairs, meters	344.19	476.26	365.40	841.66
Repairs, buildings	40.51			
Insurance	2.50	194.27	9.25	203.52
Telephone	15.01	25.00	25.45	50.45
Gas services	3,694.28	4,580.34	3,923.99	8,474.33
Construction mach. & app's	3,691.77	17.24	225.55	242.79
Construction buildings	1,214.95	26.77	7.25	34.02
Construction mains	10,685.04	676.83	4,415.53	5,092.36
Construction meters	797.56	630.49	771.22	1,401.71
Gas construction	16,571.32	1,351.33	5,419.55	6,770.88
Aggregates forwarded	$72,334.89	$30,600.70	$44,701.98	$75,302.68

580*l* *Expenditures*—Continued.

	July 1st to Dec. 31st. 1899.	Jan. 1st to July 1st. 1900.	July 1st to Dec. 31st. 1900.	Total, 1900.
Aggregates forward	$72,334.40	$30,600.70	$44,701.98	$75,302.68
Water rates, annual	53.30	34.16	88.99	123.15
Water rates, meter	.....	.....	82.54	82.54
Prescott cont. construction	195.00	37.55	12.30	44.85
Real est. rev. and expense	60.88	9.40	.....	9.40
Gas rates	308.26	8.20	14.20	22.40
Meter deposits, gas	207.00	351.50	429.92	781.42
Service connections	1,610.85	1,266.23	1,764.76	3,030.99
Water meters	2,062.14	1,485.68	1,319.44	2,805.12
Stoves	639.13	1,172.30	794.28	1,966.58
Lamps	2,333.21	1,389.06	1,893.08	3,282.14
Aggregate expenditures.	$79,804.60	$36,349.78	$51,101.49	$87,451.27

580*l* *Operation and Maintenance Expenditures.*

The following table shows the expenses of the department that are due to the operation, repairs, and maintenance of the works entirely. By consulting the table it will be seen that these expenditures, for the first half of the year 1900, exceeded those of the last half by nearly $2,000, due almost entirely to the cost and character of the coal used:

	July 1st to Dec. 31st. 1899.	Jan. 1st to July 1st. 1900.	July 1st to Dec. 31st. 1900.	Total, 1900.
Pumping works	8,115.30	6,521.01	6,622.13	13,143.14
Water services	5,648.52	6,708.38	6,325.19	13,033.57
Gas works	6,466.97	8,327.22	8,588.39	16,915.61
Gas services	3,694.28	4,550.34	3,923.99	8,474.33
Water rates, annual	53.30	34.16	88.99	123.15
Water rates, meter	.....	.....	82.54	82.54
Real estate rev. and ex.	60.88	9.40	.....	9.40
Gas rates	308.20	8.20	14.20	22.40
	24,347.45	26,158.71	25,645.43	51,804.14
Add or subtract for materials on hand	— 1,550.34	+ 774.24	— 607.18	+ 167.06
Actual operating expenses.	$22,797.11	$26,932.95	$25,038.25	51,971.20

was sold in Johnstown, Penna.—I don't know whether it is sold there now or not.

573 11. What is the average life of gas plants throughout the Mississippi valley?

Ans. 12 to 15 years

(The MASTER:)

12. Do you include the city of Peoria in your answer?

A. Yes sir; I include the city of Peoria; that is the general experience; partly due to wear and tear and partly to the outgrowth of the plant.

(Mr. MANSFIELD:)

13. Then you mean to say that all the appliances connected with a gas works become either useless or worn out in the course of 12 to 15 years, do you?

A. I mean to say as a general proposition they would; in some cases holders have been in use much longer—25 to 30 years; in other cases they go to pieces much sooner from various causes; the original holders in one city I am acquainted with are all gone; the works were constructed, according to the records of the company, and put in operation from 1868 to 1869; the original works went out of use in 1883; now, third works—complete new works, were built in 1897.

14. Was that plant located in the Mississippi valley?

A. No, it was located in the Missouri valley; it is located in Omaha.

15. Did not the deterioration of that plant in Omaha occur from the flooding of the Missouri river?

Ans. No, sir.

16. When you estimate a sinking fund of 6% upon the total amount invested to be set aside, what do you do with that 6%?

A. I should reinvest it in improvements of the company—extension of mains and in betterments only.

17. Would those betterments be charged up to construction account?

A. No sir; they would be charged to a betterment account; that betterment account would not receive the 10% interest on the capital invested until such time as it was turned in stock,

574 that is when it becomes necessary to raise a large sum for betterments, that is, for renewals, then the sum that had been expended in betterment would be turned into stock and the stock sold and in that way you could get the money to make a betterment on.

18. Then you would not take into consideration the investment of this sum in betterments at all until you issued stock therefor?

A. Not in the way of payment of dividends, no sir;

19. When you were in Peoria how long were you there for the purpose of examining the plant of the Peoria Gas & Electric Co.?

A. I got there Sunday evening and left there Monday evening; with the assistance that was given me by the schedules furnished and the maps of the street mains shown me I was enable- to make to myself a fairly satisfactory examination; if I had not had those schedules to go by and had had to go and count up everything and measure it up and all that sort of thing it would have taken me quite a while to make the examination.

20. Then this examination you made was based on the information you obtained from the Peoria Gas & Electric Company?

A. No sir; the schedules were given me and I went and verified them so far as I was able to and it checked up every time.

21. To what extent did you verify the schedules?

A. I verified the schedule by measuring the outside dimensions of the retort house, the boiler house and the condensing room; I verified the height of the stack by counting the sheets and saw it was 80 feet high; I verified the number of retorts by counting them—the benches; I verified the condensing apparatus; I saw the ammonia apparatus was as represented in the drawing by the size of the boiler; I verified the extent of the enriching bench back of the boilers; I went and looked into all the tanks around and satisfied myself that the schedule that was presented to me was right; I saw no reason to question it.

575 22. You testified on direct examination from notes—did you prepare those notes yourself?

Ans. Yes sir; I did.

23. Where did you prepare them?

A. I prepared most of them in Omaha where I have some notes and have an engineer's pocket book with reference tables in it, and I have old correspondence which has the price of apparatus and such matters as that.

24. Are you familiar with the condition of the soil in the city of Peoria?

A. I saw the Illinois river there and saw that in the bottom there it was alluvial soil of a sandy character and in the back portions of the city I saw the soil up above the street level and could see it was a sandy loam, or may be more of a clay in its nature; from past experience I could judge about what the conditions would be in trenching there; according to my past experience in the down town districts sheathing would be necessary in digging trenches on account the sandy condition of the soil; when teams drive along on the pavement the sand works out and although you may dig a trench 23 or 24 inches wide, according to the size of the pipe, or 22 inches wide, you cannot figure on repaving just 22 inches wide for when you are ready to repave you may have a place four feet wide to repave.

25. How deep are gas pipes generally laid under pavement?

A. 3½ to 4 feet; in the city of Peoria I should expect to find them 3½ feet below the concrete.

Re-direct interrogatories by Mr. ABBOTT:

1. In these cities you have mentioned where natural gas is sold at a comparative low price, I will ask you if you know in a general way the volume of the consumption of natural gas in those cities as compared with the volume of consumption in cities of 50,000
576 inhebitants and upwards, where artificial coal gas is sold?

A. No sir; I do not; I have never had an opportunity to check the books up of any natural gas company and I don't know of any statement I could refer to that would be reliable.

2. What elements, in your judgment, tend to lessen the cost of the distribution of natural gas in those cities, if it is lessened?

A. The cost is lessened by reason of the higher pressure carried and the smaller diameter pipe used.

3. Do they have any expense for advertising, canvassing and soliciting as a rule in cities where natural gas is furnished, at least, to any extent, such as would be the case in connection with the furnishing of artificial coal gas?

A. So far as my knowledge goes I never knew of a natural gas company advertising its business in exactly the same way the artificial gas companies do.

4. What would be the expenses of advertising and soliciting in connection with an artificial gas company in a general way, if you know?

A. So far as my observation goes in cities where natural gas is distributed—take the city of Chanute, Kansas; they do absolutely no advertising or soliciting of business that I know of; in Butler Penna., I go there because I have a brother living there—I have seen his bills there which were 15 cents per thousand cubic feet, and I have talked with him and others in the city of Butler about the natural gas business at that place and so far as my observation goes there, there is absolutely no advertising or soliciting done at the present time.

5. How is it in connection with the furnishing of artificial coal gas; is there not a constant expense for advertising, soliciting and canvassing and other expenses for the purpose of obtaining new business constantly?

577 A. That is a pretty broad question, but in the sale of any manufactured goods it has become necessary on account of competition to solicit and advertise.

6. You testified on cross-examination with regard to the use which would be made of the sinking fund set apart to meet depreciation and future renewals, stating that that sum would be applied every year, or from year to year, to betterments and charged to a betterment account and, if I understood you correctly, when the proper time arrived, new stock would be issued to meet those expenses charged to a betterment account—That stock when issued would be paid for, would it not?

Ans. Yes sir.

7. And if I understood you correctly, when you testified as to the income of 10% to investors on the cost of the plant, you would not include this 10% as a dividend on this expense for betterments etc., until the new stock was actually issued and paid for?

A. Yes, that is it.

8. Now, in order that we may understand each other perfectly on the questions relating to the cost of coal gas to the consumer, I will ask you this question: Assuming a plant to be in active and economical operation on the 1st, day of September 1900, with an annual output of approximately fifty million cubic feet, and under the conditions as to the cost of labor and materials which have been given, what would be the cost price to the company of coal gas at the point of consumption deducting from such cost price the value of the residuals and including 6% on the cost of the entire plant for depreciation and 10% on the cost of the entire plant as a return to the investors, assuming the actual cost price and fair market value of the plant to be $434,000?

A. I have testified the cost delivered to the consumer would be 87c.

9. That was making no allowance for the value of the resid-
578 uals and not including anything for depreciation or interest on the investment. I now desire to deduct the value of the residuals and include the 6% for depreciation and 10% return to investors?

A. I make the value of the residuals 22½ cents; deducting that from 87 cents leaves it 64½ cents delivered to the consumer. Now, if the value of the works were $434,000 that 10% and 6% would be $160 a thousand; that would be $69,440 for a sinking fund and 10% on the $434,000 investment; and on fifty million feet it would be approximately $1.39 and 64½ cents to add to that would be $2.03.

10. If you were asked in a general way to determine the cost of gas delivered to the consumer would you determine that on the basis which I have just now given you?

A. If I wanted to get at the natural cost with a fair return on the investment I should certainly figure it that way; I do not consider that in the 10% that is paid on the investment they are going to get that every year, that is, they start out with the intention of paying 10%, then they may get an explosion, or something of that kind, and there would be a year or two they would not get anything on their stock.

11. In a general way your estimate, if I understand you, would be made up in that way?

Ans. Yes sir; it would.

Mr. RITCHER:

12. In your last answer you said you would figure up the cost on a fair return on the investment; if you were figuring up the cost alone what element would you consider for a fair return on the investment?

580*v* *Auxiliary Accounts.*

Service extensions, water meters, stoves and lamps are independent accounts to which is charged all expenditures for labor and materials, and which is credited with all receipts for the sale of the said materials. The prices charged for each are calculated as closely as possible to simply make these sub departments self-supporting; in other words, these materials are furnished at cost to the people. Inventories were made of stock on hand and bills receivable in each of these accounts on the 1st of January. As compared to the ledger balances, the inventories show what appears to be accumulations, but with the exception of the lamp account the several surplus are due to materials on hand when these accounts were opened and do not differ materially from the surplus reported July 1st, 1899.

These accounts are as follows:

Water meters.

Bills receivable	$362.44	
Invoice of materials	1,010.20	
		$1,372.64
Ledger balance		945.65
Surplus		$426.99

Service extensions.

Bills receivable	$1,136.95	
Invoice	904.47	
		2,041.42
Ledger balance		717.46
Surplus		$1,323.96

Gas stoves.

Bills receivable	$75.44	
Invoice	261.06	
		336.50
Ledger balance		225.84
Surplus		$110.76

580*w* Lamps.

Bills receivable	$607.49	
Invoice	668.93	
		1,276.42
Ledger balance		1,146.89
Surplus		$129.53

Service extensions.

Number of service connections made in 1900	138
Previously reported	2,292
In West Duluth system	365
Total	2,795

Water meters.

Net gain in number of water meters for 1900	173
Previously reported	1,098
Total	1,261

Gas meters.

Net gain of meters in use	215
Previously reported	1,519
Total	1,734

The aggregate gain in the number of meters in use since the purchase of the plant is 612

Lamps.

The sale of lamps and parts of lamps continues unabated. In the past two years the department has sold 2,846 complete lamps, the number of orders received and filled amounting to 4,778, or an average of 8 for each working day.

Jan. 1, 1901.

Water plant.

Original purchase of plant	$830,200.00
Original purchase of real estate	56,800.00
Expended by council on sup. system	818,169.64
Expended by board, Prescott contract	484.95
Expended by board, extensions, etc	51,706.11
Total valuation, Jan. 1, 1900	$1,757,360.75

Statement of Cost of Supplementary System Furnished by City Engineer.

Acquiring land	$7,678.96
Pump house, mill, etc	41,156.81
Pumping machinery	134,283.34
Intake	51,375.80
Steel main and rider, 33,00 of 42 inch	319,876.72
36-inch main, 11,880	87,812.04
Reservoir: capacity 13,500,000 G	71,849.43
Labor not classified	50,825.01
Engineering and inspection	23,955.83
Additional attorneys, bonds, etc	15,447.19
Total	$804,261.03
Expended by the board upon the houses at Lakewood, and in the improvement of the grounds and pump house	$9,323.60
Improvements to reservoir	223.35

Real estate valued at $56,800.

Descriptions are as follows:

Lots 6, 6, 7, 8 and 11, block 15, Endion division—pumping works and dwelling.

Lots 163, 165, 167, 169, block 66, Duluth proper, 2nd div.—old reservoir on West First street.

Lots 9, 10, 11, 12, 13, 14, block 22, Portland div.—old gas works site, East First street.

Lots 57, 58, 59, 60, 61, 62, 63, 64, block 98, Duluth proper, 3rd div.—upper system reservoir site.

Out lot R, Lester Park, 1st div.; London road—pumping works.

West 100 feet of block 105 N. E., 15th street—old reservoir.

Block A and part block B, Lester Park, 4th div. on lake shore —pump works site.

580: Original purchase, with improvements, valued at $772,359.16

2 engine houses.
1 engine, Holly-Gaskill; capacity 5,000,000 gallons.
1 engine, Worthington; capacity 3,000,000 gallons.
1 engine, Worthington; capacity 4,500,000 gallons.
1 engine, Blake; capacity 1,000,000 gallons.
1 engine, Blake, 375,000 gallons.
4 boilers, 3 tubular and 1 water tube.
184,800 feet cast iron pipe, 6 to 20 inch.
17,858 feet kalomine pipe, 4 to 12 inch.
2,320 feet wrought pipe, 6 inch.
1 reservoir; capacity 4,000,000 gallons.

Materials on hand.

2 horses, wagons, etc., etc	$591.35
Pipes, special v*la*ves, lead, etc	5,737.31
Implements and tools (extension department)	2,217.62
Pump works, tools and fittings	1,434.70
Office furniture and fixtures	675.00
Total	$10,655.98

Recapitulation of water plant.

Total valuation of plant	$1,700,560.75
Real estate	56,800.00
Materials	10,655.08
	$1,768,015.73

Gas plant.

Lot on Garfield at works	$20,000.00
Original purchase price of plant	343,000.00
Expended by board, extensions and improvements	26,992.00
Total	$389,919.00

580& 1 building—gas works.
1 double lift holder; capacity 200,000 feet.
1 single lift holder; capacity 7,000 feet.
1 Flannery generator (old).
1 new Lowe generator; cost $5,647.73.
149,934 feet cast iron pipe, 4 inch to 16 inch.
16,266 feet kalomine, 2 inch to 10 inch.
1,734 meters.
Engines, blowers, washers, purifiers, etc.

Office furniture and fixtures	$325.00
Meters and repair materials on hand	537.91
Tools and fittings	184.31
Total	$1,047.22
Making an aggregate of	$391,040.00

Auxiliary accounts.

Service extensions, materials on hand	904.47
Water meters, materials on hand	1,010.20
Total	$2,844.66

Operation supplies.

Coal, oil, etc., pump works	$760.36
Coal, oil, etc., gas works	1,482.20
Total	$2,242.56

Recapitulation.

Water plant	$1,768,015.73
Gas plant	391,040.00
Auxiliary accounts	2,844.66
Operation materials	2,242.56
Grand total	$2,164,142.95

In conclusion I desire to express my warmest approval of the subordinate employees of the board, who, one and all, have shown throughout an earnest interest in the works, and are enthu astic over the gains made and the increase of the business. This
580*aa* increase has brought with it much additional work, but with the exception of one extra clerk in the office, drawing

a salary of $480 per annum, now increased to $600, the number of employés of the works remain the same as when the board assumed control of them.

The increase in the total of salaries paid for engineers and firemen at pumping works and gas works, and to office and shop rolls in 1900 over that of 1899 amounts to $1,666.52, and which has been caused by the above employment and by an increase in the salaries of a few of the employés, to make them in keeping and consistent with the general salaries and with the services rendered.

I think these men deserve the approval of their fellow citizens in whose interest they are working.

All of which is respectfully submitted.

L. N. CASE, *Manager*.

Ordinance regulating and fixing maximum price of gas in city of Peoria,—attached at end of volume.

Testimony taken in the above entitled cause before Judge I. C. Pinkney, special commissioner, at Peoria, Illinois, on the several dates set forth in the following pages.

Mr. W. T. Irwin, Mr. E. C. Ritcher, and Mr. W. T. Abbott, appearing for the complainant.
Mr. Henry Mansfield, appearing for the defendant.

582 United States court room, Government building.

PEORIA, ILL., SATURDAY, *January* 4, 1902—1.30 p. m.

Parties met persuant to adjournment.
Present: Judge I. C. Pinkney, special commissioner, Mr. W. T. Irwin and Mr. W. T. Abbott appearing for complainant. Mr. Henry Mansfield appearing for defendant.

HENRY L DOHERTY, called on behalf of complainant, being first duly sworn, testified as follows:

Direct interrogatories by Mr. IRWIN:

1. State your name, age, occupation and residence?
A. Henry L. Doherty; 31; gas engineer; my local residence is Madison, Wis.
2. What business have you been engaged in in the past?
A. I have been continuously engaged in the gas business ever since I left school.
3. What positions have you held during that period in the gas business?
A. I started in with the Columbus Gas Co. of Columbus, Ohio, as office boy in 1883; I continued in the employ of that company continuously until 1895, filling various positions of a clerical nature, and then as engineer for the company from 1892 to the spring of 1896; in April 1896 I was elected engineer and general manager of the Madison Gas & Electric Co. and continued in that capacity until 1898, but I only nominally held the position after the fall of 1897 as I was engaged in engineering work for Emerson McMillan & Co. of New York from then until the fall of 1899, when I took the position of manager and engineer of the St. Paul Gas Light Co.; I continued in that position until the spring of 1900 and then went back with Emerson, McMillan & Co. doing gas
583 engineering work for the various plants controlled by that syndicate; in October, 1900, I was made engineer and general manager of the Denver Gas & Electric Co. and continued in that position until May, 1901, when I was elected as president of the company, which position I still occupy; in July, 1901, I was elected engineer and president of the Lincoln Gas & Electric Company of

Lincoln Nebraska and continued in that position until December 19, 1901, when the company was re-organized as the Lincoln Gas & Electric Light Co. and I am now president of that company and the engineer has not yet been chosen.

4. Are you now the consulting engineer of any plant, if so, what plants and how many?

A. I overlooked one thing in my former answer. I was elected general manager of the American Light & Traction Co. in June, 1901, and also chief engineer of that company; that company controlled the gas company at Binghamton, N. Y., the gas company at Milwaukee, Wis., the Gas & Electric Co. at Madison, Wis., the Gas and Electric Co. at St. Paul, Minn., the gas company at St. Joe, Mo., and the Gas & Electric Co. at San Antonio, Texas.

5. What different plants have you visited and examined throughout the United States in the last 15 years.

A. If I may refer to my memoranda here (witness referring to memoranda) As engineer for Emerson, McMillan & Co., I have also carried on the business of a consulting engineer and have examined the following plants in the capacity of examining engineer to pass on the advisability of purchase; I have visited and examined the gas company at Lexington, Ky., Fort Smith, Ark., Baltimore, Md., Washington, D. C., Council Bluffs, Iowa, Nashua, N. H., Springfield, Mo., La Crosse, Wis., Denver, Colo., San Antonio, Texas, Menominee, Mich., Marinette, Wis., South Bend, Ind., Montgomery, Ala., and Cheyenne, Wyoming. Those are the only plants I have had
584 personal connections with the examination of. I have examined a great many other plants for the purpose of information and to qualify myself to judge other properties.

6. Are you familiar with the process of manufacturing gas for illuminating or heating purposes?

Ans. Yes sir, I think I am familiar with all the processes in general use.

7. What are the processes in general use for the manufacture of artificial gas for illuminating and heating purposes throughout the United States?

A. Practically there are but two, carburetted water gas and coal gas.

8. Are you familiar with those processes?

Ans. Yes sir.

9. Will you describe in general terms, and in detail, so far as it occurs to you, the modern methods and apparatus for the manufacture of coal gas now in general use?

A. Well, generally coal gas is manufactured by the destructive distillation of coal which is placed in a closed retort and subjected to a high temperature; the primary apparatus in a coal gas plant is called a coal bench constructed with 5, 6, 8 or 9 retorts and each bench has an individual furnace beneath it; from the retorts the gas is taken to other apparatus which condenses out the vapor of

580*m* *Receipts.*

The following are the receipts of the works from all sources.

If to the total of the receipts from July 1st, 1899, to Jan. 1st, 1900, were added the receipts from January 1st to July 1st, 1899, which amounted to $80,163.76, it will be seen the receipts of 1900 exceeded those of 1899 by $13,522.71.

	July 1st to Dec. 31.	Jan. 1st to July 1st.	July 1st to Dec. 31st.	Total, 1900.
	1899.	1900.	1900.

580*n* *Earnings.*

The following table shows the exact earnings of the department, and includes not only the receipts but also the differences of the unpaid balances for both water and gas. Those amounts with plus (+) in front of them are the sums that — in excess of the amount charged during the period over the sums received; and those with the minus (—) sign are the reverse:

	July 1st to Dec. 31st.	Jan. 1st to July 1st.	July 1st to Dec. 31st.	Total, 1900.
	1899.	1900.	1900.

For Comparison.

The following table is introduced for comparison only, in order that it may be seen whatever improvement or increased earning power of the works have been made or attained.

The earnings have increased much more than the cost of operation notwithstanding the large increase of the cost of coal and oil. The gas sold has increased much more than the gas made, which is owing to the replacement of the old kalomine pipe. The decrease in water pumped, notwithstanding the increased consumption, is due to the same cause.

	1899.	1900.	Increased.
Operation and maintenance, water	$24,763.09	$26,558.86	$1,795.77
Operation and maintenance, gas	21,396.81	25,412.34	4,015.53
Earnings, water	129,135.44	132,192.99	3,057.55
Earnings, gas	33,039.72	40,994.81	7,955.09
Gas made—feet	30,999,998	38,332,717	7,332,719
Gas sold—feet	25,309,963	32,974,800	7,664,837
Water pumped—gallons	1,567,677,031	1,561,455,000	Decrease. 6,222,031

580*p* *Construction.*

The following table is introduced to show what the cost of both the water and gas plants have been to the city up to the present date, which are divided under the three heads of "Original purchase," "Paid out by council," and "Paid out by board." In the subsequent table the expenses by the board are shown in detail.

The total expenditures for extension of mains amount to $53,938.77, of which $25,795.30 was for entirely new extensions and $28,143.47 was for replacements of kalomine iron pipe with larger sizes of cast iron. The total length of pipeage replaced amounts to 22,772 feet.

Water plant.

Original purchase, plant	$830,200.00	
Original purchase price, real estate	56,800.00	
Expended by council, sup. system	818,169.64	
Expended by board, prest. cont	484.95	
Expended by board, extensions, etc	51,706.11	
		$1,757,360.70

Gas plant.

Original purchase, plant	$343,000.00	
Original purchase, real estate	20,000.00	
Expended by board, extensions, etc	26,992.78	
		389,992.78
		$2,147,353.48

In construction fund Jan'y 1 ab't $40,000.

Expenditures by the Board.

Cash Assets. Jan. 1st, 1901.

The following statement of cash assets, includes the cash on hand, cash due, and operating materials paid for. It is practically an inventory, not including materials for construction, which are already charged to that account. If from this total $85,280.47 there be taken the balance in the construction fund, which amounts to $24,351.03 and $15,540.50, which was the bonus received on the 5 per cent. bonds, and which is credited to interest, there remains $45,388.92, which is the accumulation of the department.

In water and light plant fund	$38,560.22
Cash on hand	364.83
Contingent fund	300.00
Gas rates, due to Jan. 1st	6,860.47
Water rates, meter, due to Jan. 1st	9,215.83
Water rates, annual, due to Jan. 1st	20,495.00
Hydrant rentals, due to Jan. 1st	6,448.28
Stove account, bills receivable and stock	225.84
Service extension, bills receivable and stock	717.46
Water meters	945.65
Lamps	1,146.89
Total	$85,280.47

580r

Pumping Water.

The following table is an interesting one and is worthy a careful perusal, inasmuch as it shows how much more expensive was the coal used in pumping during the first half of the year 1900. As compared to the period from July 1, 1899, to January 1, 1900, the quantity of coal consumed was about the same, yet the cost was almost 50 per cent. more. As compared to the last half of 1900, the quantity used was reduced almost 12 per cent. and the cost 28 per cent.

	July 1st to Dec. 31.	Jan. 1 to July 1.	July 1st to Dec. 31st.	Total 1900.
	1899.	1900.	1900.	
Gallons pumped	799,100,240	800,238,000	761,217,000	1,561,455,000
Gallons, daily average	4,348,376	4,396,912	4,137,574	4,267,243
Coal used, tons	1,692.35	1,659.07	1,461.-5	3,120.57
Coal used, cost	$3,005.61	$4,419.80	$3,169.62	$7,589.42
Coal, pumping, tons	1,599.55	1,531.27	1,356.75	2,888.02
Coal, pumping, cost	$2,841.73	$4,035.90	$2,967.09	$7,002.99
Coal, per million gals., pounds	4,003	3,827	3,565	3,696
Coal, per million gals., cost	$3.55	$5.04	$3.89	$4.47
Gallons water—1 lb. of coal	249	249	279	264
Head pumped against, feet	290	290	290	290
Oil, waste, etc., cost		$254.29	$188.78	$443.07
Oil, waste, etc., per million gallons		31¾ cts.	24 4/5 cts.	28¼ cts.

580s *Gas Manufacture.*

The cost of manufacturing gas is shown in the succeeding tables, the second table being only for the year 1900 and arranged by months.

It will be seen by the first table that the cost per 1,000 feet was 5 cents more during the first half of the year than during the last half.

In the last column of the second table is given the percentages of "unaccounted-for gas," gas that finds its way into the air through innumerable leaks in mains and service pipes between the holder and the individual meters. During the last five months of the year it will be seen that this has been materially reduced, which was produced by the replacements of the old kalomine pipes, completed last July. Comparing the results of this period with the corresponding months of 1899, and we have the following:

Gas delivered during the 5 months in 1900	17,625,010 feet
Unaccounted for during the 5 months in 1900	795,194 feet
Percentage of loss	4½%
Gas delivered in corresponding month, 1899	15,448,967 feet
Unaccounted for in corresponding month, 1899	1,878,846 feet
Percentage of loss	12½%
Decrease of percentage fully	7½%

Multiplying the quantity delivered during the 5 months in 1900 by this decrease in the loss percentage, and we have a saving thus effected of 17,625,010, which, multiplied by 40 cents, the cost of putting 1,000 feet in the holder, and we have a saving of $528.75. It

580t may be argued that the unaccounted-for gas, with the same leaks, would be the same whatever the amount of gas delivered. On this basis the saving would be $433.66, or $1,040.30 annually.

	July 1st to Dec. 31st.	Jan. 1st to July 1st.	July 1 to Dec. 31.	Total 1900.
	1899.	1900.	1900.	
Gas made, feet	17,477,998	17,939,402	20,393,315	38,332,717
Generator coal, cost	$1,877.16	$1,969.98	$2,187.46	$4,157.44
Boiler coal, cost	501.76	761.31	572.29	1,333.60
Oil for enrichment, cost	2,807.60	3,529.85	3,434.95	6,964.80

44. What way would good business policy, in your judgment, require this depreciation to be taken care of?

A. Well it is customary to reserve some of the earnings of the company, putting them back in the plant, to compensate for this item of depreciation. There are scarcely two men that will agree on the amount of depreciation which is constantly going on in a gas works proper.

45. From your experience and observation, what per cent. in your judgment, of the actual cost of a gas plant should be set aside annually, or otherwise, to take care of this depreciation you speak of?

A. I do not think there should be any specific fund set apart for depreciation in a growing city, for you have occasion all the time to add to your plant and it seems to me the best way to take care of this item is to devote a portion of your earnings to new construction work; I think anyone would be unsafe in devoting less than 4 per cent. of their earnings to such new construction work and I think 5 per cent. would be a very fair figure.

595 46. You mean 4 per cent. or 5 per cent. of the earnings, or cost of the plant?

A. 4 per cent. or 5 per cent. of the plant.

47. What are some of the hazards that should be taken into consideration by an investor in determining the amount, or whether he would invest in the gas business, that is, whether he should invest in the gas business or put his money elsewhere?

Objected to by defendant as immaterial, incompetent and irrelevant.

A. Well, a man don't want to put his money in any kind of a manufacturing plant without recognizing the fact that he is running some risk with his money; there are other safer channels of investment; I think the most serious hazard to a gas company is municipal and legislative attacks on all plants of quasi public corporations, and the second most important hazard is the antiquation of the property by some form of competition. There never was a time when gas companies were more seriously threatened with effective competition than they are now.

48. Name some of the forms of competition that threaten the gas business?

Objected to by defendant as immaterial, incompetent, irrelevant and not tending to prove the issues in the case.

A. The competition from electric lighting. 17 years ago electric lighting was in its infancy and it is now finding ample support from the same customers who were formerly customers of the gas companies. During the past two years, the electric business has grown much more rapidly than the gas business has and it has succeeded in taking customers away at a more rapid rate than it previously had done. Another item of competition which is threatening, but

which has not yet become extremely serious, is the use of
596 acetaline gas. A newer development, and one which is even
much more serious than acetaline gas, is the use of incandescent oil burners; these give illumination at a cost of probably one third that of gas and their introduction has proven quite serious to some illuminant companies. I made some notes on that which, if I am allowed, I will refer to—interrupted.

(Mr. MANSFIELD:)

49. Where did you make those notes?

A. I made them on the train and some after I got into town this morning.

Mr. MANSFIELD: I object to the witness referring to notes if made after the time of the introduction of this suit, his knowledge of the plant having been obtained after the introduction of this suit.

(Mr. IRWIN:)

50. The notes you refer to were made personally, were they not?

A. Yes sir, they were made by me personally and were not even suggested to me by anybody.

51. And from your own knowledge and experience of the gas business?

A. Yes, sir.

(Mr. MANSFIELD:)

52. Did you read over the evidence of the other witness who have testified in this case, or any of them?

A. No sir, I did not. (Witness referring to notes.) I made some notes on competition and I will read over the ones I have not mentioned. There is always danger of competition from a new gas company coming in. There is no such thing as real competition between two gas companies, and if competition does exist someone has to pay for it, or someone has to lose money. The proposition of isolated electric plants has been a pretty serious one; for instance,
take hotels and concerns of that sort which were the gas com-
597 panies' largest customers at one time and they are now mostly
supplied from isolated electric plants. Natural gas has entirely displaced the use of artificial gas in some localities—I don't know about this particular locality—which renders the entire investment of an artificial gas plant worthless except for junk.

(Mr. IRWIN:)

53. Are accidents and explosions some of the hazards?

A. Yes sir, that is a serious, although an infrequent hazard. By that I mean explosions, but when they do occur they generally cost a lot of money and we have to be prepared to take care of them. Accidents of one sort and another are not at all infrequent; I personally have been beyond the point of consciousness several times

by staying too long in an atmosphere heavily charged with coal or water gas. A hazard that a gas man takes when he invests in this class of property is the likelihood of electric power being developed from some neighboring hydraulic plant and where this has occurred it has often depreciated the market for gas to a point where the bonded interest on the actual cost of the plant could not be met.

54. Taking into consideration the hazards to an investor investing in the gas business, what, in your judgment, should an investor receive—what returns should he receive, on his investment in a gas business?

Objected to by defendant as immaterial, incompetent, irrelevant and not tending to prove the issues in the case.

A. He ought to receive not less than 12 per cent.

Cross interrogatories by Mr. MANSFIELD:

1. Did you conduct the negotiations for the purchase of the Lincoln Gas Company's plant?

A. No sir, I did not.

2. Did you make an examination of that plant at the time it
598 was purchased by the present company that owns it?

A. No sir, I did not.

3. When was it that you made an investigation or study of the plant of the Lincoln Gas Company?

A. Well, about in July last year.

4. What do they sell gas for in Lincoln, Nebraska?

Mr. IRWIN: The complainant objects to the question as incompetent, not cross examination and not tending to show the cost of gas in Peoria, and the witness need not answer the question unless he wants to.

The MASTER: I do not think it is strictly speaking cross examination. I think, Mr. Mansfield, that would be more properly coming from your side of the case, but I have not any power to exclude the testimony.

Mr. IRWIN: If counsel for defendant desires to make this witness his own witness and ask him that question we have no objection.

5. From your knowledge of the gas plant in Lincoln, Neb., what can it manufacture gas for and deliver it to consumers in the city of Lincoln, Neb., basing your answer upon your expert knowledge?

Objected to by complainant as not cross examination and immaterial to the issues in this case.

The MASTER: The most serious objection is that it is not cross examination.

Mr. MANSFIELD: It don't make any difference, if the witness don't answer that question, we will take it up before the court; that is all there is to it; we will adjourn this session right here at this time and place.

The MASTER: Wait a minute, Mr. Mansfield, until I can
599 make a suggestion to you. Objection is made to this question that it is not proper cross examination and that is the serious objection as I look at it. I do not mean to say it would not be perfectly competent for you when you reach your side of the case to show what gas can be made and sold for in Lincoln, Neb., or any other place you have a mind to go.

Mr. MANSFIELD: That is true, but this witness is testifying as an expert and I want to find out, from his knowledge of the various plants he has testified he has examined, what the conditions are surrounding those plants and whether he can as an expert, testify what gas is worth at those places. He has testified that he has examined the plant and has got his information as to the cost of gas from such examination and I want to know if he knows anything about it. He says he does and that is all he does say and I want to know whether he does know about it.

Mr. IRWIN: The question is not competent at all for another reason; it would not be competent even on direct examination for the reason there is nothing to show that the conditions are similar, that the cost of fuel is the same, wages the same or anything else. We have asked the witness nothing about those matters at Lincoln and they all go into the cost of gas. We are not trying a case in Lincoln but in Peoria.

The MASTER: Is it not true, Mr. Mansfield, if they had asked that question on direct examination and you had objected to it that they would first have had to show the conditions were similar in Lincoln to what they are in Peoria before they could show the cost of gas there?

6. What is the nature and character of the gas manufactured in Lincoln, Neb.?

A. Coal and water gas both.

600 Q. Are you the president of the Lincoln Gas Co. of Lincoln, Neb., at the present time?

A. Yes sir.

8. The company you are now working for, or the company of which you are a stock holder, now controls the Lincoln Gas Company's plant, does it not?

A. Yes sir.

9. What proportion of the gas manufactured in Lincoln is water gas?

Objected to by complainant as incompetent, immaterial and not cross examination.

A. About 50 per cent., I think, I am not sure.

10. Do you know the selling price of gas in Lincoln, Neb.?

Mr. IRWIN: Complainant objects to the question as incompetent, immaterial, not cross examination, and I instruct the witness he may refuse to answer.

The MASTER: Mr. Mansfield, I think you have a perfect right to go into this matter as fully as you care to when your time comes but the other side precluded you from doing it by their examination of this witness so a cross examination on that subject is not proper.

Mr. MANSFIELD: The witness has testified that he knows how much it costs to manufacture gas in a modern gas plant.

Mr. IRWIN: No, I asked him under the conditions existing here and nothing else.

11. When you testified as to the cost of gas manufactured in the city of Peoria, what did you base your knowledge on in arriving at that estimate of the cost of gas to the consumer in the city of Peoria?

A. I based it on the data Judge Irwin gave me and on my knowledge of how much material was required to produce a given
601 quantity of gas and how much labor was required.

12. Is your experience based upon a theoretical knowledge obtained by you, or a practical knowledge obtained by you, through the investigation of different gas plants and through your connection as president, manager or otherwise of gas plants in the United States?

A. It was based on my observation of other gas plants which I have examined, or have been connected with, in an engineering capacity.

13. Designate the plants you were connected with in an engineering capacity from which you derive the knowledge upon which you base your estimate of the cost in the city of Peoria to consumers, of gas as manufactured by the Peoria Gas & Electric Company?

A. I did not say I gained my knowledge of these things solely by being connected with any plant in an engineering capacity—I said on observation of other plants and also by being connected in an engineering capacity with various gas properties.

14. From your observation of what other plants and connection with what other plants?

A. (Referring to memoranda.) Columbus, Ohio; Madison, Wis. St. Paul, Minn.; Denver, Colo.; my observation of plants in Baltimore, Md., Washington, D. C., San Antonio, Texas, Cheyenne, Wyo. Montgomery, Ala., South Bend, Ind., La Crosse, Wis., Springfield Mo. and Council Bluffs, Iowa, that is all I can think of just now.

15. What observation did you make of the plant at Council Bluffs?

A. The yield per pound of coal, the make of gas per man, the yield of coke per ton of coal, quantity of tar produced per ton of coal. That is all in that particular plant.

16. What was the yield of gas per ton of coal in Council Bluffs?

602 A. Approximately 10,000 feet per ton.

17. What was the percentage of tar obtained per ton of coal at Council Bluffs?

Objected to by complainant as incompetent, immaterial and not cross examination.

A. 5 per cent.

18. What observation did you make of the plant in Springfield, Mo.?

A. I made the usual observations which an examining engineer would make; I cannot tell you the result of it without referring to my notes of the examination of the property and those notes are in my New York office.

19. You stated you were general manager of the American Light & Traction Co.—where are the offices of that company?

A. 40 Wall street, New York.

21. Do they control or are they interested in any other plants than those that have been designated by you?

A. No sir.

22. In your statement as to the size of the city of Peoria, you stated it was about 8,000 feet along the river and about 8,000 feet from the river?

A. Yes sir.

23. In making your estimate as to the cost of gas, did you consider that the city was of that size?

A. Yes sir.

24. When you estimated the cost of gas to consumers, excluding depreciation to the plant and not taking into consideration the value of the residuals or interest upon the investment, what did you consider to be the value of the mains laid in the city of Peoria?

A. I did not take their value into consideration because it
603 had nothing to do with the cost of supplying the consumer with gas if no interest was to be allowed.

25. Upon what did you base that estimate?

A. I based that estimate on the cost of materials as given me in the former question and my knowledge of the yield which would be obtained from a given amount of material and a given amount of work.

26. Then in making that estimate you made it merely from the cost of labor and materials that entered into the making of the gas irrespective of the cost of the plant, the mains, the services and meters, did you?

A. Yes, irrespective of the cost but not irrespective of the character.

27. What do you mean by the character?

A. The cost of the property has nothing to do with the operating expenses if you exclude interest, but the character of the plant alone fixes what the cost will be.

28. What do you mean by saying the character of the plant fixes what the cost will be?

A. If the plant is well constructed you can do economical work, if it is poorly constructed you cannot do economical work. This particular plant is well constructed.

28. Then you merely take into consideration the fact that this plant is so constructed as to do economical work and you only take into consideration the labor and materials that go to make up the manufacture of that gas in arriving at your estimate?

A. I took the character of the plant, the cost of materials and the cost of labor to determine the cost of manufacture, distribution and sale of the gas; you have got something besides the cost of manufacture to figure there; you must distribute your gas sell it and collect for it.

604 29. What did you estimate then the cost for the distribution of gas in the city of Peoria to be—the cost of labor for the distribution?

A. I estimated the cost of the clerical labor and all labor connected with the distribution and sale of the gas including taxes and office rent at 56 cents per thousand cubic feet on an output of fifty millions per year.

30. What did you estimate the office expenses of the Peoria Gas & Electric Co. to be?

A. I have not separated my office expenses from those expenses which are indirectly related to the office expenses; I have run sales, collection, reading meters and everything into the same account.

31. How many men did you consider were necessary for the Peoria Gas & Electric Co. to employ for the purpose of distributing this gas in the city of Peoria in making up your estimate on the basis of an output of 50,000,000 cubic feet per year.

A. You will have to give me time to figure that because I have not got that with me; I have the cost only. (Witness figuring) I cannot give you that because I have not figured it out that way; I allow, for instance, 200 meters at a cost of reading $3. per day or at a cost of reading meters at 1½ cents per meter; I have not figured it out on the basis of the number of men at any time.

32. How many men would it require to read 200 meters?

A. It would require one man one day.

33. What other labor is attached to the distribution of gas in the city of Peoria?

A. Well, you must read your meter, deliver your bills, collect your money either by having people call at the office and give it to the clerk or by sending out a collector for it; you must have some one to devote all or part of their time to the keeping
605 of the records of services and meters; you must have some one devote all their time or part of their time to complaints, which in Peoria I think would take one man at least all of his time; you must have clerks to keep your office records—and I assume they have not less than three thousand open accounts on their books here; the bills must be made out, a certain amount of soliciting must be done to maintain their business; you must have a superintendent of distribution; you must have a manager; it is customary to do some advertising; you generally have not only your manager's salary to pay, but as a rule, the directors receive an allow-

ance; you must have men to repair meters, to set and remove meters; you have certain legal expenses and certain bad debts. Those items I estimate on an output of fifty million cubic feet a year would amount to not less than 56 cents per thousand cubic feet of gas sold—no, I have made a mistake in that estimate and will have to correct it. I estimate the cost of distributing and selling gas at 34 cents per thousand cubic feet; in my former estimate I estimated the cost, exclusive of residuals, at 90 29/100 cents and allowing for residuals, which I estimate would be worth 22 cents it brings the cost of gas to 68 29/100 cents, 34 cents of which is for expense of distribution and sale and 34 cents is for expense of manufacture. When Mr. Mansfield asked me about the amount of expense for distribution and sale I deducted from the 90 29/100c. my entire cost of manufacture, which I estimated at 34 cents, and this left 56 29/100 cents; this I recognized to be too large an item for distribution and sale and I found I had arrived at it by deducting the cost of manufacture from the total amount and had neglected to give credit for my estimate of the value of residuals.

34. What did gas sell for per thousand cubic feet in Columbus, Ohio, at the time you were connected with those works?

606 Mr. IRWIN: The complainant objects to the question as incompetent, immaterial, not cross examination, and because no foundation was laid for it on direct examination.

Mr. MANSFIELD: This is a matter that anybody connected with a gas works must know and I think I have a right to ask the witness this question or any other question that concerns his connection with the gas plant in order to find out whether he knows it or not. Suppose a witness comes here and says; Yes I was connected with that gas plant for 20 years and answers a lot of questions on direct examination, passing himself off as an expert, and then if on cross examination I am not allowed to go into that matter, how can I determine whether he is an expert or not?

The MASTER: As I have said before, Mr. Mansfield, I think you have a perfect right on cross examination to ascertain the qualifications of this witness as an expert and to show to what extent he has been connected with and in what manner the different plants he has testified about as tending to prove his expert knowledge upon these matters; but as to what the price of gas may be in St. Louis or any other city it does not seem to the master to be a pertinent inquiry on cross examination; I do not mean to be understood as saying but what when you come to your side of the case you would have a perfect right to show all these facts by showing other matters in connection with them, but on cross examination of this witness your question does not seem to the master to be proper cross examination.

Mr. MANSFIELD: This witness will have to go to Chicago then and go before the court before I finish my cross examination.

Mr. IRWIN: That is all right; when you get ready we will go with you.

water, removing the tar and removing the sulphur; it is then measured and stored; that in general describes it.

10. Have you examined the plant of the Peoria Gas & Electric Co. in the city of Peoria?

A. I have examined it in a sense; I went over the plant this morning and saw the class of apparatus used and made a thorough visual examination.

11. Look at Exhibit "1" now shown you, which purports to be the general plan of the plant of the Peoria Gas & Electric Co., and I will ask you to state if in your judgment it is a fair repre-
585 sentation of the plant of the Peoria Gas & Electric Co. in the city of Peoria, Ill., as seen and examined by you.

A. I should say that is the exact plant; it is apparently the exact plant.

12. State what is your judgment, from your examination of the plant and reference to Exhibit "1," as to the character of the *paint* of the Peoria Gas & Electric Co. in the city of Peoria.

A. Well, it is a straight coal gas plant of modern construction and is in good condition.

13. I will ask you what is your judgment of the plant as to its efficiency and capability for the manufacture of coal gas economically?

A. Well, coal gas can be manufactured as cheaply in that plant as in any coal gas plant of its size with which I am familiar.

14. Are you acquainted with the location, size and topography of the city of Peoria?

A. In a general way, only.

15. Just describe the city of Peoria with reference to the location of the plant of the Peoria Gas & Electric Co. as it now occurs to you.

A. As I remember the town, it stretches along the river for a distance, I should say, of 8 or 9 thousand feet and extends back I don't know whether it is directly north or a little west of north for a similar distance.

16. Westerly, I suppose, would cover it?

A. Well, I could not tell but the country rises from the river over to the residence portion.

17. About how far?

A. I should say about 8000 feet.

586 18. Do you know how many inhabitants about there are in the city of Peoria?

A. I was familiar with the United States census of Peoria and since I came here I have been given to understand that the city has a population of 60,000—more than 60,000 people.

19. I will ask you what in your judgment is the size and character of the plant of the Peoria Gas & Electric Co. as adapted to the city of Peoria, its location and size?

A. The plant is well located, both for the distribution of gas and its economical manufacture; the size of the plant, I would say, was insufficient now to supply the entire city of Peoria, if that is what

you mean; the character of the plant, I think, is a proper selection for this locality, that is, the selection of the apparatus used, the location and everything of that sort has been judiciously made.

20. Assuming that the city of Peoria is located and of the size as described by you in your previous answers; and assuming that gas coal could be delivered at the plant at the rate of $2.80 per ton, that stokers could be employed at $65.00 per month, head stoker at $70. per month, that common labor could be employed at $1.50 per day, that there was a local market for coke at the rate of $3.25 per ton, that the tar bi-product could be sold at 5 cents per gallon, that the ammonia bi-product could be sold at 8 cents per pound, that cannel coal for enriching could be bought for $3.00 per ton, that gas oil for making water gas could be bought at 3¾ cents per gallon, that coke for the making of water gas could be bought at $4.00 per ton and that the company was not bound by any requirement as to candle power of gas to be furnished consumers; which in your judgment would be the best and proper business venture, to construct a coal gas plant or a water gas plant, assuming that the
587 conditions as named existed in the spring of 1900 and prior thereto, and that the plant of the Peoria Gas & Electric Co. was constructed during the year preceding September 1, 1900?

Objected to by defendant as immaterial, incompetent and irrelevant.

A. You want to know which would be the best selection, coal or water gas?

21. Yes.

A. You have not given me one important item—how much gas do you send out?

22. Of a plant with a capacity of 500,000 cubic feet per day.

A. Without hesitation with an output of 500,000 cubic feet I should say coal gas.

23. Why would you advise the construction of a coal gas plant at that time and under the conditions named?

A. First with a make of 500,000 cubic feet a day coal gas could be manufactured cheaper; second, coal gas as a rule is more desirable; third, no time contract can ever be made for gas oil and you are virtually at the mercy of the Standard Oil Co. if you decide on a water gas plant; it is not likely oil will go lower than the price you have given me and it is entirely probable that it may double.

24. From your knowledge of the city of Peoria and the plant of the Peoria Gas & Electric Co., and assuming that said plant was constructed during the year preceding September 1, 1900, at a total cost for said plant, including the real estate, main system, services, meters and all other equipments connected therewith, of $434,000; and assuming further that upon the first day of September, 1900, said gas plant was in operation and had been for a period of four months and was then manufacturing and delivering to con-
588 sumers at the rate of fifty million cubic feet of gas per annum; and assuming further that the wages of stokers and

common labor were as before stated; what in your judgment would be the actual cost per thousand feet of gas manufactured by the Peoria Gas & Electric Company as delivered to consumers at the place of consumption on that date?

A. Well, now, leakage is to be assumed; you gave me some figures a few moments ago which I wrote down; I had already made a computation of the cost of gas on those same figures with the exception I figured stokers at $60.00 per month instead of $65. per month. Without stopping to go over that computation and correct that small error, which is not large, I would compute the cost of gas—did you say without residuals?

25. Excluding in your estimate of the cost any interest on the investment or depreciation on the plant, and excluding any account to be taken for residuals, leaving out any account of those three items.

A. (Witness referring to notes) Computed on the basis of $60. per month for stokers instead of $65. I figure it at 90 29/100 cents per thousand cubic feet on a make of 50,000,000 per year.

26. From your knowledge and information of the plant of the Peoria Gas & Electric Co., and assuming that the real estate upon which the same is situate was worth at its fair market value the sum of $50,000; and assuming that on September 1, 1900, the said plant had a main system laid through the principal streets of the city of Peoria of a length of about 26½ miles, consisting of 16, 12, 10, 8, 6, 4, and 2 inch mains, and that it had also connected with its mains on that date 2426 services and had 1758 meters set complete in the premises of consumers, and taking into consideration in your estimate the character and equipment of said plant as you
589 found the same on your examination; what in your judgment would be the fair market value of said plant complete on or about the first of September, 1900?

Objected to by defendant as immaterial, incompetent, and because no proper qualification of the witness is shown.

A. I will not make any attempt to value the plant in detail, but roughly, a gas plant with the proper mains, services, meters, etc., will cost to build about $1. per cubic foot capacity per day; the plant of complainant is well constructed, substantially constructed, and I think that estimate would, in a general way, represent its value, but it would take more time to compute the value than I can spend on it.

27. Your estimate would be substantially $500,000.?

A. Yes sir.

28. What elements enter into the depreciation of a gas plant and how do they act or effect the plant?

A. The greatest factor in depreciation of a gas plant is probably antiquation of apparatus, that is, much of the apparatus used in a gas works is apt to be rendered useless before its natural rate of

depreciation, or life, is ended. The natural wear and tear—interrupted.

(The MASTER:)

29. What do you mean by antiquation?

A. By antiquation I mean you may buy a piece of apparatus now which might reasonably be expected to have a life of 20 years but it may become too small for use, or owing to a change in the process, it may no longer be advisable to use that piece of apparatus and it has to be junked; that is probably the most serious feature in the estimate of a gas plant to outgrow everything, and to put your apparatus in large enough in advance would be practically impossible because interest on the additional investment would
590 more than eat up the cost of throwing that apparatus away in five or ten years; compounding money only takes about 10 years to equal itself. Now there is practically no portion of your gas works which may not become antiquated through a change in process or the growth of your business; that is essentially so of your condensing, scrubbing and purifying apparatus, also your exhausters, station meter and mains. I venture to say there is not a station meter which was bought ten years ago that is large enough to do its work and it has been either entirely discarded or supplemented and it is generally cheaper to discard them. That is one factor of depreciation. Another ordinary factor of depreciation is the natural wear and tear which is large on certain classes of apparatus used around a gas works; there is a constant atmosphere of sulphurous acid S. O. 3 which will attack iron work; you have ammonia around the gas plant which will always attack metal work, particularly brass, and then a great deal of your apparatus is exposed to the weather—it must necessarily be exposed to the weather; then you have the depreciation which comes from hazard; you hope everything will run smooth, but you may have accidents or explosions; explosions in gas works are not common, but they are not unusual, and a conservative gas man would feel like allowing for them; then there is the further depreciation which may result from competition; owing to competition you may have had at one time more business than you have afterwards; then the additional portion of your plant which you put in has practically been rendered useless because you have no work for it to do and it is of no more value to you than so much junk.

(Mr. IRWIN:)

30. Is there any depreciation to the mains, services and meters?

A. Yes sir, there is a considerable depreciation in services;
591 service pipe in some soils may not last to exceed three years; the average ordinary life of a service pipe I should say would be 10 years.

31. Is there any depreciation to the benches and retorts by reason of use?

A. Well, the setting of retorts will last from two to three years; a furnace will last from 6 to 10 years; an arch will last from 10 to 15 years.

32. Is there any depreciation to the holder?

A. The depreciation to the holder is generally due to natural causes and the rapidity of it will depend on the attention it receives; I know of very few holders that are of any great age, yet on the other hand there are some that are in good condition that have been up for 10 or 15 years. I estimate the life of a holder at from 15 to 20 years.

33. Is there any depreciation to the boilers and engines?

A. Yes sir, the depreciation to engines in a gas works is very rapid; ordinarily engines are only used 10 hours per day but a gas works engine is used generally 24 hours per day; an engine might last a long time but I doubt if it pays to use any of the engines longer than 8 to 10 years; boilers depreciate rapidly if they are pushed hard; as a rule the insurance companies don't care to insure on them after they have been in use 10 or 12 years—you generally find it advantageous to renew them.

34. Is there any depreciation to the iron or steel smoke stack?

A. Yes sir, the depreciation to the iron or steel smoke stack would in some cases be rapid; it depends a good deal on what kind of coal is used; I should say the fair average life of a stack would be 10 years, and probably not that high.

35. You have seen the holder of the Peoria Gas & Electric——

592 A. Yes sir.

36. Will you describe its construction so far as you now remember?

A. I will change the name of that to gasometer to distinguish its two parts; the tank is a steel tank which contains water to within a short distance of the top, the holder is, I think, a two lift holder and this portion contains the gas; the tank is constructed of mild sheet steel which would vary in thickness from about one inch plates on the bottom sheet to ¼ inch plates at the top; the holder is also constructed of mild steel and is like an inverted cup; the thickness of the holder plate is probably about 2/16 of an inch and the weight of the entire holder is probably equal to about 3 ounces per square inch; it therefore exerts a pressure on the gas at all times of about 3 ounces per square inch and you pump the gas in against this pressure and it delivers it to the city, or to the governor, which further controls the pressure, at this pressure the quantity of gas contained in the holder will affect the height.

37. Is there any depreciation in your judgment resulting to meters of a gas company in constant use?

A. Yes sir, there is a depreciation and there is also an item of repairs; meters are generally repaired every three years and their life would be from 12 to 25 years.

38. Will you distinguish and illustrate, so far as you can, what

you term as depreciation as distinguished from repairs in the management of a gas business?

A. There is no exact line of distinction between repairs and depreciation, although there are some repairs which are distinctively repairs and there are other items of depreciation which are distinctively depreciation and no one would confuse them; every
593 three years we have to overhaul meters, and fixing the meters up, repacking their glands, putting in new diaphragms and reseating the valves I would consider repairs, but the time comes when a meter no longer will stand repairs and you have to throw it away because it becomes so generally out of repair that the repairs would cost as much, or nearly as much, as a new meter and you would not have a meter as good as a new meter after you repaired it; that I would call depreciation.

39. How is that with respect to other parts of a gas plant?

A. If a main gets to leaking a little, we repair it and charge it to repairs, but there comes a time when the main will be too small or becomes so leaky that it does not pay to repair it, and as a rule we then abandon it, lay another main down the street and tap the services on to the new main, disconnecting them from the old main, then cut the old main off and probably leave it in the ground unless it is very easily removed, because it has no value except for junk.

40. As I understand you, when you simply have a crack, leak or break in a pipe, you call that repairs?

A. Yes, but when we make something new we call that a depreciation charge.

41. How is that with reference to engines, pumps, benches, retorts, etc.?

A. That same thing is true straight through although I am inclined to think that most of the pumps, engines, benches and hydraulic main have been thrown away, not because they were worn out, but because they have become inadequate, they were either too small or were not adapted to the work required of them. For instance, all of our old hydraulic mains were not adapted to the high heat we now carry and we find it more economical to discard the main and buy a new one than to maintain low heat such as prevailed
594 15 years ago.

42. If a gas plant is at all times kept in good, general repair by reason of the repairs mentioned, would the plant necessarily depreciate so that in time it would become substantially worthless for the work required of it.

A. Ordinarily yes, in some special cases no. I can see how you would tear down one part of a plant and renew it and your plant never would become obsolete because it has been rebuilt by sections from time to time.

43. Should this element of depreciation mentioned by you in your judgment be taken into consideration in determining the cost of gas as manufactured and sold to consumers by a gas company?

A. It has to be taken into consideration in some way.

616 A. I did not use the cost of the plant at all because the question given me was the cost exclusive of interest and there being no interest to be included there was no reason for knowing the investment.

76. Then in your estimate you did not assume that the Peoria Gas & Electric Company's plant was worth $434,000. as asked you by counsel for complainant?

A. I would not consider that figure out of the way.

77. Just answer the question yes or no.

A. I cannot answer it yes or no, because you put it in such a way that if I answer it one way I contradict myself.

78. I will repeat the question (interrogatory 76 repeated).

Objected to by complainant as immaterial, incompetent, and involving an assumption to the witness of the cost of the plant which was not made a part of the direct interrogatory relating to the cost of the gas.

The MASTER: The master is of the opinion the question has already been answered but the witness may answer it again subject to the objection.

A. Counsel for complainant asked me if I estimated the worth of the plant and I replied no, except in a general way; I said I applied the rule that a gas plant would cost $1.00 per cubic foot capacity per day and on that estimate it would make the value of the plant together with meters, services and mains $500,000.

79. In estimating the cost of the plant, would you estimate an increase of $1.00 for every 1000 cubic feet of gas manufactured?

A. Roughly I would estimate $1.00 for each cubic foot of daily capacity, that is, not 1,000 cubic feet.

80. For each cubic foot?

A. For each cubic foot of daily capacity.

617 81. You are not acquainted with the general conditions as to the cost of labor and materials in the city of Peoria, are you?

A. Except as given me by counsel on direct examination, and on which I based my figures and the assumptions were sufficient for the estimate I made.

82. In the manufacture of fifty millions cubic feet per year, what would be the cost of the common labor that enters into the manufacture of that amount of gas per year?

A. When you say common labor—Interrupted.

83. I mean labor that is paid for at the rate of $1.50 per day?

A. About 4 men of that class would have to be continuously employed around a gas plant, the balance would be higher priced labor.

84. What would be the occupation of those four men?

A. Handling coke, handling purifying material and firing boilers.

85. How many stokers would be required for the manufacture of that amount of gas?

A. Five as these works are laid out, that is 4 stokers, one head stoker and the furnace man; it depends upon how you class them.

86. What are the duties of the furnace man?

A. I will have to change my last answer and say 6 stokers; a furnace man quenches the coke, removes it from the retort house and operates the furnace except the firing of them and including the clinkering of them.

87. What are the duties of the stokers?

A. The stokers charge and draw the retorts; charge the furnaces, keep the standpipes clean and keep the hydraulic main free of tar.

618 88. Do they supervise and regulate the quantity of heat?

A. The furnace man is supposed to keep the heat up on the furnaces; he generally has direct charge of that work.

89. Does it require an expert knowledge to do that?

A. An expert in a sense; a man can be taught to do it who can read or write; it really requires training, not expert knowledge.

90. What did you estimate the wages of the furnace man at?

A. I rated all the furnace men as stokers as it is customary to pay furnace men the same salary as stokers.

91. How many furnace men did you estimate would be necessary to manufacture that amount of gas?

A. I estimated for retort house labor there would be required 4 stokers and two furnace men, or 6 stokers including a head stoker.

92. How many retorts would it be necessary to keep heated for the purpose of manufacturing fifty million cubic feet of gas per year by a plant similar to the Peoria Gas & Electric Company's plant as shown by Exhibit "1"?

A. The biggest part of the year it would require that three benches be kept under fire and possibly they would have to be kept under fire for the entire year—probably only two for the biggest part of the year, but for all of the winter months it would require three to be kept under fire.

93. Then, if you had 6 stokers and one head stoker you would have them all employed in and about those two benches during the process of the manufacturing of the gas?

A. Yes sir.

94. Then sometimes you would have two stokers employed in the superintendence and operation of one bench of retorts, would you?

A. No sir, I don't think at any time the gas could be sup-

619 plied from one bench.

95. You testified there would be 6 stokers and one head stoker, didn't you?

A. Six stokers and one head stoker amounts to 2 stokers and one furnace man on each shift.

96. In your assumption that there are 200 meters in the city of Peoria, what length of time would it take for a clerk to prepare bills for the various customers in the city of Peoria?

A. I did not assume there were 200 meters, I assumed there were

about 1700 meters, and in my estimate of cost of reading I assumed a cost of 1½ cents per meter; a clerk can take care of about 1800 accounts per month, entering them on a register and make out the customers' bills.

97. Would it take any longer to distribute the bills than it would to read the meters?

A. It does not take as long to distribute the bills.

98. How many men do you consider would be necessary to compose the office force of the Peoria Gas & Electric Co. and do the business of that company upon the basis of the manufacture of fifty million cubic feet of gas per year?

A. Do you want me to include the manager, the financial officer, the solicitors and complain- men?

99. I want you to state how much the office force would be.

A. Does a manager belong to the office or to something else, and does a solicitor belong to the office force. If I knew what you want I could give it to you.

100. You know with what department those people are classed generally in a gas business, don't you?

A. Yes, but the classification is not uniform.

101. Well, answer it then according to your best knowledge.

620 A. Including the manager, complaint men, solicitors, secretary and meter readers, about 12 people in all would be an average working force.

102. How many men would you consider it was necessary for the Peoria Gas & Electric Co. to have to answer complaints, or to attend to complaints, taking into consideration the fact that the plant was finished in September 1900?

A. For that period, I think the larger part of two men's time would be employed in complaints and gratuitous work.

103. What do you mean by gratuitous work?

A. Work which may not necessarily be complaint work, but work in the interest of giving customers better service, such as voluntarily cleaning out burners, putting on new tips, and doing odd jobs of piping or repairs to piping that a gas company is not legally responsible for.

104. Is it customary for gas companies to do work they are not legally responsible for unless they get a return from it?

A. Yes sir, it has been within the last few years; we have all turned merchants lately.

105. You have testified that taking into consideration the hazards of the business you thought investors should receive, as a return upon the money invested, not less than 12 per cent.—state what you mean by that?

A. Well, I don't know how to state what I mean other than to say I would not want to put my money into any kind of a quasi public corporation unless I thought I could make 12 per cent. on it as long as I could get 5 or 6 per cent. on mortgages where I took no risk.

106. Upon what do you estimate that 12 per cent.?

A. On the actual money invested in the business.

621 107. In calculating 12 per cent. upon the actual money invested in the business do you take into consideration the amount of money expended from year to year for betterments to the plant?

A. Partially only.

108. To what extent?

A. Any betterments in excess of 5 per cent., feeling it is necessary to put 5 per cent. back into the property to counteract the depreciation which is constantly going on.

109. What do you mean by your statement that the greatest hazard a quasi public corporation sustains is through municipal legislation?

A. Restrictions are often placed on the operation of quasi public corporations which if sustained by the court would be practically a confiscation of their property.

110. What per cent. of the 12 per cent. which you allow to investors on account of the hazards of the business, would be represented by the hazard sustained through municipal legislation?

A. I could not place a definite amount on that one hazard alone and besides I referred in direct examination to both State and municipal legislation; I would assume that the hazards which any investor must expect when putting his money into a quasi public corporation are such that he should have at least a double return on his money than he could get from loaning it on real estate.

(The MASTER:)

111. Do you include in that the 5 per cent. for depreciation or exclude it?

A. I exclude it. I would like to add to my answer and say that I do not necessarily mean the property must earn that 12 per cent. but unless a man has a reasonable assurance he will get a 12 per cent. return on his investment he is not warranted in taking the risk of investing in this class of business.

(Mr. MANSFIELD:)

622 112. In making your estimate as to the cost of gas, exclusive of the value of residuals, depreciation in the plant and interest on the investment, at 90 29/100 cents per thousand cubic feet, would the value of the residuals amount to 10 per cent. of the cost of the plant of the Peoria Gas & Electric Company?

A. No, they would not amount to that much.

113. What would be the cost of the gas to consumers taking into consideration 10 per cent. upon the investment, also 6 per cent. for depreciation, deducting therefrom the value of the residuals, taking into consideration that the amount of gas manufactured by the Peoria Gas & Electric Co. is fifty million cubic feet per year and assuming that the cost of the plant was approximately $434,000.

Objected to by complainant as incompetent, immaterial, and simply calling for a mathematical calculation which the witness is not required to figure out, not calling for any expert knowledge.

A. About $2.07 per thousand cubic feet.

114. Were an electric light plant a part of the business of a corporation or individual who owned a gas plant, would you then take into consideration the competition resulting from electric lighting in considering the hazard connected with the gas business?

A. Yes sir, I would, whatever renders your gas investment useless to you makes it of no value and you cannot take care of those customers in your gas department that go out and buy new machinery of an entirely different type from that contained in your gas plant.

115. Would it be necessary under those circumstances to employ the same number of men for the purpose of soliciting and would it require the expenditure of as much money for the purpose of doing the business as it would were there not an electric plant connected with the gas plant?

A. I should think it would require as much as the gas
623 companies now are continually losing gas consumption and they are trying to make it up in a different field—in the field of fuel gas.

116. Then the fact that there was an electric plant owned and controlled by the same corporation or individual as the gas plant was, would make no difference in the cost of the manufacture of gas in your opinion?

A. It would make a difference in the cost at the consumers' burners, but it would not in the two items you mention, viz: advertising and soliciting. Undoubtedly the same company can operate a gas and electric light plant more economically than they can be operated by two separate companies, but the saving will not come in where you look for it; the saving would come in in the management, combined office rent and a lesser amount of bad bills; in some cases by a consolidation of attendants such as complaint work, necessary telephoning, and you can read meters more cheaply the more frequently they occur and if the same man read both the gas and electric meters something could be saved there.

Re-direct interrogatories by Mr. IRWIN:

1. You mentioned something about candle power in your cross-examination. I will ask if the candle power of coal gas deviates or changes in any manner from the time it is manufactured in the plant, between that and the consumers' burner?

A. Well, theoretically it depreciates some; practically it does not depreciate to amount to anything except in extreme cases where nap-thaline is thrown down or something of that sort.

2. Does not the temperature have considerable to do with the candle power of coal gas?

A. It does not have considerable to do with it but it has some to do with it.

624 3. Well, a coal gas manufactured of a uniform 18 candle power, for instance, at the works, and delivered at the extreme distance in a city, does the candle power not decrease in the transmission of the gas to consumers?

A. It does not decrease enough so the average—you could measure the difference with the most delicate instrument in any distance you have got here.

4. The depreciation, as I understand you, does not affect the candle power of the gas for general use?

A. Practically it does not affect it.

5. Is it practicable to determine the candle power at the place of consumption?

A. Well, it is seldom or never done, but it could be done; we think we are pretty lucky when we get within a per cent. of it, at least I do; practically you may say there is no depreciation in transmission.

Interrogatories by Mr. ABBOTT:

6. In the course of your direct examination, you estimated the size of the city of Peoria from your observation of it to be about from 8,000 to 10,000 feet long along the river and extending for a similar distance back from the river; then on certain assumptions being given you as to the cost of labor and materials entering into the manufacture of gas, you made an estimate of its cost. On your cross examination you were asked if your estimate was based on the size of the city as assumed by you. Suppose now the facts to be that the city extends up and down the river for a distance of 4½ to 5 miles, but that the remaining assumptions as to the population, cost of labor and material remain the same, would that make any difference in your opinion in the cost of the manufacture of gas?

A. Well, it would make very little difference in the cost of
625 manufacture if you exclude interest, but it would make a difference in the investment.

7. I was going to come to that. If the area were increased to that extent, would not that result in a corresponding increase in the amount of investment through the increased length of mains, etc.?

A. I would not say exactly corresponding but it would cause an increased investment.

8. Assuming the population to be as stated, and that the city extended up and down the river say about 4½ to 5 miles, it would necessitate a greater length of mains and a greater length of time would be required, of course, to do the necessary traveling for the reading of meters; would the effect of that be to increase or diminish the cost of distribution?

A. The effect would be to slightly increase it but that increase would be slight.

9. In your judgment as a practical gas man are the solicitors, meter readers, complaint men and men whose business it is to interest themselves generally in giving better service to consumers, a necessary part of the clerical force of a modern, well equipped office of a gas plant, whose wage or salary should be included in determining the cost of gas to consumers?

A. Yes sir, I think so.

Adjourned by agreement until Monday, January 6, 1902, at 1:30 p. m.

626 United States court room, Government building.

PEORIA, ILL., MONDAY, *January* 6, 1902—1:30 p. m.

Parties met pursuant to adjournment.

Present same as before.

DONALD MCDONALD, called on behalf of complainant, being first duly sworn, deposes and says:

Direct interrogatories by Mr. W. T. ABBOTT:

1. Please state your name, age and residence?

A. Donald McDonald; 43; Louisville, Ky.

2. In what business are you engaged?

A. Gas business.

3. With what company are you connected in Louisville?

A. The Kentucky Heating Co.

4. Does that company operate a gas plant?

A. Yes sir.

5. How long and in what different capacities have you been engaged in the gas business?

A. I have been in it 12 years; I was first superintendent, then chief engineer, then president of the company I am now connected with.

6. Are you familiar with the business of the manufacture and sale of gas?

A. Yes sir.

7. Are you familiar with the different processes entering into the manufacture and sale of gas?

A. Yes sir.

8. In connection with that business, or in any capacity, have you had to do in a general way with the construction of brick and iron and wooden buildings?

A. Yes sir, I have had a great deal to do with the construction of buildings and gas plants; all of the works of the company
627 with which I am connected I planned and built; I never assisted in the building of any other plant except that one

but have watched the construction of other plants and kept myself familiar with them.

9. Are you familiar in a general way with gas plants other than the one with which you have been particularly connected, and if so, what plants?

A. I have made it my business to go through and look at the plants in the various cities where I have been on other business; I have examined the plant at Cincinnati, the one at Boston, at Terre Haute, Ind., at Columbus, Ohio, at Chicago, Ill., and some others I don't think of just now.

10. Have you examined the plant of the Peoria Gas & Electric Co. in the city of Peoria?

A. I examined it this morning.

11. Describe that plant in a general way as it appeared to you in the course of your examination?

A. It consists of a stack of retorts in a large two story fire proof building, fire proof roof and fire proof flues; near that is a building containing the exhauster, the tar extractor, condensers, scrubbers and purifyers; outside is a 300,000 foot holder in a steel tank; then there are very large and well built sheds for coal and platform for the handling of coke.

12. Look at the plat now shown you marked Exhibit "1" in this case and state whether it is a fair representation of the plant of the Peoria Gas & Electric Co. which you have just described?

A. So far as a plant can be shown by a plan alone, this is a correct plan of those works; I mean by that it requires a plan elevation and sections to completely show a works.

13. Are you acquainted in a general way with the situation, location, size and improvements in the city of Peoria?

A. I made it my business this morning to ride over the
628 city on the street cars, as well as walk through a great many of the streets so as to get a general idea of the city; I am not familiar with the names of the streets, but with the character of the streets, the character of the houses with which they are built up and the general lay of the land I am familiar?

15. Are you familiar with the general cost of buildings, materials, machinery and apparatus going to make up a gas plant during the year preceding September 1, 1900?

Objected to by defendant as immaterial, incompetent, irrelevant, and not tending to prove the issues in the case unless confined to the cost of materials and labor in the city of Peoria?

A. I am familiar with the cost of nearly all of the elements going into the erection of a gas plant; when I say nearly all, I mean that the plant with which we operate is a water gas plant and after you pass the retorts, a water gas plant and a coal gas plant differs very little; I have never built retorts nor have I ever had active supervision in operating them.

16. In the question which I asked you a few minutes ago in

The MASTER: The master desires to be fair with you, Mr. Mansfield, and I will not exclude your question or rule upon its
607 competency; I am only stating to you how the master feels about it and I now say to the witness that he may answer subject to the objection.

Mr. MANSFIELD: I withdraw the question for the present.

35. You have stated you made an examination of the plant in Lincoln, Neb.—when did you make that examination?

A. I beg your pardon, I don't think I stated that except indirectly.

36. Upon what information or investigation did you refuse to have anything to do with the Lincoln gas plant until certain changes were made in that plant?

Mr. IRWIN: Complainant objects to the question as incompetent, immaterial, not cross examination and I state to the witness he may refuse to answer any question here that pertains to the private business affairs of any company with which he has had any connection or concerning which he has testified except the Peoria plant.

The MASTER: I think, Mr. Mansfield, you have a perfect right to ascertain how thoroughly the witness has gone into this matter to qualify him as an expert, not by ascertaining what the price of the gas is or what it is sold at necessarily, but you can ascertain to what extent he has made examination of the cost of manufacturing gas at different localities, the cost of gas plants, their operation, etc., and thus test his knowledge as an expert. I don't think it proves whether a man is an expert or not to ask him what the price of gas is in a certain city. In other words, I think your cross examination ought to be confined to matters brought out in chief.

Mr. MANSFIELD: I did draw out the fact he had examined that plant in Lincoln, Neb., and had been connected with it.

The MASTER: I think you have a right to find out how thor-
608 oughly he examined it and all other plants he mentioned, as that goes to the direct question of his expert knowledge.

Mr. MANSFIELD: That is what I am trying to find out and that is what my question is asked for but will withdraw it for the present.

37. What kind of an investigation did you make of the Lincoln gas plant when you were out there last July?

A. I made a visual examination of the apparatus and of the records.

38. What do you mean by the apparatus?

A. The coal gas benches or water gas generator, the exhauster and purifying boxes, center seal and the holder.

39. By visual examination do you mean you made the same kind of an examination of the Lincoln gas plant that you made of the Peoria Gas & Electric Co.'s plant?

A. I made the same kind of an examination, differing only in degree.

40. When did you arrive in the city of Peoria today?
A. About 6:55 this morning.
41. Whom did you see in the city of Peoria when you first came
ere?
A. Well I saw the usual people a man would, the bus men and
e hotel men.
42. After that, who did you see connected with this case?
A. The first man I saw that was connected with the Peoria Gas
Electric Co. was a young man in their office whose name I did
t learn; I got directions from him as to the location of the gas
orks of the company and visited the gas works arriving there
out 7:45 this morning.
43. Who did you go down there with, if any one?
A. I went down alone and Mr. Little came down, I should say,
about half past 8.
9 44. How long were you down there at that plant?
A. I am not sure but am inclined to think I was there
om 7:45 until 9:45 a. m.
45. State what you did while down there?
A. When I arrived there, I got a plan of the gas works and studied
fixing in my mind in a general way the size of the different
uildings and apparatus, the size of the holder, the size and location
the exhausters, condensers, and in fact all of the apparatus neces-
ry for the manufacture of gas.
46. How long did it take you to examine that plant?
A. I spent about ¾ of an hour on an examination of the plant and
studying the location, the reasons for so locating it, and the
easons for so planning the works as I found them laid out on that
lan.
47. Where did you go after leaving there?
A. I went from there to the office of the Peoria Gas & Electric
o. to examine their maps of mains and plats and other records per-
aining to the system of the company.
48. How long did you stay there?
A. I don't know how long I did stay there; I did enough work
have stayed there for an hour and a half I should say.
49. Where did you go then?
A. From there I went to the office of Judge Irwin.
50. What time did you get there?
A. I don't know but it was before 12 o'clock; I should say it was
etween 11:30 and 12 o'clock.
51. What time did you go up to the Peoria Gas & Electric Com-
any's place of business the last time this morning?
A. I should say I got there about 10 o'clock or between 9:45 and
0 o'clock.
52. You have within your knowledge, then, the same
10 foundations to give evidence as to the apparatus contained
in the plant at Lincoln, Neb. as you have to give evidence of

the apparatus contained in the plant of the Peoria Gas & Electric Co., have you not?

Objected to by complainant as incompetent, immaterial, and not cross examination.

A. Yes sir.

53. From your inspection of the Lincoln gas plant, describe what kind of a plant it is?

Objected to by complainant same grounds.

A. The gas plant at Lincoln contains either 6 or 7 benches of Mitchell furnaces built by the Laclede Fire Brick Co. of St. Louis, Mo. It also contains a water gas generator of the Springer type which was not built by any regularly organized company and therefore is slightly different than any standard piece of apparatus; it contains 4 purifying boxes approximately 20 feet square; a relief holder of about 60,000 cubic feet capacity and a storage holder of about 200,000 cubic feet capacity.

54. How old, in your opinion, were the boilers and engines used in the Lincoln gas plant at the time you made your investigation?

Objected to by complainant same grounds as before.

A. Two of the boilers were 1 year old; two were 8 years old, which I have since ordered shut down and thrown out; two other boilers are 8 years old also and will no longer stand rigid inspection by the insurance companies; they have cut us down to 80 pounds pressure and I have given instructions that those boilers shall be displaced as soon as the load is sufficiently light to warrant their displacement, which will be about in May of this year.

55. Where do you obtain the water in Lincoln, Neb., that you use in the boilers?

A. From a well on the premises.

611 56. What kind of water is it—what is it impregnated with if anything?

Objected to by complainant as incompetent, immaterial, and not cross examination.

A. The water is slightly impregnated with magnesia and lime, containing, I think, about 15 grains of solid matter per gallon.

57. What is the effect of water of that kind and character in contra distinction with water used by the Peoria Gas & Electric Co. in their boilers at Peoria?

A. I don't think the water would very greatly vary in amount of solid matter contained, but don't know the nature of the solid material contained in the water in Peoria; it is probably of the same general character, however.

58. Is there any salt in the water used in Lincoln, Neb.—impregnated with salt, I mean?

A. No, there is no salt of an appreciable amount.

59. When was the gas holder of the Lincoln gas plant erected, if you know?

A. I don't know.

60. Did you examine the records of the Lincoln Gas Company?

A. Yes, sir.

Mr. IRWIN: We object to that as incompetent, immaterial, and not cross examination.

The MASTER: The witness has already answered that he did.

61. From those records, what did you find the leakage to be in the distribution of gas through the mains in the city of Lincoln?

Mr. IRWIN: The complainant objects to that question on the same grounds.

The MASTER: I think it competent as cross examination; the witness testifies that that was one of the elements of cost in
612 the distribution of gas.

Mr. IRWIN: But the leakage at Lincoln would not necessarily be a type of the leakage in other places and I did not ask the witness about it on direct examination; if Mr. Mansfield wants to ask the witness where he got his knowledge about what the leakage is in the mains here, I don't object to it, but I object to his inquiring into the private business affairs of the Lincoln gas company or any other company for the reason that when you go into those business affairs it opens up the same investigation we have been making for the past two months with reference to the plant of complainant; we are trying this case on the issues in the city of Peoria and not upon what they might be in Lincoln or any other city.

Mr. MANSFIELD: Yet, you base the knowledge of your experts upon what there is in other cities.

Mr. IRWIN: The witness is here for cross examination on anything we have examined him about but I do not propose he shall be examined about things we have not brought out or examined about on direct examination.

The MASTER: I think it is Mr. Mansfield's method or way of getting at how the witness determines what percentage of leakage should enter into the cost of the distribution of gas; it is true that the question might be put in a different way but I assume this is Mr. Mansfield's way of putting it and I think it competent cross examination for the purpose of determining what percentage of leakage he figures in the cost of distribution of gas.

Mr. IRWIN: When you go into that it means the character of the construction of the whole plant, how long everything has been there and also of the main system.

The MASTER: I can see where it leads to but I assume it is Mr. Mansfield's method of asking about those things; the master
613 cannot say what the next question will be or how far the investigation on that point will go, but the witness testified

that leakage was one of the matters that entered into the cost of distribution of gas.

Mr. IRWIN: Well, I will instruct the witness that he has the privilege of refusing to answer, if he desires.

A. I am perfectly willing to answer the question if I could but I cannot answer it because our station meter was out of order for a long time and we had only the records of our consumers' meters and nothing to compare it with; but the leakage is running at the rate of about 150,000 cubic feet per mile of main reduced to a 3 inch basis.

62. How many miles of mains are there in the city of Lincoln?

A. I have not my data at hand and I could not answer that.

63. How much on a rough estimate?

A. I would assume there was about 35 miles.

64. You say that there is 150,000 cubic feet of gas lost per mile of main by leakage on a 3 inch basis—what do you mean by a 3 inch basis?

A. That means that a mile of 12 inch pipe would be counted as 4 miles of 3 inch pipe.

(The MASTER:)

65. During what period of time do you fix that leakage?

Mr. MANSFIELD: Just wait a minute, if it please the master.

The MASTER: The master wants you to understand, and also counsel on the other side, that any question he deems material he will ask and I want to know for what time—interrupted.

Mr. MANSFIELD: Damn the time; I don't think the master or anybody else has a right to interrupt me when I am asking questions.

The MASTER: It is the master's right to get all the information he can that he deems pertinent in the case; that is the duty
614 of the master and counsel ought to understand it and I want to know for how long a period of time the witness fixes this leakage, whether it is for a year, a month or what?

The WITNESS: A year.

(Mr. MANSFIELD:)

66. Explain what you mean by a 3 inch basis.

A. I mean that a 12 inch pipe—or any sized pipe larger than 3 inches—has a larger area for leakage and it is therefore customary in the gas business to reduce all pipe to a 3 inch basis when figuring leakage.

67. In stating the number of miles of mains then, did you reduce all 12 inch mains there were to a 3 inch basis?

A. No sir, because I don't know the actual number of mains there and I don't know what it would be on a three inch basis.

68. Approximately, knowing the size of the Lincoln gas works and the amount of gas that is distributed to customers in the city of

Lincoln, how many miles of 12 inch main would you estimate there were in the city of Lincoln?

A. There might not be any 12 inch main in Lincoln but I am inclined to think it would approximate 35 miles of 6 inch main or reduced to a 3 inch basis it would approximate 70 miles of 3 inch main.

69. Then you would say there would be 10,500,000 cubic feet of gas wasted in Lincoln on account of leakage through its mains?

A. The figures stated for Lincoln I don't think are exactly out of the way, you must remember, though, that when you state leakage it includes all unaccounted for gas, and unaccounted for gas consists of three things which ordinarily go under the head of leakage: First, false registering of customers meters. Probably out of every 18 meters 17 register wrong against the company. Another factor in leakage is the condensation of vapor contained in the gas.

615 Another factor is a change in temperature, the gas is generally measured on the consumers' premises at a lower temperature and hence at a smaller volume than when measured at the works.

70. In making your estimate of the cost of gas at 90 29/100 cents delivered to consumers in the city of Peoria what did you estimate the candle power of that gas to be at the point of consumption?

A. 18 candle power.

71. It is practicable, is it to furnish gas to consumers at the point of consumption of an 18 candle power?

Objected to by complainant as incompetent, immaterial, not cross examination, and also because the question is not limited to coal gas.

The MASTER: I do not think it proper cross examination but the witness may answer subject to the objection.

A. Yes sir, it is practicable.

72. You mean taking into consideration the gas that is manufactured here in the city of Peoria, do you?

A. Yes sir.

73. Would there be any difference in the estimated cost of the gas were the candle power of that gas reduced?

A. No material reduction.

74. In your estimate of the cost of the Peoria Gas & Electric Company's plant, what did you estimate the size of the retort house to be?

A. I did not make any estimate of the size *fo* the retort house; I merely made observations to know whether it was of sufficient size for the proper operation of 7 benches of 9's which are contained therein and found that it was.

75. Upon what estimate of the cost of the Peoria Gas & Electric Company's plant did you estimate the cost of the gas delivered to consumers?

low candle power gives a better light through the incandescent burner than high candle power and also gives better satisfaction in the various heating and cooking fixtures for the reason it is not so apt to throw out soot and don't fill up the mixers so readily;
638 at the same time for that part of gas used through the open unprotected burner the higher candle power is more satisfactory but for the larger part of it that is not used in open burners it is cleaner and gives better satisfaction, that is I mean the lower candle power.

43. State if in your judgment the furnishing of gas, which would have an 18 candle power at the point of consumption at a distance of from 1½ to 2 miles away from the plant, would be satisfactory to persons using gas from the same pipe situated near the plant, and, if not, why not?

A. A gas which would yield 18 candle power 2½ miles from the works would probably yield 19 or 20 candle power close to the works, especially in cold weather would that difference be noticed; those customers who were using the gas in open burners would be glad the candle power was above requirement and those using it to cook with or in incandescent burners would complain that the gas was too rich and smokey.

44. About what proportion of open burners are now used in the entire consumption of a gas company's output?

Objected to by defendant as immaterial, incompetent and not tending to prove the issues in this case.

A. I should say that certainly not more than one third of a company's output is used through the open burner.

45. State if in your opinion it is practicable to furnish gas of 18 candle power, measured at a distance of from 1½ to 2 miles from the works, without the use of enrichers?

Objected to by defendant as immaterial and incompetent and on the ground the witness has not qualified himself as an expert with reference to the manufacture and distribution of coal gas.

A. It is impossible to get that candle power of gas out of any gas coal that I know of without the use of cannel, or the use of oil for enriching.

639 46. What effect does the use of cannel coal or oil for enriching have upon the cost to the company of the gas furnished?

A. It makes it more expensive, of course?

47. What candle power of water gas is required to give the public a service as satisfactory as 18 candle power in coal gas?

Objected to by defendant same grounds.

A. It is generally considered that it takes a 22 candle power water gas to be equal in general satisfaction to an 18 candle power coal gas.

A. The retorts themselves, the clay retorts, have to be replaced with new ones about once every two or three years; that is always counted as repairs, but in from 10 to 20 years the arches which hold the retorts will have to be torn down and rebuilt and that is called depreciation.

55. What difference would there be between repairs and depreciation, for instance, in the holder?

641 A. A holder must be kept painted continually and that is repairs; if it springs a leak it must be patched, that is repairs, but the time will come when the sheets themselves will be rusted so thin they can no longer be patched and that must be covered by depreciation.

(The MASTER:)

56. There is a point I have been in doubt about all the time. Is this depreciation due to the peculiar character of the business, or is it a depreciation that would naturally follow if this same material was employed in another business?

A. It would follow no matter in what business the material was employed; you might build out of granite and it will last, you might say, forever; you build out of hard brick laid in Portland cement and it will last indefinitely, but where you build out of thin iron or build out of iron and nothing else on the inside to resist the action of acids the time will come when it will be entirely eaten up and that is peculiar to the gas business.

(The SAME:)

57. Does that work a more speedy deterioration than if it was employed otherwise?

A. It works more speedily than it would work in some classes of business, but any business which produces acid vapors, all the iron work connected with that business is liable to the same depreciation, and iron work employed in the gas business is liable to it.

(Mr. ABBOTT:)

58. Then, if I understand you correctly, even if a plant were kept in good general repair, this element of deterioration would still be a necessary element to consider in arriving at the cost of producing and distributing gas?

A. Yes sir, a time comes when your plant will be utterly worn out and unless provision is made for it you will have no fund with which to rebuild it; over and above running repairs depre-

642 ciation must be provided for.

59. Taking into consideration these various elements of depreciation you have mentioned, general decay and special causes, such as electrolysis, and the necessity for replacement of material and equipment, even where general repairs are made, and taking into consideration your experience and observation in respect to the renewal and rebuilding of plants, mains, etc., what in

your opinion, does good business policy require should be done to take care of this depreciation?

A. There should be an annual charge of a certain per cent. against the cost price of all that part of the plant which is subject to depreciation.

60. How is this fund, which is set aside, handled as a matter of general practice?

A. It is generally put right back into the business but the cost of the various parts and the plant as a whole appears at a less price every year owing to a charge off being made.

61. What in your opinion would be the proper percentage on the entire cost of a gas plant located in a city like Peoria, to be charged off annually in order to cover this general average depreciation of a plant?

A. It should be about 5 per cent. on the apparatus, buildings and mains exclusive of the real estate; that would assume it was all going to last 20 years and parts of the gas plant would not last nearly that long; a gas plant that is 20 years old is mighty apt to be out of use and has to be replaced.

62. That is a fair average charge, is it?

A. Yes sir.

63. Aside from the general depreciation concerning which you have testified, what are some of the hazards of the gas business as an investment, that is, the hazards an investor of money
643 would take into consideration in determining whether he would invest in a gas plant or something else?

A. One of the serious hazards is the likelihood of explosions and asphyxiation, for they have them on a very large scale, and a very large part of the plant of a company might be wiped out by damage resulting from an explosion. Another hazard is the change in the methods of manufacturing gas which may make your whole plant almost useless; also the constant discovery of new methods of lighting and heating by people may make your product unsalable even though your plant was still in good order. During my own memory the cheapening of coal oil was a very serious blow to gas companies and they had hardly recovered from that until the invention of the electric light came along and they have never quite recovered from that; and now, we are told we will have acetaline lights, electric heaters and hot water heaters. In other words, the inventive genious of mankind is continually working at problems which if solved might render a gas plant useless and a loss on the hands of the owners. Besides, wherever there is any possibility of finding natural gas, there is a very serious liability that a plant which is furnishing artificial gas may be rendered useless.

64. Is the possibility of the granting of franchises to other companies at any time also a hazard of the business?

A. It is always with us and liable at any time to cause a war of rates which will destroy profits for a certain number of years even if the company itself survives.

65. From your experience and observation in the matter of the management of gas plants and experience in the gas business, are you able to state what would be a reasonable and fair return to investors in gas properties, taking into consideration the hazards of the investment on account of the conditions and dangers con-
644 cerning which you have testified?

A. I have a very well formed opinion on that subject but its value would have to depend on how much value people put on my judgment.

66. What in your opinion would be a fair and reasonable percentage per annum on the cost price of the entire plant as a return to investors in the gas business considering the hazards and dangers about which you have testified?

Objected to by defendant as immaterial and incompetent.

A. In a part of the country where a man could loan money on a good mortgage at 6 per cent., he would be a great fool to buy gas stock unless it paid him as much as 8 per cent. per annum. The risk is considered less in a large city than in a small city.

67. Have you in the course of your connection with gas companies acquired information in a general way with reference to natural gas?

A. Yes sir, I know a good deal about natural gas for the company I manage furnishes natural gas very largely.

68. Is there any difference in the cost of the distribution of natural gas as compared with the cost of distribution of artificial gas, if so, state in what that difference consists?

Objected to by defendant as incompetent, immaterial, and not tending to prove the issues in this case.

A. The cost of distributing natural gas is much less which is partly due to the physical qualities of the gas itself; there is not the same condensation from natural gas; there are not as many complaints to answer. In fact a natural gas company is not usually compelled to keep a complaint force at all. Besides that, and an item of equal importance, is the fact that the number of cubic feet consumed by each customer is usually three or four times as
645 great with natural gas as it is with artificial gas, so that, the cost of looking after each service and each meter being about the same the cost per thousand cubic feet would be very much less.

69. As I understand you, it would spread the fixed expense over a large area?

A. Yes, but as a matter of fact you can take care of 2,000 meters delivering natural gas for less money than you can take care of that number of meters delivering artificial gas.

70. Is there any difference in the pipes?

A. Practically none; pipes have to be laid the same no matter which gas is delivered.

71. What is the effect of all these causes which you have given

on the cost of distribution of natural gas compared with the cost of distribution of artificial gas?

A. It makes the cost of distributing natural gas very much less. I was mistaken in my last answer. There is no difference in the laying of pipes but, as a matter of fact, natural gas is universally sold under higher pressure than artificial gas and it enables you to use smaller pipes and it materially affects the matter of investment in the distributing mains, and therefore the annual interest.

72. Do you know in a general way the average price at which artificial gas is sold in the cities of the United States which have a population of 50,000 and upwards?

A. Yes, I have such knowledge.

73. State what is the average price of artificial gas throughout the United States in cities of 50,000 inhabitants and upwards?

Objected to by defendant as immaterial, incompetent and not tending to prove the issues in this case.

The MASTER: I do not see the meteriality of it but the witness may answer subject to the objection.

646 A. It will be between $1. and $1.15 per thousand; most of them charge about a dollar and some of them charge higher than that per thousand cubic feet.

74. Do you know of any cities where less than a dollar per thousand cubic feet is charged in cities of 50,000 and upwards?

Objected to by defendant same ground.

A. Yes, sir, there are several, viz: Cincinnati, Toledo, Pittsburg and some others; there are five or six; I do not recall them all just now.

75. What, if any conditions are there concerning the cities you have mentioned which tend to cheapen the cost of the manufacture of gas in those cities?—for instance Pittsburg?

Objected to by defendant same grounds.

A. Pittsburg is the headquarters for gas coal in the United States; there is also a ready market for coke and the conditions for making a distributing gas are very favorable.

76. What about the extent of consumption?

A. The consumption is very large and very concentrated; the city is closely built up and the number of consumers per mile of main would, I think, be large from what I have seen of the city.

77. What conditions exist in Cincinnati which would have a tendency to cheapen the cost of manufacturing gas there?

A. Cincinnati is a very crowded city, its streets are narrow and closely built up and the amount of gas which can be distributed over a certain number of miles of main is very large; in addition, to which, its works are right on the river, the coal is stored in barges afloat so it does not have to be touched with a shovel except when it is put into the wagon which carries it to the retort and there

is a very large consumption per head of population and per mile of main. Besides that, Cincinnati being on the Ohio river immediately below Pittsburg gets gas coal very cheap. I do not
647 know the local conditions at Toledo.

Cross interrogatories by Mr. MANSFIELD:

1. What do you mean when you say the conditions are very favorable for the distribution of gas in Pittsburg?

A. I think I answered that in reply to the question in chief. The city is closely built up and therefore the consumption per mile of mains would be large enabling a smaller force of men to look after the distribution of a larger quantity of gas.

2. What do you mean by the city being closely built up?

A. I mean the streets are narrow, the houses built close to the property line and on small lots as a general proposition, and several stories high, so there would be a good many meters in each house; I would refer also to the facility with which good gas coal could be obtained in Pittsburg.

3. What is the cost of gas coal in Pittsburg?

A. I don't know but I know the rest of us have to buy it there and ship it.

4. Do you know that there is any difference between the cost of gas coal in Pittsburg and the cost of gas coal in Peoria, of your own knowledge?

A. I don't know that there is, but I would assume that coal brought from Pittsburg to Peoria would cost more in Peoria than in Pittsburg but I don't know that it does.

5. What is the selling price of coke in Pittsburg?

A. I don't know.

6. Do you know whether or not the selling price of coke in Pittsburg is any greater than the selling price of coke in Peoria?

A. I should think it would be higher in Peoria but I don't know it.

7. Would you think, then, that the difference between the selling price of coke in Peoria and the selling price of coke in
648 Pittsburg would make any difference as to the relative price of the gas manufactured in Peoria and Pittsburg respectively?

A. If there were such a difference, it would tend to have that effect. The presence in Pittsburg of a very large number of manufacturing establishments which use coke, would tend to keep up the price of coke in Pittsburg, but the amount of coke for sale from a ton of coal is usually hardly as much as half a ton so that a small difference in the price of coke would not make up for a large difference in the cost of coal.

8. What is the percentage of coke obtained from the distillation of a ton of coal?

A. Do you mean the amount obtained or the amount left for sale after heating the retorts?

9. I mean the amount obtained?

A. Usually about 1320 pounds.

10. What would that be expressed in percentage?

A. 66 per cent.

11. What coal gas plant have you been connected with in the United States?

A. I stated in chief I was never connected with any coal gas plant; I have been compelled, however, in keeping up with my own business—that of distributing natural gas and water gas—to keep generally informed as to the manufacture of coal gas, also.

12. You have stated you examined the plant at Terre Haute, Ind. When you examined that plant in Terre Haute, how long did you take in an examination of it?

A. Two or three hours; I did not examine it critically; I just went through it and looked at it for information.

13. What kind of a plant was that?

A. At that time it was a coal gas plant and my recollection is they had a water gas supplement to be used if they needed it
649 but they were not using it then.

14. How long ago was that?

A. About eight years.

15. When did you examine the plant at Boston, Mass.?

A. About two months ago.

16. How long did you take in your examination of that plant?

A. About two hours.

17. What is the size of that plant compared with the size of the Peoria plant?

A. I expect it is about 20 times as big.

18. How long did you take in your examination of the Peoria plant?

A. About an hour and a half, that is, of the manufacturing plant.

19. You stated you examined the plant at Cincinnati, how long did you take in an examination of that plant when you examined it?

A. I spent about a half a day in their retort house very much entertained and interested.

20. Was that the only portion of the plant you examined at the time?

A. By the retort house I mean the retort house and works connected with the retort house; the plant runs all over the city and nobody could examine the mains because they are concealed, but the retort house and the houses connected immediately with it are the parts a man would naturally look at when he goes to see the plant and that is what I mean when I say I examined the plant.

21. You stated that Exhibit "1" as shown you is a correct representation of the manufacturing plant of the Peoria Gas & Electric Company, so far as it can be shown upon a plat. Is that true?

A. That is my recollection of my answer and that is true.

A. Does the question refer only to the manufacturing plant or to the plant as a whole including mains, services and meters?

20. Only to the manufacturing plant.

A. I am fully competent to answer that question.

21. On the basis referred to in the former question from your investigation of this plant and your knowledge of the cost of the construction of similar plants and your knowledge of the cost of the various items of machinery, materials, apparatus and equipment entering into a gas plant during the years 1899 and 1900, you may state what in your opinion was the fair cost price of the manufacturing plant proper of the Peoria Gas & Electric Company in the open market.

Objected to by defendant as immaterial and incompetent for the reason the witness has not qualified himself as an expert with regard to coal gas plants and has not testified that he knows the cost of labor and materials entering into the construction of such a plant laid down in the city of Peoria.

A. I have not made any detailed estimates of the cost of the whole of that manufacturing plant; I have, however, gone over the statement which the officers of the gas company keep as to what it actually did cost and with the single exception of the fire clay material entering into the construction of the retorts I am able from my own experience to say whether or not those statements of cost represent fairly the actual cost of those buildings; my opinion is that the buildings were constructed in a reasonable and economical way and that the buildings, apparatus, holder, sheds and all would cost just about the price at which they are charged in the cost state-
631 ments; as to the retorts themselves, I have lately investigated for my own use the cost of putting up a lot of retorts for making coal gas and the price which those retorts are stated to have cost corresponds very closely with the price I found I would have to pay if I built a bench of them.

22. Was the cost given you by the company, or any of its officers to which you have referred in your answer to my previous question, if so state what it was?

A. It was given to me by Mr. Little, vice president of the company and he showed me the vouchers for each separate item; I have bought similar material and the vouchers were just about what such material usually has cost our company and the material is not manufactured either here or in Louisville, it has to be shipped wherever it goes, so the only way it would vary would be in the matter of freight and cost of erection, depending on the cost of labor in different places.

23. Were you advised by the company, or any of its officers, as to the sizes and lengths of the various mains and services laid by complainant company?

Objected to by defendant as immaterial, incompetent and not tending to prove the issues in the case.

A. I was given a statement by Mr. Little of the number of lineal feet of each size of main the company now has.

24. Are you familiar with the cost of gas pipe in the open market in the years 1899 and 1900, and have you had experience and knowledge as to the cost of laying such pipe in ordinary streets and in paved streets?

A. I was buying pipe and laying pipe during that time myself and am familiar with its cost.

25. What were the lengths and sizes of the company's mains as given to you by the officers of the company?

632 A. (Witness referring to notes.) There were 1758 feet of 16 inch main, of which 160 feet is under pavement; 20,768 feet of 12 inch main, of which 11,225 feet is under pavement; 3,482 feet of 10 inch main, of which 58 feet is under pavement; 20,224 feet of 8 inch main, of which 13,234 feet is under pavement; 12,874 feet of 6 inch main, of which 5,474 feet is under pavement; 80,852 feet of 4 inch main, of which 9,792 feet is under pavement, and 260 feet of 2 inch main, none of which is under pavement. I used these figures in estimating the cost of the main system.

26. From what you have been informed as to the length and sizes of the mains and from your knowledge of the cost of such pipe, and assuming that the same were laid during the year preceding September 1, 1900, and that the cost of ordinary labor in the city of Peoria during that time was $1.50 per day, state what in your opinion would be the fair cost of those mains and the laying of them ready for use?

A. My estimate totals $122,766.

27. Were you informed also as to the number and extent of the services, if so, what information was given you in regard to them?

A. Mr. Little informed me that the company had three 3 inch services, total length 872 feet; 2—2½ inch services, total length 374 feet; 652—2 inch services, total length 37,244 feet; 1503—1¼ inch services, total length 111,369 feet; 266—1 inch services, total length 29,393 feet, making a total of 179,252 feet.

28. Assuming that the service pipes of the Peoria Gas & Electric Co. are of the sizes and lengths which you have given in your answer to the last interrogatory, and that the same were laid during the year preceding September 1, 1900, and that the cost of

633 ordinary labor during that time was $1.50 per day, from your knowledge of the cost of such material, will you please give your opinion as to the fair cost of the service pipes of said company, including the expense of laying the same ready for use?

Objected to as immaterial and incompetent.

A. I figure that those services would cost $39,154.

29. Assuming that on September 1, 1900, the meters of the Peoria Gas & Electric Co. were 1,758 in number, what in your opinion would be the value of the said meters including the setting and making them ready for use on September 1, 1900?

A. Of course, the sizes of the meters would enter very largely into that calculation; I am informed that 413 of the meters were 5-light, 1217 were 5-light, 93 were 10-light, 12 were 20-light, 14 were 30-light, 6 were 45-light, one was 60-light, one was 100-light, and one was 150-light. My estimate of the cost of that number of meters of those sizes amounts to $14,290, which includes the setting and placing of the meters.

30. In answer to my question in relation to the cost of the manufacturing plant proper, you stated that you had examined the vouchers representing the different items of cost and that in your judgment they represented the actual cost of such material and equipment—what was given you, if anything, as the total cost of the manufacturing plant proper?

A. $107,480; if I had made an independent estimate I would not have arrived at exactly that figure; the chances are I would have missed it as much as 10 per cent. one way or the other; a great deal of the material is underground where it cannot be seen, but those parts which I could see and the value of which I do know, the vouchers for them corresponded very closely to my knowledge on that.

31. I will ask you whether that estimate, or your information, included any value for the real estate?

34 A. It did not.

32. Have you given any value to the real estate in answering any of the questions relating to the value of this plant?

A. I have not given any value on the real estate at all; I have been asked no questions about that. As to the buildings, before I was connected with the gas business at all, I was an architect and afterwards a contractor and my judgment on those is very good. As to the parts of the plant which I have bought myself, of course, I could compare the vouchers shown me with my own knowledge.

33. In your estimate given as to the cost of the plant, mains and services of the Peoria Gas & Electric Co., have you included in your estimate any amount for the legal organization of the company, the equipment and organization of its business force, cost of advertising, solicitors, etc., and the general expense of putting the plant into operation?

A. I have not; I took the plant just as it stood if a man undertook to duplicate it.

34. In your judgment, would the expense, to which your attention has been called in the last interrogatory, so far as your observation goes, be generally and necessarily incurred in the organization of a company and getting the plant into operation?

A. They constitute an absolute and necessary part of the organization and construction of any gas plant, and what is more, they constitute a very large part of it.

35. Are they properly considered as part of the cost of a plant?

Objected to by defendant as incompetent and immaterial.

A. They are always charged as such and in my opinion they are properly so charged.

635 36. From your inspection of the plant, and your knowledge of the cost of the construction of similar plants, and assuming that this plant of the Peoria Gas & Electric Co. was put in operation for the manufacture and sale of gas to consumers on May 1, 1900, and assuming further that the cost of the real estate upon which the said manufacturing plant is located, was $51,000., that the cost of the legal organization of the company, the equipment and organization of its business force, cost of advertising, solicitors, etc., and the general expense of putting said plant into operation was $42,000., what, in your opinion was the fair cost price of that plant?

A. I would say it would be about $435,000. or $440,000. I reinforced my judgment on the matter from the estimates I made on certain parts of it or on nearly all of it, in fact, and the company's statement as to the cost of other parts.

37. On the same assumption as given you in interrogatory 36, and assuming further that on September 1, 1900, after about 4 months of operation, it was manufacturing and selling gas to consumers at the rate of 50,000,000 cubic feet per annum, what, in your opinion was the fair market value of the entire manufacturing plant, mains, services, meters, office equipment and equipment of every kind, which might properly be considered a necessary part of the plant, assuming that the same as existing and in operation, was sought to be purchased by parties having the need of such a plant, and having the right to operate the same, excluding from your estimate of the market value, any value which might lie in the license or franchise of the company?

A. Well it would be worth the cost of duplication, together with an additional sum, dependent on the prosperity of its business and future prospects. I should say its market value would lie between $450,000. and $500,000.

636 (The MASTER:)

38. What is the fair market value of the physical property itself independent of future prospects?

A. About $435,000.

(Mr. ABBOTT:)

39. What length of time would ordinarily be sufficient to put a new gas plant into operation so as to enable it to work economically and develop the economies of which it is capable?

Objected to by defendant as immaterial and incompetent on the ground that the witness has not qualified himself to give expert testimony with regard to the manufacture of coal gas by a plant which is exclusively of that nature.

A. I would rather not answer that question because I do not consider myself competent to do it.

40. Assuming that the Peoria Gas & Electric Co., commenced the manufacture and delivery of gas to consumers on May 1, 1900, and assuming further that the character of the plant and the lengths and character of its mains and services are as appear in the preceding part of your testimony, and that the cost of Youghiogheny gas coal at the works of the company was $2.80 per ton, that the wages of labor were $1.50 per day for ordinary labor, $65.00 per month for general stokers and $70. per month for the head stoker; assuming further that the purchase of material is general, and the expenses of general operation were fair and reasonable, considering the location of the plant, that the management and superintendence of the plant was efficient and competent; and assuming further that said plant had been in operation a sufficient length of time to put into smooth operation the economies of which it was capable, and that it was manufacturing and selling gas at the rate of 50,000,000 cubic feet per year, what, in your opinion, would be the actual cost per thousand cubic feet of the gas manufactured and delivered to consumers by said company, excluding from
637 your estimate the value of residuals, and excluding also any charge for depreciation or interest on the investment.

Objected to by defendant same grounds as before.

A. My opinion is that the item of coal to the thousand feet of gas would amount to 28 cents; the item of labor would amount to 18 cents; the item of taxes, based on information as to what the taxes actually are on this plant, would amount to 11 cents, and the item of distribution would amount to 44 cents, making $1.01 not allowing any credit for residuals.

41. What candle power in coal gas is deemed most satisfactory for ordinary use by the consumer?

Objected to by defendant same grounds.

A. Most gas men say about 18; my own opinion is that 16 is better.

42. Please give the reasons why in your judgment a 16 candle power is more satisfactory to the consumer than coal gas of a higher candle power?

Objected to by defendant same grounds.

A. At the time when the candle power of gas was fixed in the charters of most gas companies, there was only one way of obtaining light from gas, which was through the open, fishtail burner, and very little gas was used for fuel; today a very large per cent. of the output of every gas company is used for fuel and more than half of that sold for light is used through incandescent burners which not only do not derive any benefit from the high candle power of gas, but are actually at a disadvantage on account of it, a comparatively

(The MASTER:)

48. What do you mean by general satisfaction?

A. For illuminating purposes; for heating purposes it would take a higher candle power than that.

(Mr. ABBOTT:)

49. From your experience, knowledge and observation of the gas business will you please state what elements, forces and causes, if any, tend to depreciate a gas plant and its pipes under the ordinary conditions which exists in all cities having a population of about 50,000 and upwards.

Objected to by defendant as assuming that the conditions as affecting gas pipes are the same in all cities having a population of 50,000 and upwards.

A. Well, there is expansion and contraction due to heating and cooling; there is the action of the acids from the coal; there is rust and as applied to the rust on the iron work, disintegration of the masonry, and as applied to the mains, there is both rust and electrolysis.

50. What depreciation takes place, if any, in the plant itself, and the different parts of its equipment?

A. I included that in the first part of my former answer, and I should add that as to the mains there is the action of water, acid salts and aceline salts, especially where the ground is filled with refuse, mains deteriorate very rapidly.

640 51. Is there any depreciation from the weat and tear on the machinery?

A. Yes, sir, that is one of the first items—moving parts wear out.

52. State if there is a depreciation in a gas plant outside of the question of repairs made from time to time from the fact that the different parts may become unfit for use, or it may be necessary or economical to replace them with new appliances—state in what manner that element of depreciation appears, if there is such?

A. Assuming that every part of the plant is kept in as good repair as you can keep it in, there will a time come when any machine or any piece of apparatus, will be either so worn out or so rusted out that it is no longer capable of repair without spending on it more than the cost of a new one. In other words, there is a constant depreciation going on which is not prevented by complete and thorough running repairs.

53. If I understand you correctly, then, this depreciation of which you speak, is something which is distinct and separate from the general repairs to a plant which is going on all the time?

A. Yes, it is in addition to the general repairs.

54. Will you distinguish and illustrate further what you mean by the difference between repairs and depreciation. For instance, in the retorts themselves?

which I referred to the cost, I meant the general market value or cost of such materials in the open market at the time specified. Are you familiar with that in general?

A. Yes sir, I know at about what price they could be purchased at that time, for I purchased some myself.

17. From your inspection of the plant of the Peoria Gas and Electric Co. and assuming that it was built and constructed during the year preceding September 1, 1900, and from your observation of the location, character and size of the city of Peoria, what is your opinion of the plant of the Peoria Gas & Electric Co. with respect to its fitness, size, character and equipment for the manufacture and sale of gas in said city, taking into consideration
629 the element of future growth?

Objected to by defendant on the ground that the witness has not shown himself qualified to give an opinion concerning a coal gas plant, never having been connected with one in any capacity.

A. The plant is excelentlly designed; it is very compact and shows a great deal of study and forethought in the way it is laid out; the buildings are all constructed very substantially and of fire proof material, the apparatus is all of good quality, well located, well connected up and well constructed; I should call it a first class plant in every particular for its size; there has been no money wasted in the construction of the plant; there is not a sign of any money spent on ornamentation or on buildings or apparatus more expensive than necessary.

18. Would you say from your inspection of the plant and from your knowledge of the gas business that it is for its size a modern up-to-date gas plant?

Objected to by defendant same grounds as before.

A. I should say it was.

19. From your examination and knowledge of the plant of the Peoria Gas & Electric Co., from your examination of its plant, from your knowledge of the construction of similar plants and from your knowledge of the cost in the open market, during the years 1899 and 1900, of the various items of machinery, materials, apparatus, equipment and labor entering into the construction and operation of a gas plant of the capacity and character of the Peoria Gas & Electric Co., are you able to state what would be the reasonable cost price of the manufacturing plant of the Peoria Gas & Electric Co., assuming that said plant was constructed during the years 1899 and 1900, and that the various items of machinery apparatus, materials, equipment and labor were purchased in the open market?

630 Objected to by defendant as immaterial and incompetent on the ground the witness has not qualified himself as an expert to give evidence concerning a coal gas plant?

the 5 per cent., which I assume you to mean is 5 per cent. on the total cost of the plant, in this case $434,000.—interrupted.

A. The cost of the plant except the real estate I said.

62. You would expend that 5 per cent. in the betterment of the plant?

A. A company would do that as long as it was a growing company and nearly all companies are growing companies; of course, if a plant ceases to grow and it was impossible to find an investment for that depreciation fund that way, then it would have to be invested in some safe bonds.

63. In doing that, you would charge up to construction account of the plant the amount of money that was represented by the yearly investment of the 5 per cent. per annum depreciation?

A. No.

64. What would you do with that?

A. I never kept a set of books in my life.

65. How would you account for that money?

A. Well you would have the additional mains, meters and other things on hand to show for it—yes, you would have to charge that to plant to the extent you spent it and charge it away from
660 plant to the extent of the depreciation; the two accounts would balance themselves. I am not a bookkeeper.

66. Then at the end of each year, you would still continue to charge upon the cost of the plant the 8 per cent. which you think should be allowed to investors upon the amount of money invested in the construction of the plant?

A. I would endeavor, if possible, to pay my stockholders a dividend but, if I could not do it, they would have to do without it until another year.

67. Then, is it not a fact that at the end of 20 years you would have a sum on hand represented by your 5 per cent. yearly depreciation and your 8 per cent. charge as a fair return upon the amount invested in the plant, making more than the total cost of your plant at the time the same was constructed?

A. A plant which in the course of 20 years would not earn as much or more than what it cost to build it to start with would be a poor plant—interrupted.

68. You don't understand my question.

A. Let me finish and see if I don't come to what you want. If you pursue the policy to the end of always reinvesting the amount of money which was charged to depreciation, you would finally have a plant about double as big as the one you started with, but the same capitalization, the difference between the two being represented by the fact that the older parts of the plant are now worn out and will have to be rebuilt; but it is not always practicable to reinvest in betterments the amount charged to depreciation unless your business is a very rapidly growing one, and even then such an item as the rebuilding of the stacks in a retort house will not be a betterment but will be replacing something that has been destroyed in

use. Unless the business was growing, however, you would be
661 compelled to invest your depreciation account in some securities which could be readily turned into cash so as to have it on hand to be used in replacing the old retort house or any part which might become useless.

69. The total value of the plant, as you have testified in this case, is about $434,000. including real estate, as I understand it and deducting that real estate it would leave it $383,000. You mean then to charge 5 per cent. each year upon that $383,000. for depreciation, do you not?

A. Yes sir.

70. Which would make about $19,150. each year?

A. Yes sir.

71. Now, as I understand you, you place that back into the enlargement or betterment of the plant?

A. So far as it is not consumed by the replacing of worn out parts and during the earlier years of the plant's existence it would not be consumed that way.

72. You then charge it up to construction account, do you not?

A. Yes sir.

73. And it enters into the cost of the plant in order that at the time the original plant is worn out you will have a sum represented by this amount of money that is taken for depreciation to rebuild your worn out plant, do you not?

A. As the time approaches when important parts of the plant will have to be replaced unless you issue additional securities you would not be able to divert the depreciation money and put it back into extensions, otherwise you would come up against the time when an important renewal was absolutely necessary and have no money to make it with; as this time approaches that fund would have to be put aside in actual cash or securities so as to be available when needed.

74. Having charged that to construction account, to the
662 total cost of the plant, then in your opinion the stock holders or investors should be allowed 8 per cent. on the total cost of the plant which in this case would be represented by $383,000. and $19,150.?

A. You would put the $19,000. in as extensions and charge it off as depreciation, leaving your plant the same size it was before.

75. Then, upon that $383,000., to which was added $19,150. you think that the investors should be allowed 8 per cent. annually upon that amount of money, do you?

A. You are wrong in adding the $19,150. to the original cost because while it is put on as a betterment it is at the same time charged off as a depreciation and does not alter the total. I think that in a country where a safe mortgage will bring 6 per cent. gas stock ought to pay 8 per cent. otherwise I would not buy it.

76. Would you say gas stock should bring more interest on the

investment than would make that gas stock worth $100.00 in th
open market?

A. As a general proposition, a gas stock which pays a dividen
one or two per cent. above the current rate which can be realize
from perfectly safe securities, will be worth between $100. and $11
dependent on what the public opinion is of the future of the com
pany; leaving out the question of the future of the company, th
stock would not be worth par.

77. In the event that there would be no necessity for the enlarg
ment or betterment of the plant of the Peoria Gas & Electric Co
in that event what would you do with the 5 per cent. or the $19,15
which you deduct on account of depreciation?

A. I would buy city bonds with it, provided they were free fro
taxation.

78. Is it not a fact that if you did buy city bonds which woul
net an interest of 5 per cent. per annum that at the end of 20 year
you would have more money than your original plant cost
663 A. No, because the money would have been consume
from time to time in renewing first all your meters and nex
the retorts and stack.

79. I didn't ask you about that.

A. You asked me a question which involves that answer.

80. Just wait a minute and we will find out about this?

A. I will say no sir, you would not have that money.

81. (Interrogatory No. 78 repeated to witness.)

A. No, you would not have that amount of money on hand be
cause it would have been consumed from time to time in replacin
parts of your apparatus which had worn out and had become neces
sary to replace.

82. Would that be true if you had invested that money in cit
bonds?

A. Yes, you would have had to sell your bonds to make you
renewals.

83. What is your estimate of the average life of a meter?

A. It varies a great deal, depending on the locality in which it i
placed and the dampness of the atmosphere, but 10 or 12 years i
probably the average life of a meter.

83. Then you could have this money invested that way for 10 o
12 years, could you not?

A. That part of it which was due to the depreciation of th
meters, yes sir.

84. What are the bi-products obtained from the manufacture o
coal gas?

A. Coke, tar and ammonia.

85. Are there any other bi-products obtained from the manufact
ure of coal gas have a commercial value?

A. None that has such a commercial value as to be worth savin
in a plant of ordinary size; they get a little cy-nogen out o
664 the spent oxide but the quantity is not sufficient to justify
works of ordinary size in arranging to save it.

86. What if anything do they obtain from the sale of the sulphide of iron when it becomes so saturated as to be practically worthless in the manufacture of gas?

A. I don't know; it is so small it is not included in the returns of one gas company in fifty; I know however they do get something.

87. How often do they clean their retorts?

A. I don't know.

88. What, if anything, do they obtain from there that is of value?

A. They get very hard carbon out of it which they sell to the manufacturers of electric light carbon.

89. About how much do they obtain from it?

A. I could not tell you that; it is small, however; the only way I know it is small is it does not figure in the commercial reports of the various companies.

90. What do you compute the cost to be of the tile roof of the purifying house?

A. I did not figure it; I simply considered it as a fire proof building; it is, however, the very best character of a roof which can be possibly put on a building to be used for that purpose.

91. What did you estimate the cost of the office building at?

A. I made no estimate on that building; the building which contains the office and the shops is put down at $4,400. and from what I saw of that building I should say that was a conservative estimate of its cost.

92. What was the size of the walls of that building—do you know?

665 A. I do not; they appeared to me to be 17 inches for the two story parts and 13 inches for the one story parts; that is what they ought to be anyway.

93. What was the size of that office building?

A. You mean the part occupied by the office alone, or the part occupied by the office and shops?

94. Office and shops.

A. I did not measure it but I can take the plan and measure it for you, if you would like me to.

95. Did you estimate it from the plan?

A. No sir, and I could not tell you the size of the house I live in but I could tell you what it cost to build it, for I have built one like it.

96. What were the footings of that building composed of?

A. I could not say, they were underground.

97. What was the thickness of them?

A. I don't know that either.

98. And yet, from a view of the office building you can approximate what the cost of the building was, can you?

A. Yes sir, from my general knowledge of the art of building; I would not undertake to construct a house for a certain sum without making a much more careful examination of it than that but if a man tells me a house has cost so much I don't need to take a tape line and go over it to know whether or not that is probably true.

99. Would you buy a house without going through the hous and looking at the various materials of which it is composed, th size of the foundation, etc.?

A. I did buy one very lately that way and made one of the bes bargains I ever made in my life and I did not measure
666 & 667 thing in it.

100. What would you estimate the cost to be of a on story shed of the following dimensions? "50 feet by 125 feet by 2 feet high, brick piers for footings 5 feet by 5; iron plates 20 inches b 20 inches by 1 inch thick, and posts 12 inches by 125 inches; ri girders 6 inches by 12 inches; rafters 2 inches by eight by 16 inche on center; gravel roof; braces 6 by 6 inches; all anchored togethe with 1 1/8 8 inch rods all boarded up inside with 2 inch plank a the way up"?

A. That shop has in it 150,000 cubic feet and it is worth abou 4¼ cents a foot—I should say about $6500. to $7000. and if would attempt to make the same estimate by going out and coun ing the lumber that is in it I would want three or four hours to d it or a half a day.

101. How much pipe did you buy during the years 1899 an 1900,

A. I really could not tell you; I bought a good deal of wrough iron service pipe and a few thousand feet of cast iron pipe.

102. What size cast iron pipe did you buy?

A. 16 inch.

103. How many thousand feet did you buy?

A. About 2,000; we laid very little mains that year.

104. What aside from what would be generated in and about th gas holder of a gas plant, would cause the gas holder to rust?

A. Sulphuric acid which comes from the gas from the sulphur i the coal which ought to be thoroughly eliminated in the purifyer but it acts on all of that part of the apparatus before the purifyer and that part of it that goes past the purifyers gets on the holde

105. To what extent is there sulphuric acid in the gas after goes through the purifyers to the holder?

668 A. The percentage is very small but it is enough to get o the iron.

106. About what is the percentage?

A. What chemists would call a trace; then, too, whatever am monia comes over in the gas saturates the water the holder rests i and that makes it act very rapidly on the iron work of the hold wherever the holder is submerged in the water; the water in th holder pit nearly always has an odor as if of ammonia and the iro work which is constantly submerged in it rusts very rapidly.

107. What do they pay for gas coal in Cincinnati?

A. I don't know; they pay the Pittsburg price plus the cost towing it in large flows of barges.

Adjourned by agreement until Wednesday, January 8, 1892, 10 o'clock a. m.

669 United States court room, Government building.

PEORIA, ILL., WEDNESDAY, *January* 8, 1902—10 a. m.

Parties met pursuant to adjournment.
Present same as before.

EDWARD E. GORE, called on behalf of complainant, being first duly sworn, deposes and says:

Direct interrogatories by Mr. IRWIN:

1. State your name and residence?
A. Edward E. Gore; Chicago, Ill.
2. How long have you resided in Chicago?
Ans. 5 years.
3. What is your business?
A. I am at present the president of the Audit Company of Chicago, a corporation engaged in a public accounting business. My business is that of a public accountant.
4. How long have you been engaged in that business?
A. In Chicago for five years; prior to that time I was engaged in a very similar business for the auditor of this State; I had charge of the bank department and building and loan association department in the auditor's office of the State of Illinois, which required the exercise of a great deal of accounting and practically the same duties as meet a public accountant at this time.
5. Please explain what your duties, or business as a public accountant consist of?
A. The duties of a public accountant consist of the investigation of the books, accounts and papers of individuals, firms and corporations, for the purpose of ascertaining the condition of a business, the amount of profit enjoyed by a business, the value of its assets, the extent of its liabilities, the accuracy with which its books are kept or fidelity of its employés.

670 6. Have you had occasion to examine into manufacturing establishments as to the manner of the keeping of their accounts and as to the accuracy of such accounts as to the property and assets of the companies or individuals in the manufacturing business?
A. Yes sir, many times.
7. I will ask you if it is customary and ordinary and considered a good business policy for manufacturing concerns to keep an account known as depreciation?
A. It is customary to keep an account that is synonymous with what you call it, although it is frequently treated under different terms; it will be under the account of "Reserve for depreciation" or "Contingent fund" or some designation of that character.
8. Please explain how such fund is ordinarily kept and how it is used in a manufacturing business?

Objected to by defendant as immaterial, incompetent, and no tending to prove any issue in the case.

A. The profits of a business are ascertained at the time of th closing of its books, it may be monthly, quarterly, semi-annually o annually; when such profits are ascertained, a calculation is mad as to the probable depreciation of the plant, machinery, fixtures an various property of the concern, and a proportionate amount fro the profits of said company is taken from the profits and added t this account called "Reserve for depreciation," and profits thereafte divided, leaving this account to stand as a liability of the concern that is, a liability in this sense, it offsets an asset by that amoun calculated to be too much; it is not a liability in the sense it is some thing the concern has to pay, but is set off and held apart for the pur pose of reducing the value of the assets admittedly carried too high the purpose of that reserve so carried is when the occasion arises an the plant is so depreciated that its usefulness is ended, the concern ma
671 mark off from its assets, the plant, machinery, etc., and with out involving the solvency of the concern, by extinguishin at the same time this liability on the other side of the balance shee called reserve for depreciation; that reserve for depreciation is base upon the experience of each business; in some lines of business de preciation is very rapid; in machinery that is used for cutting tha has great wear and tear, depreciation is extremely rapid, sometime running as high as 25 per cent. per year; in other lines of busines it varies according as the wear and tear varies, but a proper basi upon which depreciation is calculated, is the experience of that par ticular business and the length of time which must elapse before complete renewal of the plant is necessary; in that connection re pairs are not necessarily to be paid out of such reserve; there is distinction between repairs and renewal; repairs are to put the prop erty into good working condition, but there is a wear and tear tha goes on throughout the whole property which repairs cannot remed and which must be cared for through the medium of this reserve the life time of a property, under the best of conditions and eve when kept thoroughly repaired, is limited; there is a general givin out at the end of each period which no repair will make good which requires complete renewal and it is to provide for this com plete renewal that this reserve for depreciation is maintained.

9. What facts constitute limits on the life of machinery or appa ratus or buildings that causes this depreciation you have mentioned

Objected to by defendant same grounds as before.

A. First wear and tear. Second; atmospheric influences. The there is also the hazard of the machinery or apparatus becoming ob solete, being superceded by something much improved which mus be instituted to meet competition and the old machinery b
672 torn out; ordinary depreciation will result from wear an tear but these other things are contingencies constantly me with in the business.

10. About what is the ordinary depreciation taken into account for the buildings of a manufacturing plant?

Objected to by defendant as immaterial, incompetent, no proper foundation laid or qualification of the witness shown.

The MASTER: I think the inquiry should be limited to manufacturing plants for the manufacture of coal gas; I do not think you should go into depreciation generally.

11. Does this element of depreciation enter into all manufacturing plants and buildings?

Objected to by defendant same grounds.

The MASTER: That question is general in its character and the master holds he does not think it competent so far as it relates to all classes of manufacturing plants and buildings but the witness may answer subject to the objection.

A. It does.

12. Does it enter into or affect a gas manufacturing plant?

A. Undoubtedly.

13. Does a like depreciation affect a building constructed of brick and iron with a tile roof?

Objected to by defendant same grounds.

The MASTER: I think that competent; there are buildings of that kind in connection with the complainant's plant.

A. Such buildings depreciate undoubtedly.

14. Does this element of depreciation enter into gas plants, electric light plants, street railway plants and all public corporation plants of that character?

Objected to by defendant same grounds.

A. Yes sir.

673 15. Will you explain to about what extent and how they are affected?

Objected to by defendant same grounds.

A. In the case of an electric light plant, the wires and poles suffer from the atmosphere, from wear, and depreciate within 10 or 15 years, varying with different places. Machinery in a power house depreciates rapidly because run at a high speed. In the case of a street railway the depreciation is extremely rapid on account of wear and tear and there is a constant renewal going on of a street railway, both in its track, rolling stock and power house that has to be met and can be only properly met by a reserve for depreciation. In the case of a gas plant there is a depreciation going on through the action of the elements on the buildings and wear and tear of the machinery itself through the burning that goes on through the chemical action of the gas in the mains and the action of the water, the moisture in the ground where the mains are laid they rust out,

650 22. Had you no knowledge of the conditions or the size of the buildings erected upon the land owned by the Peoria Gas & Electric Co., could you, by an examination of that plat, tell what was the nature or character of the buildings erected thereon, or the nature or character of the apparatus contained therein?

A. I could tell all about it except in some instances; the height of the stories may not be shown on the plat; the nature of the apparatus is very clearly shown; the diameters and the sizes from a point of view immediately above it are shown accurately; the heights are in most cases marked; it shows a condenser 6 feet in diameter for instance and marked on it, 20 feet high, and from that I know exactly what it is; if they had failed to mark on it 20 feet high I would assume it was a proper height but I would not know whether it was or not, nor could I tell by looking at what is marked "Coal shed" whether that shed has 20 or 30 feet heating room under it but in the absence of other information I should assume they had made it high enough to get in a sufficient quantity of coal and I think all the buildings are marked on it as well as sizes.

23. Then in forming your estimate of the cost of the manufacturing plant of the Peoria Gas & Electric Co., you base your estimate to some extent upon conjecture that the buildings are erected and of the heights as you stated in your answer to the former interrogatory, did you?

A. That part which is under ground and concealed I took for granted the information on the plat was absolutely correct; that part which was above ground and could be seen I went by the buildings themselves and my own eyes rather than the plat.

24. Having examined the vouchers for the foundation of the gas holder of the Peoria Gas & Electric Company's plant, state what was the size of that foundation and of what it was made?

651 A. It was made of concrete: I am unable to state either its depth or diameter from memory and I had no information about it whatever except that contained in the voucher, because there is not a particle of it shows above ground. If Mr. Little had not told me about it, I would not have known whether that holder had a foundation under it or not, but the fact that it is standing there would indicate it.

25. How did you estimate the fair, market cost of it without knowing the depth or diameter of the foundation?

A. I took Mr. Little's word for the depth and diameter of the foundation and as for the rest of the holder I have recently built one a good deal like it; I did not go into the number of pounds of iron in it at all, I simply went on my own judgment, if my own holder cost so much how much would this one cost.

26. What was the size of the holder you built?

A. 250,000 cubic feet; then we built another one of 1,200,000 cubic feet.

27. In arriving at your estimate as to what was the fair, cash market value of the plant of the Peoria Gas & Electric Co., did

you base that estimate upon the manufacture of 50,000,000 cubic feet of gas per year, or upon what did you base it?

A. I was instructed to exclude any consideration of the future prospects of the company and I based it merely on the cost of building such a plant as that is having seen the plant with my own eyes.

28. Did you take into consideration the price gas was selling for in the city of Peoria at the present time?

A. I did not even know that and I paid no attention to it at all; I assumed that the company was getting or could get a fair price for its gas and based my estimate on the cost of building a good gas plant, such as they have.

652 29. Would you vary then your estimate of the fair cash market value of the plant of the Peoria Gas & Electric Company were it only to manufacture 50,000,000 cubic feet of gas per year?

Objected to by complainant as already answered and because the witness has stated that he answered the questions under instructions to exclude from his estimate the prospect of future sales of gas.

A. Well, if I knew there was any reason, either legal or physical, which would prevent the growth of the business beyond 50,000,000 cubic feet per year, I should say the company had built a much larger plant than necessary and it was not worth what it cost them.

30. What would you then say would be the fair, cash, market value of that plant upon the basis of the manufacture of 50,000,000 cubic feet of gas per year?

Objected to by complainant as incompetent, immaterial, not cross examination and assuming conditions not contained in the direct interrogatory with reference to this matter and also assuming further conditions not in the record.

The MASTER: I think the hypothesis is not in the record at all, that is, the basis for that estimate, but the witness may answer subject to the objection.

A. I am unable to answer the question with only that for data. The market value of a thing, leaving out of consideration entirely the cost of constructing it or duplicating it, is bound to depend on its earning capacity; and if I had only the maximum output fixed I must know the selling price before I can get any idea of the profit, and excluding the question of the cost of construction, the market value would depend entirely upon the question of profit.

653 31. Assuming that gas then was selling at $1.25 per thousand cubic feet with 10 cents off if paid before the 10th of the month in which the bill became due, what in your judgment would be the fair cash market value of the plant of the Peoria Gas & Electric Co. upon the basis of the manufacture of 50,000,000 feet of gas per year?

Objected to by complainant as incompetent, immaterial, not cross examination and involving assumptions not in the record.

A. Adding to the assumptions in your question, which I understand you want me to do, the further condition that the output for some reason will not grow beyond 50,000,000 cubic feet per year, I should say that plant would be worth about $325,000; that being the sum on which it would pay 7 per cent. interest.

32. Did you take into consideration in making your estimate of the fair, cash, market value of that plant an allowance of 5 per cent. for depreciation which you state should be allowed for depreciation in every gas plant?

Objected to by complainant as incompetent, immaterial, not cross examination and based on different assumptions from the direct interrogatori-s propounded to the witness and because further based on assumptions not in the record?

A. I did not take it in and I did not leave it out; if you want an answer to such a question as you ask me I would want a full half day to figure on it if anything depended on it; I have just given the best general idea I have. I assume that at that price the company could make about 45 cents per thousand on the gas sold which would give them about $22,500. per year profit. Of course in order to do that, they would have to change their organization from that of a progressive company intending to grow and become larger and employ the grade of men necessary for that sort of a company, to a company that had gotten its growth and every depart-
654 ment should be put in the hands of the cheapest men possible for no matter how good he was he could not make the business any better. That is to say, it would be managed under conditions that don't exist in the United States anywhere. All the gas companies I know of are run with the expectation of the business growing.

Defendant's counsel objects to the foregoing answer as not responsive and moves the court to exclude it.

(The COURT:)

33. Was that part of your answer to the question?

A. Yes sir, and it was in my mind at the time I made my estimate to Mr. Mansfield and what I based my estimate on and without that answer the estimate is not an intelligible one.

(Mr. MANSFIELD:)

34. Do you mean to say that you looked over each and every voucher which was paid that went to make up the cost of the manufacturing plant of the Peoria Gas & Electric Co.?

A. No, I *do* not; I looked over the accounts and saw the totals; I then looked over the various items entering into those accounts and looked over a large number of vouchers, enough to see the ac-

counts were made up by charging those vouchers to those accounts, and out of probably 100 vouchers I looked over they represented the cost of articles which I knew myself were just about what such articles would cost.

35. And you assumed those vouchers you did not look at were of the same character?

A. Yes sir, because they were all bound together in order of date and there was no selection used as to those shown me.

36. But as a matter of fact you don't know what the other vouchers contained at all, do you?

A. No sir, I do not.

37. Your estimate of the cost of that plant then is based merely upon sum totals, or practically upon sum totals of accounts shown you by the officers of the Peoria Gas & Electric Co.

655 A. Those sum totals, however, came—interrupted.

38. Answer my question yes or no.

A. No, I will not answer any question yes or no for you can put a question and have it answered yes or no and make a fool of a man in that way. The sum totals came very close to what my own experience has been in the construction of similar work and my own estimates of work which I have constructed. For instance, I recently made an estimate on constructing a bench of coal gas retorts for our own company and I could see that Mr. Little's vouchers came reasonably close to what I found I would have to pay for similar work.

39. What kind of materials did you base your estimate upon for the construction of similar work?

A. Common brick, fire brick, wrought iron and cast iron.

40. Is there any different grades of common brick, fire brick and wrought iron?

A. Theoretically yes; practically no. Practically you want the best you can get of all of them and the best don't cost much more than the worst.

41. Do you know the difference between the best brick manufactured and sold in the city of Peoria and the poorest brick manufactured and sold here?

A. I do not, but substitute Louisville, for Peoria and I will tell you all about brick that you want to know. As to fire brick, they are about the same all over the United States because they are nearly all shipped.

42. Do you know what kind of lumber was used in the construction of those buildings?

A. I might have noticed it but I did not; it looked to me, though, like sound, straight grown lumber, free from knots,

656 but I did not notice what kind of wood it was.

43. Did you make a close inspection of the lumber that entered into the construction of that plant?

A. I was an architect for close to 12 years and I cannot go close to lumber without seeing whether it is straight and sound, but I can

get close to it without noticing whether it is oak, hemlock or pine but I noticed this lumber to see it was free from defects.

44. You went down to examine that plant in order to give evidence in this case?

A. Yes sir, but I did not undertake to make a builder's estimate on it; I could have done it but it would have taken some time.

45. What is the composition of natural gas?

A. One atom of carbon to 4 atoms of hydrogen C. H. 4 as it is known, about 96 per cent., the balance nitrogen; sometimes there is a trace of sulphur and sometimes a little oxygen. Books will tell you there is some free hydrogen in it but there is not.

46. What is the composition of artificial coal gas?

A. It is free hydrogen, light carburetted hydrogen and a groupe of volatile oils known as illuminants—I mean such as liquidate at a low temperature and are gasses at an ordinary temperature.

47. What are those volatile oils which would represent the condensation which occurs in the pipes of a coal gas company?

A. They are of the same substance to which it owes its high illuminating power CH4. Marsh gas will not condense at any ordinary temperature, but all of the substances richer than that, which give gas its illuminating power, are liable to condense if the temperature becomes low enough.

657 48. What are some of those gasses which condense in the gas pipes of the Peoria Gas & Electric Co., if there is any condensation there?

Ans. Benzine, benzole—there are a dozen of them; I don't remember all their names.

49. Are there any ingredients in natural gas which would condense in the distribution of that gas?

A. Nothing except a very little vapor of water which occasionally gives trouble in exposed pipes at an exceeding low temperature; ordinarily natural gas gives no trouble at all from condensation; the interior of a natural gas main most always will give out dust if you tap the inside of it: you don't pump the mains of a natural gas system at all.

50. Do you ever pump the mains of an artificial gas system?

A. Yes, you are compelled to do it constantly; wherever you leave a trap you can be certain they will stop up; you can lay natural gas mains without traps.

51. What is the effect of the condensation of artificial gas upon the pipes, if any?

A. Do you mean as to rusting them or destroying them?

51. Yes?

A. It has very little effect because it is inside where the air cannot get to it: if the liquids which condense out of gas could be first thrown on a pipe, then the air get to it, it would rust the pipe very rapidly.

52. Does the condensation of these liquids in the pipe ever penetrate the pores of the pipe and tend to preserve the pipe?

A. I have heard people say it did, but I don't believe a word of it; I will answer your question, no. What does happen, however, is that leakage at the joints gets into the soil outside and greases the outside of the pipe and preserves it to some extent; it don't go through the cast iron though.

658 52. Do you know whether or not they have an appliance at the Peoria Gas & Electric Company for the pumping out of the pipes?

A. I feel morally certain they have, but I did not see it and I never heard anybody question it.

53. In making up your estimate of the cost of that plant, did you take into consideration that they did have that appliance?

A. Yes sir, I added $2.50 for a pump.

54. What kind of a pump is it?

A. A little hand pump that a man carries under his arm and when he goes to a drip he screws it on and pumps it out.

55. Are there certain locations in pipes where there are traps or drips for the purpose of accumulating whatever liquid may be contained in the pipes?

A. Yes sir.

56. Would the necessity of those drips be greater in a flat country, or practically a level country than in a hilly country?

A. They are equally necessary everywhere but it is somewhat easier to arrange them in a hilly town because you can yet longer grades draining to one point.

57. Is it practicable in the manufacture of coal gas to distribute the gas so that the candle power of the gas at the point of consumption will be 10 candle power?

A. It might be distributed so it would always be in excess of that; I would consider it just as impossible to so distribute it that it would be always 18 candle power as it was for Shylock to get his pound of flesh without getting a drop of blood.

58. Would the loss in the candle power of the gas in a city of the size of Peoria, basing it upon your knowledge of the length of the mains of the Peoria Gas & Electric Company, be appreciable between the plant of said company and the houses of the consumers?

A. Yes sir, it would be very appreciable.

659 59. To what extent?

A. It might be as much as 2 candle power, especially in cold weather; I am assuming in answering that question you start out with high candle power; if you start out with a low candle power there would be but very little loss; the higher the candle power the more the loss will be.

60. I understood you to say that the average life of a gas plant would be about 20 years and that there should be a charge for depreciation of 5 per cent. per year?

A. Yes sir.

61. And that you would place the amount of money representing

whose property they were laid, or were used for that purpose previous to September 1, 1900, the time of the commencement of this suit.

The MASTER: Suppose they were laid under the direction of the city of Peoria?

Mr. MANSFIELD: Or unless it is shown they were laid under the direction of the city council of the city of Peoria.

A. The total length of the 1¼ inch services laid is 111,369 feet, of which 3,301 feet are laid under pavement; 994 feet under
683 block stone pavement; 89 feet under cobblestone pavement; 1,060 feet under brick pavement on a 6 inch concrete base; 99 feet under a brick pavement with a macadam foundation; and 1,059 feet under brick pavement on a gravel foundation.

38. You may state the length of the two inch service pipes of the Peoria Gas & Electric Co. laid under your supervision and also how much is under pavement and what kind of pavement?

Objected to by defendant same grounds as before stated.

A. There are 37,244 feet total length of 2 inch services of which 2,637 feet is laid under pavement / 38 feet under block stone pavement; 61 feet under cobblestone; 1,891 feet under brick pavement on a 6 inch concrete base; 225 feet under brick pavement laid on macadam foundation and 422 feet under brick pavement laid on a gravel base.

39. State the total length of the 2½ inch service pipes including how much is under pavement and what kind or kinds of pavement.

Objected to by defendant same grounds.

A. The total length of the 2½ inch service pipe is 374 feet, of which 56 feet is under pavement; 7 feet under cobblestone pavement; 6 feet under brick pavement on a 6 inch concrete base, and 43 feet is under brick pavement on a macadam base.

40. State the total length of the 3 inch service pipes of the Peoria Gas & Electric Co. as laid under your supervision including how much is laid under pavement and what kind or kinds of pavement?

Objected to by defendant same grounds.

A. The total length of the 3 inch service pipe is 872 feet, of which 24 feet is under pavement; all of which pavement is a brick pavement laid on a 6 inch concrete base.

684 41. What is the total length of all the different sizes of service pipes as laid under your supervision that are laid under pavement?

A. The total length of service pipe under pavement is 6,090 feet.

42. What is the total length of all the service pipe laid under your supervision?

A. 179,252 feet.

43. You have stated that these different service pipes were laid

by you under your supervision as superintendent of distribution of the Peoria Gas & Electric Co.? I will ask you to state if the various lengths and conditions, with reference to which you have testified, describe the situation of the said service pipes on the first day of September, 1900.

A. Yes sir, all the information applies to the apparatus as it stood on that date.

44. State if any part of these service pipes were laid under or by direction of the city council?

Objected to by defendant as immaterial, incompetent and not the best evidence.

The MASTER: I think that is a pretty good objection but the witness may answer subject to the objection.

A. Part of these service pipes were laid on streets that were to be paved, that is, what is called service stubs; they were not real services.

45. Were any part of these services laid on application of consumers?

A. All the services were laid on application from the consumers.

Mr. MANSFIELD: I object to the last interrogatory for the
685 reasons heretofore stated.

46. With reference to the services of which you have testified so far as the same were laid into the premises of the consumer, you may state whether any were so laid without application from the consumer?

Objected to by defendant as immaterial, incompetent and not the best evidence, the application being the best evidence.

Mr. ABBOTT: I propose to show there were not any services laid into the premises of the consumer except upon an application.

A. No sir, we had an application for every service that was laid into the premises.

47. Referring to such services as were laid only from the main to the curb line, state whether any services were so laid except such as were laid under the direction of the city council?

Objected to by defendant same grounds last stated.

A. No.

48. Have you prepared, or caused to be prepared under your supervision, a map or plat showing the distribution and sizes of the different lengths of mains of the Peoria Gas & Electric Co. in the streets and alleys of Peoria as the same were on the first day of September, 1900?

A. Yes sir, I have.

49. Examine the plat now shown you, marked Exhibit "13" and state whether it is a plan or representation of the mains of the differ-

ent sizes belonging to the Peoria Gas & Electric Co. as the same ex
isted on the first day of September, 1900?

A. Yes sir, it is.

50. Is there any scheme or system in connection with this plat b
which the different sizes of pipe are represented?

A. Yes sir.

51. Explain what that is?

A. The sizes of pipe are explained by means of colors an
686 the broken or full lines; broken black line represents a 1
inch main; a full black line represents a 12 inch main;
broken red line represents a 10 inch main; a full red line repre
sents an 8 inch main; a full yellow line represents a 6 inch mai
and a full green line represents a 4 inch main. We have a smal
amount of 2 inch main which is represented by a double green lin

52. Is there anything on the plat showing the location of th
manufacturing plant itself?

A. No, the location of the plant is not shown except wher. the 1
inch main starts.

53. Please indicate by writing the word "plant" on the pla
where it is situated and was situated on the first day of September
1900, with reference to the other lines that are drawn upon th
plat.

A. I have so marked it.

54. Have you now indicated by writing the word plant upon thi
map, the situation of the manufacturing plant with reference to th
distributing system as the same is marked thereon?

A. Yes sir, I have.

55. State if the plat marked Exhibit "13" is a true and correct
plat of the streets and alleys of the city of Peoria and their relative
location so far as the same can be shown on a flat surface?

A. Yes sir.

56. And is it a true and correct representation of the streets an
alleys in which the main pipes of the different sizes were laid and
located on September 1, 1900?

A. Yes sir.

57. Were you in the city in the early part of November, 1901
when Mr. E. G. Cowdery and Mr. J. H. Eustis were here?

A. Yes sir.

687 58. You remember, do you, the occasion of their visit to
the city of Peoria?

Ans. Yes sir.

59. About when was it?

A. Between the 5th, and 8th, of November 1901.

60. State in your own way what you did, if anything, with rela
tion to showing Mr. Cowdery and Mr. Eustis the streets and alleys
in which the mains were laid, the character of the pavement and
what, if anything, you did in the way of showing, or explaining
the records of the company to them in relation to the amount of the
different kinds of mains or pipes?

Objected to by defendant as immaterial, incompetent and not tending to prove the issues in the case.

The MASTER: I do not think that material.

Mr. ABBOTT: If the master please, the estimates of these witnesses in their testimony was based to some extent on assumptions as to what the records of the company disclosed as to the amount and extent of the mains and services, on which they based their estimates of the cost of the plant, and the purpose is to show by this witness that they were shown everything that could be shown and that they were also permitted to inspect the records as to such things as were not on the surface and that the records shown them were true and correct.

Mr. MANSFIELD: Their testimony should have been given on facts that were within their own knowledge; what they knew from the explanation that was offered by this witness at the time he was taking them through the streets and alleys of the city of Peoria might have made no impression upon their minds at all and the mere fact this witness would testify to this at this time could not change the knowledge they had at that time.

Mr. ABBOTT: They have testified to what they knew, and we propose to show by this witness what he showed them and it is
688 certainly competent and material at this stage in our opinion.

The MASTER: I do not think you ought to include the records of the company; I do not think you ought to prove the records of the company by parole evidence.

Mr. ABBOTT: I am not, I merely expect this witness to say that he showed them the records; I do not ask him to state what the records disclosed.

The MASTER: The witness may answer subject to the objection.

A. I met Mr. Eustis and Mr. Cowdery at the company's office and showed them the records of the services, meters and mains and after they had examined them I drove them over the streets that were paved, under which we had mains laid, and also showed them the extent of the territory we covered with our distribution system and I explained to them the character of the pavement we had to remove and the size of the main under that pavement.

61. State if you showed them also the record of the size, character and length of the services.

A. Yes sir, I did.

62. State if you also showed them the record of the size and character of the meters and the number set up to September 1, 1900.

Objected to by defendant same grounds as last stated.

A. Yes sir.

63. Were the records which you showed them at that time true and correct?

A. Yes sir, they were.

64. Were they the same on which you have based your testi
today with reference to the size and length of the mains and se
and the size and character of the meters?

A. Yes sir.

66. Do you remember the occasion of the visit of
689 Pratt of Des Moines to the city of Peoria?

A. Yes sir, I do.

67. About when was that?

A. Between the 18th and 20th of November, 1901.

68. You may state what, if anything, you did with refere
showing Mr. Pratt over the streets and alleys of the city of
in which the mains and services of the Peoria Gas & Electr
had been laid and located prior to September 1, 1900, and w
anything, you did in the way of showing him the records
company as to the length of mains and services and the num
meters which had been set up prior to September 1, 1900?

Objected to by defendant as immaterial, incompetent an
tending to prove the issues in the case.

A. I met Mr. Pratt at the company's works and drove hin
the streets that were paved, under which we had mains lai
explained to him the work of laying the mains, the character
pavement we had removed and replaced, the size of the ma
laid and after driving him over the city I took him to the o
the company and showed him the records of the company's
services and meters.

69. Were the records which you showed Mr. Pratt of the
of mains, services and the number of meters of the Peoria
Electric Co. as the same had been laid, located and placed p
September 1, 1900, true and correct records?

Objected to by defendant same grounds as before.

A. Yes sir.

70. State if they were the same records from which you have
your testimony today in relation to that subject.

Objected to by defendant same grounds.

A. Yes sir.

690 71. Do you remember the occasion of the visit of Mr
merville of Indianapolis, Mr. Kellogg of Sioux City,
and Mr. Knapp of Chanute to the city of Peoria?

A. Yes, sir.

72. They were all here together were they not?

A. Yes sir.

73. Do you remember about when?

A. About the 10th or 12th of December, 1901.

74. State what, if anything, you did in the way of showi
Summerville, Mr. Kellogg and Mr. Knapp over the stree
alleys of the city in which the mains and services of the

Gas & Electric Co. were laid and located and had been laid and located prior to September 1, 1900, and what, if anything, you did with regard to showing them the records of the company with reference to the lengths and sizes of the mains and service pipes and the character and size of the meters belonging to complainant company on September 1, 1900?

Objected to by defendant same grounds as before.

A. I met Mr. Summerville, Mr. Kellogg and Mr. Knapp and took them over the streets and alleys which were paved, under which we had laid mains, and explained to them the character of the work necessary to lay the mains, also showed them the records of the company at the office with reference to the mains, services and meters.

75. Were those the same records which you had previously shown to Mr. Cowdery, Mr. Eustis and Mr. Pratt?

A. Yes sir, they were.

76. Were they true and correct?

Ans. Yes sir.

77. Were they the same records from which you have testified today as to the size, character and length of the different service mains and meters?

691 A. Yes sir.

78. I think I omitted to ask you in its proper order for the number and sizes of the meters of the Peoria Gas & Electric Co. as the same had been located and set prior to and as they existed on the first day of September, 1900. Please state the number of the meters of the different sizes and the total number as they existed on that date?

Objected to by defendant same grounds as before.

A. There were 1758 meters set on the 1st day of September, 1900. 413 of them were 3-light meters; 1217 were 5-light; 93 were 10-light; 12 were 20-light; 14 were 30-light; 6 were 45-light; 1 was 50-light; one was 100-light; and — was 150-light meters.

Complainant's counsel in connection with the testimony of this witness offers in evidence, and exhibits to the master, the plat marked "Exhibit 13" which has been identified and explained by the witness which said plat is hereto attached and made a part of the testimony of this witness.

Objected to by defendant as immaterial, incompetent and not tending to prove the issues in the case.

Cross interrogatories by Mr. MANSFIELD:

1. Did you lay any pipe, or superintend the laying of any pipe in the alley between Madison and Jefferson streets, and Fulton and Franklin streets in the city of Peoria?

A. Yes sir.

2. Did you have to shore up that block in there?

A. Just occasionally not continuously.

3. Who were some of the men employed on the job by the Peoria Gas & Electric Co. at that time?

A. I cannot recall the names of the laborers but Harry
692 Ross was a corker at that time.

4. Who were the men who did the excavating?

A. I cannot give you the names of the laborers: I do not recall them at all.

5. Don't you know any of the men who worked on that particular piece of work as laborers at that time?

A. I cannot recall any of their names now.

6. Can you obtain the information as to who worked on that particular piece of work.

Mr. ABBOTT: The complainant objects to this testimony as incompetent and immaterial: the questions immediately preceding the last question have been allowed to pass without objection for the reason we assumed they were perhaps proper questions to test the recollection and knowledge of the witness but as he states he has no recollection of the names the inquiry should certainly cease because it is not in any sense cross examination to ask the witness to produce any records of that work; it is not shown that he kept the time book or anything of that kind and, while the questions so far have not been objected to, yet they should not go any further on that line for the purpose of testing the recollection of the witness.

7. Then you don't know of anybody who did any work on the laying of the pipe between Madison and Jefferson streets and Fulton and Franklin streets in the city of Peoria?

A. No, I cannot recall any names at the present time.

8. About how much of the space between Franklin and Fulton streets in the location mentioned did you have to shore up?

A. That I could not give you either; it was just a shore occasionally where the banks showed signs of caving in.

9. Where did you have to shore up any of that space?

693 A. I cannot recollect that either.

10. Do you know as a matter of fact that you — to shore any of it up at all?

A. No, I am not absolutely certain on that, but as a general rule in all those alleys we had to shore occasionally but as to the shoring in that particular locality I am not absolutely certain.

11. Does this plat "Exhibit 13" show all of the pipes and connections of the same with the system of the Peoria Gas & Electric Co. on September, 1, 1900?

A. Yes sir, it shows all the main pipes.

12. Was there any other pipes running into the main, or connecting with the main, on South Adams street below Persimmon street in the city of Peoria previous to September 1, 1900?

A. By any other pipes, do you mean other than servicepipes?

13. Yes sir?

Ans. No.

14. There is a pavement on South Adams street in the city of Peoria between Persimmon street and Western avenue, is there not?

A. Yes sir.

15. How much of the trench you dug from Persimmon street to Western avenue did you have to shore up, and if you had to shore up any of it designate at what points the shoring was done?

A. Between Persimmon street and South street we had to shore occasionally; below South street we did not have to shore any.

16. Where did you have to shore between Persimmon and South street?

A. The stretch of main that lays along the curb below Lincoln avenue to South street had to be shored nearly every pipe in it.

17. Do you know who were the laborers employed upon that job?

694 A. No, I cannot recall any laborers at this date

18. When did you make this map Exhibit "13"?

A. About 3 or 4 weeks ago.

19. Is the alley between Persimmon street and Bridge street, and Washington street and Adams street in the city of Peoria paved?

A. Part of that is paved with cobble stones below Bridge street, I think, one or two blocks.

20. Did you have to shore up that when you dug the trench through there?

A. Yes sir, there were two or three places below Bridge street in the alley between Adams and Washington streets that we had to shore.

21. Who was employed on that job as laborers?

A. I could not give you the names of the laborers now; I don't remember them.

22. Did you have at that time throughout the city of Peoria several gangs of men working, or did you have but one gang at one place?

A. We had two gangs of men working; one gang was on Adams street below South and the other gang was in the alley between Adams and Washington streets above Persimmon street.

23. Did you have to shore up any in the alley between Adams and Washington street above Bridge street?

A. Yes sir, almost continuously up where the alley was paved and where we were close to the buildings.

24. Is that alley paved between Bridge street and Main street?

A. Yes sir.

25. Did you have to shore up any of the trench between Main street and Eaton street, and Washington street and Adams street?

695 A. Yes sir, nearly all of the block above Main street had to be shored and also occasionally above Hamilton street.

so that, the depreciation is constant in connection with a gas plant that will eventually render the plant worthless; the lifetime of a gas plant is about from 15 to 20 years in my experience, and it is the practice of accountants in constructing the balance sheets of such companies, as based upon actual experience with plants of that character, to reserve about 6 per cent. per annum on the value of the plant, or on the cost of the plant, for the purpose of creating a reserve for depreciation, which will amount to sufficient at the expiration of the average life time of such plant to replace it.

Cross interrogatories by Mr. MANSFIELD:

1. Have you ever been engaged in the manufacture of gas?

A. No sir.

2. Were you ever connected with any gas plant in the
674 United States?

A. Not in the sense that I have had any interest in them.

3. Have you ever been engaged in or about the office, or in or about the plant of a company that manufactures gas?

A. Well, I have looked through the books of gas companies and I have witnessed the tearing up of an old gas plant.

4. What would be the depreciation upon the pipes or mains of a gas company that was laid in sandy soil?

A. Well I would not be able to state as to that; my experience with gas mains was with some that were laid in black soil which *saw* taken out of the ground about 20 years after they were put in and they fell to pieces as they were taken out.

5. What would be the depreciation in a gas main laid in a clay soil, if you know?

A. I should think it would be about the same as that I mentioned I should think it would go to pieces in 20 years.

6. Do you know?

A. I saw this main taken out and I know how long it had been in.

7. What kind of soil was it in?

A. It was in central Illinois at Carlinville and was in black loam with a clay subsoil and the pipe had been in the ground some of them 20 years, some of them 18 years and some of them 22 years.

8. Do you know of your own personal knowledge when those gas pipes were put in the soil?

A. Well, yes, in a way; I know through the records when the plant was built and installed, but of course I was not on the ground and did not see the main planted.

9. You don't know whether they were old or new mains as a matter of fact when put in as you did not see them when
675 they were laid?

A. When they were put in they were undoubtedly new.

10. You didn't see them at that time?

A. No, but I know how the plant was built.

11. You don't know of your own knowledge whether those gas mains were put in the ground when they were new or old, do you?

A. Well, I was not standing there watching them.

12. You did not see the pipes when they were laid originally?

A. No sir.

13. In other words, all you have testified to here has been from hearsay knowledge obtained from the inspection of books without any practical knowledge of the life of a gas main?

A. Well, I would not say that.

14. What is the life of a gas main in sandy soil?

A. I don't know because I am not qualified to speak on that question.

16. What is the life of a gas holder?

A. I speak of both the mains and holder—interrupted.

17. Not from any hearsay but from your practical knowledge, if you have any, what is the life of a gas holder?

A. I speak from the point of an expert handling the accounts of such concerns and constructing their reserve.

18. You are then testifying to a knowledge that you have obtained from an inspection of the books of gas companies?

A. Not altogether; I do it from my knowledge of the accounting business gathered from the combined experience of such accountants as have preceded me in the business and have recorded their experience in the general accounting education I have acquired, and I know from the concensus of opinion of accountants in England and the United States that the average life of a gas plant is from 15 to 20 years.

676 19. Do you follow rules laid down by accountants or follow the orders given to you by the people for whom you are keeping books?

A. I do not take any orders from people I am working for.

(The MASTER:)

20. Do I understand you to say you are keeping books?

A. Not at all; I do not keep books; when I make an investigation of a gas plant, the entire plant, I see that it has a proper reserve for depreciation, both as a measure of prudence and for the protection of the owners of such plants and to protect any possible investor who may put his money in on the certificate I make.

(Mr. MANSFIELD:)

21. Does not the auditor of the State of Illinois keep the books of the Peoria Gas & Electric Co. in the city of Peoria?

A. I don't know what that company does.

22. You are president of the Audit Company of Illinois?

A. No sir, of the Audit Company of Chicago.

23. Where is its office?

A. 218 La Salle St., Chicago, Ill.

(The MASTER:)

24. I would like to know what you mean when you say the average life of a gas plant is from 15 to 20 years. Do you mean the entire plant including mains, etc., or merely the manufacturing plant?

A. The mains also.

(The SAME:)

25. Both the mains and manufacturing plant?

A. Yes sir, the mains and buildings that exist in the plant.

Adjourned by agreement until Thursday, January 9, 1902, at 1:30 p. m.

677 United States court room, Government building.

PEORIA, ILL., THURSDAY, *January* 9, 1902—1:30 p. m.

Parties met pursuant to adjournment.

Present: Judge I. C. Pinkney, special commissioner. Mr. W. T. Irwin, Mr. E. C. Ritcher and Mr. W. T. Abbott, appearing for complainant, Mr. Henry Mansfield appearing for defendant.

JOHN M. ROBB, called on behalf of complainant, being first duly sworn, testifies as follows:

Direct interrogatories by Mr. ABBOTT:

1. State your name, occupation and residence.

A. John M. Robb; superintendent Peoria Gas & Electric Co. Peoria, Ill.

2. How long have you occupied your present position?

A. For nearly three years, ever since the company began operations here.

3. State to what extent you are familiar with the lengths of the different sizes of mains and the streets and alleys in which they are laid?

A. I superintended the entire work of the installation of the distribution system.

4. Did you have the supervision of the work of laying the main pipes of the Peoria Gas & Electric Co. and also the laying of the service pipes and setting of meters as well?

A. Yes sir, I did and all other work of laying and distribution work of the gas department.

5. Are you familiar with the extent, size and different kinds of mains and services and the streets and alleys in which the same are laid in the city of Peoria?

A. I am.

678 6. The work, if I understand it, was all done under your personal immediate supervision?

A. Yes sir.

7. Are you able to give the lengths of the different sizes of mains which were laid under your supervision as constituting part of the distributing plant of the Peoria Gas & Electric Co.?

A. Yes sir, with the aid of my data I can give the lengths of the mains but my memory is not very good for figures.

8. Was the data or memoranda of which you have testified prepared by yourself or under your immediate supervision?

A. Most of it I prepared myself and the rest was prepared under my charge and direction.

9. State the number of feet of 16 inch main pipe which were laid under your supervision and state how much of that is under pavement?

A. 1758 feet of which 160 feet is under pavement.

10. Under what kind of pavement is that laid?

A. 80 feet of it is under block stone pavement and 80 feet is under brick pavement—large brick laid on macadam foundation.

11. State the number of feet of 12 inch main laid under your supervision and how much of that is under pavement and what kind of pavement?

A. 20,768 feet of 12 inch main of which 11,225 feet is under pavement; 3,128 feet of that is under block stone pavement; 4,973 feet is under brick pavement laid on 6 inches of concrete; 1,364 feet is laid under brick on a macadam foundation; 888 feet is laid under a brick pavement on a gravel foundation; 872 feet is laid under a cobblestone pavement.

12. State the number of feet of 10 inch mains laid under your supervision and how much of that is under pavement and what kind or kinds of pavement?

679 A. There are 3,482 feet of 10 inch main of which 58 feet is under pavement; it is a brick pavement laid on 6 inches of concrete.

13. State what length of 8 inch main has been laid under your supervision, how much of it is under pavement and what kind of pavement?

A. There are 20,224 feet of 8 inch main of which 13,234 feet are under pavement; 160 feet of that pavement is asphalt on 6 inches of concrete; 589 feet is laid under a block stone pavement; 5,197 feet is laid under a brick pavement on a 6 inch concrete base; 7,288 feet is laid under a brick pavement on a 6 inch gravel base.

14. State the length of the 6 inch mains of the Peoria Gas & Electric Co. laid under your supervision and state how much of that is under pavement and what kind or kinds of pavement?

A. There are 12,874 feet of 6 inch main laid, of which 5,474 feet is under pavement; 93 feet is under a block stone pavement; 3,828 feet is under a brick pavement on a 6 inch concrete base; 517 feet is under a brick pavement on a 6 inch gravel base; 506 feet is

under a brick pavement laid two courses of brick thick on a 6 inch concrete base, and 530 feet is laid under cobble stone.

15. State the length of the 4 inch main of the Peoria Gas & Electric Co., laid under your supervision and how much of it is under pavement and what kind or kinds of pavement?

A. There are 80,852 feet of 4 inch main laid, of which 9,792 feet is under pavement; of this there are 326 feet laid under asphalt pavement on a 6 inch concrete base; 309 feet under block stone pavement; 5,772 feet under a brick pavement laid on a 6 inch concrete base; 152 feet laid under a brick pavement on a macadam base; 2,256 feet laid under a brick pavement on a 6 inch gravel base; 977 feet laid under a cobblestone pavement.

680 16. What is the total length of the mains laid under an asphalt pavement with a 6 inch concrete foundation?

A. 486 feet of mains.

17. What is the total length of mains laid under a block stone pavement?

A. 4,199 feet.

18. What is the total length of mains laid under brick pavement on a 6 inch concrete base?

A. 19,828 feet.

19. What is the total length of mains laid under brick on macadam foundation?

A. 1,596 feet.

20. What is the total length of mains laid under brick on a 6 inch gravel foundation?

A. 10,949 feet.

21. What is the total length laid under two courses of brick on a 6 inch concrete foundation?

A. 506 feet.

22. What is the total length of main laid under cobblestone pavement?

A. 2,379 feet.

23. What is the total length of mains laid under pavement of all descriptions?

A. 39,943 feet.

24. What is the total length of the mains all together including those laid under pavement?

A. 140,223 feet.

26. State if the lengths of the different sized mains, the character of the pavements you have mentioned, the total length of pipe laid under pavement and the total length of pipe all together are as the same stood on the first day of September, 1900?

681 A. They are just as they stood on September 1st, 1900.

27. Did you in the course of the laying of these pipes become familiar with the character of the soil of the city of Peoria?

A. Yes sir, I did so far as the mains were concerned.

28. What is the character of the soil in the city of Peoria through which these main pipes were laid?

A. Mostly sand in the district below the bluff, in some places the ground is filled in, and on the bluff the soil is generally yellow clay.

29. To what width as a rule was it necessary to excavate the trench to lay the pipes?

A. 3½ feet was the average width of our trench.

30. What width of pavement was disturbed? on the average, which had afterward to be replaced?

A. I should judge the average was between 3½ and 4 feet. Whenever a ditch caved a little bit under the pavement the city inspector required us to remove the pavement the entire width of the caving so in some cases the amount of pavement removed was greater than the width of the original trench.

31. Was that an unusual or frequent occurrence?

A. Below the bluff, where the greater part of the pavement was, it was a frequent occurrence.

32. To what extent in the digging of trenches for the laying of pipes in that part of the city below the bluff, did it become necessary to shore the sides of the trenches?

A. The greater part of the trenches that were excavated through the pavement had to be shored more or less and nearly all of 12 inches had to be almost continuously shored.

33. To what depth on the average were these trenches dug?

A. On the average of 4 feet in depth.

34. Are you able to give the lengths of the different sizes
682 of service pipes together with the character of the pavement under which they were laid, if any were laid under pavement?

A. Yes sir, I can give you the lengths of the various sizes of service pipe.

35. Those were also laid under your supervision?

A. Yes sir.

36. State the total length of the one inch service pipe of the Peoria Gas & Electric Co. as laid under your supervision including in your statement how much is under pavement and what character of pavement?

A. The total length of the one inch service pipe laid is 29,399 feet of which there are 72 feet under pavement; 14 feet is under block stone pavement; 14 feet under cobblestone; 7 feet under a brick pavement laid on a 6 inch concrete base and 37 feet under a brick pavement laid on a gravel base.

37. State the total length of the 1¼ inch service pipes together with how much is under pavement and the character of the pavement?

Mr. MANSFIELD: The defendant objects to this testimony as incompetent and immaterial unless it is shown that at the time these service pipes were laid, or immediately after they were laid they were used for the purpose of distributing gas to the customer into

26. In the alley between Hancock street and Spring street, between Adams street and Jefferson street paved?

A. No.

27. Did you have to shore up the trench along there?

A. Just occasionally where it showed signs of coming in.

28. At what point along that line of trench did you have to shore up?

A. I could not recollect any particular point there?

The MASTER: How do you claim, Mr. Mansfield, that this testimony becomes competent at this stage of the proceedings with reference to what had to be shored up or what had not?

Mr. MANSFIELD: The complainant is bringing it in here as an expense.

The MASTER: How would it be competent unless it were made to appear by this witness, or somebody else, that this witness when showing these men where the mains and services were laid gave them these facts to take into consideration as an item of expense and that they made their estimates based upon his representations. How does it become competent unless that appears?

Mr. MANSFIELD: Don't it appear?

The MASTER: I do not know where it appears—I merely want to get your theory of it.

Mr. MANSFIELD: As a matter of fact the expenses this complainant has gone to does not prove the issues in this case at all; the question is not how much the company has expended in the erection of its plant in the city of Peoria; the question is, What can gas be made for in the city of Peoria at a reasonable price?

The MASTER: That is one very material question.

Mr. ABBOTT: If Mr. Mansfield wishes to file a demurrer
696 to the evidence so far introduced we are willing to argue it.

Mr. MANSFIELD: They might go and put in service pipes into every house in Peoria; they might increase their investment here to millions of dollars, but you could not base the reasonable price of gas upon anything like that.

The MASTER: That is true; but that is not the question that this testimony tends in any way to prove. I simply want to get your idea of it.

Mr. MANSFIELD: I am simply going on their idea now, not on my idea at all.

The MASTER: My idea is it is wholly incompetent, but you can pursue it if you see fit; I do not see the application of this proof now, considering what is in evidence so far. If, as a matter of fact, this witness had made representations of that character to these expert witnesses who have estimated the cost of the plant and it appeared he had done so, then I could see how it would become material.

Mr. RITCHER: Nearly all the expert witnesses testified from their own experience with soil and not from any information given them as to the soil in the city of Peoria.

The MASTER: That is true, and it does not appear anywhere in the evidence that any representations were made to them except as to the general lines of the distributing mains and services.

29. Is the alley north of Hamilton street, between Monroe and Madison streets, paved?

Ans. No.

30. Did you have to shore up the trench in that alley?

A. I cannot recall any particular place where we had to shore there.

31. Is the alley north of Hamilton street, between Perry St., and Monroe St., paved?

Ans. No.

32. Did you have to shore up the trench in that alley?

A. No, I cannot recall any place along there we shored up.

697 33. Is the alley north of Main street, between Glendale Ave. and Perry street, paved?

A. Only where it crosses Hamilton street.

34. Did you have to shore up the trench in that alley?

A. No, I don't think we did.

35. Is the alley between Franklin street and Spencer street, between First and Second avenues, paved?

Ans. No sir;

36. Did you have to shore up the trench in that alley?

A. Yes sir; there was shoring in that alley, but I could not recall the particular places.

37. Where was it—in what block?

A. I could not give that either; you see in doing this work we had the sheathing and where we did not need it we left it in one particular place, but when we worked in those alleys we had to carry the sheathing with us and if the trench showed signs of coming in we shored it.

38. But don't you recollect of any particular place that was done?

Ans. No sir;

39. Nor you don't know how much of it you did?

Ans. No.

40. Is the alley between Second avenue and Third avenue and Franklin street and Spencer street, paved?

Ans. No sir;

41. Did you have to do any shoring in that alley?

A. Yes, we had to do some there.

42. Where was the particular location in that alley you had to shore?

Ans. I don't recall the particular location.

43. Do you know the names of any of the men who were on that job?

Ans. No, I don't recall the names of any of the laborers.

44. Who were the men that did the corking on that job?

A. Well, we had several; Harry Ross was one; John Newcomb was another; Frank Staffan was another; Arthur Victor was another; there were several more; I don't recall all their names now.

698 45. On Franklin street, between Adams and Perry streets, did you have to shore up the trench along that street?

A. Yes, occasionally in the first two blocks on Franklin St., from Adams street, and the last two blocks ending at Main street—almost continuously so.

46. Did you have to shore up the trench on Main street, between the alley in the block between Adams and Washington streets and Bluff street in the city of Peoria?

Ans. Yes sir;

47. Where?

A. On Main street between and from the alley below Adams street and Washington street and to Knoxville—not continuously, but at every joint length as it became necessary.

48. Did you have to shore up the trench on Knoxville avenue?

A. There was some shoring done there, but I don't recall at what particular points

49. How frequently did you have to shore it?

A. I could not answer definitely as to that either; I think the first two blocks we had to shore every joint length.

50. On Main street, between Bourland street and Bluff street, did you have to shore the trench there?

Ans. No sir;

51. On Spencer street, between Read avenue and High street, did you have to shore there?

A. Occasionally below Seventh avenue we had to shore.

52. How frequently?

A. Every two or three pipe lengths as the sides of the trench would show signs of coming in.

53. On what street was the double course of brick laid on a concrete foundation?

A. On Hamilton street and in the alley between Washington and Water streets from Main to Hamilton streets.

54. Is there a concrete foundation on Hamilton street?

A. Yes sir;

699 55. Where?

A. Right where our main crosses the street, right at the National hotel, just above Jefferson St., is the place I recall particularly.

56. Is that two courses of brick laid on concrete?

A. Two courses of brick laid on concrete.

57. Is that the only pavement in the city of Peoria of that kind and character?

Ans. That is the only kind we took up.

58. Where did that pavement extend from and to?

A. That pavement we disturbed?

59. Yes?

Ans. It was across Hamilton St., were we cross it twice—at the alley between Jefferson and Madison avenues and at the alley between Madison avenue and Monroe street.

60. How wide is that street?

Ans. 100 feet.

61. Didn't you testify on direct examination that there were 516 feet of your mains under that kind of pavement?

A. There is one more block of that—in the alley between Washington and Water street, from Main street to Hamilton street.

62. You testified that the services were laid into the property of consumers upon application—upon application for what?

A. For gas service.

63. Did those applications contain any request to have a meter placed in the premises?

Objected to by complainant as incompetent, immaterial and not cross examination, also not the best evidence.

(Question withdrawn.)

64. When you drove Mr. Eustis over the streets in the city of Peoria, how long did it take you to show him the streets and alleys under which the pipes were laid?

A. As nearly as I can recollect, about an hour.

700 FRANCIS W. LITTLE, recalled for further cross examination.

Interrogatories by Mr. MANSFIELD:

1. Have you the information called for in cross interrogatory No. 93?

A. Yes sir.

2. Will you produce that information and make it part of your sworn answer to that interrogatory?

A. The number of services attached to the main running down Adams street from Persimmon street to the city limits, on May 1, 1900, was 160 of which 93 were services into the houses of consumers and 67 were services running merely from the main up to and immedately back of the curb.

3. Have you the information called for in cross interrogatories 95 and 96?

A. Those questions were asked and objected to and no ruling was made on it and I have not that statement made up. The fact is, I overlooked the date of May 1 and supposed it was the same information that the question calls for giving the date of September first.

4. What was the average price of the services so laid on South Adams street in the city of Peoria?

A. The average price or cost?

5. The average cost.

A. That I could not tell without an examination of the books of the company to ascertain the exact number of feet of each and the expense of putting them in.

6. What was the average length of those services on South Adams street in the city of Peoria?

A. That information I have not got.

7. Did you not testify on direct examination as to the
701 average length of the service pipes put in by the Peoria Gas & Electric Co.?

A. Yes sir, I think I testified as to the average length of all services.

8. What was the average length of all the services?

A. In the vicinity of 80 feet; the exact amount I have forgotten now.

9. What did you testify as to the total length of the services put in—what number of feet?

A. The total length of services was 179,252 feet up to September, 1900; the average length of the services were 73 9/10 feet.

10. What was the average cost per foot of laying those services?

A. 25 5/10 cents.

11. How many services were there?

Ans. 2426.

12. What was the average cost per service laid?

A. $15.89.

13. Did you testify before the board of review of Peoria county, Ill., on the 29th day of August, 1901?

A. I testified on or about that time; I have forgotten the exact date.

14. Did you not testify there as follows, in answer to this question: "How many services have you," and you answered, "In the vicinity of 2000," and in answer to the question, "What did those service pipes cost each," you answered, "We have 250 tons of service pipe; some of them were put in before the rise in price of pipe and some afterwards, and the average was made out in that way on the basis of the value of the pipes;" then in answer to the question, "Can you arrive at any estimate of what each service pipe cost," did you not testify, "We estimate it by the tonnage of the pipe and add the labor of laying it;" then in answer to the question,
702 "State about how much that cost—each service pipe," did you not testify, "It cost about 3 cents a foot, I think; the services cost on the average about $3.00 apiece; it was either $3.34 or $2.84." Did you not testify in words as shown by the answers to the foregoing questions?

Mr. IRWIN: We object to the question as calling for conditions that did not exist on or about September 1, 1900, or during any period concerning which the witness has been asked about. We object to the question as incompetent, immaterial and not cross examination.

The MASTER: The witness is asked with reference to the cost of the service pipe generally that they had at the time he testified before the board of review. It has not been shown yet that the witness was sworn there.

Mr. IRWIN: Nor does it appear he was interrogated about these service pipes or this particular matter.

The MASTER: You had better start right, Mr. Mansfield, and read up to that question.

15. Did you not testify under oath before the board of review?

A. No, sir, I have no recollection of being sworn at that hearing. In fact, my recollection is very clear that I was not under oath.

16. Did you not then testify to the questions asked you in the preceding interrogatory No. 14, as stated in the answers thereto, as read by me to the reporter?

Objected to by complainant as incompetent, immaterial and because the witness has just stated he was not under oath at the time and therefore was not testifying.

The MASTER: It is competent to show contrary statements
703 of the witness. Are you introducing it for that purpose, Mr. Mansfield or for the purpose of impeachment?

Mr. MANSFIELD: I am introducing it for the purpose of impeachment.

Mr. IRWIN: Where it does not appear that the witness is under oath, he was not testifying and we object to the use of the word "testify" in the question.

Mr. MANSFIELD: I expect to prove the witness was under oath at the time.

The MASTER: I think it fair to the witness and also the inexorable rule that a question of this kind should be plainly put with the time, place and circumstances fixed and if you will put your question separately, that is divide it up, the witness may answer subject to the objection.

17. Did you not, after being first duly sworn, testify before the board of review of Peoria county, on August 29, 1901, in the court house in the city of Peoria, in answer to the question, "How many services have you," did you not answer, "In the vicinity of 2,000"?

Objected to by complainant same grounds as before.

The MASTER: The witness may answer subject to the objection.

A. I have no recollection of having been sworn at the time or place stated in the question and I have no recollection as to the number of services I stated we had at that time.

18. Did you appear before the board at that time?

A. On or about that time, I did.

19. Did you make any statement with regard to the number of services you had?

A. I recollect making some statement concerning the number of services we had at that time.

704 (The MASTER:)

20. When you refer to that time, do you refer to the time you were before the board of review?

A. Yes sir.

(Mr. MANSFIELD:)

21. Did you not testify before the board of review of Peoria county, Ill., after having been first duly sworn, on the 29th day of August, 1901, in the court house, in the city of Peoria, in answer to the question, "What did those service pipes cost each," did you not testify, "We have 250 tons of service pipe; some of them were put in before the rise in the price of pipe and some afterwards and the estimate was made out in that way on the basis of the value of the pipes."

Objected to by complainant as incompetent, immaterial, not cross-examination and assuming that the witness was sworn on that occasion.

The MASTER: The same ruling.

A. I have no recollection of having been sworn at the time of my appearing before the board of review and I think I stated—my recollection is quite clear that I stated—when appearing before the board that the estimates of the values of the property, and as put upon the property, were what I considered to be the value of the property at the time the statement was made up, disassociated from any license or right to use the public streets of the city, and was the value of the property as laid in the public streets for any purpose whatever and where it was situated at that time, disassociated from the franchise or license to use the public streets for such purpose. Concerning the service pipes, my recollection is now that my statement was confined to the value of the metal in the pipes at that time laying in the streets where it was.

22. Did you not testify in regard to the number of tons of service pipe that were laid in the streets of the city of Peoria by the Peoria Gas & Electric Company?

705 A. I do not recollect.

23. If not under oath, did you not state, "We have 250 tons of service pipe; some of them were put in before the rise in the price of pipe, some afterwards and the estimate was made out in that way on the basis of the value of the pipes," before the board of review, at the time and place above designated in the former interrogatory?

A. In my statement before the board of review, I stated from memory only my recollection of the size of the plant and various parts of the plant owned by the Peoria Gas & Electric Co. that year, and I could not undertake to give my words, or anything more than the general substance of my words, as stated at that time, or used in the statement made. I have no recollection as

to whether or not I stated that there were 250 tons in the service pipes then laid in the public streets.

24. Did you not testify before the board of review of Peoria county at the same time and place, in answer to the question, "Can you arrive at an estimate of what each service pipe cost," did you not testify, "We estimate it by the tonnage of the pipe and add the labor of laying it"?

Objected to by complainant as immaterial, incompetent, not cross examination and assuming the witness was sworn and testified.

The MASTER: The witness may answer subject to the objection.

A. I have no recollection now concerning the asking of the question referred to, or my answer to it, if such a question was asked, and, as stated above, I have no recollection that I was under oath.

25. If not under oath, did you not make that statement before the board of review at that time and place?

706 Objected to by complainant as immaterial, incompetent and not cross examination.

The MASTER: Same ruling.

A. I have no recollection concerning such a statement.

26. Did you not before the board of review of Peoria county at the same time and place testify in answer to the question, "State about how much that cost, each service pipe," did you not testify it would cost about 3 cents a foot; I think the services cost on the average about $3. apiece; it was either $3.34 or $2.84"?

Objected to by complainant as not cross examination, incompetent, immaterial, and assuming that the witness was sworn.

The MASTER: The witness may answer subject to the objection.

A. As stated above, I have no recollection of having been sworn when appearing before the board of review and I am quite clear in my recollection that I did not at any time state the cost of the services, or use the word "cost;" if I made any statement concerning the cost, it was based on the then value of the services as estimated by me.

27. If you were not sworn at the time and place mentioned before the board of review, did you not state in answer to the question, "State how much that cost, each service pipe," that it cost about 3 cents; I think the services cost on the average about $3.00 apiece; it was either $3.34 or $2.84"?

Objected to by complainant as immaterial, incompetent and not cross examination.

The MASTER: Same ruling.

A. My recollection is that any statement which was made by me

concerning the services of the Peoria Gas & Electric Co. was based upon their then value and not upon their cost.

28. Did you not testify before the board of review, at the same time and place in answer to the question, "You put in most
707 of the services at the same time you put in the mains"? Did you not testify and answer "Yes"?

Objected to as not cross-examination, incompetent, immaterial and assuming the witness was sworn and gave testimony at that time.

The MASTER: The witness may answer subject to the objection.

A. I have no recollection that I was sworn when appearing before the board of review and have no recollection of giving such testimony.

29. You testify that in your statement, or testimony, before the board of review, that such testimony, so given, was given upon the idea of the value of the pipe in the ground disassociated from the franchise and license of the company to do business, or to furnish gas in the city of Peoria. As vice president of the Peoria Gas & Electric Company, did you not make a statement, or send a statement to the board of equalization of the State of Illinois with regard to the value of the franchise of the Peoria Gas & Electric Company in the city of Peoria?

Objected to by complainant as not cross-examination, incompetent and immaterial.

A. I signed the usual report to the State board of equalization but have no recollection now as to whether it contained any statement concerning the franchise of the company; I don't know whether it had any statement in it whatever concerning the franchise or its value.

30. In the statement so sent by you to the board of equalization of the State of Illinois, did you place any value on the shares of stock of the Peoria Gas & Electric Company?

Objected to as not cross-examination, immaterial and incompetent.

The MASTER: I think it incompetent and immaterial, but the witness may answer subject to the objection.

708 A. I don't recollect the contents of the statement now.

31. Have you now the information asked for heretofore in your cross-examination as contained in cross-interrogatories # 230 to # 261 inclusive on pages 223 to 231 inclusive of this record?

A. I have made up the answers to the cross-interrogatories referred to in the form of tabulated statements which I have with me and now produce as my answers to such interrogatories, making the same a part of my answer to this interrogatory.

709 *Operating Statement, Month of May,* 1900.

Gas sold as per consumers' meters			3,295,800 c. f.
Total expenditures as per statement below			$5704.41

NOTE.—The ammonia apparatus and tar and ammonia wells were incomplete and no record of ammonia or tar production was kept until August.

726 32. In one of these tabulated reports you show that during the month of April 1900, there were 12 6/10 retorts in action. What do you mean by 12 6/10 retorts being in action?

A. In April 1900, there were two benches containing nine retorts each, in operation and fired up for the making of gas; the capacity of these benches, however, when all the retorts were in use was more than the amount of gas demanded by the public, therefore, some of the retorts were not in use; the number of retorts in use is usually stated among gas men as being "in action;" the number of retorts in action vary from day to day, and a record of the number so actually producing gas was kept and the total number thus in use each day was added up and divided by the number of days in use to get the average number of retorts in action.

33. Then when you show by your tabulated statement there were only 18 retorts in action, you mean there were only two benches?

A. Yes sir; only two benches then being used; you understand that these are benches of 9's, and if the number exceeds 9 or any multiple of 9, then an additional bench is required to be brought under fire.

34. I noticed that in June 1900, the average candle power of the gas manufactured was 19 3/10 to 19 8/10—How do you account for the difference in the candle power of the gas manufactured?

A. Whenever the gas is above 17½ to 18 candles it was enriched

with oil naphtha; from 17 to 18 candles it was enriched with canne coal and under 17 candles no enricher was used.

35. How many clerks were engaged in the accounting department of the Peoria Gas & Electric Co., during the month of June 1900?

Objected to by complainant as not cross-examination, incompetent and immaterial.

A. I cannot recollect the exact number; we had a cashier, a head bookkeeper, an assistant bookkeeper, a complaint clerk, a stenographer, and if I remember rightly, one solicitor, whose com-
727 pensation was also charged to the accounting department.

36. Did these clerks so employed in the office of the Peoria Gas & Electric Company attend to any of the business of the electric branch of said company?

Ans. Not in that month.

37. Were those the only persons employed by the Peoria Gas & Electric Co., in the accounting department during the month of June, 1900?

Ans. No.

38. What other persons were employed?

A. We had clerks in the electric department who looked after the electric business.

39. How many clerks were employed in the electric department?

Objected to by complainant as immaterial, incompetent and irrelevant.

40. Who were the clerks employed in the gas department of the Peoria Gas & Electric Co., during the month of June 1900?

Objected to by complainant as not cross-examination, immaterial and incompetent.

The MASTER: I do not see the materiality of it, but the witness may answer subject to the objection.

A. A. P. Colvin, cashier; W. S. Woodworth, bookkeeper; James Trimble, ass't bookkeeper; Frank Philbrick, complaint clerk; Lizzie Pulsipher, stenograper, and C. B. Newman, solicitor. I think also that Chas. S. Easton was employed by the company in June 1900, if I remember rightly. The offices of the company were separate at that time and the gas office was at No. 420 Main St., and the electric office at No. 125 N. Jefferson avenue.

41. In October 1900, according to the tabulated statement of the operating expenses of the company for that month you say that there was $109.86 expended for enrichers, and that by the use of those enrichers you obtained a candle power of 19 8/10 in the manufacture of 5,327,900 cubic feet of gas. In the corresponding
728 operating statement for the succeeding month you state that you expended $175.30, for enrichers and only manufactured 4,666,000 cubic feet of gas, and that the candle power produced was

only 18 6/10. How do you account for the difference in the candle power of the gas under those circumstances?

A. My recollection is that November was a very much colder month than October and that some of the difference in candle power was due to the lower temperature; and further, in the fall of 1900, we experienced a good deal of trouble with our fixing bench which was used for enriching the gas; at that time the fixing bench contained a sectional retort which opened at the joints causing the loss of considerable of the oily vapor which was intended for the enrichment of the gas and permitted of the introduction of air into the retort, which also reduced the candle power; that was the month also when we had a good deal of trouble with nap-thaline as we always do in the fall—interrupted——

Mr. IRWIN: You didn't save the nap-thaline either did you?

The WITNESS: No we did not.

42. In your tabulated statement showing the expenses of the company for the month of February 1901, I find you only expended $62. for enrichers and manufactured 4.085.800 cubic feet of gas, and the candle power produced was 19 2/10. How do you account for the discrepancy between that month and October 1900?

A. My recollection now is that in the latter part of that winter, and probably about the month of February, we got a new retort placed on the fixing bench and were able to bring up the candle power rapidly by the use of a relatively small amount of naphtha. In other words, the fixing bench was working better.

43. I notice that in May 1901, you charged up nothing for enrichers in the expense account and the candle power was 17 5/10, and that in June 1901, under the same conditions, the candle power of the gas was 18 6/10. How do you account for that?

729 A. By the difference in the quality of the coal which we were using at that time the candle power of the gas varied within one or one and a half candle—sometimes as much as two candles, according to the quality of the coal. In other words, whether it was fresh mined coal, or coal that had been exposed to the weather, whether it was free from dust and dirt, or whether it contained a good deal of dust and stuff.

44. In November 1900, was the Peoria Gas & Electric Co., selling gas for fuel purposes at the net price of 85c. per thousand feet with 10c. off if paid before the 10th, of the month?

Objected to by complainant as immaterial, not cross-examination.

A. Yes sir;

45. I notice by your statements that the cost of the manufacture of gas, not including depreciation or interest, during that month was 81c. and 8 mills. Is that a true and correct statement of the cost of the manufacture of gas during that month, not including depreciation or interest?

A. Yes sir; that is a correct statement of the average cost of the gas made during the month of November 1900, excluding depre-

ciation and interest, but after deducting the value of the residuals made.

46. Were you selling fuel gas in the city of Peoria during the month of December, 1900, at 85 cents per thousand feet with 10 cents off if paid on or before the 10th, day of the month in which the bill became due and payable?

Objected to by complainant as not cross-examination, incompetent and immaterial.

The MASTER: I think it competent; the witness may answer subject to the objection.

A. Yes sir;

47. I notice by your operating statement for the month of
730 December 1900, that the cost of gas per thousand cubic feet, after deducting the value of the residuals made, not including depreciation or interest, was 99 cents and 9 mills. Is that a true and correct statement of the cost of the manufacture of gas per thousand feet after deducting the value of the residuals made, not including depreciation or interest?

A. Yes sir; for the month of December 1900.

48. Were you selling gas in January 1901, to consumers for 85 cents per thousand cubic feet with 10 cents off in the event the bill was paid on or before the 10th, of the month in which the bill became due?

Objected to by complainant as not cross-examination, immaterial, incompetent and irrelevant.

The MASTER: I do not think the price at which the company sold gas is conclusive at all as to what it cost to manufacture it, but it is a circumstance I think it competent to show in this case, and the witness may answer subject to the objection.

A. Yes sir.

49. I notice on your tabulated statement of the operating expenses for the month of January 1901, that you state that the cost of gas per thousand cubic feet, after deducting the value of the *the* residuals made and not including depreciation or interest, was 90 cents and 5 mills. Is that a true and correct statement of the cost of manufacturing gas per thousand cubic feet for the month in question as manufactured by the Peoria Gas & Electric Co.?

A. Yes sir.

50. Was the Peoria Gas & Electric Company selling fuel gas in the city of Peoria during the month of February 1901, at the price to consumers of 85 cents with 10 cents off if paid on or before the 10th, day of the month in which the bill fell due?

Objected to by complainant as not cross-examination, incompetent immaterial and irrelevant.

731 A. Yes sir;

51. I notice for the operating statement offered in evidence

for the month of February 1901, that you state therein, that the cost of gas per thousand cubic feet, after deducting the value of the residuals made, and not including depreciation or interest, was $1.05 5/10. Is that a true and correct statement of the cost of the manufacture of the gas made per thousand cubic feet by the Peoria Gas & Electric Co., during that month?

A. Yes sir. In answer to cross-interrogatories commencing with cross-interrogatory 204 on p. 219 and ending with cross-interrogatory 211, on p. 220, I have to say, there were two working orders got out for installing the condensing and purifying apparatus; one covering the installation of the apparatus, properly known as "working order No. 204" issued August 21, 1899; the other issued the same date being "working order No. 206" covering the foundation for the condensing and purifying apparatus. The estimate of the cost under working order No. 204 of the condensing and purifying apparatus was "labor $500; material $17.900" making a total of $18.400. The estimate under working order No. 206 for the foundation was "labor $800; material $900; total $1700."

52. Have you those working orders in your possession?

A. I have copies of them or duplicates; our working orders are all made in duplicate with a carbon sheet; the carbon sheet being put between the two they are exactly alike.

53. Will you bring those duplicate working orders into court to-morrow?

A. Yes sir; I will bring them in to-morrow. Cross-interrogatory No. 212 asked for an estimate of the cost of the benches; I see now that question includes also the cost of the storage holder and I have not the working order of the storage holder. The benches were installed under working order No. 205, issued August 21, 1899,
732 and the estimate was "For labor $600; material $19.398; total $19.998."

54. Have you a copy of that working order in your possession?

A. Yes sir;

55. Together with the estimate made by you at that time?

A. The estimate was not made by me; the estimate was made by the foreman.

56. Together with a copy of the estimate made at the time?

A. Yes sir;

57. Will you bring those into court to-morrow?

A. Yes sir: I will bring them all in.

Cross-interrogatory No. 223, p. 222, asks: "How much gas was in the holder of the Peoria Gas & Electric Company on the morning of September 1, 1900?" My answer to that is; the gas on hand on the morning of September 1, 1900, was 244.731 cubic feet. There were some other interrogatories asked me to be answered on page 233—interrogatories No. 277, 278 and 279. I find on looking into the matter that when South Adams street, between Cedar and South streets, was paved, the Peoria Gas Light & Coke Co., had three inch mains on that street which had been in a number of years and was

considered by them to be too small, and the foreman of that company came to Mr. Robb, our foreman, and said they wanted to cut off their main and connect certain services onto our main. I find that the services at No. 1507, No. 1509, No. 2003, No. 2035, No. 2109 and No. 2111 S. Adams St., were attached to our mains and that the gas passing through those services into the meters of the consumers has been charged by us to the Peoria Gas Light & Coke Company, and that they have paid us for it.

58. What price has the Peoria Gas Light & Coke Co., paid your company for that gas?

A. The same price as everybody else paid, viz:—75 cents for fuel and $1.15 for light up to the 1st, day of November 1901,
733 and since that time they have paid us $1.00 per thousand cubic feet.

59. For what distance did the Peoria Gas Light & Coke Co., abandon its mains on S. Adams street?

A. So far as my knowledge goes from Cedar to South street.

60. Then they practically turned over to you all of the consumers on S. Adams street from Cedar to South street did they?

Objected to as calling for the conclusion of the witness.

The MASTER: Let the witness state what was done; that is all he can do; his conclusions would not be proper.

A. All I know about it is that these six consumers were connected up to our mains and our men read the meters and charge the gas to the Peoria Gas Light & Coke Company.

61. Did you furnish any gas to the hose house of the city of Peoria located on S. Adams street, between Cedar and South streets?

A. I don't think so; I have no recollection of furnishing any gas to the hose house at that point.

Adjourned by agreement until Friday, January 10, 1902, at 10 a. m.

United States court room, Government building.

PEORIA, ILL., FRIDAY, *January* 10, 1902—10 a. m.

Parties met pursuant to adjournment.
Present same as before.

Cross-examination of F. W. LITTLE resumed by Mr. Mansfield:

The WITNESS: I now have with me the working orders and estimates called for yesterday which I promised to produce this morning which said working orders and estimates read in the words and figures following, to wit:—

Working Order Requisition No. 204.

Peoria Gas & Electric Company.

PEORIA, ILLINOIS, *August* 21*st*, 1899.

To the general manager:

734 The following work account No. 34 is necessary. Pleas furnish me with working order authorizing the same.

Installing purifying and condensing apparatus. Probable cost o this work will be:—Labor $500.00; material $17.900.00; tota $18.400.

C. H. CHRISTIE,
Superintendent.

Working order No. 204 issued for above work August 21, 1899.

F. W. LITTLE,
General Manager.

Working Order Requisition No. 205.

Peoria Gas & Electric Company.

PEORIA, ILLINOIS, *August* 21, 1899.

To the general manager:

The following work account No. 34 is necessary. Please furnish me with working order authorizing same.

Installing benches in retort house. Probable cost of this work will be;—Labor $600.00; material $19.398.00; total $19.998.00.

C. H. CHRISTIE,
Superintendent.

Working order No. 205 issued for above work, August 21, 1899.

F. W. LITTLE,
General Manager.

Working Order Requisition No. 206.

Peoria Gas & Electric Company.

PEORIA, ILLINOIS, *August* 21, 1899.

To the general manager:

The following work account No. 34 is necessary. Please furnish me with working order authorizing same.

Foundation for purifying and condensing apparatus. Probable cost of this work will be:—Labor $800; material $900; total $1700.

C. H. CHRISTIE,
Superintendent.

Working order No. 206 issued for above work August 21, 1899.

F. W. LITTLE,
General Manager.

735 *Working Order Requisition No.* 208.

Peoria Gas & Electric Company.

PEORIA, ILLINOIS, *August* 21, 1899.

To the general manager:

The following work account No. 34 is necessary. Please furnish me with working order authorizing same.

Erecting storage holder. Probable cost of this work will be:—Labor $400.; material $23,000.; total $23,400.

C. H. CHRISTIE, *Foreman.*

Working order No. 208 issued for above work, August 21, 1899.

F. W. LITTLE,
General Manager.

63. Are those working order- true and correct copies of the working orders as shown by the vouchers on file in the office of the Audit Company of Illinois in Chicago?

Objected to by complainant as incompetent and immaterial as a comparison of the two would certainly be the best evidence.

The MASTER: The witness may answer if he can.

A. These are correct copies of the working order requisition on file in the office of the Audit Company of Illinois in Chicago.

64. Are those the only estimates that were made for the work done under those orders as shown by the vouchers and sub-vouchers on file in the office of the Audit Company of Illinois at Chicago?

A. My recollection is that another working order was got out covering the foundation of the storage holder but I am not entirely clear as to that. Aside from that, I believe these are the only estimates which were made covering the installation of the benches, the condensing and purifying apparatus and the holder.

736 Re-direct interrogatories by Mr. ABBOTT:

1. It appeared from your testimony yesterday that there were some 60 odd service pipes on South Adams street that were laid only from the street main to the curb line, or a little beyond, but not into the premises of consumers. I will ask you to state how those service pipes came to be so laid?

A. Those service pipes, which we commonly call "service stubbs" and which are the pipes leading from the main only to a point immediately back of the curb, were laid just prior to the paving of the

street by direction received from the office of the commissioner of public works and to avoid the necessity of opening the pavement when any of the adjacent residences desired to use gas.

Defendant's counsel objects to the foregoing answer as immaterial, incompetent and not the best evidence because the orders received from the office of the commissioner of public works would be the best evidence, and moves the court to exclude it.

2. I do not ask you to state the contents of any orders received from the city council, or the commissioner of public works, but I will ask you to state whether those pipes were laid in accordance with and because of directions so received?

Objected to by defendant as immaterial, incompetent, not the best evidence and because it don't tend to prove the issues in the case.

A. They were laid because of directions received from the office of commissioner of public works, and also, because of the requirements of our ordinance—license.

3. Then, if I understand you, they were necessarily required to be laid at the time?

Objected to by defendant same grounds.

737 A. Yes sir.

4. Did they, therefore, become a necessary part of the distributing plant of the Peoria Gas & Electric Co. as the same stood on the first of September, 1900?

Objected to by defendant same grounds.

A. Yes sir.

5. In your cross examination yesterday you were asked a number of questions with reference to statements claimed to have been made by you before the board of review of Peoria county in the month of August, 1901. If, as a matter of fact, you made any of the statements to which your attention was directed yesterday, I will ask you to state on what basis, or theory as to the value of the service pipes of your company, you proceeded in the course of that examination before the board of review, if any was had?

A. I was advised by our counsel, prior to making up the statement and prior to appearing before the board of review, that the valuation to be placed upon the property of the Peoria Gas & Electric Co. should be the then fair, cash value of the property both as to the plant, street mains, services, meters and other property disassociated and separated from the franchise of the company; that its value should be stated by me at its fair cash value, or what it could be sold for disassociated from the franchise and without the right to operate a gas plant; it was on that basis that the property was valued by me and on this basis its value was stated by me before the board of review.

6. You may state whether the service pipes of the company at the date of said statements, if any were made, would be as great as the value of similar pipe not in the ground having reference to the labor which would necessarily be involved in removing the same for the purpose of sale?

738 Objected to by defendant as immaterial and incompetent.

A. The service pipe then being in the ground would not be worth anywhere near the value of such pipe out of the ground since the cost of taking them out of the ground would be nearly or quite as great as the value of the pipe after it was removed.

7. If the statements referred to in your cross examination were made, and as you have now stated the theory or basis on which they were made under the advice of counsel, were such statements on that basis or theory true and correct to the best of your knowledge and belief?

Objected to by defendant as immaterial and incompetent.

The MASTER: I do not think it material but the witness may answer subject to the objection.

Mr. ABBOTT: We withdraw the question.

8. If the questions thus far put to you on re-direct examination have not elicited a full explanation of the theory or basis on which the statements were made by you before the board of review, if any such statements were made, please make such further explanation as you may deem necessary and proper.

A. Before making up the statement for the assessor, I advised with our counsel concerning the basis upon which the statement was to be made, that is, the basis upon which valuations were to be fixed; we made out a schedule in the form required by the local assessor and before that schedule was made out I advised with our counsel, as stated, concerning the basis upon which the schedule was to be made out. Counsel advised me that in making estimates of value I was to consider only the value of the property, as property, disassociated and separate from the license to maintain any structures, which were in the public streets or alleys, that the valuation should be without reference to its specific use as a gas
739 plant in connection with the license from the city; I was also to consider the possible cost of removing those structures from the streets and alleys, and also in valuing the plant, and the various parts of the plant, to take into consideration, the value of the plant, or parts of the plant, in like manner. That is to say, disassociated from the franchise. When I appeared before the board of review counsel was with me and again repeated those instructions; my recollection now is I prefaced my statement to the board of review by saying it was on this basis that the property had been valued by me and I did not intend, and as I now recollect, did not make any statement as to the cost of property, but my statements were based upon the value of the property; that was what I in-

tended to do and what I believe I did do, and I clearly explained to the board the basis upon which the valuations were fixed.

Re-cross interrogatories by Mr. MANSFIELD:

1. You testified, did you not, on your direct examination that the cost of the services as laid in the ground were some thirty odd thousand dollars?

Objected to by complainant as immaterial and not proper recross examination.

The MASTER: I do not think it proper but the witness may answer subject to the objection.

A. The record shows what I testified to in that respect, and if I may be permitted to examine the record I will tell you what I testified to. The statement there in the cost of the property as of September 1, 1900, shows what I testified to as to the cost of those services.

2. And that cost was made up of labor and materials that went into the laying of those pipes?

740 Objected to by complainant same grounds.

The MASTER: The ruling will be the same.

A. Yes sir, the labor, material and relaying of the pavement.

3. When you testified before the board of review, or when you made the statement before the board of review, whichever it was, you testified that the services cost on an average about $3.00 apiece, did you not?

Objected to by complainant as not proper re-cross examination and as assuming something entirely contrary to what the witness stated.

By the MASTER: I don't think it proper re-cross examination but the witness may answer subject to the objection.

A. I have no recollection of making any such statement before the board of review; what I intended to say and believe I did say was that in my opinion that was the value of the pipe in those services at that time.

4. Would the labor of taking up those pipes exceed the labor of laying them down?

A. No, I think not.

FRANCIS W. LITTLE recalled on behalf of complainant, deposes and says:

Direct interrogatories by Mr. ABBOTT:

1. You are the same Francis W. Little who has previously testified in this case?

A. Yes sir.

2. Will you give a description of all the buildings, structures, machinery and apparatus, together with their sizes, con-
741 struction, and character composing the gas plant of the Peoria Gas & Electric Company in the city of Peoria, Ill. as it stood on September 1, 1900?

Objected to by defendant as immaterial, incompetent and not tending to prove the issues in the case and because it has already been testified to by the witness.

The MASTER: This testimony is offered, I suppose, under the stipulation made in connection with the testimony of Harvey W. Brown in this case.

Mr. ABBOTT: Yes sir.

The MASTER: I think it material and competent, and it will be admitted subject to the objection.

A. The following is a description of the plant of Peoria Gas & Electric Company as at September 1, 1900.

742 Retort house.

107 ft. 4″ x 42 ft. 2″—Brick building with gable roof. Walls 32 ft. above grade, 18″ thick for 12 feet and 12″ balance of height, with 16″ pilasters spaced 13 feet apart.

Ludowici tile roof, built onto steel frame work supported by seven steel trusses. 10 ft. clerestory entire length of building.

Foundations 6 feet below grade and laid on footing of concrete 12″ deep by 2 ft. 9″ wide.

Main floor laid with 9″ x 9″ x 2½″ tile.

Operating floor built upon nine hollow tile arches sprung from 15″ iron L-beams, one end of beam resting on wall and other end next to benches being carried on iron column. Operating floor covered with 9″ x 9″ x 2½″ tile, except 4 feet in front of benches, which is covered with cast iron plates.

Retort house contains seven Parker-Russell full depth regenerative benches of nine 16″ x 26″ x 9 feet deep retorts to each bench. Each retort provided with mouth piece with self sealing lid and connects to hydraulic main through 6″ standpipes, and bridge pipes provided with self sealing lids or covers.

Steel hydraulic main is 2 feet 7½″ deep by 2 feet 5″ wide, built of boiler plate and provided with four cast iron cleaning pockets fitted with covers bolted on, for each bench.

Hydraulic main is connected to condenser room with a 16″ cast iron pipe in which is placed a 16″ Western Gas Construction Company gate valve at hydraulic main. 16″ pipe is covered with magnesia cement.

A 9″ H. & M. angle thermometer is attached to 16″ pipe at hydraulic main.

Hydraulic main is provided with a 4″ tar take-off pipe and connected to both ends of main through 4″ valves.

4″ tar pipe runs entire length of benches, then drops to below floor and is carried to separator in condenser room.

Hydraulic main is also provided with ammonia take-off which discharges into a cast iron seal pot which is connected to 4″ tar pipe.

Benches are drafted through a main flue constructed entire length of benches and discharging into 90 feet by 48″ steel stack, built upon a brick foundation 12 feet in diameter at base by 13 feet. Foundation 6 feet deep.

Benches and hydraulic main are supplied with water through a 1¼″ water pipe laid under retort house floor. Same pipe also supplies water for quenching hot coke through five standpipes, each standpipe being provided with a stop cock set in the ground and fitted with a curb box brought 2 feet above the floor.

No. 5 and No. 6 benches and heating coil in elevator pit are supplied with steam through a 1″ pipe brought from condenser room. Heating coil contains 150 feet 1″ pipe.

For cleaning stopped standpipes, a platform of 2″ plank has been constructed the entire length of hydraulic main, in front of standpipes. Platform is carried on channel irons bolted across top of hydraulic main.

A 10″ diameter x 13 ft. 6″ travel, direct acting elevator with 6 ft. 6″ x 6 ft. 6″ platform is provided to elevate coal and coke to the operating floor. Elevator is connected to elevator pump and surge tank in boiler room with one 3″ and one 4″ pipe laid underneath boiler room floors.

A 1″ gas pipe is run along wall entire length of building on each floor, from which 8 gas jets on each floor are taken.

743

Boiler house.

38 ft. 5″ x 65 ft. Brick, with gable roof. Walls 20 ft. high, 18″ thick. Roof covered with Ludowici tile built onto steel frames supported by 1″ steel truss. Foundation 6 feet deep, on brick footing 2 feet wide. Floor paved with paving brick.

Pump pit 8 ft. x 10 ft. x 8 ft. deep, 12″ brick walls, wooden stairway and wooden hand rail.

Boiler house contains: two 66″ x 18 ft. tubular steel boilers with 36″ x 40″ domes, set in independent brick settings; connected together by one 6″ steam header from which is taken one 4″ pipe to supply heating apparatus and oxide elevator engine and one 4″ steam line to pump header; and also connected by one 2″ header, from which is taken steam supply to exhausters. All live steam piping and dome of boilers are covered with magnesia covering.

Two 5½″ x 3½″ x 6″ single acting boiler feed pumps connected so that either one or both may be worked.

One 8″ x 5″ x 10″ single acting pump, drawing water from river and set in pit 8 feet deep.

One 5¼" x 3½" x 6" single acting ammonia pump pumping crude liquor to ammonia still and scrubbers, set in pit.

One 10" x 6" x 12" single acting tar pump for loading tar into tank wagons or cars, set in pit.

One 4½" x 2¾" x 5" single acting ammonia pump for pumping concentrated liquor from storage tank.

One 8" x 5" x 10" single acting pump for elevator and fitted with 1½" pump governor and guage,—Fisher.

One 9½" x 8" x 10" crane air compressor used in connection with elevator apparatus.

One 12" x 19 foot stand pipe for elevator.

One 10 ft. 2" x 1 ft 4" x 1 ft. 5" open surge tank for elevator.

One 7 ft. 10" x 7 ft. 10" diameter steel tank supported on iron columns resting on boiler and fixing bench setting, used for water tank.

One fixing bench consisting of an 18" x 20 foot retort built into a setting containing a Parker-Russell semi-recuperator furnace and provided with two mouth pieces fitted with self sealing lids, and connected to 4 ft. x 4 ft. x 4 ft. deep hydraulic main by means of a 6" stand pipe and a bridge pipe fitted with self sealing lid. Hydraulic main is provided with a tar pot into which an overflow pipe from hydraulic main discharges.

Fixing bench is connected with outlet of purifier boxes with a line of 6" pipe, which also serves to connect vaporizer, and another line of 6" pipe leads from fixing bench hydraulic main to inlet of exhausters.

One vaporizer for vaporizing naphtha, consisting of a closed steel tank 3 ft. x 4 ft. x 6 ft. containing 11 steel shelves on which rest 11 coils of 1" steam pipe made up of 13 pipes to each coil, and each coil provided with two ½" valves so that steam may be cut off from any coil independently of the others.

6" connecting pipe is provided with three 6" valves, one in purifying house, one at vaporizer and one in condenser room.

One ammonia concentrator, made by Michigan ammonia works, of a capacity of 15,000 tons of coal per annum, consisting of a steel overhead tank supported on a timber frame work, a cast iron still on foundation on boiler room floor, a condenser consisting of a coil of 2" lead pipe contained in an open steel tank supported on
744 a timber frame work; an absorber consisting of a closed steel tank set on a brick foundation, and a second absorber set alongside of first absorber.

One No. 2 B Baragwanath plain tubular water heater with brass tubes.

One 3" exhaust header into which all pumps and exhausters discharge, each exhaust pipe from each piece of apparatus being provided with a valve. 3" pipe is also provided with 3" valves in order to by-pass feed heater.

One 3" discharge pipe from river pump to tank, provided with 3"

valve so that water may be diverted from tank and pumped directly into water lines leading to condenser room and retort house.

A 1½" connection provided with a float valve supplies the open elevator tank with water from the 3" discharge pipe from river pump.

A 3" connection provided with a 3" valve is taken from pipe leading from elevator stand pipe to supply water to condenser room, purifier house and retort house.

Water pipes are so arranged that either well pump located in condenser room or river pump, or elevator pump may supply water required in condenser, purifier and retort houses and meter room, or well water from well pump may be supplied to purifier and condenser houses and river water to retort house.

A guage board on which are placed guages for each of the following pieces of apparatus:—Exhauster, P. & A. air cooler, No. 1 condenser, No. 2 condenser, washer, No. 1 scrubber, No. 1 purifier and No. 2 purifier and No. 2 scrubber, 10 guages.

Guages consist of two glass tubes connected top and bottom with brass connecting pieces provided with stuffing boxes each guage provided with a brass connecting pipe fitted with a ⅜" gas cock. P. & A. air cooler, and condenser guages are 18", others are 14" guages.

One cast iron enameled washout water closet and flush tank.

One cupboard or wardrobe for fireman's clothes.

A line of 1" gas piping supplying 12 foot burners placed in boiler room.

Purifying and condenser house.

107 ft. 4" x 65 ft. 1", brick, gable roof. Walls 43 feet high to eaves, 22" thick for 25 ft. and 16" balance of height.

Condenser room divided off by partition wall built up to the roof, 16" thick for 25 feet and 12" balance of height. Foundation 3 ft. 6" deep. Roof covered with Ludowici tile (except two spaces over condenser room which are covered with glass tile to make sky lights), built onto steel frame work supported on six steel trusses, and partition walls.

Condenser room is provided with a frame stage and wood floor around condensing apparatus, and purifier house is also provided with a stage and floor around purifier boxes.

A wooden stairway leads from basement of condensign room to stage floor, another leads from stage floor in condenser room up to stage floor in purifier house, and a third stairway leads from purifier house floor to stage floor around boxes.

A plank runway is built from purifier house floor to driveway between store room and purifying house. Entire floor both in condenser room and purifying house is paved with paving brick.

745 Condenser room contains:—One preliminary air cooler 20 ft. 6" high by 5 feet diameter provided with two 12" valves and one 16" by-pass valve and one 9" H. & M. angle thermometer.

Air cooler is set on brick foundation 11 feet high, foundation is hollow, or of concentrue construction and space inside is connected through opening in wall of building and through area built outside and carried two feet above ground, to atmosphere.

Two P. H. and F. M. Roots No. 5 exhausters, with engines on same bed plate, set on brick foundations 3 feet below condenser room floor and 8 feet above floor. Each exhauster furnished with an automatic gas governor and steam valve and two 12″ gas valves with floor stands.

One 16″ automatic by-pass valve is provided for each exhauster.

Steam piping, both supply and exhaust, is provided with valves so that either one may be cut off independently of the other.

One P. & A. tar extractor set on brick foundation 3 feet below condenser room floor and 8 ft. 4″ above floor, and provided with two 12″ valves and one 16″ by-pass valve, all with floor stands and one differential guage and one 9″ H. & M. angle thermometer.

A seal pot to seal the drips from both exhauster and the P. & A. is set on floor below P. & A.

A tubular air condenser 20 ft. 6″ high by 5 ft. 6″ diameter set on brick foundation 3 ft. below condenser room floor and 8 feet above floor, and provided with two 12″ valves and one 16″ by-pass valve, all with floor stands and one 9″ H. & M. straight thermometer.

Foundation is of eccentric construction to permit air to be brought through arched opening left in base, and circulated through condenser.

Two tubular water condensers each 5 ft. 0″ by 20 ft. 6″ set upon brick foundation 3 feet below condenser room floor and 8 feet above floor, each condenser provided with two 12″ valves and both condensers provided with one 16″ by-pass valve with floor stand.

Each condenser is connected by separate drip pipe to seal pot set under washer. A 1¼″ ammonia cock in each drip pipe. Each condenser is also provided with two water connections so that either well or river water, or both, may be supplied to condensers. 1″ overflow pipes lead from each condenser to catch basin in boiler room. No. 2 condenser provided with two manholes, one top and one bottom, for cleaning.

One improved Chollar washer built of cast iron 5 ft. x 8 ft. x 3 ft. 6″ deep, set on foundation consisting of two brick piers 8 feet long extending from a point 3 feet below condenser room floor to a point 6 ft. 6″ above floor and provided with two 2″ valves and one 16″ by-pass valve, all with floor stands, and one differential guage and one 9″ H. & M. straight stem thermometer. Washer is also provided with device for varuing height of water in washer.

Two scrubbers 6 ft. diameter by 24 feet high, set upon foundation 3 feet below condenser room floor and 8 feet above floor, each scrubber provided with two 12″ valves and one 16″ by-pass scrubber, also provided with one 9″ H. & M. angle thermometer.

No. 1 scrubber is provided with two 2″ drip connections with a 2″ cock in each connection so that crude liquor may be run into

washer or else discharged into seal pot on condenser room floor under scrubbers.

No. 2 scrubber is provided with a 2″ drip pipe fitted with 2″ cock discharging into seal pot on condenser room floor.

746 Each scrubber is fitted with three layers of trays and seven 11″ x 17″ oval self sealing man holes, and removable sprinklers. The No. 1 scrubber is fitted with a double connection so that it may be supplied either with fresh water or crude liquor.

The tar and condensation from the various pieces of apparatus are gathered into three seal pots, one set below scrubbers and one set below washer and one set below P. & A. A separate line of 4″ cast iron pipe is run from these seal pots to a tar and ammonia separator set below the P. & A. This 4″ line is supported on brick piers. At the seal pot below the P. & A. an opening is left for a 3″ wrought iron header which is run along the entire length of the 16″ gas main to carry away the tar and condensation collecting in the 16″ gas main between the by-pass valves.

There are 8 syphone drips in the 16″ gas main each drip made of 1¼″ pipe, fitted with 1¼″ ammonia cock and a ½″ tee and steam connection provided with a ½″ steam valve, so that any drip or any portion of the 16″ gas main may be steamed at any time. These drips discharge into the 8″ wrought iron header through 3″ x 2″ tees and the drip header is also provided with a steam connection with a valve at each end so that any stoppage may be steamed out.

One tar and ammonia separator set on condenser room floor below P. & A., and consisting of steel tank 5 ft. diameter by 5 ft. 3″ deep, provided with a vertical steel partition dividing separator into two compartments, and also provided with one 4″ tar outlet and two 2½″ ammonia outlets, fitted with devices for varying the height of the liquor contained in the separator and also fitted with a clean out in the bottom of the side of the tank. A line of 4″ cast iron pipe to tar well and a line of 3″ wrought iron pipe to ammonia well, both pipes laid under condenser room floor take the tar and ammonia away from the separator.

The 16″ gas main is provided with specials now closed by blank flanges, so that the present apparatus, excepting the exhausters, may be duplicated at any time, thereby doubling the capacity of the condensing room. The 16″ gas main is supported on brick piers and all elbows are provided with cleanout holes fitted with self sealing covers.

One 4½″ x 2¾″ x 5″ single acting pump is set on condenser room floor and connected to well in yard by a line of 2″ pipe. This pump is fitted with a ½″ Fisher pump governor and pressure guage, and supplies well water to meter room and scrubbers and condensers.

Condenser room is heated by one coil of 450 feet of 1″ pipe built onto railing of stage floor and one coil of 384 feet of 1″ pipe built onto walls of condenser room.

A steam trap set into floor of condenser room takes care of the condensation from these coils as well as the condensation from coils

in purifying house and meter room. A line of 1¼″ pipe paralleling the 16″ gas main supplies steam to the drip seals for steaming out stoppages.

Condenser room is lighted at night by 14 incondescent electric lamps with wiring arranged so that lights on stage floor and lights on condenser room floor may be controlled independently of each other from switches placed in boiler room.

There is one *guage* board in condenser room provided with one *guage* connected to inlets of exhausters.

747 Connections are also provided for introducing air for revivifying oxide, through a meter set on condenser room wall near *guage* board.

Connection consisting of a line of ½″ pipe carried across condenser room and provided with ½″ cocks and seal, is also provided for introducing nap-tha into gas main at inlets of exhausters.

A 2″ connection fitted with a 2″ ammonia cock is also provided to return a portion of the gas from the outlet of the exhausters to the inlet.

Another 2″ connection fitted with 2″ ammonia cocks is run from the outlets of the purifiers to the inlets of the exhausters.

A line of 1″ pipe is run from the inlet of each piece of apparatus to the *guage* board in boiler room. All of the turns in these lines are made by means of 1″ tees with opening plugged.

A cupboard is provided for holding waste, packing, etc.

Purifying house contains:— Two 24 ft. x 24 ft. x 5 ft. deep purifying boxes constructed of cast iron plates bolted together and supported by eight 12″ x 31½ lbs. steel I-beams 36 ft. 6″ long, carried by walls of purifying house and 16 cast iron columns built upon 16 21″ x 21″ brick piers with 42″ x 42″ footings and extending from a point 3 ft. 6″ below purifier house floor to 3 feet above floor.

Each box is provided with one layer of reversible oak trays supported on seven 3″ x 5½ lbs. steel I-beams 24 feet long.

Each box is provided with four 12″ discharge openings, in bottom, each opening fitted with a hinged self sealing cover, or door, and above each opening is fitted a special trap tray provided with a handle so that the foul material may be dumped without digging down to the trays.

Each box is provided with a steel cover, 24 feet 6½″ x 24 ft. 6½″ deep at sides and 34″ deep in center of ends.

Each cover is provided with a 7″ ground joint blow off.

Each box is provided with a 10″ opening to which is connected a 10″ mercury sealed valve. A line of 10″ pipe from the valve leads to a 10″ steam jet exhauster and from the exhauster to the outside of purifying house. A 9″ H. & M. angle thermometer is placed in 10″ pipe.

Six 16″ valves with floor stands and connections so arranged that the gas may be conducted through both boxes tandem with either box first, either box independently of the other, or both boxes together.

Valves and piping are supported by hangers from I-beams carrying boxes, and tees are left for two additional boxes.

One power traveling crane carried by two steel I-beams supported by latticed steel columns resting on steel I-beams carrying boxes.

Crane built of two heavy latticed steel girders, connected at ends by lighter girders, traveling on four flanged and turned wheels. Two wheels carry gear wheels operated by pinions secured to a steel shaft which is in turn driven by chain sheave and hand chain.

Lifting apparatus consists of two cross heads, one with right hand screw and one with left hand screw, working upon a threaded shaft which is driven by a gear wheel set in the center of the length of the shaft and operated by a pinion secured to a second shaft which is in turn driven through a train of reducing gears by a
748 chain sheave and *and* hand chain. Four chains working over four sets of chain sheaves of two sheaves per set give the travel of the cross heads to the covers of the boxes.

One oxide elevator consisting of a receiving boot built under purifier house floor in a pit covered with removable floors, a bucket elevator incased in a wood case, and discharging into a head secured to a frame work built on to the tie bars of the purifier roof trusses. A galv. iron spout to carry material from head to either box, and provided with rope and blocks for lowering and raising spout.

A counter shaft with a link chain belt reaching from wall of purifier house to head shaft in center of house.

A 4 H. P. upright steam engine set on brick foundation on purifier house floor and connected to countershaft with a leather belt.

Purifier house is heated with two coils containing 288 ft. 1″ pipe and built onto sides of purifier boxes.

Two coils containing 500 feet of 1″ pipe built under boxes.

One coil of 1″ pipe containing 544 feet of 1″ pipe and built on purifier house wall.

A 1″ water pipe brings water from well pump in condenser room to a point in center of house near elevator, and from there to wall between purifier and condenser room where a hose connection and 100 feet of ½″ hose are placed above stage floor. 1″ water pipe is continued on to meter room.

A 4″ steam pipe covered with magnesia pipe covering brings steam to a point below stage floor at center of wall between purifier and condenser rooms, from which point steam is distributed to the heating apparatus in purifier house, storeroom and meter room. A 2″ steam line carried along walls of purifier house carries steam to oxide elevator engine and to storeroom. Another 2″ steam line carried along walls of purifier house, carries steam to steam jet exhauster, where a ½″ pipe is taken off and run to center of purifier house for heating water required in making oxide; and to meter room where a 1¼″ steam line is carried to naphtha house. All steam piping is covered with magnesia covering.

A 2″ gas pipe carried on walls of purifier house supplies gas

through a meter placed in meter room, to storeroom and boiler room, and retort house.

Two lines of 1″ pipe connect inlets of boxes to *guages* on board in boiler room. All bends and turns in these pipes are made with 1″ tees having one opening pluggett.

One line of 1″ pipe carried on walls of purifier house carries naphtha to vaporizer in boiler room from basement of meter room.

Meter and governor room.

28 ft. 3″ x 29 ft. 6″ brick, flat roof, walls 20 ft. above grade, 9″ thick. Foundation 8 feet below grade 12″ thick on brick footing 21″ wide. Roof carried on 2 x 8 joists supported in center by 10″ x 12″ trussed girder and covered with tin. Floor in Georgia pine and ceiling is also ceiled with Georgia pine. Five sliding sash windows. One wall built with blind arch so that meter may be taken through wall if necessary.

Building contains:—One 10 foot Maryland station meter set on brick foundation to bring base of meter above meter room floor.

Meter is fitted with two 16″ valves and one 16″ by-pass
749 valve with floor. stand and one 9″ H. & M. angle thermometer. Two 16″ valves and one 16″ by-pass valve, all with floor stands, for holder connections.

Connections covered with blank flanges for additional holder.

One 10″ Connelly automatic governor fitted with reducing flange connections so that larger governor may be set in future. Governor is provided with three 16″ valves with floor stands.

All specials in 16″ gas pipe are provided with cleanout openings closed with self sealing covers.

16″ gas piping and valves and fittings are all supported on 12″ x 12″ brick piers.

One *guage* board fitted with syphon *guage* to show pressure on mains.

One photometer room 9 ft. 10″ long by 4 ft. 10″ wide by 7 ft. 4″ high ceiled with Georgia pine matched, tongued and grooved ceiling.

One American Meter Company style B 60″ bar photometer.

One laboratory 9 ft. 9″ long by 4 ft. 4″ wide by 7 ft. 4″ high, ceiled with Georgia pine matched, tongued and grooved ceiling, fitted with 16″ x 24″ enameled steel sink set in work bench running along length of laboratory.

One Perry L. Hobbs ammonia testing outfit.

One American Meter Company ammonia test meter.

Laboratory is supplied with gas connections and with water from well pump in condenser room.

Meter room is heated by one 120 ft. iron pipe radiator.

Office, storeroom, and shop building.

103 ft. 1″ x 29 ft. 6″, brick walls, gable roof. End walls 19 ft. high at eaves at Grove Street end and 23 ft. 6″ high at rear end, height taken from foundation. Walls 12″ thick.

There are two 9″ partition walls, one 20 ft. high from foundation and one 22 ft. high from foundation.

There are four 9″ cross walls carrying floors, one 5 ft. high from foundation and one 8 ft. high from foundation. Foundations are 3 feet deep and 12″ walls have 2 ft. 5″ brick footings and 9″ walls have 1 ft. 9″ brick footings.

Roof covered with Ludowici tile built onto 1″ sheathing supported by 2″ x 6 rafters tied together by 2″ x 8″ joists.

Office is 27 ft. 6″ x 24 ft. 3″, plastered walls, floored, ceiled and finished with Georgia pine.

Office fitted with toilet room containing syphon jet water closet and overhead flush tank, enameled iron corner wash stand. One standing desk with cupboards and drawers. One hand rail from desk to wall. One drafting table. One black board. One roll top desk.

Storeroom is 27 ft. 6″ x 46 feet, floored with Georgia pine flooring laid over 2″ flooring spiked diagonally to joists.

Storeroom is partitioned off for meter repair shop by 7/8″ partition.

750 Meter shop contains three sets meter shelves 3 feet deep x 20 ft. long x 14 feet high, having a capacity for storing 600 meters. One set of shelves 3 feet deep by 20 feet long by 14 feet high containing 12 shelves. Two sliding ladders hung from overhead tracks in front of shelves. One work bench 10 feet long by 2 ft. 6″ wide. Top fitted and glued together and containing three drawers provided with Yale padlocks. One five foot meter prover. One gasser for testing meters for tightness. One 2 ft. 6″ x 3 foot table.

Storeroom contains:—One set fitting bins 20 feet long, 14 ft. high, 2 ft. 6″ deep containing 180 bins. One sliding ladder hung from overhead track in front of bins. One set fitting bins 3 ft. x 6 ft., containing 18 bins 15″ deep. Two sets fitting bins 8 ft. x 5 ft. 6″, containing 30 bins each 2 ft. deep.

One tool room consisting of a platform 12 feet by 19 ft. 6″, supported by storeroom wall on one side and four 2″ pipe posts on other side. Tool room provided with shelves for tools.

Fitting shop is 29 ft. 6″ x 27 ft. 6″ floored with Georgia pine flooring laid over 2″ flooring spiked diagonally to joists. Contains:—

One type C. Westinghouse alternating current 7½ H. P. motor, mounted on a platform made of 4″ x 4″ sticks framed together. One main shaft 2″ x 10 ft. hung in two shaft hangers. One 48″ x 5″ Dodge wood split pulley. One 12″ x 15″ face Dodge wood split pulley. 60 ft. 3″ double leather belting. 36 ft. 5″ double leather belting.

One No. 7 Jarecki pipe machine, with extra set of dies, extra head to hold dies, and countershaft. Pipe machine is set on steel pan 7 feet long by 3 ft. 6″ wide by 1″ deep.

Five fitter's benches, each bench consisting of a 2 ft. x 5 ft. white wood top, provided with two sliding drawers with Yale padlocks, bolted to two 2″ x 2″ x ¼″ angle iron standards 2 ft. 6″ high and a 2 ft. x 5″ x 2″ thick white wood shelf bolted to angle iron supports riveted to standards. Standards braced by two ½″ rods.

One work bench 2 ft. 6″ wide x 10 feet long. Top fitted and glued together and containing three drawers provided with Yale padlocks.

One white wood standing desk secured to wall.

One roll top desk for foreman.

One small cupboard for small drills, taps etc.

One 20″ x 30″ cast iron sink fitted with steam connection for heating water.

Building is piped for gas with 13 ell burner cocks in fitting shop, 12 ell burner cocks in storeroom and meter shop, one four burner polished brass fixture and 9 polished brass stiff brackets and independent cocks in office.

Building is heated with steam brought by a 2″ line from purifying house, by one iron pipe radiator of 120 square feet in office; one iron pipe radiator of 60 sq. ft. in office; four coils containing 585 feet of 1″ pipe in storeroom; one coil containing 203 feet of 1″ pipe in fitting shop.

Condensation is taken care of by steam trap located in basement of building.

Holder.

300,000 cu. ft. capacity. Consists of inner section of 83 ft. diameter by 28 ft. deep. Outer section of 85 ft. diameter by 28 ft. deep. Set in steel tank 87 ft. 6″ diameter by 29 ft. deep. Tank is set on concrete foundation 10 feet deep on river side and 2 feet deep on opposite side. Connections are 20″ and are set in a brick pit 15 feet wide by 18 feet by 6 ft. 3″ deep divided in center by 12″ partition walls. Walls are 12″ thick. 11 ft. 6″ of pit under holder
751 covered with railroad iron joists spaced 16″. Two 20″ drips set in pit. Connections outside of drip are 18″. Pit outside of holder is floored over with ⅞″ flooring.

Coal house No. 1.

Consists of an irregular shaped L frame building 166 ft. 8″ long on long side of ell, 84 ft. 5″ long on short or bottom side of ell, 118 ft. 6″ back again, 27 ft. in towards long side, 35 ft. 1″ up towards top of ell and 51 ft. across top of ell. Covered with a gravel roof carried on 61 8 x 8″ posts varying in length from 21 ft. 8″ for posts on sides of house to 23 ft. 4″ for posts in center of house. Posts rest on 22″ x 22″ cap stones built upon 2 ft. 6″ x 2 ft. 6″ brick piers 3 ft.

deep. House is sheathed with ⅞" siding from a point 10 ft. from ground to eaves.

Walls of coal storage room are constructed independently of coal house and consist of 3" plank walls 13 feet high held in place by 81 6" x 6" oak timbers 16 feet long, tied together at top by 166 1" rods about 16 ft. 6" long, and at bottom ends buried in trench 3 ft. deep.

10 lines of 6" x 8" timbers across coal shed and 4 lines of 6" x 8" timbers along length of coal shed, all timbers intersecting and bolted to posts carrying roof, with wrought iron angle pieces, act as braces.

Floor of coal house consists of 6" plank spiked to 4" x 4" oak sleepers. Roof is fitted with galv. iron hanging trough along each side and six galv. iron down spouts.

Coal shed is wired for two arc lamps with switch placed on post near scales. Coal house contains one 4 ft. x 6" miners' scale manufactured by H. N. Strait Mnfg. Co.

Coal house No. 2.

Is an L. shaped frame building, each side of ell is 128 ft. long and width of each side is 58 feet. Gravel roof supported on frame work carried by 35 12" x 12" posts varying in length from 19 ft. 6" for posts along sides to 23 ft. 6" for posts in center of ends of house; and 39 6" x 6" posts varying in length from 20 ft. 6" to 21 ft. 6". All posts are bolted to cast iron shoes built upon brick piers from 3 to 4 feet deep and are tied together across tops with 6 x 18" stringers spiked on and braced between posts with 6" x 6" braces bolted to posts with cast iron angles. Posts are also tied together by 98 1" rods about 16 ft. long.

Coal storage is provided for by 2" plank walls carried from floor to eaves on 12" x 12" posts, and on 35 additional 12" x 12" posts 11 feet long bolted to cast iron shoes built onto brick piers from 3 to 4 feet deep. Posts are held in place at top by a line of 12" x 12" *waling* extending entirely around coal house. *Waling* is bolted to each post. Entire floor is paved with paving brick.

Coal shed No. 2 is connected to retort house by means of a wooden trestle 160 feet long, consisting of a 3" plank floor spiked to four 4" x 10" stringers carried on framed 4" x 10" bents about 2 feet high and spaced approximately 10 feet apart.

Coke platform.

Consists of a 2" plank floor having an area of 8 ft. 10" x 59 ft. 9" at end of retort house and an area of 103 ft. 3" x 19 ft. 6" along Grove Street side of retort house. Platform is carried on 12" x 12" posts and is bolted securely to retort house wall. Platform has storage capacity for six car loads of coke. Side and ends of platform along side of retort house are sheathed with 1" boards to make storage shed under platform.

752 Coke storage in yard.

Is an irregular shaped area of 110 ft. long along No. 1 coal house, 50 feet along switch, 80 feet back to trestle, and 60 feet back along trestle to coal house; floored with 2″ plank spiked to 4″ x 4″ sleepers spaced 4 feet apart.

Tar well.

Consists of a brick cistern 28 ft. 4″ inside diameter and 14 ft. 6″ deep with walls 18″ thick, brick laid in cement mortar. Tar well is plastered with Portland cement and is covered over with a roof of ⅞″ tongued and grooved ceiling.

Ammonia well.

Consists of a brick cistern 14 ft. 8″ inside diameter and 13 ft. 9″ deep with walls 18″ thick, brick laid in cement mortar. Ammonia well is plastered with Portland cement and is covered with a roof of ⅞″ tongued and grooved ceiling.

Concentrated ammonia tank.

Consists of closed steel tank 10 ft. 3″ diameter by 7 ft. 2″ deep, set in brick cistern 17 feet inside diameter and 10 ft. 3″ deep. Brick laid in cement mortar, walls 12″ thick. Cistern is roofed over 4″ x 6″ plank set on edge and spiked together.

Naphtha storage.

Consists of a closed rectangular steel tank 14 ft. long by 8 ft. 11″ wide by 8 ft. 7″ deep, set in a brick cistern 17 ft. long by 11 ft. 11″ wide by 10 ft. 6″ deep with 12″ brick wall laid in cement mortar.

An elevated closed steel tank 4 ft. 1″ diameter by 8 ft. 10″ high, set in a tank room 10 ft. square by 7 ft. 2″ high raised 16 ft. 5″ above floor over lower tank in ground.

Framing supporting tank is sheathed with 1″ sheathing covered with building paper.

Building is also used as pump house and contains:—One 4½ x 2¾″ x 5″ single acting pump; one heating coil containing 100 feet of 1″ pipe.

Well.

Brick walls are 18″ thick. Is 5 ft. 2″ diameter by 80 ft. deep.

Drainage system.

Consists of 64 ft. of 30″ sewer laid from one end of city sewer and joining iron pipe under R. R. tracks; 94 feet of 20″ sewer; 230 ft. of 12″ sewer; 220 feet of 8″ sewer; 545 feet of 6″ sewer; 125 feet of 4″ sewer.

Depth of sewer runs from 7 feet at junction with 30″ sewer to 3 feet at west corner of retort house.

Six man-holes—one at junction of 30″ sewer 12 feet deep; one in boiler room 5 feet deep; one in passage between retort and purifier houses at upper end 5 feet deep; two in retort house 5 feet deep; one in yard near well 3 feet deep.

All man-holes excepting one at junction with 30″ sewer are provided with cast iron covers fitted in cast iron frames.

Yard connections.

One line of 6″ wrought iron pipe 200 feet long from river pump in boiler room to river.

One line of 4″ wrought pipe from tar well to tar pump, 50 feet long.

One line of 3″ pipe 180 feet long from tar pump to side track.

One line of 2″ pipe 150 feet long from well to well pump in condenser room.

One line of 2″ pipe 50 feet long from tar pump to end of boiler house to load tank wagons.

753–756 Yard connections—continued.

One line of 1½″ pipe 60 feet long from crude ammonia well to crude ammonia pump.

One line of 1½″ pipe 120 feet long from concentrated ammonia well to concentrated ammonia pump.

One line of 1½″ pipe 190 feet long from concentrated ammonia pump to switch to load tank wagons.

One line of 1¼″ steam pipe 115 feet long from meter room to naphtha house.

One line of 1″ pipe 115 feet long from meter room to naphtha house to carry naphtha to boiler room for vaporizer.

Pipe shed.

Consisting of frame building built onto storeroom building sheathed with ⅞″ tongued and grooved ceiling fitted with racks to hold 1½ car loads of pipe and having two pair double doors in front.

Scales.

One wagon scales, H. N. Strait Mnfg. Co. six ton, 8 ft. x 22 ft. platform set in brick pit with 18″ walls 4 ft. deep.

Track scales.

H. N. Strait Mnfg. Co. 80 ton 44 foot scales set in brick pit with walls 18″ thick and 5 feet deep.

Side tracks.

One P. & P. U. side track along coke platform.

One P. & P. U. side track across track scales, through No. 1 coal house, across yard and along No. 2 coal house.

One C. R. I. & P. side track along river side of property and No. 2 coal house.

Fencing.

280 feet (not including gates) of 8 ft. tight board fence carried on posts spaced 7 ft. 6″.

One wagon gate at scales 11 ft. 9″ wide x 7 ft. 4″ high. Gate posts carried up 15 ft. high and braced across tops.

One foot gate at scales 3 ft. 6″ x 7 ft. 4″.

One double gate over track at No. 1 coal house, gates 3 ft. 1″ x 7 ft. 11″.

One gate in fence between No. 1 and No. 2 coal houses. Gate 11 ft. 5″ x 8 ft. 2″ hung from posts carried up 15 feet and braced across tops.

One double gate across tracks at No. 2 coal house. Gates each 6 ft. 6½″ x 6 ft. 4½″.

One gate in fence along Rock Island track 7 ft. 7 ft. 4″ hung from posts carried up 15 feet and braced across tops.

757 3. What is the character of the soil in and through the streets and avenues of the city of Peoria in and through which the mains and pipe of the Peoria Gas & Electric Co. have been laid?

A. Below the bluff it is a sandy soil containing considerable gravel and in some few places the soil is what is commonly called "filled ground;" on the bluff there is some sandy clay and in other portions a hard dense clay.

4. From your investigation, knowledge and experience in the gas business, are you able to state what would be the fair market value of the gas plant, main system, services, pipes, meters, etc. of the Peoria Gas & Electric Co., in the city of Peoria on the first of September, 1900, to parties desiring to engage in the gas business, and assuming that such parties had a right to operate such plant?

A. Yes sir.

5. You may then state what would be the fair, market value of the gas plant, main system, services, meters, etc., meaning and intending in this question to cover the entire manufacturing and distributing plant of the Peoria Gas & Electric Co. in the city of Peoria, as the same stood and existed on the first of September 1900, to parties desiring to engage in the gas business, assuming such parties had the right to operate the plant?

Objected to by defendant as immaterial, incompetent and already gone over by the witness.

A. In my opinion the market value at the date mentioned and under the circumstances mentioned, was from $450,000. to $500,000.

6. Since the first part of your examination in this case, certain witnesses have been interrogated as to the size and capacity of the ammonia plant of the Peoria Gas & Electric Co. I will ask you to describe the size and capacity of the ammonia plant of complainant company in its gas plant in the city of Peoria, stating the
758 capacity of said ammonia plant and its fitness and utility as a part of the manufacturing plant of the Peoria Gas & Electric Co. as the same stood on the first of September, 1900, explaining in detail so far as you can.

A. The ammonia plant was rated by the manufacturer as a fifteen thousand ton plant; by that rating is meant a plant of sufficient size and capacity to properly concentrate the ammonia produced in the carbonization of 15,000 tons of coal per year, or the amount of ammonia produced from the manufacture of 500,000 cubic feet of gas per day. The plant, I believe is ample in size, to take care of the ammonia produced from the manufacture of 500,000 cubic feet of gas per day and is up to its rating in size and capacity.

7. Did you hear the testimony of J. M. Robb in this case with reference to the lengths of the different sizes of mains and services and the number of meters owned by the company?

A. Yes sir.

8. Were all the buildings, machinery and apparatus which you have listed and described, including the mains, services and meters, described in the testimony of J. M. Robb, a part of the plant of the Peoria Gas & Electric Co., on September 1, 1900?

Objected to by defendant as assuming facts that do not appear in the evidence of Mr. Robb; also as immaterial, incompetent and not tending to prove the issues in the case.

A. Yes sir.

9. Were they a necessary part of the said plant as the same stood on that date for the manufacture and distribution of gas in the city of Peoria?

Objected to by defendant same grounds.

A. Yes sir.

759 10. About what was the population of the city of Peoria, and territory adjacent thereto, about September 1, 1900?

Objected to by defendant as immaterial, incompetent and already answered by the witness in his former testimony.

A. The population of the city of Peoria proper, with the territory adjacent thereto, at the date mentioned, in my opinion, was between 60,000 and 65,000.

11. Describe the topography of the city of Peoria, the length, width and size of the city and the location of the plant of the Peoria Gas & Electric Company therein?

Objected to by defendant because the witness has already testified to the same matter.

The MASTER: I do not recall that this witness has been interrogated on that point and he may answer subject to the objection.

A. The city of Peoria is located on the westerly bank of the Illinois river and extends up and down the river for a distance of slightly more than 4 miles; the business portion, and a large proportion of the residence part of the city, is located upon a bench of land slightly higher than the average stage of the water in the river; this bench of land is parallel to the river and rises towards the northwest and falls slightly to the southwest; back from the river, at an average distance of approximately one mile, is a bluff which rises to a height of about 100 feet and a considerable proportion of the residences of the city lie on the sides and top of this bluff; the city extends back from the river an average distance of slightly more than 1½ miles. The plant of the Peoria Gas & Electric Company is located nearly midway in the length of the city at the foot of Persimmon street near the bank of the Illinois river.

12. Having in view the situation, location, size and to-
760 pography in the city of Peoria as you have described it, you may state what, in your opinion, is the location of the manufacturing plant of the Peoria Gas & Electric Co. with reference to the economic and convenient manufacture and distribution of gas over the territory you have described?

A. The plant is very well located for conveniently and economically manufacturing and distributing gas; for the manufacture of gas it is economically located by reason of the switching facilities, and for the distribution of gas, it is economically and conveniently located, because the greater portion of the territory to which gas is supplied is higher than the plant, and in as much as gas is lighter than air the gas rises naturally in the pipes and flows easily and rapidly to the consumers' meters.

13. At what price could ordinary laborers be employed per day during the period from May 1, 1900, to August 31, 1900?

A. At $1.50 per day.

14. Did that remain substantially the same after the last mentioned date?

A. Yes sir.

15. Was that the market price at which such labor could be employed during the period above named?

A. Yes sir, that was the market price of labor during that period.

16. What could stokers be employed at *from* the manufacture of gas in the city of Peoria during the period from May 1, 1900, to September 1, 1900?

A. Ordinary stokers could be employed at from $60. to $65. per month during the period mentioned.

17. What could a head stoker be employed for in the city of Peoria during the same period?

A. $70. per month.

761 18. What could common stokers be employed for in the manufacture of gas in the city of Peoria during the year from September 1, 1900, to September 1, 1901?

A. Ordinary stokers $60. and $65. per month, head stoker $70. per month.

19. Were the respective prices which you have just given for ordinary and head stokers in the different periods of time respectively the fair market value for such labor during the periods named?

A. Yes sir.

20. What could Youghiogheny coal for making gas be purchased for and delivered to the works of the company in the city of Peoria on or about September 1, 1900?

Objected to by defendant as immaterial and incompetent.

A. The market price of Youghiogheny coal delivered in Peoria on or about September 1, 1900, was from $3.00 to $3.20 per ton delivered on the side track of the company.

21. What was the ruling price for that quality and grade of coal during the period from May 1, 1900, to September 1 1900?

Objected to by defendant same grounds.

A. During all that period Youghiogheny coal was worth in the market delivered at the works of the company about $3. per ton. The price varied between $3.00 and $3.20 per ton.

22. What was the ruling market price for that character and grade of coal during the year immediately following September 1, 1900?

Objected to by defendant same grounds.

A. During the greater portion of the year the average price was about $3.10, the price ranging between $3.00 and $3.40 per ton delivered at the works of the company.

23. What was the local market, if any, for the residual
762 known as coke about the first day of September, 1900?

A. About $3.25 per ton.

24. State if that was the prevailing market price for coke during the entire period from May 1, 1900, to September 1, 1901,—if any change or changes occurred during that period, please state what they were.

Objected to by defendant as immaterial, incompetent and not tending to prove the issues in the case.

A. Yes sir, the price of $3.25 per ton was the average market price of coke during the period mentioned.

25. What was the ruling market price for the bi-product known as tar arising from the manufacture of gas during the period from May 1, 1900, to September 1, 1901?

Objected to by defendant same grounds.

A. The market price of tar varied between May 1, 1900, and September 1, 1901, between 5 cents per gallon and 3 cents per gallon.

26. What was the ruling price for the bi-product known as ammonia arising from the manufacture of gas during the same period?

Objected to by defendant same grounds.

A. The market price of ammonia during the period mentioned varied between 8 cents per pound and 5 cents a pound.

27. What was the ruling market price of cannel coal for the enriching of gas delivered at the plant of the Peoria Gas & Electric Co., in the city of Peoria, during the same period?

Objected to by defendant same grounds.

A. From $3.00 per ton to $4.75 per ton.

28. What was the average market price of gas oil for making water gas in 1899 and 1900 delivered in the city of Peoria?

Objected to by defendant same grounds.

A. From $3\frac{3}{4}$ cents to $3\frac{8}{16}$ cents per gallon.

29. What was the market price of coke for making water
763 gas delivered at the plant of the Peoria Gas & Electric Co. in the city of Peoria in 1899 and 1900?

Objected to by defendant same grounds.

A. From $4.50 to $5.00 per ton.

30. What was the market price, delivered at the plant of the Peoria Gas & Electric Co. in the city of Peoria, of coal for boiler fuel in 1899 and 1900?

Objected to by defendant same grounds.

A. It ranged between $1.15 and $1.55 per ton.

31. What was the market price or value of breeze during the years 1899 and 1900 at the plant of the Peoria Gas & Electric Co.?

Objected to by defendant same grounds.

A. About $1.00 per ton.

32. What was the market price for retort carbon at the plant of the Peoria Gas & Electric Co. in the city of Peoria during the years 1899 and 1900?

Objected to by defendant same grounds.

A. From $10 to $12.50 per ton.

33. In your previous examination in this case, you stated that the value of residuals arising from the manufacture of gas from September 1, 1900, to August 31, 1901, was $20,372.91. Please state how you fixed the value of the residuals arising during that period from the manufacture of gas, that is whether it was the fair market

value of the residuals arising from the manufacture of gas during that period, or some arbitrary value placed on it by you?

A. The residuals were valued at the fair market value and the price at which we were able to sell them during the period mentioned.

34. Do those correspond approximately to the market value you have given in your testimony?

A. Yes sir.

764 35. Did you credit the actual cost of the manufacture and delivery of gas to consumers during the period from September 1, 1900, to August 31, 1901, with the value of the residuals as arbitrarily fixed by you, or was it the market value of the residuals arising during that period as shown upon your statement marked Exhibits "2," "3," "5," and "6" as to the amount and cost of gas manufactured by the Peoria Gas & Electric Co.?

A. The residuals are credited in the statements referred to at the average price which we realized from the sale of them, although in the case of both tar and ammonia the prices at which we sold them were somewhat above the market prices existing at that time by reason of the fact that we had contracts for the sale of them made when the market price was higher.

36. In your previous examination you stated that the value of the residuals arising from the manufacture of gas from May 1, 1900, to September 1, 1900, was $21,041, how was that value determined, by some arbitrary value fixed by you, or was it the fair market value of the residuals from time to time arising from the manufacture of gas during that period?

A. The residuals during the period mentioned were credited at the average price at which they were sold, which was, as to the residuals, tar and ammonia, somewhat above the market price existing at that time.

37. In your answer to cross interrogatory No. 31, of your last examination by Mr. Mansfield, you furnished to the reporter statements known as operating statements for a period, month by month, beginning with May 1900, and ending with August 1901, in which you give certain statements as to the value of residuals made. You may state whether the value of the residuals as they appear in the statements just referred to, are the fair market value of the said residual products except as to those instances with reference

765 to which you have testified, that the prices actually received by you were more than the prevailing market prices owing to the existence of contracts with reference thereto?

A. The values as stated are the fair market values of the residuals made excepting as to the tar and ammonia which, during the greater portion of the time, were less than the amount stated in the open market; they were, however, credited at the figures given in the statement because of the existence of contracts which enabled us to sell them at the prices stated in the statements.

38. Has the Peoria Gas & Electric Company a gas stove department connected with its gas business in the city of Peoria?

A. Yes sir.

39. How long has it had such a department?

A. Since the commencement of its gas business in the spring of 1900.

40. Has the Peoria Gas & Electric Co. a soliciting and advertising department connected with its gas business in the city of Peoria?

A. Yes sir.

41. Is it necessary to maintain a department of that character in the gas business at the present time, if so, why?

A. Yes sir, in my opinion, it is necessary to maintain such a department to promote the sale of gas and increase and enlarge the market for the product which the company manufactures.

42. Does such a department add to the cost of the delivery of gas, if so, explain how?

Objected to by defendant as immaterial, incompetent and not tending to prove the issues in the case.

A. The expenses of advertising and soliciting necessarily increases the cost of delivering gas by reason of the cost of advertising
766 and soliciting being added to the other costs of the distribution department.

43. In what respect generally has the cost of the delivery of gas increased in the last 15 years, if it has increased?

A. Gas companies in the last 15 years have become much more attentive to the wants and troubles of their customers and it is now the general practice to employ complaint men to look after customers' complaints, both as to the quality of gas, the pressure, the condition of burners, the condition of stoves and all the appliances in which gas is used; much more attention is paid to leaks in the mains, services and meters and in the house piping of consumers than was the case 15 years ago; the business is now recognized as commercial business, the company selling at retail a standard product and every effort is made to get new customers and extend the uses of gas by old customers; all of these expenses necessarily increase the cost of the distribution of gas.

44. What facts and circumstances have brought about these changes in the methods of handling the business?

Objected to as immaterial, incompetent and already gone over by the witness in his former testimony.

A. Principally the competition of other illuminating and heating agents; the introduction of electricity into general use about 15 years ago threatened the stability of the gas business and induced the managers of gas companies to adopt an aggressive policy and endeavor to meet the competition; about the same time the burners used with coal oil were greatly improved and this also stimulated gas managers to start efforts to dispose of their product; the gas

stove at the same time was considerably improved and it was discovered that gas could be succes-fully used for all family purposes in connection with cooking and for heating in gas grates and fire places.

45. Turning now from considerations connected principally
767 with the distribution. You testified in the early part of your examination in chief with reference to certain changes and improvements in the machinery, apparatus and process of manufacture. What effect, if any, have these changes and improvements had upon the cost of the manufacture of gas?—In what way and to what extent?

Objected to by defendant as immaterial, incompetent and having already been gone over by the witness.

A. The improvements to which I referred were generally in connection with an increase of the capacity of benches, larger retorts and better furnaces, and in connection with the better condensation and purification of gas. The changes in the furnaces and the character of the retorts in the benches have permitted of a marked increase in the amount of gas given off per ton or pound of coal carbonized, and a considerable reduction in the amount of coke required to heat the furnaces. The improvement in the yield of gas has been to increase the average yield from about 8,000 feet per ton of coal to 10,000 feet per ton of coal. The improvement in the furnaces has resulted in changing the amount of coke required to heat the furnaces from 50 to 60 per cent. or more of the coke made, which was common 12 or 15 years ago, to 25 and 30 per cent. of the coke made, which is the common practice now. The larger benches permits of a larger amount of gas to be made in the works per man per day. The better methods of condensation result in a higher illuminating value to the gas; formerly it was extremely rare to find a plant which could make 16 candle coal gas or better without enrichment; it is not unusual now to find plants making 17, 17½ and even 18 candle coal gas without enrichment. The effect of the change in the methods of purification has been to reduce the cost of purification. All of the changes to which I have referred have resulted, either in an increased yield and lower cost of manufacture and greater amount of gas made per man, or the production
768 of more residuals per ton of coal carbonized.

46. In the construction of the manufacturing plant of the Peoria Gas & Electric Co., were all of these improvements, with reference to which you have testified, embodied, so far as the same could be embodied, in a plant of that size and capacity?

A. Yes sir.

47. Was the gas coal and other material entering into the cost of the manufacture of gas as manufactured by the Peoria Gas & Electric Co., as testified to by you, purchased from time to time by the said company at the fair market price of all such material entering into the cost of the manufacturing of such gas?

Objected to by defendant as immaterial, incompetent, and not tending to prove the issues in the case.

A. The cannel coal used in enriching was purchased from time to time at the lowest market price obtainable in this market; the Youghiogheny coal used from the commencement of the company's operations in the spring or in April, 1900, up to September 1, 1901, was purchased in the fall of 1899 at a price considerably below the market price which obtained thereafter during the whole of the period mentioned; this coal was bought in one order at less than the price which has subsequently prevailed.

48. Was the labor employed by you in the manufacture of gas at the plant of the Peoria Gas & Electric Co. purchased by you at the fair market price of such labor for the respective times during which it was employed?

A. Yes sir.

48. In your previous examination you mentioned a number of hazards to the investor in considering whether he would invest in the business of the manufacture and sale of artificial gas. I will ask you to state if the action of legislatures and city councils are, in your judgment, a hazard to the management or investment
769 in such a business and in answering this question I will ask you to illustrate the dangers and hazards from the action of legislative bodies and municipal councils so far as you can from your own experience.

Objected to by defendant as immaterial, incompetent, not tending to prove the issues in the case and because already testified to by the witness.

The MASTER: I don't think that is a material inquiry. I think this about it, that when a corporation, company or individual engages in this business, it does it knowing those contingencies may arise at any time. I think it is a very different thing from a hazard which would naturally arise from competition such as has been detailed.

Mr. ABBOTT: Will the master hold that a wholesale grocery dealing both in fuel and gunpowder would not be entitled to charge more in proportion on the gunpowder than on fuel.

The MASTER: The master will not decide anything now; I simply state my present impression on that line of inquiry.

Mr. IRWIN: I think it material and when the authorities are produced I think the master will agree with me.

The MASTER: The witness may answer subject to the objection.

A. In my judgment the hazard of the gas business is greatly increased by the action, often ill-advised and hastily considered, of legislatures and city councils. The business is subject to the imposition of restrictive conditions which, in my opinion, are not often in the interest of either the gas company or the public. In this connection I will refer to an ordinance which was vetoed not long since

by the mayor of the city of Peoria, which ordinance permitted the gas company to lay mains and supply customers in the south
770 western portion of the city and which, had it become a law, would have added to the consumption of gas and increased the gross earnings of the company; the ordinance, which forms the basis of this suit, is another illustration in point, not only with reference to the price, but with reference to the provision relating to the furnishing of gas of a uniform 18 candle power to be measured at the point of consumption.

49. Is it not a fact that since the ordinance, under which the Peoria Gas & Electric Co. is operating was passed, an ordinance was adopted granting to other parties the right to operate a gas plant in this city which would have come into direct competition with the Peoria Gas & Electric Co., that is, if it should appear by other proof that such an ordinance was passed, would that be a further illustration of the dangers of the possible action of municipal councils as a hazard of the gas business in your opinion as a gas expert?

Objected to by defendant as incompetent, immaterial and frivolous and not tending to prove the issues in this case.

A. Yes sir, there has been such an ordinance pas*t* and a license was granted to one Charles V. Newman, and the worst effect of the granting of such ordinance is to arouse discontent in the minds of consumers and to create an impression that by waiting possibly they can get gas at a lower price which retards the development of the business.

50. Do any other hazards of the business occur to you now aside from what you may have testified to before, such as might result from the changing in grades in streets of a growing city, or a change in the method or process of lighting, or a change in the manner and distribution of public lighting and competition of other companies therefor or any others which occur to you at this time, if so, state what they are.

771 Objected to by defendant as immaterial, incompetent, not tending to prove the issues in this case and because it has already been gone over by the witness.

A. Changes of grades which frequently take place in a growing city may result in one or two conditions which are expensive and hazardous; the change of grade may establish a new grade so much above the old grade as to make the gas pipe inaccessible and require them to be raised and replaced in new filled ground; the result is that in the settlement of the ground the joints become leaky and not infrequently the pipes break; on the other hand a change of grade may place the pipes either above the existing grade or so near to it as to require them to be lowered which is expensive and in many instances results in a permanent expense by reason of requiring a re-grading or re-enlignment of the main; quite frequently and especially where pipes are less than 6 inches in size, it is cheaper to

cut off the old main and abandon it than to take it out of the ground, although, if it were left undisturbed, it would have a number of years of life still in it; improved changes in methods of lighting are being brought about from year to year; these changes to which I refer apply particularly to burners better adapted for the use of coal oil and to more economical lamps and apparatus for electricity; these changes are constantly going on and in my opinion constitute a serious hazard to the gas business.

51. What changes, if any, are now going on, or have been going on since the year 1899, in the manner and process of public lighting?

Objected to by defendants same ground as before.

A. A great many cities throughout the country are returning to the use of gas for public lighting, especially in connection with the Welsbach or incandescent mantel light; the use of gas for
772 public lighting in connection with the incandescent mantel lamp is becoming general.

52. Where gas is used for public lighting on short term contracts between the municipalities and the gas companies and at the expiration of those contracts competition is asked for with reference to further contract, either by bids or otherwise, to what extent if at all, and in what manner do such facts constitute a hazard to the gas business?

Objected to by defendant same grounds.

A. It constitutes a hazard to the gas business where competition is asked for and especially where bids are received from people then having no gas plant and no means of supplying gas to fill such contracts except through the construction of a new plant; the street lighting, if large enough in amount, operates as an inducement to people to apply for a franchise or license and especially if the contract is for the entire public lighting, or a large portion of it.

53. Under the circumstances noted in the last interrogatory, you may state if it is an uncommon thing for bids to be made by parties who have not at the time a gas plant in existence?

Objected to by defendant same grounds as before.

A. I think it is not uncommon for people to bid on gas street lighting where they have no plant, but rely upon getting a franchise and building a plant after the contract is awarded to them.

54. Those facts, as I understand you, constitute a hazard to the company already doing the business?

Ans. Yes sir.

55. Several witnesses in this case have testified with regard to certain elements and forces which tend to depreciate a gas plant. In what manner, from your experience and observation as a gas man, does good business policy require that this depreciation of a plant from year to year should be met?

773 Objected to by defendant same grounds as before.

A. The proper method of taking care of depreciation is by setting aside each year from the earnings of the company a sum sufficient to meet the annual depreciation. As a matter of practice, the gas company so setting aside such a sum should reinvest this money in extensions and replacements to the plant and property of the company and the money so spent would properly be charged to the proper construction account; at the end of the year when the books are closed the construction account should be credited with the amount of the depreciation and a depreciation account should be opened and the amount so credited to construction should be charged to depreciation and then closed out into the profit and loss account of the company at the close of the year; in this manner, the actual value of the assets of the company corresponds to the book value.

56. In your judgment, from your experience and observation in the gas business, should the method stated in your last answer be followed, and should it be followed before any estimate could be made of the earnings or profits of the company?

A. Their entries should be made before any dividend is declared or any sum set aside for dividend purposes and before the statement of the profits of the business for the current year is made up.

57. Explain a little further what you mean by its being originally charged to construction account and carried there until the books are closed at the end of that year, having regard to the theory, if it be a proper theory, that the books of the company should show, so far as books can, the real history of the business.

A. The books of every company should be an accurate history of the transactions of that company. The reason for charging to construction account the moneys expended in extensions and replacements is that a proper record of such extensions and replace-

774 ments may be made upon the general books of the company; at the same time, with the close of each fiscal year, those items, which are properly charg-able against the profit and loss account, or in other words, against the earnings of the business, should be taken into account and the necessary entries made on the books so that each year's business stands by itself.

58. In your previous examination in this case, and in the examination of some other witnesses, reference has been made to Brown's Directory as a source from which certain information is procured as to the prices charged for gas in cities in the United States of 50,000 inhabitants and upwards, as shown upon Exhibit "7." What is Brown's Directory?

Objected to by defendant as immaterial, incompetent and not tending to prove the issues in this case.

A. Brown's Directory is a publication issued annually by E. C.

rown of New York ; it is a directory of all the gas companies of the nited States and Canada ; it shows, among other things, the prices harged—Interrupted.

(The MASTER :)

59. I don't think it would be competent for you, Mr. Little, to ate what it shows ; the question don't call for the contents of the irectory.

(Mr. ABBOTT :)

59. Let your answer relate to a description of it as to whether r not it is a standard and reliable work and so considered among ne gas fraternity ?

Objected to by defendant same grounds.

A. It is a standard work which has been issued for a number of ears and is generally regarded among gas men as the most authori- ative publication of the sort in America and is considered to be eliable and accurate.

60. Do you know what the population of Peoria was in 1880?

75 A. It was 29,259 as shown by the census of that year.

61. State what it was, if you know in 1890 ?

A. It was 41,024.

62. State what the population of the city of Peoria proper was in he year 1900 ?

A. In 1900 the population of the city of Peoria proper was 56,100.

63. The difference between that and the population as given in our evidence in relation to the population of the city of Peoria and erritory adjacent thereto is, I assume, to — the additions of territory hich has been taken into the city since the census of 1900—is that orrect ?

A. Yes sir.

64. What additions have been made to the city of Peoria since he census of 1900 ?

A. The villages of North Peoria and South Peoria have been an- nexed to the city and, if I remember correctly, also the village or district known as West Peoria.

65. What other village corporation is immediately adjacent to he city of Peoria ?

A. The village of Averyville is located at the northerly end of he city and immediately joins the northerly city limits of the city f Peoria.

66. Is it physically a continuation of the city ?

A. Yes sir, the boundary between the two is purely an artificial ne.

Cross interrogatories by Mr. MANSFIELD:

1. In your direct examination you testified that the fair cash market value of the plant of the Peoria Gas & Electric Co.
776 was worth between $450,000. and $500,000., what did you include in that estimate of the fair cash market value?

A. The entire plant and main system, services, meters and records of the company.

2. What did you estimate the fair cash market value of the Peoria Gas & Electric Co. to be in making up your estimate of the fair cash market value of the plant of the Peoria Gas & Electric Co., as testified to by you in your direct examination?

Objected to by complainant as incompetent, immaterial, and not cross examination for the reason that the witness was asked on direct examination to state the market value only of the property considered as an entirety.

The MASTER: I think it competent for counsel on cross examination to ascertain what the witness estimated the different parts at in making up his estimate of the value of the plant.

A. In my direct examination the question as to what I considered to be the fair value of the property was further qualified by the statement that it was limited to people who had the right to use it as a gas plant. In other words, had a license to operate a gas plant in the city of Peoria and my estimate of the market value of the property at that date is based upon the property as a whole and I consider it to be worth more than it cost in that connection using it and considering it as an entirety.

3. Now will you please answer my question?

A. I did not make any estimate of the mains independent from the remainder of the plant but considered the entire plant to be worth something more than it cost.

4. What did you add to the original cost of the mains for the reason you took into consideration that the Peoria Gas & Electric Co. had a right or license from the city of Peoria to manufacture and distribute gas in said city?

777 A. I did not estimate it in that way; I estimated what I considered to be its market value to someone aside from the Peoria Gas & Electric Company who had a license or franchise to do business in the city.

5. Did you estimate those mains to be of more value than you testified they cost in your former direct examination in making up your estimate as to the fair cash market value of the plant?

Objected to by complainant as incompetent, immaterial, not cross-examination and not directed to any theory of the market value of the plant as brought out on direct examination.

The MASTER: I think the witness has already stated he did not make any separate estimate as to the value of any separate portion

e plant but that his estimate was based upon the plant as an
ety coupled with a license to do busines.
. IRWIN: Yes sir, the mains would not be worth anything un-
hey could be used in connection with the plant.
e MASTER: The witness may answer subject to the objection.

I did not take the mains separately into consideration but
ated that the entire plant was worth more than it cost under
onditions named.
What are the various parts of the manufacturing plant and
ibuting system of the Peoria Gas & Electric Co. that you took
consideration when you made up your estimate as to the fair,
market value of the plant?
I took into consideration all of the plant as described by me
y testimony in this case as a complete gas plant.
State what were those various parts you took into considera-

I took into consideration the real estate upon which the plant
is located, which was described by me in my testimony, in-
cluding the joining or near-by real estate; the retort house
with the seven benches of 9's therein contained and other
ratus as described by me; the boiler house and its contents as
ibed; the purifying and condensing house with its contents;
neter room with its contents; the office storage room and shop
its contents; the storage holder, the yard, gas, steam, water
sewer piping, the complete main system of the company, the
ces and meters and all of the records of the business.
Is that all you took into consideration?
And any other property which the company might own. I
by that, I took into consideration all of the property belonging
e gas plant of the Peoria Gas & Electric Co.
In making up the fair, cash market value of the plant of the
ia Gas & Electric Company, as testified to by you, at what value
ou place the office of the Peoria Gas & Electric Company, as
ed upon its ground at the foot of Persimmon street in the city
oria?

jected to by complainant as immaterial, irrelevant, not cross
ination and asking the witness to make an estimate of a char-
which he has several times stated he did not make or under-
to make.
e MASTER: I think counsel has a right to ascertain what was
idered by the witness in arriving at the estimate he made. The
ess may answer subject to the objection.

I did not make any separate estimate of the value of the office
ding referred to; I considered it as a necessary part of the
e plant all taken together.
. How long has it been since this plant was constructed in the
of Peoria?

A. The construction of the main plant was completed in
779 the year 1900.

11. In what part of the year 1900?

A. The main body of the plant was completed in the early part of 1900?

12. Was there any depreciation in that plant from May 1, 1900, up to September 1, 1901?

A. Yes sir.

13. Was the fair, cash market value of that plant on September 1, 1901, as large as testified to by you upon your direct examination?

Objected to by complainant as immaterial and assuming a statement the witness never made.

A. I do not remember of testifying on my direct examination to its market value on September 1, 1901.

14. Was the fair cash market value of the plant on September 1, 1901, as much as you testified the fair cash market value of the plant was at the time you testified it was worth from $450,000. to $500,000.?

A. Under the conditions named in the direct interrogatory, viz:—That parties wanted it who desired to engage in the gas business and had a license to operate a gas plant in the city of Peoria, I believe the market value of the plant on September 1, 1901, was as great as on September 1, 1900, provided the ordinance, which forms the basis of this suit, was not then a valid ordinance.

15. Then in the first year of the operation of the plant, the plant instead of depreciation increased in value in your estimation from $434,000. to between $450,000. and $500,000.?

Objected to by complainant as a statement of counsel only and not repeating what the witness said.

The Master: The question is argumentative, Mr. Mansfield.

780 16. Did not the plant then increase in its selling value between May 1, 1900, and September 1, 1901?

Objected to by complainant for the same reason last stated and because it does not state the proper time at which the witness estimated the market value of the plant.

The Master: The witness may answer subject to the objection.

A. I believe that immediately upon the completion of the plant it became worth more than it cost under the conditions named in the direct interrogatory.

17. In calculating the amount of depreciation which you say a plant would suffer yearly, would you calculate that depreciation upon the fair market value of the plant or would you calculate it upon the actual cost value of the plant?

A. I would calculate the depreciation, if I were operating the plant, on the cost of the property unless I had reason to believe that the cost varied very materially from its value.

18. What do you mean when you say you would estimate that preciation upon the cost of the plant?

A. Upon the cost as shown by the books and records of the company.

19. What do you include, if anything, in the cost of a plant other an the labor and materials which enters into the cost of the manufacturing plant and the distributing system?

A. I include in the cost all of the organization expenses, the preparation of the necessary and desirable books and records, the attorneys' fees, legal expenses of incorporating the company, and all e expenses incident to testing and putting the plant in operation well as the cost of labor and materials in the construction of the arious parts of the plant.

20. What percentage did you allow to cover such depreciation.

81 A. I testified in my examination in chief that in my opinion the total average depreciation amounted to 6½ per cent. er annum on the cost of the property exclusive of real estate.

21. You stated in your direct examination that one of the hazards f the business of the manufacture of gas was the ill-advised action f city councils and illustrated that hazard by citing the fact that he city of Peoria subsequent to the time of the granting of the license or franchise to the Peoria Gas & Electric Co. granted a similar license to a man named Newman. Explain what effect or what money was expended by the Peoria Gas & Electric Co. on account f the fact that this ordinance or franchise was granted to Newman?

Objected to by complainant as immaterial and irrelevant.

A. The only money spent by the Peoria Gas & Electric Co. in hat connection was to procure a copy of the Newman ordinance, or which I believe we paid $1.60, but that was not the effect of the ranting of that ordinance to which I referred in speaking of the azard. All such ordinances, and I believe it was understood by very person in the city of Peoria, that Mr. Newman never intended o build a gas plant. All such ordinances have the effect of prejudicing the minds of the customers of the Peoria Gas & Electric Co. gainst that company because they were charging more for gas han that ordinance provided and, having the sanction of the city ouncil it was assumed by the public that the charges of the Peoria as & Electric Co. were more than were necessary to pay a fair return on the money actually invested. The tendency of all such egislation is to do no good to the public but it discourages the use f gas and works an injury to the company doing business in the ommunity.

22. For what purpose did Mr. Newman, in your opinion, 82 obtain the license from the city council of the city of Peoria?

A. In my opinion he did it for the purpose of making rouble for the Peoria Gas & Electric Co. because he was a dis-

charged employé and had no idea whatever of ever building or operating a gas plant.

23. Then you believe Mr. Newman went to the expense of soliciting throughout the city merely for the purpose of getting even with the Peoria Gas & Electric Company, having no idea in his own mind that he would ever install a plant in the city of Peoria?

A. I don't think that Mr. Newman ever went to any expense in soliciting or procuring the employment of solicitors and I think he had no idea in his mind than one of revenge for being discharged. I don't believe he ever expected to build a gas plant.

24. What revenge could Mr. Newman have obtained if he did not intend to build a gas plant in the city of Peoria?

Objected to by complainant as incompetent, immaterial and simply calling for the opinion of the witness.

The MASTER: I think it incompetent and immaterial and calling for the opinion of the witness but he may answer the question if he desires.

A. Well, I will not answer it then. I will drop the subject

24. In estimating the fair cash market value of the plant of the Peoria Gas & Electric Co., did you estimate the fair, cash market value of the mains of said company at a value in excess of the actual cost of the materials and labor that entered into the laying of those mains in the streets of the city of Peoria?

Objected to by complainant because it has been answered already at least three times.

The MASTER: I think that is right, Mr. Mansfield, but if you want him to answer it again he may do so subject to the objection.

783 A. I did not make any separate estimate of the mains apart from the entire plant.

25. In making up your estimate of the fair cash market value of the plant of the Peoria Gas & Electric Company, did you add anything to the value of each and every part of the manufacturing plant as well as the distributing system of the Peoria Gas & Electric Company?

Objected to by complainant as already asked and answered several times.

The MASTER: Well, let him answer again.

A. I did not take the parts of the plant separately and independently. I estimated that the plant as a whole was worth more than it cost under the conditions named in the direct interrogatory asked me.

26. Did you not testify before the board of review of the county of Peoria on August 29, 1901, after having first been duly sworn, in reply to a question asked you by Mr. Jack with regard to the

ue of the four inch mains that they were worth about 30 cents a
t as laid in the streets?

Objected to by complainant as incompetent, immaterial, not
per cross examination, and assuming that the witnesss was
rn and testified.

The MASTER: The witness has fixed the fair cash market value
he plant at a certain time. Now these 4 inch mains constitute a
ge proportion of the distributing mains of the complainant com-
y and why is it not competent for counsel on cross examination
show that the witness in a former statement made statements
regard to the value of what constitutes a large proportion of
distributing mains.

Mr. ABBOTT: For the reason that the witness has four or
five times stated that he estimated the market value of the
plant as a whole and did not take into consideration any par-
lar part of the plant except so far as the whole was an entirety.

The MASTER: The master cannot assume how the witness will
wer this question; I think it competent as tending to ascertain
method the witness used in arriving at the fair cash market
ue as stated by him.

A. My recollection is that I was not sworn and did not testify
ore the board of review. The statement I made before the board
review, as I now remember it, was confined wholly to the value
the mains as laid in the streets disassociated from the license to
business and considered merely as so much cast iron pipe lying in
streets with reference to the mains of all sizes.

Q. If you were not sworn before the board of review did you not
answer to the question, "Could you arrive at an estimate as to
at 80,852 feet of 4 inch mains were worth," state, "About 30
ts a foot now laid in the street"?

Objected to by complainant same grounds as before.

A. I don't remember. The statement made by me before the
rd of review in connection with the value of all of the property
ether 4 inch main, 6 inch, 8 inch, or other sizes, was wholly based
on what I considered to be the value of the pipes disassociated
m the license to do business and considered only as cast iron
e laid in the streets.

Q. Did you not testify before the board of review of Peoria county,
, on the 29th day of August, 1901, after being first duly sworn,
answer to the question, "How many miles of main have you,"
you not testify, "26 55/100 miles devided up into 1758 feet
of 16 inch main, 20,768 feet of 12 inch main, 3482 feet of
10 inch main, 20,224 feet of 8 inch main, 12,874 feet of 6 inch
main, 80,852 feet of 4 inch main, and 260 feet of 2 inch main,
king a total of 140,223 feet?

Objected to by complainant same grounds as before.

A. I don't remember that I was sworn when appearing before the board of review and I don't remember that the figures given are the exact figures that I stated at that time. I gave a list which I believe was then substantially accurate, of the mains owned by the company and I think it approximated the figures you have stated.

29. If you were not sworn before the board of review at that time and place, did you not make the statement as contained in the last interrogatory?

Objected to by complainant same grounds.

A. I don't remember that I stated the lengths of the various sized pipe exactly in the figures you have given.

30. Did you not before the board of review of the county of Peoria, Ill., at the court house in the city of Peoria, on August 29, 1901, after being duly sworn, in response to the question, "Have you made an estimate as to the value of each of those" testify, "We did not make it up in that way; in making up the schedule, we went at it in a different way from that; we took the price of the pipe in the street; the pipe delivered cost us all the way from $15. to as high as $25. a ton and we figured the tonnage of the pipe and figured it on the basis of the tonnage; that is the simplest and most practical way as we look at it to get at the value of the mains"?

Objected to by complainant same grounds.

A. I don't remember that I was sworn when appearing before the board of review and I don't remember the question to which you refer.

786 31. If not sworn at the time and place in question, did you not make the following statement before the board of review of Peoria county, "We did not make it up in that way; in making up the schedule we went at it in a different way from that; we took the price of the pipe in the street; the pipe delivered cost us all the way from $15. to as high as $25. a ton and we figured the tonnage of the pipe and figured it on the basis of the tonnage; that is the simplest and most practical way, as we look at it, to get at the value of the mains"?

A. I do not now remember.

32. Did you not, after being first duly sworn, before the board of review of Peoria county, Ill., at the same time and place, in answer to the question, "Could you arrive at an estimate as to what 80852 feet of 4 inch mains were worth," testify, "About 30 cents a foot now laid in the street."

Objected to by complainant as immaterial, incompetent and not cross examination.

The MASTER: The witness may answer subject to the objection.

A. I don't remember that I was sworn or testified before the board of review.

33. If you were not sworn before the board of review, did you not at the same time and place in the presence of the board of review of Peoria county make the statement substantially as given?

Objected to by complainant same grounds.

A. I don't now remember.

34. Did you not before the board of review of Peoria county, Ill., at the same time and place, in answer to the question, "That includes laying and everything" testify, "Of course, when you come to that question you have to consider in connection with
787 that—you have to take that as an average condition and also have to consider that the question of its value laid in the streets adds labor and also deducts labor. In other words, taking what that pipe is worth in the street as physical property, you have to consider what it would cost to take it out of there."

Objected to by complainant same grounds.

A. I don't remember that I was sworn or testified when I appeared before the board of review; I don't remember now whether I stated substantially the matters contained in that interrogatory or not.

35. Did you not before the board of review at the same time and place in answer to the question, "You take the cost of putting it down" did you not testify, "No, add the cost of putting it down"?

A. I don't now remember.

36. Did you not before the same board at the same time and place after having first been duly sworn in answer to the question, "Now in the 12,874 feet of 6 inch pipe" testify, "I have to give you that from memory but it was about 40 cents a foot; 8 inch pipe runs about 50 cents; 10 inch pipe about 60 cents; 12 inch pipe between 75 and 80 cents, and 16 inch pipe about a dollar"?

Objected to by complainant same grounds.

A. I don't remember that I was sworn when appearing before the board of review and I don't remember now as to the figures which you state in your interrogatory. I made the statement that the values as contained in the schedule submitted by me were what I considered to be the fair cash value of the property dissociated and separate from the license to do business and to occupy the public streets and I believe I stated then and believe now that those values as stated by me were true and correct and
788 were the maxium values of the property under the conditions under which the schedule was made.

37. Do you remember when that schedule was filed?

A. No, I do not.

38. Was it before the institution of this suit?

A. My recollection is it was after the institution of this suit.

39. You testified in your direct examination that it was customary

where a charge of 6½ per cent. was made for depreciation to charge that 6½ per cent. to the construction account and afterwards at the end of the year credit it to depreciation account—do you then in figuring up the profits of a company take into consideration the fact that this amount of money has gone into construction account and figure a percentage of profit upon the amount of money so charged to construction account?

A. You have not stated that as I testified to it. I testified that the amount of depreciation should be set aside as a fund and reinvested in the extension and replacements of the plant of the company; when this money was so invested and spent, the purposes for which it was spent, or rather the constructions for which it was spent, should be charged to the construction account and carried in that account until the end of the fiscal year; at that time the total amount of depreciation should be credited to construction account, thereby reducing the account by that amount and should be charged to depreciation account; at the close of the year the depreciation account should be charged direct to profit and loss thereby wiping out the depreciation account as a live account on the books of the company, and when that method has been adopted by a company no profits on the amount of the construction arising out of this depreciation fund would be entitled to or receive dividends or profits.

789 40. Would you then after this amount of money had been placed in extensions or replacements calculate depreciation upon those extensions and replacements?

A. No sir.

41. When if at any time would the amount of money that was taken from the depreciation fund commence to be considered in making up the profits of the business?

A. It is customary to make up the statement of the profit and loss account, which shows the profit of the business, after the closing of the books at the end of the fiscal year; the depreciation each year is at that time charged into the profit and loss account against the earnings or profits of the company.

42. Would the amount taken from the depreciation account and used in the extensions or replacements of the system be ever made the basis for an increase in the capital stock of the company?

A. Not under a proper system of accounting.

44. When you were laying the mains of the Peoria Gas & Electric Co. at what points in the city of Peoria did you strike a mixture of gravel and sand?

A. In a large part of the pipes which were laid under the bluff; that is to say, we struck it on Persimmon street in the alley between Washington and Adams streets; on Adams street south of Persimmon street; on Warner avenue and in nearly all of the district between, we will say, Spencer street and Main street under the hill, or to put it more this way—south and west of Main street and Adams street between those streets and the river.

45. Have you any gas pipe on Warner avenue?

A. I think we have for a small distance (witness referring to plat). I am wrong about that, it is between Warner avenue and Adams street.

790 46. Where did you find the filled ground in the city of Peoria in the laying of the mains of the Peoria Gas & Electric Co.?

A. I don't know all of the places; we found filled ground in the alley between Washington and Water streets; filled ground on the lower end of Persimmon street; some filled ground on South Adams street below Persimmon street, and possibly in other places. I do not now remember exactly where.

47. What part of the city of Peoria is the most thickly settled district in the city?

A. In a general way, I should say the fourth ward is.

48. How about that part of the city south west of Persimmon street and west of Spencer street?

A. That is thickly settled.

49. Have you any gas mains in that locality?

A. No, but that is where we have been trying to get some; that is where the ordinance was vetoed.

50. That was subsequent to the passage of this ordinance fixing the maximum price to be charged for gas in the city of Peoria, was it?

A. Yes sir.

51. Is the gas stove department of the Peoria Gas & Electric Company a self sustaining department?

Objected to by complainant as incompetent and immaterial unless the question is confined to a period before September 1, 1900?

A. Yes sir, that is, it is self sustaining to the extent that the price at which stoves are sold as a general proposition equals the cost of the stove; it does not pay the expense of the solicitor or the people who set stoves or look after them afterwards.

791 52. How many men have you employed in the soliciting and canvassing department of the Peoria Gas & Electric Company?

A. We have one man now employed who does soliciting, canvassing and collecting.

53. Does he also collect for the electric branch of the Peoria Gas & Electric Company?

A. Not as a rule.

54. You testified in direct examination that owing to the improvement in machinery the amount of coke obtained from a ton of coal was increased from about 35 per cent. to 60 per cent.?

A. No I testified that the amount of coke available for sale had increased and the amount of coke used to heat the benches had decreased.

(The MASTER:)

55. In other words, there had been a saving in both direction
A. Yes sir.

(Mr. MANSFIELD:)

56. Did you not testify that where formerly the percentage of
used amounted to 60 per cent. that at the present time it amou
on an average to about 25 per cent. for use under the retorts?

A. I think I testified that formerly from 50 to 60 per cent. o
coke made was required to heat the retorts and at the present
only 25 to 30 per cent. is required for the same purpose. I mea
heating the retorts not only in the bench furnace, but also any
coke which may be used around the gas works; in other words,
the coke used in the production of gas is now from 25 to 3
cent. of the amount made while formerly it was from 50 to 6
cent. of the amount made.

57. Did these improvements lessen the cost of the manufactu
gas?

A. Yes, it lessens the cost per thousand feet.

792 58. Did these improvements increase or diminish
amount of residuals obtained from the manufacture of
gas?

A. Generally speaking the amount of residuals has not incr
as to amount of residuals made. As stated before, the imp
ments leave a larger proportion of the coke available for sale
amount of tar produced is slightly increased in recent years,
to some extent at the expense of the quality of the tar; the am
of ammonia I think is about the same as it was 8, 10 or 1
ago or more.

59. When were these material changes in the art of manufactu
gas first introduced?

A. The most important change was in the general adopti
regenerative benches and the discarding of the open fire ben
this change was made first 15 to 20 years ago, but it is only w
eight or 10 years that regenerative furnaces have been e
sively introduced among the smaller gas works; the changes i
condensation and purification systems have been slow and
hardly be said to have come in at any particular time; they
been a matter of evolution and of somewhat slow growth.

60. The introduction, then, of regenerative furnaces has ca
an increase in the production of gas made per man empl
has it?

A. The regenerative furnace is in part to be credited wit
increase in the production of gas per man employed, but the
cipal increase in this respect is due to the larger size of the be
and the additional number of retorts in each bench.

Re-direct interrogatories by Mr. ABBOTT:

1. In the interrogatories which have been propounded to you since you were recalled as a witness I have had in mind and
793 intended to confine all of my questions relating to the plant of the Peoria Gas & Electric Co. to the gas plant only. I will ask you to state if in all of your answers to my interrogatories you also had in mind and intended to testify with regard to the gas plant only of complainant company?

A. Yes sir, my testimony has related entirely to the gas plant of the Peoria Gas & Electric Company.

2. Is that true throughout your examination so far as it relates to interrogatories which may have been at other times propounded by other counsel?

A. Yes sir, only in the instances where I have specifically stated that my testimony related to the electric plant.

3. Where no language has been used as distinguishing it, as I understand you, you have intended and meant to be understood as indicating the gas plant only?

A. Yes sir.

4. In your cross examination, at the end of your first examination, you were asked certain questions in regard to alleged statements with reference to the service pipes of the company claimed to have been made before the board of review of Peoria county, Ill., in August, 1901, and in your re-direct examination following that cross examination you stated the basis and purpose of that examination as you understood it, that those statements were made under the advice of counsel on a certain definite basis and theory and for a certain specific purpose, if such statements were made. In your cross examination, since you have been recalled, you have been asked some similar questions with relation to statements claimed to have been made at the same time and place with reference to the gas mains of the company. State whether you desire that the same statement you made when asked to explain with
794 reference to the services applies also to the statement claimed to have been made by you with reference to the main pipes as well?

A. Yes sir.

5. Is it or is it not a fact that all such statements as were made at that time and place, if any were made, were for the sole and only purpose of fixing the valuation of the tangible property of the Peoria Gas & Electric Co. for taxation purposes and not otherwise?

A. The statements made by me were for the sole purpose of fixing a value on the tangible property of the Peoria Gas & Electric Co. for taxation purposes.

6. You were asked on cross examination some questions in relation to the market value of the entire plant considered as of the date of September 1, 1901, and answered, as I remember, substantially that its market value at that time you considered to be substantially

the same as on September 1, 1900. State whether or not in determining the market value of the property on September 1, 1901, you made such statement on the assumption that there had been a proper system of accounting, and book keeping, that a proper allowance, in your judgment, for depreciation of the plant had been entered therein, that the plant had been kept up to its condition as it existed on September 1, 1900, and that it had up to that time accumulated some business.

A. Yes sir, I took all those assumptions into consideration.

Re-cross interrogatories by Mr. MANSFIELD:

1. You testified in reply to the last interrogatory propounded to you by Mr. Abbott that in making up the fair cash market value of the plant on September 1, 1901, you took into consideration the fact that the company had obtained more customers. By
795 doing so you base your estimate, then, of the fair cash market value not only upon the tangible property of the Peoria Gas & Electric Co. but upon the amount of business the company was doing upon that date.

A. Not entirely. Mr. Abbott's question covered a very much wider range than that and assumed that there had been a proper system of accounting that the company had accumulated a business, which I assume to be a permanent business, and that the plant had been kept up to its normal efficiency and condition.

(Mr. RITCHER:)

Q. Is that a fact?

A. Yes sir.

Mr. IRWIN: For the purpose of further showing the hazards of the business, I offer in evidence on behalf of complainant the proceedings of the city council of the city of Peoria of the regular meeting of May 7, 1901, and will read from those proceedings the following extract: "The committee on streets, alleys and bridges to whom was referred the ordinance of C. V. Newman for the construction and operation of gas works, reported said ordinance, recommending the adoption of the same. The report was adopted on motion of Alderman Kasjens and the ordinance was ordered read. The ordinance was read and amendments offered by Alderman Kasjens to section 4, 8, 9, 12, 13 and 15 were unanimously adopted by the council. The ordinance was then placed upon its passage on motion of Alderman Kasjens and adopted by the following vote:—Ayes, Aldermen Bartholomew, Case, Gauss, Kasjens, Proctor, Simmons, Stillwell and Woodruff—eight."

Objected to by defendant as incompetent, immaterial and irrelevant, not tending to prove the issues in the case.

Mr. IRWIN: Further on the same subject, to show the hazards of the business, I offer in evidence on behalf of complainant a certified

copy of an ordinance, entitled "An ordinance granting to
796 Charles V. Newman, his associates, successors and assigns the right to lay gas mains and distribute gas in and along the several streets and highways in the city of Peoria, Illinois." Adopted by the city council of the city of Peoria on the 7th day of May, 1901, and also offer in connection with it the certificate of the clerk as to its being a true copy, which said certified copy of ordinance together with the certificate attached thereto is hereto attached marked "Exhibit 14."

Objected to by defendant as immaterial, incompetent, irrelevant and not tending to prove the issues in this case.

Mr. IRWIN: On the same subject, and for the same purpose, I offer in evidence on behalf of complainant a certified copy of an ordinance entitled, "An ordinance granting the Peoria Gas & Electric Co., its successors and assigns, the right to lay and maintain gas mains and pipes in and along certain streets, avenues and public highways in the city of Peoria, Ill." as passed by the city council on the 18th day of June, 1901, together with the certificate of the city clerk and the veto of the mayor of the city of Peoria attached thereto, which said ordinance, certificate of clerk and veto of the mayor is hereto attached marked by the master "Exhibit 15."

Objected to by defendant for the same reasons as Exhibit 14 was objected to.

Mr. IRWIN: I now offer in evidence generally on behalf of complainant in support of the allegations of the bill in this case, an ordinance entitled, "An ordine-ce granting to the People's Gas & Electric Co. the right to lay gas mains and pipes, and distribute gas in and along the several streets and highways in the city of Peoria,
Ill., as adopted by the city council of the city of Peoria
797 on the 18th day of April, 1899, together with the certificate of the city clerk attached thereto, it being the original ordinance—license or franchise, granted to the complainant by the city council of the city of Peoria, which said ordinance and certificate is hereto attached marked by the master "Exhibit 16."

Objected to by defendant as incompetent, immaterial, irrelevant and not tending to prove the issues in this case.

Mr. IRWIN: I now offer in evidence on behalf of complainant, for the purpose of showing the hazards of the business and also for general purposes an ordinance entitled, "An ordinance regulating and fixing the maximum price of gas in the city of Peoria passed by the city council the 4th day of September, 1900, together with the certificate of the city clerk as to its authenticity, which said ordinance and certificate is hereto attached marked by the master "Exhibit 17."

Objected to by defendant as immaterial, incompetent, irrelevant and not tending to prove any of the issues in this case.

Mr. IRWIN: If the master please, this closes the complainant's case with the exception, perhaps, of one witness. We may want to put Mr. Summerville of Indianapolis on the stand at some time

when we can secure his attendance but I now stipulate we will offer no evidence on any new points from him; his testimony will simply be cumulative testimony along the same lines other experts have testified. Mr. Summerville is in the East and we have not been able to secure his attendance and I don't know just when we can get him. I really do not know at the present time whether we will take his testimony at all but, if we desire to, I would like to reserve the right to take his testimony on the stipulation we
798 will offer nothing new so as not in any way to delay the defense in proceeding with its case.

The MASTER: You, then, close complainant's case do you?

Mr. IRWIN: Yes sir.

The MASTER: The master desires to congratulate counsel for complainant on the expedition with which they have put in their evidence in this case, it being barely two months since we commenced taking testimony.

As counsel is unable to agree on the time when the defendant shall proceed to put in its testimony, the master will fix the time. The defendant will commence to take testimony on its part Tuesday, February 11, 1901, at such place as may be designated by the master.

Adjourned.

798a EXHIBIT "14." I. C. Pinkney, Master.

An Ordinance.

An ordinance granting to Charles V. Newman, his associates, successors, and assigns, the right to lay gas mains and distribute gas in and along the several streets and highways in the city of Peoria, Illinois.

Be it ordained by the city council of the city of Peoria, Illinois.

SECTION 1. That, subject to the terms and conditions of this ordinance hereinafter specified, there is hereby granted to Charles V. Newman, his associates, successors and assigns, (hereinafter to be known and designated by the general term of grantees) the right to construct, operate and maintain a gas plant, to lay and maintain main pipes and service pipes for gas in and along the streets, alleys and public places of the city of Peoria, Illinois, for the distribution to consumers of gas for illuminating, heating and power purposes, and to prescribe the terms and conditions thereof, in so far as such terms are not determined by this ordinance.

SECTION 2. That, pursuant to the petition of the owners of the land representing more than one-half of the frontage on the streets, avenues and public highways hereinafter named, there is hereby granted to the grantees aforesaid the right and authority to construct, lay and maintain gas mains, service pipes, branches, feeders,

ut-offs and manholes in, along and upon the following named
treets, avenues and highways in the said city of Peoria, for the pur-
ose of furnishing the said city of Peoria and the inhabitants thereof
ith gas for lighting, heating and power purposes, to-wit:

Fayette street from Water street, the initial point, to Knoxville
venue.

Knoxville avenue from Fayette street, the initial point, to Ne-
braska avenue.

98b Main street from Water street, the initial point, to Eliza-
beth street.

Jackson street, from Washington street, the initial point, to Bluff
treet.

Bluff street from State street, the initial point, to Jackson street.

Glen Oak avenue from Jackson street, the initial point, to Wis-
onsin avenue.

Adams street from Spring street, the initial point, to Pecan street.

Washington street from Jackson street, the initial point, to Pecan
treet.

Franklin street from Adams street, the initial point, to Seventh
venue.

Perry street from Franklin street, the initial point, to Main
treet.

And such other streets, avenues and alleys upon which said
rantee may from time to time obtain frontage.

Also the right and authority to connect the same with main pipes
eeders and service pipes that may hereafter be laid or maintained
y grantees and in and along any other streets, avenues or public
ighways in said city of Peoria for the purposes aforesaid.

SECTION 3. That before any work of construction shall be com-
menced under the rights and privileges conferred by this ordinance
rantees shall execute to the city of Peoria a bond in the penal sum
f ten thousand dollars ($10,000) with good and sufficient surety
which said surety may be a corporation organized and legally au-
horized to do surety business); said bond so given to be approved
y the mayor and city council and filed in the office of the city
lerk, the conditions of which bond shall be to keep the city of
Peoria harmless from all damages of every kind and nature
98c whatsoever, occasioned by the aforesaid grantees operating
under this ordinance, and to indemnify all persons or cor-
orations damaged or injured by reason of the negligent acts of
aid grantees or their employees in and about the exercise of the
ights and privileges by this ordinance granted.

SECTION 4. That grantees shall, within three months from the date
f the passage of this ordinance file their indemnity bond as in sec-
ion (3) above provided, and shall within said three (3) months
egin the construction of their gas plant within the city of Peoria,
nd shall within fifteen (15) months from the date of the passage of
his ordinance supply gas to consumers for illuminating and heating
urposes. Provided, however, that the time during which any

legal proceedings shall be pending whereby said grantees shall be prevented or delayed in complying with the requirements of this section, shall not be taken or deemed any part of the time herein specified. Failure on the part of the grantees to strictly comply with the provisions of this section shall, at the option of the city council, operate as a forfeiture of all further rights and privileges under this ordinance. Written notice of such option on the part of the city shall be given to grantees at least ten days before such forfeiture shall take effect, which notice may be left at the office of grantees in charge of any person there employed by said grantees, and the same shall be deemed a sufficient notice.

SECTION 5. That grantees, when so ordered by a vote of the city council shall extend mains on any street, avenue or public highway contiguous to the mains belonging to said grantees, which at such times are in use and operation; provided, however, that said grantees shall not be required to so extend their mains until given a good and sufficient guarantee that the annual revenue to be derived by grantees from such extension shall not be less than one hundred dollars ($100) for each six hundred feet of main extension so ordered.

798d SECTION 6. That grantees shall do no permanent injury to any street, sidewalk, alley or public place, and whenever said grantees shall desire to open ground on any street or public place, or to disturb any pavement or sidewalk for the purpose of operating under this ordinance they shall first secure a permit therefor from the commissioner of public works, and grantees shall complete such work without delay and shall forthwith restore such street, public place, pavement or sidewalk so disturbed to a condition equally as good as it was before being disturbed. That the work of restoration shall be done under the direct supervision of the city department of public works, at grantees' expense which shall include a reasonable inspector's fee for such person, who shall be placed in charge of the supervision of such work of restoration by the department of public works. That where the streets and avenues of the city of Peoria have been permanently paved, if it be practical such streets and avenues and the buildings and residences thereon situated, shall be supplied by laying all necessary gas mains and service pipes through the alleys, thereby avoiding as far as possible the necessity of disturbing said permanent pavings. That whenever any street, avenue or public place is about to be permanently improved by paving or otherwise so as to make it desirable that gas mains and service pipes be laid before such permanent improvement is made, the commissioner of public works shall notify grantees of such proposed improvement, and said grantees shall at their own expense within thirty (30) days after such notification begin the work of laying gas mains, including all service pipes and connections to the curb line along said proposed improvement, and shall push such work to completion without delay; provided however, that grantees shall not be required to make connections with their

mains in operation nor furnish gas unless the nearest point of their mains already laid and in operating shall be within 600 feet of the mains so ordered laid, and provided further that all proper connections shall be made and gas furnished at any time when grantees' gas mains in operation shall approach at its nearest
798e point within 600 feet of the mains thus laid, if said grantees shall be furnished the guarantee as in section (5) above provided.

SECTION 7. That at no time shall any consumer be charged or be compelled to pay for the gas by him consumed and furnished under this ordinance to exceed seventy-five cents per thousand cubic feet. That the candle-power of the gas so furnished shall be as follows:

For coal gas it shall be eighteen candle power.

For mixed coal and water gas, it shall be twenty-two candle power.

For water gas, it shall be twenty-five candle power.

SECTION 8. That the grantees herein shall immediately proceed to organize and incorporate a company or corporation under the laws of the State of Illinois, to be known as the "Citizens Gas Light and Fuel Company of Peoria," for the purpose of operating the gas plant in accordance with the rights and privileges by this ordinance granted, to whom upon its organization as above specified grantees shall immediately assign and transfer according to law this franchise, together with all the rights and privileges by this ordinance granted; subject to all the restrictions and undertakings herein placed upon and assumed by grantees; and said company shall take the place of grantees and do and perform their undertakings hereunder, and such assignments shall be filed in the clerk's office of the city of Peoria, and also be recorded in the office of the recorder of deeds in and for Peoria county and no other or further assignment or transfer shall be made, except by mortgage, without the consent of the city council of Peoria; provided, that no mortgage of said gas company or corporation shall be made which shall have any effect whatever of curtailing any of the rights of the city of Peoria under this ordinance. In case said grantees do not organize said company and the franchise by this ordinance granted shall not have been transferred and assigned to said company or corporation within three (3) months of the date of its passage
798f then said ordinance shall become null, void and inoperative, and all rights and privileges hereunder granted shall be forfeited.

SECTION 9. That upon the assignment and transfer of the franchise, rights and privileges by this ordinance granted, to the Citizens Gas Light and Fuel Company as in section eight (8) above provided, and said company's acceptance of the assignment, the said company shall immediately deposit with the city treasurer of the city of Peoria a certified check for ten thousand dollars ($10,000) payable to the order of the city treasurer, and certified to by a bank of the city of Peoria, as a guarantee of good faith upon the part of said com-

pany in compliance with the conditions and provisions of this ordinance by it assumed. That such check shall remain in the custody of the city treasurer, subject to forfeiture for any failure on the part of said company to comply with the terms of this ordinance upon it imposed, until such time as the said company shall have constructed its plant and commenced to furnish gas under this ordinance and shall have substituted for such certified check a bond as hereinafter provided. That such check shall be forfeited to the city of Peoria without further legal process whenever there is a substantial violation by the said company of any of the conditions upon it imposed by this ordinance, said forfeiture to be ordered by the city council whenever it shall find that there has been such violation. That after the gas plant shall have been constructed and said company shall thereby furnish gas to its patrons, said certified check shall be surrendered to said company upon its first filing with the city clerk a good and sufficient bond in the penal sum of ten thousand dollars ($10,000) to be approved by the mayor and city council, conditioned upon said company's faithful observance of all the conditions upon it imposed by this ordinance and its operation under the franchise hereby granted, said bond to continue during the life of this ordinance, and to be subject to forfeiture at any time upon the order of the city council whenever it shall deter-
798g mine said company to have substantially violated any of the conditions by this ordinance upon it imposed.

SECTION 10. That any time after the assignment and transfer of the franchise, rights and privileges granted under this ordinance, to the Citizen's Gas Light and Fuel Company, as in section (8) above provided, the city of Peoria, as a municipal corporation, shall have the right to purchase at a fair market value the gas plant of the grantees, and all things pertaining thereto, as herein provided, on the following conditions, and the grantees in accepting this ordinance, expressly covenant and agree to sell to the city of Peoria the said gas plant, provided the said city may at said time have the power to purchase the same, or to contract for the payment of the same or shall pay for the same in cash, and upon the payment for the same grantees shall convey said gas plant and all things pertaining thereto, to said city of Peoria, free from all liens upon the following conditions, viz:

The city of Peoria, by resolution of its city council, shall determine to purchase the said gas plant, and shall serve a certified copy of such resolution on the grantees at least six months before the time or times when the city of Peoria may desire to exercise the right of purchase hereinbefore granted; service of such certified copy may be made as provided for service notice in section (4) above. In case the city and the grantees shall be unable to agree upon a price to be paid for said gas plant as a fair market value, then such value shall be left to three disinterested experts as appraisers of which the city of Peoria shall select one, grantees a second and these two shall choose a third. These three appraisers shall consti-

tute a commission, shall examine and take testimony of experts and otherwise determine the then existing fair market value of the gas plant and all that pertains thereto; but in ascertaining such fair market value they shall not appraise nor take into consideration the then unexpired term of the franchise granted by this ordinance but shall equitably decide what amount the city of Peoria is justly
798*h* and fairly entitled to pay as a fair market value to the grantees for the gas plant and all that pertains thereto, save said unexpired franchise, and shall make a written award of the then fair cash market value of such gas plant property, in duplicate, and shall deliver one of such awards to the city clerk, and the other to grantees, and the city of Peoria shall then have the option of purchasing or refusing to purchase the said gas plant at the price so fixed. But in no event shall the city pay more than the actual cost of the material and labor used in constructing and improving such gas plant, and said appraisal shall be made upon this basis. If the said city shall then elect to purchase, it shall give the grantees notice of such election within sixty days from the delivering of said award to the city clerk as aforesaid, and failure to give such notice to grantees shall constitute an implied refusal on the part of the city to make such purchase, according to the terms of the award filed with the city clerk. Provided that neither an express nor implied refusal on the part of the city to purchase as above provided, shall operate as a bar against said city at any future time again exercising its option as herein provided. Upon the city's election to make such purchase, it may pay the whole or any part of such award, but it shall not pay less than one-sixth of the same on or before the expiration of three months after its election to purchase, and on or before the expiration of each successive period of three months thereafter it may pay the whole or any part of the remainder, but it shall not pay less than one-sixth part of the whole award at each of said periods until the whole shall be paid. Interest, not exceeding the legal rate for Illinois, shall be paid by the city on all deferred payments from the date of the first payment to the time of the payment of each and all of the said deferred payments, at such rate per annum as the appraisers may fix as just and proper. But the said city shall have no right to any of the property or income of the said gas plant until such time as it shall take actual possession of the property and make the first payment of the purchase money aforesaid,
798*i* and at such time an adjustment of accounts between the city and grantees for gas furnished or supplied by grantees and not then paid for shall be had. But if the city shall fail or refuse to purchase it shall pay all the necessary expenses incurred by said appraisers in or on account of the appointing of such appraisers and making such award, but in case the purchase is completed and such purchase money paid, then shall such expense be equally divided between the city and the grantees. When the first payment as fixed by this section shall have been made, the city of Peoria shall be im-

mediately put in to possession of said gas plant, and all payment when made shall be applied under the direction of the city if the city sees fit to so direct, to the liquidation and extinguishment of all indebtedness of said grantees, which are liens upon said gas plant and upon full payment for said gas plant, said grantees shall convey the same free from all liens and incumbrances whatsoever to the city of Peoria.

SECTION 11. That the subscriptions to said stock in said company to be organized and incorporated by grantees as above provided shall be open to all citizens of Peoria who may desire to subscribe for stock and that in such subscription for stock, small subscribers shall have the preference and shall be accommodated before those desiring to subscribe for large amounts.

SECTION 12. That the rights and privileges hereby granted are upon the express condition that all the provisions and limitations in this ordinance enumerated and imposed upon grantees shall inhere in and be a part of any sale, lease, transfer or combination which aforesaid grantees or their successors, the Citizens Gas Light and Fuel Company of Peoria, Illinois, shall make to or with any other company, trust or corporation or individual now engaged or hereafter to be engaged in the manufacture or sale of gas in the city of Peoria, Illinois, which is not prohibited by section eight (8) and ten (10) above, and any sale, lease, transfer or combination made or attempted to be made in violation of the terms of this section shall be null, void and inoperative; and that in consideration of the rights and privileges by this ordinance granted to the aforesaid grantees, the franchise, rights and privileges by this ordinance granted shall not be sold, transferred or assigned to any person or persons, firm or corporation, or in any other manner except as specified in sections eight (8) ten (10) and twelve (12) of this ordinance and that any attempt on the part of the grantees or their successors to sell out or dispose of their gas plant in any other manner shall operate as a forfeiture of this ordinance and all rights to operate under it.

798j

SECTION 13. That grantees shall upon their acceptance of this ordinance immediately deposit with the comptroller, of the city of Peoria, the sum of five thousand dollars ($5000) in United States currency to insure their faithful performance of organizing and incorporating the Citizens Gas Light and Fuel Company and assigning and transferring to said company the franchise, rights and privileges by this ordinance granted within the time specified in section eight (8) above. That such money so deposited shall be forfeited to and become the property of the city of Peoria without further legal process whenever there is a substantial violation of the conditions by this section imposed upon grantees, and that such forfeiture shall be ordered by the city council whenever it shall determine that there has been such violation.

SECTION 14. That the rights and privileges by this ordinance

granted shall continue for a term of fifty (50) years from the date of its passage.

SECTION 15. That said grantees shall file with the city clerk their written acceptance of this ordinance within ten (10) days after its passage and that upon their failure to do so within the time specified this ordinance to become null and void.

7981 SECTION 16. That this ordinance shall be in force and effect from and after its passage.

Passed in council this 7th day of May, 1901.

(Signed) HENRY W. LYNCH, *Mayor.*

(Copy)
ROBERT M. ORR, *City Clerk.*

STATE OF ILLINOIS, }
City and County of Peoria, } *ss:*

I, Robert M. Orr, city clerk of the city of Peoria, do hereby certify that I am city clerk of the city of Peoria, and the keeper of the records of said city, and that the annexed and foregoing ordinance is a true copy of an ordinance granting to Charles V. Newman and assigns the right to construct a gas plant, etc. of which it purports to be a copy, as the same appears among the records in my office.

Witness my hand and the official seal of said city this ninth day of January A. D. 1902.

[MUNICIPAL SEAL.] ROBERT M. ORR, *City Clerk.*

7981 EXHIBIT "15." I. C. Pinkney, Master.

To the city council of the city of Peoria.

GENTLEMEN:—In accordance with statutory enactment I return herewith an ordinance *entitled*, "An ordinance granting to the Peoria Gas & Electric Company the right to lay and maintain gas mains and pipes in and along certain streets in the city of Peoria," which was before your body for consideration and approval at the last regular meeting of the city council, together with my veto and reasons therefor:

At the time of the granting of the original franchise to this company, representations were made to the people and to the members of this council, to induce the city council to grant the franchise; among the representations so made the following appears:

"The signers of these petitions believe that competition will reduce the price of gas and result in saving thousands of dollars yearly to the public of Peoria."

The city council at that time believing that these representations were made in absolute good faith, as they were alleged to be by the

promoters and stockholders of this company, granted the original franchise. The result is known to not only the members of the council, but to all citizens generally. Instead of reducing the price of gas the citizens are now paying one (81) dollar per thousand cubic feet, when before the passage of the ordinance, they were only paying seventy-five — (75c.) per thousand cubic feet for fuel gas. On account of this raise in the price of gas by the gas companies, the city council in its wisdom, passed an ordinance fixing the maximum price that could be charged for gas furnished consumers in the city of Peoria. That ordinance fixed the maximum price to be charged for gas at seventy-five — (75c.) per thousand cubic feet and has never been repealed, and is now and ever has been since its passage,
798*m* a law in the city of Peoria; yet notwithstanding this law so passed by the council, the People's Gas & Electric Company, now Peoria Gas & Electric Company, come before your honorable body and request that you grant them further concession, ignoring completely the action taken by the preceding council in passing the maximum gas rate ordinance. You are also aware that litigation is now pending in the United States court brought by the Peoria Gas & Electric Company for a construction of the ordinance limiting the maximum price to be charged for gas in the city of Peoria, which litigation is far from determination.

If you pass the present ordinance applied for by the Peoria Gas & Electric Company, you not only ignore the former action of the city council, but you also ignore the litigation pending in the United States court, and you grant to the said gas company, in the teeth of its breach of faith, the further privilege of charging an exorbitant price for gas in another district of the city of Peoria.

I am therefore of the opinion that this council, if for no other reason than to be consistent, should either repeal the maximum gas rate ordinance and allow the present litigation pending in the United States court to go by default, or refuse to pass the present ordinance to the Peoria Gas & Electric Company.

For these reasons I hereby veto an ordinance entitled, "An ordinance granting to the Peoria Gas & Electric Company, its successors or assigns, the right to lay and maintain gas mains and pipes in and along certain streets, avenues and public highways in the city of Peoria, Illinois," passed by your honorable body on the 18th day of June, 1901.

WILLIAM F. BRYAN, *Mayor.*

798n *Ordinance.*

An ordinance granting the Peoria Gas and Electric Company, its successors and assigns, the right to lay and maintain gas mains and pipes in and along certain streets, avenues, and public highways in the city of Peoria, Illinois.

Be it ordained by the city council of the city of Peoria, Illinois:

SECTION 1. That whereas, the owners of more than one-half of the land fronting and abutting upon the following streets, avenues and public places, viz:

Along Cass street, from Helen street, the initial point, to Antoinette street.

Along Antoinnette street, from Helen street, the initial point to Louisa street.

Along Louisa street, from Ann street, the initial point, to Garde street.

Along Olive street, from Adams street, the initial point, to Lincoln avenue, and

Along Henry street, from Olive street, the initial point, to Tyng street, have petitioned the city council of the city of Peoria, Illinois, to grant to the Peoria Gas and Electric Company the right to construct lay and maintain gas mains and pipes for the distribution of gas for fuel, light, heat and power purposes, in and along said respective streets avenues and public places above named, between the said points designated.

798o Now, therefore, in pursuance to the prayer of said respective petitions, the right, power and authority be, and is hereby granted to the Peoria Gas and Electric Company, its successors and assigns to construct, lay and maintain gas mains, pipes, branches, feeders, service pipes, cut-offs and man-holes, in, under and along the following named streets, avenues and highways in the said city of Peoria, Illinois, for the purpose of furnishing said city and the inhabitants thereof with gas for fuel, light, heat and power, viz:

Along Cass street, from Helen street, the initial point, to Antoinette street.

Along Antoinette street, from Helen street, the initial point, to Louisa street.

Along Louisa street, from Ann street, the initial point, to Garden street.

Along Olive street, from Adams street, the initial point to Lincoln avenue.

Along Henry street, from Olive street, the initial point, to Tyng street.

Also the right to join and connect the same with any gas mains, pipes, feeders and service pipes that may be laid or maintained by said company, its successors and assigns in and along any other

streets, avenues and public highways in said city for the purposes aforesaid.

SECTION 2. That the right power and authority hereby granted is subject to, and shall be governed by all the terms, conditions and requirements contained and set forth in a certain ordinance entitled "An ordinance granting to the Peoples Gas and Electric Company (now Peoria Gas and Electric Company) the right to lay gas mains and pipes, and distribute gas in and along the several streets, and highways in the city of Peoria, Illinois," passed and adopted
798p by the city council of said city, on the 18th day of April, A. D. 1899.

Passed in council this 18th day of June, A. D. 1901.

798aa Also the right and authority to connect the same with mains, pipes, feeders and service pipes that may be laid or maintained in and along any other streets, avenues, or public highways in said city for the purposes aforesaid.

SECTION 3. The grantee herein shall enter in a bond in the penal sum of one thousand dollars, with sufficient surety (which surety may be a corporation organized to do a surety business) the same to be approved by the mayor and comptroller, conditioned to keep the city harmless from all damages of every kind and nature occasioned by the said grantee and to indemnify all persons or corporations damaged or injured by reason of the negligent acts of said grantee in and about the exercise of the rights and privileges herein granted.

SECTION 4. This ordinance is granted upon the condition that said company shall, within six months from the date of the acceptance of this ordinance, begin the construction of gas works within the city of Peoria and shall, within eighteen months from the date of the acceptance of this ordinance, begin to manufacture and supply gas hereunder: Provided, however, that at the time during which any legal proce-dings shall be pending whereby the said company, its successors and assigns, shall be prevented from or delayed in complying with the requirements of this section, shall not be taken or deemed any part of the time specified.

Said company shall, within thirty days from and after the passage of this ordinance, deposit with the city treasurer of the city of Peoria, the sum of five thousand dollars as security for its faithful compliance with the provisions of this section of this ordinance, which sum so deposited, shall be returned to said company when it shall have expended the sum of fifty thousand dollars in and about the purchase, construction and erection of its said gas works. Should said company fail to commence the erection of its said gas works,

798bb or fail to supply gas within the time mentioned herein, then the city council may, by resolution declare the said sum of five thousand dollars forfeited to the said city of Peoria.

SECTION 5. Said company shall, when so ordered by a
vote of all the aldermen elected, extend their mains on a
avenue, or other public highway contiguous to the main
company at the time in use and operation; provided, howe
said company shall not be required so to extend its mains
company shall receive a good and sufficient guarantee
amount of annual revenue to be derived by said company f
extension shall not be less than the sum of one hundred d
five hundred feet of main extension so ordered.

SECTION 6. Said company shall do no permanent injur
street, sidewalk, alley or public place, and when said compa
open ground in any street, it shall forthwith restore the str
ment and sidewalk to a condition equally as good as befo
expense of said company. Where the streets and avenue
city of Peoria have been permanently paved prior to the
placing of any gas mains therein by the said Peoples' Gas a
tric Company, its successors or assigns, said Peoples' Gas a
tric Company, its successors or assigns shall, when, in its j
the same shall be practicable, lay all such gas mains in and
the alleys, thereby so far as practicable avoiding the nece
disturbing said permanent pavements; and when in the ju
of said company, its successors or assigns, it shall be deem
sary to make any extension in any street, avenue or publ
which shall be permanently improved either by paving or
cmizing, the said company shall first secure a permit for t
pose from the commissioner of public works of this city.

Whenever any street is about to be permanently impr
paving or macademizing the commissioner of publi
798cc shall notify said company of such proposed improvem
within sixty days after such notification, said compa
lay its mains, including all service pipes and connections to
line at its own cost and expense.

SECTION 7. The rights and privileges hereby granted by t
nance are granted for the term of ninety-nine (99) years f
after the acceptance of this ordinance.

SECTION 8. This ordinance shall take effect and be in for
and after its passage and the acceptance thereof by said c
and the filing and approval of the bond herein required.

Passed in council this 18th day of April, A. D. 1899.

An Ordinance.

An ordinance regulating and fixing the maximum price of gas in the city of Peoria.

Be it ordained by the city council of the city of Peoria:

SECTION 1. That the maximum price of gas furnished the city of Peoria, and the citizens thereof, and all consumers of gas therein, shall not exceed the sum of seventy-five cents (75c.) per thousand cubic feet; such gas so furnished to afford a light of not less than eighteen (18) candle power; to be measured and ascertained at the place of consumption, in said city, by the modern appliances known to science for measuring the candle power of illuminating gas; and the Peoria Gas Light & Coke Company, and the Peoria Gas & Electric Company, and any other company corporation person or persons who are now or may hereafter furnish gas to consumers in the city of Peoria, are hereby authorized and empowered to charge all consumers of gas in said city a sum not in excess of seventy-five (75c.) cents per thousand cubic feet.

SECTION 2. That any company, corporation, person or persons who shall in violation of the provisions of the preceding section charge or require the city of Peoria, or any citizen thereof, or any consumer of gas therein to pay for gas furnished to it or them, or either of them, a sum in excess of seventy-five cents (75c.) per thousand cubic feet, or who shall furnish to said city of Peoria, or any citizen thereof, gas less than eighteen (18) candle power, shall be subject to a penalty of not less than twenty-five ($25) dollars nor more than two hundred ($200) dollars for each and every offense.

798*ee* SECTION 3. That any company, corporation, person or persons who shall remove any meter or meters from the house, store, factory or premises of any consumer of gas in the city of Peoria, against the will and consent of any such consumer of gas who is willing to pay for gas furnished him, it or them by any company corporation, person or persons, the price established and fixed in section one (1) of this ordinance shall be subject to a penalty of not less than twenty-five ($25) dollars nor more than two hundred ($200) dollars for each and every offense; provided, however, that any company, corporation, person or persons furnishing gas to consum-

ers in the city of Peoria, shall have the right to remove any meter or meters for the purpose of repairing the same, on condition that such meter or meters so removed shall be replaced or a new one substituted in its place within twenty-four (24) hours of the time of the removal of any such meter or meters.

SECTION 4. This ordinance shall be in force and effect from and after its passage and due publication, as provided by law; provided, that nothing herein contained shall impair the obligation of any contract in existence between the city of Peoria and either of said gas companies above mentioned.

SECTION 5. All ordinances or parts of ordinances in conflict with this ordinance are hereby repealed, subject to the proviso contained in section four (4) of this ordinance.

Passed in council this fourth (4) day of September, A. D. 1900.

800 United States court room, Government building.

PEORIA, ILLS., TUESDAY, *February* 11, 1902—10 a. m.

Parties met pursuant to adjournment.

Present: Judge I. C. Pinkney, special commissioner. Mr. W. T. Irwin, Mr. E. C. Ritcher, Mr. W. T. Abbott, appearing for complainant. Mr. Henry Mansfield, Mr. F. H. Tichenor, appearing for defendant.

On account of the illness of Mr. F. W. Little, who the defendant desired to first examine for the purpose of laying the foundation for other testimony, and on account of the fact that Mr. Tichenor had but recently become associated with Mr. Mansfield in the defense and had not become familiar with the case, and because of the further fact that Mr. Tichenor had an important case on call in the circuit court of Peoria county the further hearing of this case was adjourned by the master until Wednesday, February 19, 1902, at the hour of 10 o'clock a. m., the master stating that at that time the hearing must proceed unless a further extension was granted by the court.

801 United States court room, Government building.

PEORIA, ILL., WEDNESDAY, *February* 19, 1902—10 a. m.

Parties met pursuant to adjournment.

Present: Judge I. C. Pinkney, special commissioner, Mr. W. J. Irwin, Mr. E. C. Ritcher, Mr. W. T. Abbott, appearing for complainant Mr. Henry Mansfield and Mr. F. H. Tichenor appearing for defendant.

Defendant's counsel offers in evidence from the records of Peoria county, Illinois, a certified copy of the charter and the articles of incorporation granted to the complainant company together with the certificate of the recorder attached thereto, which said document is hereto attached marked by the master "Exhibit 18."

FRANK T. CORNING, called on behalf of the defendant, being first duly sworn, deposes and says:

Direct interrogatories by Mr. TICHENOR:

1. State your name and place of residence.
A. Frank T. Corning, Peoria, Ill.
2. What is your business?
A. Distiller.
3. How long have you been a resident of Peoria, Ill.?
A. Since 1880.
4. Have you been engaged in the distilling business substantially all the time you have been a resident of Peoria?
A. I have.
5. Where has your place of business been during that period?
A. Foot of Sanger street.
6. With what company or companies in the distilling business have you been associated or identified during the period covered by your statement?
A. Monarch Distilling Company and Corning Distilling Co.

802 7. Those institutions are both in that locality, are they?
A. Yes sir.

COPY BOUND CLOSE IN CENTER

8. With what company or companies are you connected or associated with at the present time in that line of business?

A. Corning Distilling Company.

9. Is Corning and Company also in existence as a corporation?

Ans. Yes sir.

10. And in the prosecution of business?

Ans. Yes sir.

11. What official connection, if any, have you at the present time with Corning and Company?

Ans. I am its president.

12. How long have you occupied that position?

A. I should say since 1895.

13. What official connection, if any, have you with the Corning Distilling Company?

A. I am its president.

14. When was that company organized?

A. I should say about last June or July.

15. How old an organization is Corning and Company?

A. Since 1893.

16. Both of those organizations are incorporated under the laws of the State of Illinois, are they not?

Ans. Yes sir.

17. State whether or not you were a subscriber to the capital stock of the People's Gas & Electric Co., now the Peoria Gas & Electric Co., prior to the time of its organization?

A. I was.

18. Are you the same F. T. Corning whose name appears at the head of the list of stockholders in Exhibit "18" offered in evidence in this case?

Objected to by complainant as assuming the witness is now a stockholder.

A. I am.

803 19. State whether or not you took the stock for which you subscribed in the organization of that company?

A. I did.

20. Are you and have you been since its organization a stock holder in the People's Gas & Electric Co. and later the Peoria Gas & Electric Co.?

Objected to by complainant as incompetent and immaterial.

A. Yes sir.

21. Prior to the time you became interested in the complainant company, what, if any, experience had you had in the gas industry in Peoria or elsewhere?

Ans. None whatever.

22. What, if any, knowledge had you of the expense, operation and production of gas in the ordinary way as used for illuminating and heating purposes?

Ans. None.

23. About when did you commence your investigations with reference to becoming interested in the complainant company?

A. I made no investigation at any time.

24. How long prior to the time you became a subscriber for stock in the company in question did you have any negotiations with respect to becoming a stock holder or interested in any way in that company?

Objected to by complainant as incompetent and immaterial.

The MASTER: I do not see the materiality of it but the witness may answer subject to the objection.

A. I do not remember but it was not a long time.

25. Through whose intervention or suggestion, if anybody's, did you begin your inquiry or negotiations which culminated in your becoming a subscriber as mentioned?

Objected to by complainant same grounds.

A. That is a hard question for me to answer because several of my friends came to me with regard to it but I don't remem-
804 ber who they were.

26. Do you at the present time remember who any of them were?

A. No, I cannot recall any of them definitely.

27. Do you remember at this time who any of the other subscribers for stock in complainant company were at the time of its organization?

Objected to by complainant as incompetent, immaterial and not the best evidence.

A. There was Mr. Miller, Robert Clarke and Chauncey Clarke, I recall now; those are all I recollect now.

28. Are you able to state how long prior to the time you became a subscriber you had conferences with any of those gentlemen with respect to the subject matter?

A. I do not think I had any conferences whatever.

29. Where did you see them on the occasions you have indicated?

Ans. That I don't remember.

30. State whether or not within your recollection any of the people who subsequently became interested with you in the company in question called on you at your place of business with reference to becoming a stockholder, or a subscriber to stock in that company?

Ans. They did not.

31. Do you know Sumner R. Clarke, of Peoria?

Ans. Yes.

32. How long have you known him?

Ans. 30 years.

33. State whether or not you have ever been associated with him in business in Peoria or elsewhere?

A. Not unless in this gas company.

34. What, if any, conversation did you have with Mr. Sumner Clarke prior to the time you subscribed for the stock in question?

A. I don't remember of having any conference with him about it; I may have had but I don't recall it.

35. How long has Sumner R. Clarke been a resident of Peoria?

805 A. That I don't know.

36. Has he for a great many years?

Ans. Oh yes.

37. And has been interested in various lines of business in Peoria, has he not?

Ans. So I understand.

38. Is Mr. Clarke a man who is well known in Peoria and has been for a great many years?

Ans. I should say so.

39. State whether or not you were present at a meeting of the stock holders called for the purpose of perfecting the organization of complainant company?

A. I don't remember whether I was or not.

40. Are you able to state at this time whether or not you were present at any meeting of the stock holders prior to the completion of its organization?

Ans. No, I cannot.

41. State whether or not you received any notice of the meeting called for the purpose of perfecting the organization in question?

Objected to by complainant as incompetent and immaterial.

A. I do not recall it but I presume I did receive such notice if it was issued.

42. Where were you in the months of January, February and March, 1899?

A. I cannot answer that but presume I was in Peoria.

43. Did you know of the completion of the organization of complainant company about the time it was accomplished?

A. No I cannot answer that.

43. State whether or not you participated in any meeting of the stock holders, or subscribers, to the stock of that company at the election of directors during the early spring of 1899?

A. That I don't remember.

44. State whether or not you have ever been a director or officer in the complainant company?

Ans. I have been a director.

806 45. When were you elected and for how long a period of time were you such director?

A. I think I was on the first board and think that board was elected for a year, but I am not sure as to that.

46. Are you still a director of complainant company?

A. No sir, I am not.

47. How many terms did you serve?

Ans. I don't remember.

48. State how many, if any, directors' meetings of that co you attended during the time you occupied that position with ence to it?

A. I cannot answer that; I don't know.

49. Did you attend any of them?

A. Yes, I attended a few—not many.

50. What, if anything, was the company doing during the you were a director as you have testified?

A. That I cannot recall.

51. What, if any, knowledge did you as a director have business of the company during the time you were acting i capacity?

Ans. I might say none whatever.

52. That is, you had no knowledge whatever of the business done?

A. No sir; I did not attend enough of its meetings and I wa at those I did attend and I knew very little of their business a

53. How many directors were there on the board at the time were a member?

Ans. That I don't know.

54. Who were some of them, if you remember?

A. Mr. Sumner Clarke; Theodore J. Miller; I think Ben W and myself; whether Mr. Little, the present manager of comp ant company, was a member of that board or not I don member.

807 55. How frequently, during the time you were a dir were directors' meetings of that company held?

A. That I don't remember.

56. Where were the meetings held?

A. To the best of my recollection at the office of the gas comp on Main street; I don't remember the number; it was at thei office before they moved, just below Anthony's Loan & Trust pany between Madison and Jefferson streets.

57. Do you know whether or not the company was engage construction work during the time you were a director?

A. I think it was.

58. Do you know about the time that work was commenced?

A. No.

59. What, if anything, did the board of directors have to do the work of construction?

Objected to by complainant as immaterial.

A. I don't know.

60. What, if anything, did the directors have to do with au ing, passing or approving accounts for construction during the t you were connected with the company in the capacity you h mentioned?

Objected to by complainant as immaterial.

A. I don't know.

61. What, if any, discussions were had at any of those meetings in your presence with respect to construction work, or the cost of construction, or the general plan of construction?

A. I heard none.

62. Does your answer cover the whole period of time you were a director of that company?

A. It covers all the meetings I attended.

63. What was the character, in a general way, of the business transacted at those directors' meetings?

808

A. That I don't remember because I attended so few of them.

64. About how many meetings did you attend during the first year of the existence of the company?

A. During my term of office I don't think I attended over three or four meetings.

65. In what part of the year were those meetings, if you recollect?

Ans. I do not recollect.

66. What is the character of your memory in general with respect to the business which you ordinarily transact—is it good or otherwise?

A. If I am sufficiently interested to make it an object, perhaps my memory would be better, but this was a small interest I had and I did not bother much with it or pay much attention to it.

67. Through whose influence, if anyone's, did you originally become a subscriber to the capital stock?

A. The subscription was made on my part more from the class of men going into it; I don't know that any individual influenced me in any way.

68. Through what channel did you obtain information to the effect that such a company was about to be organized?

A. That I don't remember.

69. In what way did you learn the names of the gentlemen who were to be associated with you as subscribers to th estock?

A. That I don't remember.

70. Are you able to state at this time how many of the others had signed the subscription list at the time you attached your name?

A. Well, that would be answered likely by the subscription book where I signed.

71. Is it not true you were the first subscriber to the stock book?

Ans. That may be, I don't remember.

809

72. State whether or not prior to the time you became a subscriber you had attended any meetings, or had any conferences, with others proposing to become subscribers to the stock of that company?

A. I may have done so but I don't recall it.

73. Through what source did you receive advice as to the gent
men who were intending to become interested in the company?

A. I don't know that unless through general conversation in
general way.

74. Have you at this time no recollection whatever as to peop
with whom you conversed touching the matter of the organizatio
of this company and there interests and its outcome?

A. Yes sir, I have talked with Mr. Miller and Mr. Sumner Clark
both occasionally.

75. What, if any, representations did they make to you with r
spect to the probable outcome of an investment of the characte
which it was proposed to make?

Objected to by complainant as incompetent and immaterial.

The MASTER: I do not see its materiality but the witness ma
answer subject to the objection.

A. My recollection is they thought it was a good investment.

76. What, if any, business experience had Sumner R. Clarke ha
at that time generally?

A. He had had a large experience.

76. In what lines of business had he been engaged and how ex
tensively?

A. That I don't know; he had been in the distilling business bu
I think he had retired from that at that time; I don't think he wa
in it although he might have been.

77. Do you know in what business he was then engaged?

A. I don't think at that time he was in any business par
810 ticularly.

78. Is it or is it not true that he has for a number of years
been very largely interested in real estate transactions?

A. I don't know.

79. I think you have testified that you have never been associ-
ated with him in any business in any way?

A. No sir.

80. Is it not true that Samuel R. Clarke was at that time a man of
very large means and was then, or had been, interested in very
large enterprises on his own account?

A. I presume that is true.

81. Mr. Clarke was at that time a man past middle life some-
what?

A. That I don't know but I suppose so.

82. During what portion of the time you have known Sumner R.
Clarke has he been actively engaged in business within your knowl-
edge?

Ans. You might say always.

83. In what locality, or localities, have his business interests been
during the time you have known him?

A. That I don't know.

84. Has he or not ever been interested in enterprises in Peoria?
Ans. I have understood he has been.
85. Where was his distilling interest at the time he was so engaged?
A. He was interested in the Manhattan distillery at Peoria.
86. Is it not true that during the time Sumner R. Clarke was engaged in the distilling business tha you, as a distiller, frequently came in contact with him in a business way?
A. Yes sir.
87. That covered a considerable period of time, did it not?
A. Yes sir.
811 88. Is it not also true that he was prominently identified with the distilling interests here for a great many years?
A. Yes sir.
89. And that he subsequently retired?
A. Yes sir, that is, I presume he retired.
90. He has not been engaged in that business for some years, has he?
A. No, he has not been known as being engaged in it but he may be.
91. Do you know what position, if any, he occupies in the complainant company at the present time?
A. I do not.
92. Do you know what position he has ever occupied in that company?
Ans. He was president of the company at one time.
93. Was that during the time you were a director?
A. Yes sir.
94. State whether or not as such president he presided at the meetings of the directors which you attended?
A. He has presided at some.
95. But not at all of them?
Ans. No not at all of them.
96. Who was the other presiding officer during any part of the time you were a director?
Ans. I don't remember.
97. Are you, or are you not, able to state at this time the character of business which was transacted or discussed at any of the meetings you attended during the time you were a director in that company?
Ans. No, I don't remember.
98. How long were those meetings or any of them in session?
A. Perhaps an hour or an hour and a half—perhaps half an hour; I was generally late at those meetings and don't know how long they were in session.
99. On how many different occasions did anybody interview
812 you prior to the time that you agreed to become a subscriber to the capital stock of complainant company?
A. I don't think I was interviewed at all.

100. Then do I understand you to say that the first knowledge you had of the organization of the company, or of its intentions was when the stock subscription list was presented to you and you signed it?

A. No sir, it was talked of in a general way before but nobody interviewed me, that is, sought me at my office or anything of that kind.

101. Where were these general discussions at and under what circumstances?

Ans. I don't remember.

102. Were they in the nature of meetings or otherwise?

A. They were otherwise; there were no meetings that I recall.

103. State whether prior to the time you so subscribed you called on Sumner R. Clarke at his office in Peoria, or at any other place, for the purpose of discussing with him the proposed incorporation of this company?

A. I may have done it but I don't recall it.

104. Where was Mr. Clarke's office during that time?

A. No. 211 Main street near the Merchant's national bank.

105. That has been this place of business for a number of years, has it?

Ans. Yes sir.

106. What degree of intimacy during the past years has existed between you and Sumner R. Clarke?

Objected to by complainant as immaterial.

A. I have known Mr. Clarke well for 30 years.

107. And your relations with him have been intimate, have they not during that time both socially and in business?

A. Not recently; not within the last year.

108. Are you able to state at this time from whom, or
813 th-ough what channel, you first received any suggestion with reference to the proposed incorporation of a new gas company in Peoria at that time?

Ans. No, I am not.

109. State whether or not during the time you have been a resident of Peoria you have been engaged in any industries other than distilling?

Objected to by complainant as immaterial.

A. Yes sir, in four.

110. Do I understand your answer to be that those other industries were in no way connected with the distilling industry or rectifying interests?

Ans. Yes, outside of that.

111. About when in point of time were you so interested?

A. Oh these interests have varied in time; I could not answer that question just now.

112. Were they during the early portion of your residence in Peoria or later?

Ans. Oh, the last 12 years all of them.

113. For how long a period of time did those interests continue?

Objected to by complainant as immaterial.

A. They are in force still.

114. What, if anything, had any of those other enterprises mentioned to do with the gas industry?

A. I have counted the gas industry among the four; that is one of the four.

115. Were any of the other three outside interests which you have mentioned in any way connected with gas industries?

A. None whatever.

116. Then this was your only investment or interest of any character in gas industries up to this time?

Ans. Yes sir.

117. In a general way what was the character of those other three companies in which you were interested?

814 Objected to by complainant as incompetent, immaterial irrelevant.

The MASTER: I don't think it competent but the master has not the power to exclude it.

Mr. RITCHER: Then we instruct the witness that he does not have to answer unless he wants to.

The MASTER: The master does not like to see those matters come up in that way.

Mr. RITCHER: If the master will not rule we have to do it.

The MASTER: The master cannot rule on the competency of questions, he can simply allow the witness to answer subject to the objection.

The WITNESS: None of my interests in the other three industries are in any way connected with the gas business or with any gas interests or never have been, or supplying gas companies, or anything else in any way.

118. During any time from the beginning of negotiation touching the proposed investment and continuing through the period you were a director in complainant's company, what, if any, discussions were had between you and your associates or those proposing to become interested in this company, with respect to the effect of competition in the gas industry in Peoria.

Objected to by complainant as incompetent and immaterial.

A. None that I recall.

119. What, if any, knowledge did you have at that time with respect to competition, or attempted competition, in the same direction in other cities in the United States?

Objected to by complainant same grounds.

A. I had none.

120. Were you or not familiar, in a general way, with the mode of distributing gas to consumers in cities, that is to say, you understood the general plan of distribution did you not?

A. Yes sir.

121. In Peoria at that time for what purposes was gas used?

A. For illuminating and fuel purposes.

122. State whether or not there was then a gas company in operation in the city of Peoria?

Objected to by complainant same grounds.

A. There was.

123. Do you know what its corporate name was?

A. I think the Peoria Gas Company, if I recollect right.

124. There was only one, was there?

A. So far as I know.

125. And that was the only one that had been in operation during your acquaintance with the city?

A. So far as I know.

126. Do you know what territory was reached for service by that company?

Objected to by complainant as immaterial.

A. I do not.

127. Do you know in a general way whether or not it covered the city of Peoria and its environments?

Ans. I presume it did.

128. How long had you been a consumer of gas from that company?

A. I have taken gas from that company ever since I have lived here, 22 years.

129. Do you know whether or not that was the only gas company that had ever been operated in the Peoria territory?

A. It was the only one I knew of.

130. Did you or did you not know the men who were interested in that company as officers and stock holders?

A. No, but I knew some of them; I knew Mr. Henebery, Mr. Coffey and Mr. Farrelly.

131. Did you know Wm. A. Herron?

Ans. No.

132. Did you know Mathew Griswold in his lifetime?

A. Yes.

133. Did you know Peter Coffey in his life time?

A. Yes.

134. Do you know Leslie Robison?

Ans. Yes.

135. All of those gentlemen were for many years interested prominently in the old gas company, were they not?

A. I recall the ones you have named now; I had forgotten about them.

136. Is it not true you have done more or less business with those gentlemen?

A. I have taken gas from the old company ever since I have been here; that is the only business I have had with them.

137. Is it not true that Mr. Henebery was at one time a distiller in Peoria with large interests here?

A. That was before my day here.

138. What, during the years you knew the gentlemen mentioned, was their standing and financial ability?

Objected to by complainant as immaterial, incompetent and irrelevant.

The MASTER: I don't see the materiality of it but the witness may answer subject to the objection.

A. Well, personally I don't know only from rumor that it was good.

139. Were they men of large or small means?

Objected to by complainant same grounds.

A. Personally I don't know but I presume they were large; I presume they were all men of large means.

140. What has been Mr. Herron's business during the years you have known him?

817 Objected to by complainant as immaterial.

A. I don't know Mr. Herron even by sight.

141. Do you know in what line of business he is now and has been engaged?

Ans. No, I don't know his interests any of them.

142. State if you don't know Wm. A. Herron of Peoria, the president of the Savings Bank of Peoria and have so known him for the past 20 years?

A. I wish to correct my former answer; I did meet Mr. Herron once, I had forgotten that; I met him at a summer resort some three or four years ago; that is all my acquaintance with Mr. Herron.

143. Interrogatory 142 repeated.

A. I can answer that yes.

144. What, if anything, is Mr. Henebery's official connection with the First National Bank of Peoria?

Objected to by complainant as incompetent, immaterial, irrelevant.

A. I don't know; I understand he is an officer of that bank but I am not sure of it.

145. You have done business with the First National Bank of Peoria for a great many years, have you not?

A. No sir. We did business with the First national when we fir
came here for perhaps 10 years, but we have not done any busine
with them since until about 6 months ago.

146. During the period covered by your residence in Peoria up t
the time of the organization of the company in question, what,
any, other franchise had been granted to gas companies for the pur
pose of construction in Peoria?

Ans. I don't know.

147. What, if any attempt, within your knowledge had been mad
during that time to obtain a franchise in Peoria for the purpose o
establishing another gas industry here?

A. I don't know that.

818 148. What, if any, connection have you ever had with the
city government of Peoria?—officially I mean?

Ans. None whatever.

149. You have never been in the council?

Ans. No sir.

150. What, if any, changes have been made in the price of gas to
consumers during the time you have been a resident of Peoria?

A. That I cannot answer.

151. In the month of March 1899, was the price higher or lower
than it was when you first became a resident of Peoria?

A. I don't remember.

152. Do you know what the price was in the month of March
1899?

Objected to by complainant as immaterial.

A. No.

153. Look at the paper now shown you and state whether or not
it bears your genuine signature?

Ans. Yes sir.

154. Will you please read that paper into the record and make it
part of your testimony in this case?

Complainant objects to the witness reading it as part of his tes
timony.

The MASTER: I don't think it competent to offer it that way.

Mr. TICHENOR: This paper is the original on file with the city
clerk and we do not want to offer it in evidence; we expect to offer
a certified copy of it if the complainant will admit it is part of the
files in the office of the city clerk.

Mr. IRWIN: If this paper is marked for identification and offered
in evidence the complainant will admit it is part of the files of the
city of Peoria and a certified copy of the paper may be substituted
for the record, but we will object to it as incompetent evidence in
the case.

Defendant's counsel offers in evidence a certified copy of the
paper identified by the witness together with the certificate of the

city clerk thereto attached, which said certified copy is marked
819 Exhibit "19," as is also the original paper shown the witness.

Objected to by complainant as incompetent, immaterial and irrelevant under the issues in this case. (Admitted subject to the objection.)

Whereupon said paper was read to the master in the words and figures following to-wit:

819½ EXHIBIT "19." I. C. Pinkney, Master.

PEORIA, ILLINOIS, *April* 18, 1899.

To the honorable mayor and city council of Peoria.

GENTLEMEN: We have to-day filed with the city clerk additional petitions addressed to your honorable body asking you to grant to People's Gas and Electric Company the right to lay, construct and maintain gas mains and electric wires in the streets and alleys of Peoria, mentioned in the petitions. The petitions which we have filed to date represent the frontage on more than fifty-two miles of streets and in the aggregate, more than three-fourths in value of the real estate situated within the city limits of Peoria.

The signers of these petitions believe that competition will reduce the price of gas and result in saving thousands of dollars yearly to the public of Peoria. That this view is correct is proven by the fact that the mere threat of competition has reduced the price of gas for light twenty per cent., and actual competition will do much more.

We ask for the People's Gas and Electric Company only the right to do business on equal terms with the old company. We propose to build a modern, first-class, strictly up to date plant, the work of constructing which will begin at once when the ordinances now before you have been passed. If favorable action is taken now we shall be prepared to furnish gas to the Peoria public before Thanksgiving day.

The necessary financial arrangements have been made and every detail arranged for beginning work at once.

Thousands of dollars are ready to be paid out to Peoria workingmen, manufacturers and dealers in supplies. We will in all cases give our home people the preference in the employment of labor, and the purchase of material required in the erection of our plant.

819½ This application for the favorable action of your honorable body is made in absolute good faith and the rights if granted to us will not be for sale.

As the work of erecting our plant must be done out of doors and before freezing weather, and as the ordinances are now before you

for final action, we respectfully ask an early and favorable consideration of them.

Respectfully submitted,

S. R. CLARK,
B. WARREN, JR.,
H. SANDMEYER,
C. C. CLARK,
GEO. H. LITTLEWOOD,
CHAUNCEY D. CLARKE,
O. J. BAILEY,

F. T. CORNING,
THEO. J. MILLER,
Stockholders People's Gas and Electric Company.

STATE OF ILLINOIS, } ss:
County of Peoria, }

I, Robert M. Orr, city clerk of the city of Peoria, do hereby certify that I am city clerk of the said city of Peoria, and the keeper of the records of said city and that the annexed and foregoing is a true copy of a petition filed on the 18th day of April, 1899, by the People's Gas and Electric Company, of which it purports to be a copy as the same appears among the records of my office.

Witness my hand and the official seal of said city this 20th day of February, A. D. 1902.

[Seal of City of Peoria, Illinois. Chartered A. D. 1845.]

ROB'T M. ORR, *City Clerk.*

820 155. When, with reference to the day Exhibit "19" bears date, did you sign your name to it?

Ans. I don't remember.

156. Was it at or about the time of its date?

A. That I cannot recollect.

157. State whether or not at the time you affixed your signature to it, other names had already been attached.

A. I don't remember but I presume they had judging from where I signed it.

158. State whether or not all of the other gentlemen, whose names are affixed to the document you have identified marked Exhibit "19," were, at the time that paper bears date, interested, or proposing to become interested, in the complainant company.

A. I cannot answer that.

159. State whether or not any of them, other than yourself, were at that time so interested, or proposing to become interested?

Objected to by complainant as immaterial.

A. I cannot answer that because I don't know the date the stock was subscribed for.

160. Does the date which the paper itself bears in any way refresh your recollection with respect to the time when you first proposed to become interested in complainant company?

Ans. No.

161. What were the circumstances under which you affixed your signature to Exhibit "19"?

A. I presume it was because I was a stockholder in the company, but I could not say that was the fact.

162. What were the preliminaries leading up to the signing and presentation to the city council of this paper Exhibit "19"?

Objected to by complainant as immaterial.

A. I could not answer the question.

163. State whether or not prior to the time you signed the paper in question you examined it and read it through.

Objected to by complainant as immaterial.

821 A. I presume I did.

164. At the time you affixed your signature to Exhibit "19" did you or not believe its contents to be true?

A. I believed it to be true of course; I signed it.

165. State whether or not at the time you signed that paper and prior thereto, you expected that the complainant company, if granted a franchise for the construction of a gas plant in Peoria, would carry out in good faith the representations made in that paper?

Objected to by complainant as immaterial.

A. Yes sir;

166. State whether or not it was your judgment at the time you signed that paper and before, that the complainant company would, if granted the franchise, be able to carry out those representations in good faith?

Objected to by complainant as immaterial.

A. Yes sir.

167. Upon what did you base your judgment covered by the last two interrogatories and the answers thereto?

Objected to by complainant as immaterial.

The MASTER: I think it material in view of the affirmative matter contained in the answer in this case.

Mr. TICHENOR: It is, and further than that, we have a right after all our testimony is in, to amend our answer to conform to the proof.

A. I don't recall it more than that the paper was drawn up and signed and I supposed it would be carried out and it may have been for all I know now.

168. Do you know who prepared the paper marked Exhibit "1
A. I do not.
169. Do you remember who presented it to you for your sig
ture?
A. I do not.
170. Do you remember where it was presented to you
822 A. I do not.
171. How many of the persons, whose signatures are
pended to it, were present at the time you signed the paper Exh
"19"?

Objected to by complainant as immaterial.

A. I don't recall.
172. When, with reference to the time you signed the paper,
you first see it?
Ans. That I don't recall.
173. State whether or not it had been presented to you prior
the day on which you affixed your signature to it?
A. That I don't recall.
174. State whether or not within your recollection the subj
matter of that paper, or the paper itself, had been discussed betwe
you and others, or among others in your presence, prior to the ti
you signed it?

Objected to by complainant as immaterial.

A. I don't recollect.
175. Do you say there was no discussion or consideration of
by you with others, or by others in your presence, before y
signed it?
A. I presume there was, but I don't recall it so I can swear to
176. State whether or not you were consulted with reference
the advisibility of preparing and presenting to the city council
paper embodying substantially the material incorporated in Exhi
"19" prior to the time you signed it?

Objected to by complainant as immaterial.

A. I cannot answer it; I don't know that I was consulted.
177. Have you at this time no recollection whatever with refe
ence to the subject matter inquired about?
A. No, it is so long ago I don't remember the details.
178. Have you at this time any recollection whatever with r
gard to this paper, either before or after you signed it, oth
than the mere fact of your examining it and attaching your si
nature?
823 A. That is all.
179. Do you remember any discussion afterwards with r
gard to it?
Ans. I do not.
180. In what way, if at all, did you actively participate in an

efforts that were made to obtain an ordinance granting a franchise or license to the complainant company?

Objected to by complainant as immaterial.

A. In no way at all.

181. State whether or not you were present in the city council at any meeting during the time this ordinance was pending?

A. I was not.

182. State whether or not you were before any committee of the council having this ordinance under consideration, or whether you met any member of the committee during the time the ordinance was pending?

Objected to by complainant as immaterial.

A. I was not before such a committee nor did I see any of the committee individually.

183. State if you knew of the presentation of the ordinance asking for the franchise in question at the time it was presented—did you know at the time of the fact that it was presented?

Objected to by complainant as immaterial.

A. I might have known; I don't recollect it positively.

184. Did you or did you not know at the time you signed Exhibit "19" that the ordinance in question was pending before the city council of the city of Peoria?

Objected to by complainant as immaterial.

A. I might have known it; I don't recollect positively.

185. What, if anything, had you to do with the consideration of the subject matter of the preparation of the ordinance and its leading features?

Objected to by complainant as incompetent and immaterial.

824 A. I had nothing to do with it.

186. When, if at all, did you first see a draft of that ordinance as it was proposed to present it to the council for passage?

A. I don't recollect I ever saw a draft of it; probably the original paper was the first I ever saw of it.

187. You refer to the original ordinance do you?

A. No, Exhibit "19."

188. I am speaking with reference to the ordinance itself?

A. Oh, I never saw any draft of the ordinance.

189. To what extent, if at all, have the directors, or you, participated in fixing the prices charged, or to be charged, by complainant company for gas furnished to the city of Peoria, or its inhabitants or industries?

Objected to by complainant as immaterial.

A. None whatever.

190. What, if any, discussions were had in the directory at any meetings attended by you touching the prices to be charged to consumers?

(Objected to by complainant as immaterial)

A. None that I recall.

191. State whether or not the subject of prices charged, or to be charged to consumers, was under discussion by the directory at any time when you were present in your representative capacity or otherwise?

Objected to by complainant as immaterial.

A. Not that I remember of.

192. Are you able to state at this time any subjects that were considered and passed upon by the board of directors during the time you were a member at any meetings which you attended?

A. I cannot; the minutes will show that I suppose.

193. When, with reference to the time the complainant company began to furnish gas to consumers in Peoria, did your connection as director with the company cease?

825 Objected to by complainant as immaterial.

A. I cannot answer it just as you put the question. I ceased to be a director about 8 or 10 months ago as nearly as I can remember it.

194. For how long a period of time, up to the time you- connection ceased as stated, had complainant company been furnishing has to the citizens of Peoria?

Ans. That I cannot answer.

195. At what prices did complainant company furnish gas to the city and citizens of Peoria and vicinity when it began distribution after the installation of its plant?

Objected to by complainant as immaterial.

A. I don't know.

196. Were you at that time a gas consumer of that company?

A. No, I have never taken gas from the new company.

197. As a director in that corporation did you then, or did you not, know the prices at which gas was being furnished to consumers?

Objected to by complainant as immaterial.

A. I presume I knew but I don't recall the prices.

198. How many gas plants had complainant company during the time you were connected with it in the manner you have explained?

A. Just this plant here so far as I know.

199. You have nothing whatever to do with any other?

Ans. No.

200. Did you, or did you not, know of any changes in the prices

to consumers during the time you were in the directory of that company?

Objected to by complainant as immaterial.

A. I think I knew of some changes but I don't recollect what they were.

201. Are you able to state whether or not the changes referred to by you in your former answer were by way of increase or decrease in the price of gas to consumers?

A. My recollection is it was a decrease.

202. Are you able to state now when, with reference to the
826 time complainant company began to furnish gas, the first decrease occurred?

A. I do not.

203. From recollection at this time are you able to state how many, if more than one, change by way of decrease in price, were made during the time you were a member of the directory of tha company?

A. No I do not.

204. Do you remember whether or not there were more than one?

A. No.

205. During the time you were such director was any change made except by way of decrease within your knowledge?

Objected to by complainant as immaterial.

A. I don't remember.

206. Do you know what the price charged for gas by complainant company was at the time you ceased your connection with it as a director?

Ans. I do not.

207. State whether or not while you were a director of that company the right to fix and change the price of gas furnished to consumers was vested in the board of directors or otherwise?

Objected to by complainant as immaterial.

A. I don't remember.

208. Do you know as a matter of fact who, during that period, or any part of it, did fix the price at which gas should be furnished to consumers?

Objected to as immaterial.

A. I don't know.

209. Do you know Francis W. Little who has for sometime been associated with the complainant company?

Ans. I do.

210. Was he associated with it during the time you were a director?

Ans. He was.

211. During all the time?

Ans. Yes sir;

212. What was his official designation in that organization during the period in question?

827 Objected to by complainant as incompetent and immaterial.

A. As I recall it he was vice president.

213. What were his duties and what did he do as such vice president or otherwise?

(Objected to by complainant as immaterial)

A. I cannot answer the question for I don't know.

214. Was he or not a member of the board of directors during the time you were officially connected with it?

A. I think he was.

215. What, if any, conversation did you ever have with Mr. Little with respect to the price of gas or fixing or changing it during that time?

(Objected to by complainant as immaterial)

A. I had no conversation with him on the subject.

216. What, if any, statements did he at any time make to the board of directors, or at any directors' meeting when you were present, touching that subject?

Objected to by complainant as incompetent and immaterial.

A. I don't recall any.

217. What, if anything, did he at any time during his connection with complainant company, say to you with respect to the prices at which gas could be furnished to consumers in the city of Peoria?

Objected to by complainant as incompetent and immaterial.

A. He never said anything that I recall.

218. Do you know whether or not Mr. Little is a man skilled in the gas industry?

A. Personally I don't know; he has the reputation of being.

219. During what portion of your life since reaching maturity have you been actively engaged in business?

A. Ever since maturity.

220. During that time have your interests been large or small and over what part of the country has your business extended?

A. They have extended from Cleveland to Peoria, or be-
828 & 829 tween those two cities. You speak of my personal business?

221. No, I want to ascertain over what territory your business interests have extended?

A. You mean the interests I have been connected with?

222. Where your products have gone?

Ans. All over the country.

223. And does that extend to exporting also?

A. At times, yes.

224. Has that been the fact for a considerable number of years extending up to the time you became interested in the complainant company?

Ans. Yes sir.

225. In what cities, other than Peoria, have you had personal business interests during the period covered by your business life?

Objected to by complainant as immaterial.

A. Well, Cleveland, Peoria, Chicago; that is all I recall.

226. Has Corning & Co., or any of the distilling interests with which you have been closely identified ever maintained an office in the city of New York?

(Objected to by complainant as immaterial.)

A. Yes sir.

227. State whether or not you were at one time a director or officer in a corporation known as the Distilling & Cattle Feeding Company, generally known as the "Whisky trust"?

Objected to by complainant as immaterial.

The MASTER: I do not see the materiality of it but I suppose it is offered for the purpose of showing the wide business connections of this witness.

Mr. TICHENOR: That is exactly the reason I ask it.

A. Thank the Lord! No, that is one thing I escaped.

228. State whether or not you were ever at any time a director or officer in an organization which came into existence after that and which in a measure took its place, known as the "American Spirits Manufacturing Co."?

830 Objected to by complainant as immaterial.

A. No.

229. Were you ever a director or officer in an organization known as the Standard Distilling & Distributing Company?

Objected to by complainant same ground.

A. No.

230. You know of all of those organizations, do you not?

A. Yes.

231. Have you done business with all of them directly or indirectly?

A. We have done business with two of them, that is, in the period of years you are speaking of now.

232. State whether at any time during the last 10 years you have been a director or officer in any of the three companies last mentioned?

(Objected to by complainant as immaterial.)

A. No.

233. And are not now?

Ans. No.

234. Outside of the presidency of the two corporations to which you have referred have you at any time within the last 4 or 5 years been a director or officer in any other corporation interested in the distilling business either in the line of spirits or whiskies so-called?

(Objected to same ground.)

A. No.

235. And are not now?

Ans. No.

HENRY SANDMEYER, called on behalf of the defendant, being first duly sworn, deposes and says.

Direct interrogatories by Mr. TICHENOR:

1. State your name, residence and business?

A. Henry Sandmeyer; No. 305 N. Monroe St., Peoria, Ill.; am in the stove and hardware business.

831 2. Wholesale or retail?

Ans. We do some wholesaling.

3. Are you engaged in any other line of business except that which you have mentioned? If so, what?

A. Yes sir; I am president of the Peoria stone & marble works and am vice president of the Merchants national bank.

4. Are there any other enterprises or companies in which you are at present engaged or interested?

Ans. No sir;

5. How long have you been engaged in the hardware business of the character of which you have mentioned?

A. I went to work in the hardware business in 1851, and have been in it continuously since that time in Peoria.

6. How long have you been president of the Peoria stone & marble works?

Ans. Quite a long time; I could not exactly remember the number of years.

7. In what business is that company engaged?

A. Making such work as you see in this room; we do not handle any granite, but building stone, marble and tile work.

8. Where is that industry located?

Ans. Up on Adams St.,

9. How old an enterprise is it?

Ans. About 14 or 15 years old.

10. During what portion of the time since its organization have you been interested in it?

A. I have not been interested in it all the time since its organization; it went down hill so I had to take hold of it and pull it up.

11. State whether that is a large or small industry?

A. It did over $300,000 worth of business last year.

12. Over what territory does that business extend?

A. We sell goods in New York and Cincinnati; we have a big shop at Colorado Springs; we do lots of work in Chicago; it is all over the United States; we have the exclusive sale of the green marble for the United States.

832 *marble for the United States.*

13. You have been president of that company for 8 or 10 years or more?

Ans. Yes sir.

14. How long have you been interested in the Merchants National Bank of Peoria?

A. Well, since the Merchants' national bank was re-organized from Mechanics' national bank.

15. Do you remember about how many years ago that was?

A. I could not tell exactly, but think it was about 8 or 10 years ago.

16. During what portion of that time have you been its vice president?

A. I think it is about 5 or 6 years.

17. Before that time what was your official connection with that bank?

A. I was a director for some time.

18. What is the name of the firm in which you are now interested in the hardware business?

A. H. Sandmeyer & Co.

19. How many members of that firm are there?

A. There has only been three; we are just now making a stock company out of it; incorporating it into a stock company; before this it has been a partnership for many years.

20. State whether or not you remember becoming interested in The Peoria Gas & Electric Company, the complainant in this case?

Ans. Yes sir, somewhat.

21. You were a subscriber for some stock at the time the company was being organized?

Ans. Yes sir.

22. What, if any, office in the company have you held?

A. I never held any office.

23. State under what circumstances you first became interested in the company—how did it happen that you took an interest?

833 Objected to by complainant as immaterial.

A. Well the bank took an interest and I thought it was a good thing and so I took an interest in it.

24. To what bank do you refer?

Ans. The Merchants national.

25. Do you mean the bank itself or other people associated in the bank with you?

A. Some of them associated with me in the bank.

26. The bank of course was never a stockholder?

A. No sir.

27. What representations, if any, were made to you before you became a subscriber with respect to the possibilities of the company in case it could obtain a franchise in Peoria?

Objected to by complainant as immaterial.

A. I don't know as there was anything mentioned, only I thought it would be a good thing to have a new gas company here on account of competition.

28. Are you able to state at this time who first interested you in the subject?

A. That I cannot tell; I know we talked the matter over in the bank several times; I could not tell who was the first man that spoke about it.

29. You say you talked it over in the bank—was that among the other people interested in the bank with you?

A. Mr. Littlewood, Mr. Ferd. Luthy and Sumner Clark and others interested in it.

30. What official connection with the Merchants national bank had George H. Littlewood at that time?

A. Cashier.

31. How long had he been cashier?

Ans. A long time.

32. What position, if any, did Mr. Luthy occupy?

A. President.

834 33. Was he president at that time and had he been for some years?

Ans. Yes, sir.

34. What position, if any, did Sumner R. Clarke occupy in that bank at that time?

Ans. Director.

35. Had he been for some years?

Ans. Yes sir.

36. This discussion to which you have referred as I understand, was among those gentlemen whose names you have mentioned and yourself?

Ans. Yes sir.

37. Who, if anyone, among those persons brought up the subject or took the lead in the discussion, if you are able to state from recollection at this time?

Objected to by complainant as immaterial.

A. I really cannot recollect exactly who first talked about us going into that new gas company.

38. On how many different occasions, in a general way, were

there discussions in your bank of that character prior to the organization of the company?

Objected to by complainant as immaterial.

A. I could not tell now.

39. Who of you took part in any of those conversations to which you have referred?

Objected to by complainant as immaterial and already answered.

A. Well, the same men that spoke about it before; Sumner R. Clarke talked to me sometimes and Theodore Miller talked to me I think.

40. I have reference more particularly to the discussions in the bank.

A. There was not much discussion there, only the question came up about taking stock and of course I—Interrupted——

41. During those discussions was the question of competi-
835 tion one which you considered, if so, what was said about it?

Objected to by complainant as immaterial.

A. I don't think there was anything said about that—not that I recollect of.

42. How long before you became a subscriber to the stock of that company did you first know of its proposed organization and in what way was the subject brought to your attention?

Objected to by complainant as immaterial.

A. Well I never took much interest and don't recollect much about it.

43. State whether or not, so far as you became interested in it and so far as you investigated, did you do that in person or depend upon somebody else?

Objected to by complainant as immaterial.

The MASTER: I do not see the materiality of it but the witness may answer subject to the objection.

A. I did it more on account of the men who were in it—Mr. Corning and Mr. Bailey.

44. Then at the time you took up the subject, as I understand you, a number of those gentlemen had already become identified with it in one way or another.

Ans. Yes sir.

45. How many of the gentlemen who subsequently became stockholders of that company had become identified with the proposed organization prior to the time you became a subscriber?

Objected to by complainant as immaterial.

A. Well, I don't recollect but I believe there were several; I think I was one of the last to subscribe.

46. Did you take the stock subscribed by you?

Objected to by complainant as immaterial.

A. Well, I took the stock; I subscribed to the stock.

47. State whether or not you are now a stockholder of that
836 company?

Objected to by complainant as incompetent and immaterial

The MASTER: I think this evidence competent under the affirmative matter set up in this case; not as rebutting any of the proof made by complainant but as sustaining the affirmative matter contained in defendant's answer.

Mr. TICHENOR: Of course, we are not called upon to limit ourselves to rebutting complainant's evidence; we have a right to make out our own case in our own way.

The MASTER: Yes, but I simply desire to make that personal explanation.

A. No sir.

48. State whether or not you paid in full for that stock subscription which you took?

Objected to by complainant same grounds, and also because there is no issue in this case or no matter set up in the answer that would make that competent.

The MASTER: I don't know about that; there is a charge that this ordinance was obtained by fraud—a direct charge in the answer.

Mr. IRWIN: Suppose it was obtained by fraud, it would not affect the issues in this case; it is an immaterial allegation entirely.

The MASTER: You think the fact then that they say this ordinance was procured by a fraud is immaterial.

Mr. IRWIN: It is absolutely immaterial, but whether Mr. Sandmeyer paid for his stock or not don't establish that fact; no one pretends there was any payment for stock until they began to construct the plant—they would have no use for money up to that time.

The MASTER: How do you claim that becomes material,
837 Mr. Tichenor.

Mr. TICHENOR: There are a number of ways in which it becomes material; the complainant has attempted to show the plant cost $434,000, and if that stock was not paid for in full where did the money come from?

Mr. IRWIN: It don't make any difference; it is nobody's business. Somebody might have given the money to the company or loaned it to them.

Mr. TICHENOR: If the stock was not paid in does not that tend to show the plant did not cost that much money; it is a fact we have a right to bring out and have a right to know at this time.

The MASTER: I am inclined to think it is competent testimony and the witness may answer subject to the objection.

Mr. IRWIN: I will then direct the witness if he does not care to answer he need not.

The WITNESS: What shall I do; shall I answer it or not?

The MASTER: You can use your own judgment about it; the master has ruled you could answer the question and counsel for complainant has instructed you you need not answer unless you want to; he has no right to so instruct you and you can do as you please.

The WITNESS: I guess I will not answer.

49. What, if anything, have you ever paid on the stock subscription which you took in the complainant company?

Objected to by complainant as incompetent and immaterial.

The MASTER: The witness may answer subject to the objection.

Mr. IRWIN: I will inform the witness he may refuse to answer that question if he desires.

Mr. TICHENOR: I understand that Mr. Sandmeyer is our witness and if counsel for complainant proposes to sit here and instruct our witnesses they need not answer questions unless they please we might as well close our case now because we cannot get any
838 evidence under those circumstances.

The COURT: You do not need to do that, your recourse is open to you.

Mr. TICHENOR: Yes it is open to us through the court.

Mr. IRWIN: We are ready to submit that proposition to the court at any time.

Mr. TICHENOR: The master can see precisely what such a course will result in if Mr. Irwin insists on his position; I believe I will let him do it and instruct every witness we put on that he need not answer every question asked or he may instruct the witness as soon as he is sworn that he need not answer any question unless he desires.

Mr. IRWIN: I will do what I think is the proper thing to do.

The MASTER: You understand I am powerless to do other than I have done; the only thing the master can do is to rule on these questions as put but he cannot pass upon the competency of the evidence or compel the witness to answer if he does not want to; the only thing you can do, as the master understands it, is to apply to the court for a rule on the witness to answer and then of course the witness will be bound by what the court directs; of course, if the master had the power to do so, he would enforce a compliance with his rulings but as the master understands the law he has no such power.

Mr. TICHENOR: Does the master desire to take an adjournment now in order to enable us to present this question to the court, if so we will go up to Chicago and present it tomorrow.

The MASTER: No sir; the master will allow you to recall this witness, or any other witness on those questions the witness refuses to

answer at any time you desire until you close your case. Now let us get along with the examination gentlemen.

A. Well, I will not answer.

839 50. State how many assessments, by the board of directors of the company, were made upon this stock during the time you were a stockholder?

Objected to by complainant as immaterial, incompetent and irrelevant.

A. Shall I answer it?

The MASTER: Yes you may answer subject to the objection.

A. I don't know.

51. State whether or not any were made?

Objected to by complainant same grounds.

A. I cannot tell.

52. Where were you during the year 1899?

A. I was here in Peoria all of the year except I generally go away in July and did that year.

53. Do you know where the office of the complainant company was during that year?

Ans. No sir.

54. Do you know whether or not it had an office in Peoria then?

Ans. No sir.

55. Were you or not present at a meeting of the subscribers of the capital stock for the complainant company at the time they met for the completion of the organization so far as they were concerned?

Objected to by complainant as immaterial.

A. Yes sir.

56. Where was that meeting held?

A. I think it was in the Niagara building.

57. Who were present at that meeting?

Objected to as immaterial.

A. I think all the stockholders.

58. How many of the other gentlemen who subscribed for stock in the complainant company did you know personally at that time?

840 A. I guess I knew them all.

59. How long had you known them in a general way?

A. For quite a long time—for many years.

60. How many, if any, of them were engaged in business in Peoria at that time?

A. I think they were all engaged in business here; I don't think there was a stranger in it.

61. Were their business interests in Peoria at that time large or small and what had they been in past years within your knowledge?

A. I think they were all large business men.

62. How long had you known Sumner R. Clarke?

A. Since I was a boy I guess.

63. Do you know in what lines of business he had been engaged up to the time of the organization of this company?

A. I know some of them; he used to be in the distilling business, then he was in the real estate business and I guess loaning out some money.

64. He is not in the distilling business at this time, is he?

A. I could not tell.

65. Do you know where his office is in Peoria?

A. Yes sir.

66. What was the financial standing and ability of the gentlemen with whom you were associated as subscribers for that stock at that time?

A. They were all pretty well off.

67. State whether or not you were ever present at a meeting of the subscribers or stockholders of that company at any time other than the one, to which you have referred, in the Niagara building?

Ans. No sir.

68. State whether or not at that meeting directors for the company were elected?

Ans. Yes sir.

841 69. How long was that meeting in session if you know?

A. I think about maybe half or three-quarters of an hour.

70. How did you happen to appear at that meeting?

Objected to by complainant as immaterial.

A. I don't really recall but think I got a notice that the meeting was to be held.

71. Prior to the time you subscribed for the stock in question, state whether or not you had ever been a stockholder in any gas company?

Objected to by complainant as immaterial.

A. No sir.

72. What, if any knowledge, had you at that time of the cost or process or manufacture of gas for illuminating and fuel purposes?

Objected to by complainant as incompetent and immaterial.

A. Not any.

73. What, if anything, had you personally to do previous to that time with the construction of gas plants?

Objected to by complainant as immaterial.

A. Not anything.

74. State whether or not at the time of the preliminary arrangement for the organization of complainant company there was a gas company in operation in the city of Peoria?

Objected to by complainant as immaterial.

A. Yes sir.

75. How long within your knowledge had that company bee operation here?

Objected to as immaterial.

A. I could not tell exactly, but for a long time; I know *wh* it built; I was living here at the time.

76. Do you remember at this time the men who w
842 original- interested in the construction of that plant?

Objected to as immaterial.

A. No sir, I do not recollect.

77. Do you know the gentlemen who have been prominen identified with that company for the past twenty or thirty years so, who were they?

Objected to as incompetent and immaterial.

A. Yes sir; Peter Coffey, William Herron, Matthew Henebe Matthew Griswoold, Leslie Robison, Matthew Farrelly, and a gr many others.

78. Who is this Mr. Herron to which you refer?

A. The president of the Peoria savings bank; an old bank Peoria.

79. What within that time has been the financial standing a responsibility of all those gentlemen, whose names you have me tioned as being connected with the old gas company?

Objected to as incompetent and immaterial.

A. So far as I know, they are all good men and all of go standing.

80. What has been their financial responsibility?

Objected to as immaterial.

A. I think they are all right so far as I know.

81. Are they men of large or small means?

A. I think they are men of large means.

82. Are there any others of those whose names you have me tioned who are and have been bankers for a great many years?

Objected to as incompetent and immaterial.

The MASTER: I think it material under one view of this case.

A. I don't recollect.

83. Do you know Matthew Henebery well?

Ans. Yes.

84. Has he been a banker for a great many years?

843 Objected to as immaterial.

A. Yes, he has been connected with the First National Bank o Peoria.

85. Is the First National Bank of Peoria an old or a new institution?

Objected to as immaterial.

The MASTER: I don't know that it is particularly material but I can see one view of it where it may be.

A. It is an old bank.

86. What is its standing compared with the other banks in Peoria?

Objected to as immaterial.

A. It is all right—good standing.

87. The Matthew Griswold you have mentioned is now dead?

A. Yes sir.

88. What official connection with the bank did Leslie Robison have within your knowledge?

Objected to as immaterial.

A. I could not tell.

89. Over what territory, during the time you have known the old gas company, has it been operating—I mean up to the time of the organization of the complainant company?

Objected to as immaterial, incompetent and irrelevant.

A. I cannot tell; I don't know how far it runs out; it went over considerable territory.

90. Do you know whether its operation was limited to a certain portion of Peoria or did it cover the whole town?

Objected to same grounds and because the witness has already answered the question so far as he knows.

The MASTER: If he can answer it more fully let him do so.

A. I cannot answer it any more fully.

844 91. For how long a time had you been a consumer of the old gas company at the time of the organization of the new company?

Objected to as immaterial.

The MASTER: I do not see the materiality of it but the witness may answer subject to the objection.

A. I could not tell, it has been a long time ago.

92. But practically since its organization?

Objected to as leading and immaterial.

A. Yes sir.

93. State under what circumstances you subscribed for the stock in the new company as you have testified?

Objected to as incompetent, immaterial, irrelevant and because already asked and answered.

A. I thought it was a good thing to have another company.

94. State whether or not at the time you made your subscription it was made absolutely or conditional?

Objected to as incompetent, immaterial, irrelevant and calling for a conclusion.

A. It was conditional at the time it was complete.

Complainant objects to the foregoing answer because the subscription itself shows how the subscription was made and further because the answer is incompetent, immaterial, irrelevant and not a pertinent way of showing what a subscription is and move- the court to exclude it.

95. To whom did you make that subscription, or in other words, at whose solicitation, if anyone's, did you subscribe to the stock?

Objected to as incompetent and immaterial.

The MASTER: I thin- it competent to show at whose solicitation the stock was subscribed; the witness may answer subject to the objection.

A. At the solicitation of Sumner R. Clarke.

845 96. State whether or not at the time you made that subscription you had any written agreement with Mr. Clarke pertaining to that stock.

Objected to as incompetent, immaterial, irrelevant.

A. Yes sir, I had a written agreement.

97. Have you that written agreement with you now?

A. No sir, I gave it back to Mr. Clarke again.

98. When did you surrender it to him?

Mr. IRWIN: Complainant objects to the question as incompetent and immaterial and I will advise the witness that so far as his personal dealings with Mr. Clarke with reference to this stock, or anybody else, are concerned he has a right to refuse to answer.

The MASTER: I doubt your right, Mr. Irwin, to instruct a witness called by the defendant, that he need not answer; I do not think you have that power; if it were one of your witnesses that was on the stand you might exercise that privilege but when a witness is put on by the opposite party I do not think you have a right to do it.

Mr. IRWIN: The master says he has no power to rule on the competency of the testimony and we think the witness has a right to protection and unless I am compelled to desist I shall certainly assume that right when counsel asks concerning matters wherein I think the witness is entitled to protection.

The MASTER: The witness can avail himself of his right to refuse to answer if he desires.

Mr. TICHENOR: I desire to state my position; I am not seeking to inquire into a single thing pertaining to Mr. Sandmeyer's private

business in any way, shape or form; my inquiries are entirely with reference to transactions which are material in the matter in controversy, or at least I believe them to be material and necessary to make a proper defense; there are a great many details it is necessary for us to bring out and have made a matter of record and I am seeking to accomplish that; I am not seeking to inquire into Mr. Sandmeyer's private business nor trying to lay any foundation for prosecution or any liability or anything of the kind; I think I have a right to show the circumstances under which Mr. Sandmeyer was induced to make this subscription and under which he did make it and the outcome of it as a whole.

846

Mr. IRWIN: I do not care whether he made it under the grossest representations of fraud.

Mr. TICHENOR: I am not charging that he subscribed under misrepresentations at all.

Mr. IRWIN: It has not anything to do with this case or any issues that can possibly arise in the case.

The MASTER: Gentlemen, I think this is a matter perhaps for final argument; the master has admitted this proof upon the assumption it was offered to establish the affirmative matter set up in the answer in this case; the master would be disinclined to allow counsel to inquire into the private affairs of anybody and the master has not discovered so far there has been any attempt to do so; the present opinion of the master is that inquiry touching the organization of this company, in view of the answer in this case, is competent and the master has permitted inquiry along those lines simply as a defense in the case under the answer. The witness may answer subject to the objection.

A. I gave him up the paper when he took the stock off my hands.

99. When was that with reference to the time you subscribed it?

Objected to as incompetent, irrelevant, immaterial.

847

A. I could not recollect how long but it was a few months afterwards.

100. Why did you sur-ender that stock?

Objected to same ground.

The MASTER: The witness may answer subject to the objection.

Mr. IRWIN: I will advise the witness that he has a right to refuse to answer that question if he desires.

A. Oh, I don't think it has any bearing anyhow—shall I answer it?

The MASTER: Yes, if you desire.

A. Well, I had business enough without being connected with a gas company.

101. To what extent had your business been increased from the time you subscribed to that stock up to the time you surrendered it?

Objected to same grounds as before.

The MASTER: I don't think that question material.

Mr. TICHENOR: Well, I will withdraw it.

102. Was that your only reason for giving up the stock at that time?

Ans. Yes sir.

103 Were you a director or officer or in any way connected with the gas company from its incorporation up to the time you surrendered the stock?

A. No, sir, I did not attend any meetings.

104. What duties, if any, had you to perform or did you perform in connection with the operation of complainant company during the period you were a stockholder in it?

A. Oh, I didn't do any work for the company—never did.

105. I understand from your former testimony that you never attended more than the one meeting in the Niagara building in all that time?

Ans. That is all.

848 106. Are you able to fix with any degree of accuracy the date you surrendered your stock to Sumner R. Clarke?

Objected to as immaterial, incompetent and irrelevant.

A. No sir.

107. State whether or not that surrender was of your own motion or whether it was solicited by Mr. Clarke?

Objected to same ground.

A. It was on my own motion.

108. Look at the paper now shown you, marked "Exhibit 19" and state whether or not your genuine signature is attached to it.

A. Yes sir.

109. Who presented that paper to you for your signature?

A. I don't recollect whether it was Theodore Miller or Sumner R. Clarke but think it was one of those two.

110. Do you remember the occasion of an ordinance being introduced in the city council for the purpose of obtaining a license for complainant company?

A. I recollect a little about it but not much.

111. At the time this paper, "Exhibit 19" was presented to you for your signature, did you, or did you not, know that the ordinance was pending before the council?

A. Yes, I knew the ordinance was pending.

112. What, if anything, did you have to do, by way of suggestion or otherwise, with reference to the preparation of that ordinance before it was submitted?

A. I don't think I had anything to do.

113. State whether or not you were consulted in any way by any of your associates with reference to that subject matter?

A. No sir, I don't think I was.

114. Where, if you remember, was "Exhibit 19" presented to you for your signature?

49 A. I think it was in my office or down at the bank, I could not tell exactly which.

115. State whether or not at the time you affixed your signature o "Exhibit 19" you believed in good faith that the statements hich it contained were true?

Objected to as incompetent and immaterial.

A. Yes sir.

116. State whether or not at that time you believed in good faith hat the complainant company, if granted a license under the ordiance then pending, would carry out in good faith the representaions made in "Exhibit 19"?

Objected to as incompetent, immaterial and because there is no vidence to show they have not done it and as a matter of fact they ave done it.

A. Yes sir.

117. State whether or not at the time you signed "Exhibit 19" ou believed that the complainant company, if granted a license nder the ordinance then pending, would be able in all respects to arry out in good faith the representations embodied in that exhibit?

Objected to as incompetent and immaterial.

A. Yes sir.

118. State whether or not you saw that document prior to the time was presented to you for your signature?

A. I don't think I saw it before I signed it.

119. State whether or not prior to the time you signed that paper ou were consulted by any of your associates, subscribers for stock n that company, with reference to the preparation and presentation o the city council of a document of that character.

Objected to as incompetent, immaterial and irrelevant.

A. I don't recollect: I could not answer that question.

50 Cross interrogatories by Mr. IRWIN:

1. You spoke of some agreement between yourself and Mr. Clarke ith reference to your subscription of stock—was that stock ever ssued and delivered to you?

A. No sir.

2. Was not the agreement that Mr. Clarke had with you that if ou did not want that stock at any time, within a reasonable time, e would take it off your hands?

A. Yes sir.

3. And he did do it, is not that so?
A. Yes sir.
4. And that was all there was to it?
A. That was all there was to it; that is the way I went into it.

Mr. TICHENOR: Wait a minute, if that was a written agreement the writing would be the best evidence of what it contained.
The MASTER: I think so, I do not think the answer is competent.
Mr. TICHENOR: We move to exclude the answer.

5. Did not Mr. Clarke take your subscription off your hands before there was any assessment on your stock?
A. Yes sir.
6. Then the reason you paid no assessment on the stock was because no assessment was made on the stock while your subscription stood?
Ans. Yes.
7. You had a right to keep that stock if you wanted to?

Objected to as being argumentative.

A. Yes.
8. And Mr. Clarke took it off your hands because you asked him to do so?
Ans. That is so.
9. And you surrendered all your claims to the stock to Mr.
851 Clarke before any assessments were made upon the stock?
A. Yes sir.
10. You say you signed "Exhibit 19" and that you believed the statements in it were true at that time?
Ans. Yes sir.
11. Do you know that they are not true now?

Objected to as calling for a conclusion, and because the witness has stated he never attended a meeting and does not know anything about what they have done or were doing.

A. No sir.
12. So far as you know, they are true today—is not that a fact?

Objected to same reasons as before.

A. Yes.

Re-direct interrogatories by Mr. TICHENOR:

1. How do you know that up to the time you surrendered that stock no assessment had been made upon it?
A. I should think they would have called on me if there had been.
2. Have you had anything whatever to do with this gas company as a business man in a business way since you surrendered your stock?

A. No sir, except I have had their gas put in.

3. Have you at any time had any knowledge whatever of what that company was doing in a business way since that time?

A. No sir.

Re-cross interrogatories by Mr. IRWIN:

1. Did you consider you had any right to have anything to do with the business of the company after you surrendered all your stock?

Objected to as immaterial and argumentative.

A. No sir.

852 ROBERT D. CLARKE, called on behalf of the defendant, being first duly sworn, deposes and says.

Direct interrogatories by Mr. TICHENOR:

A. My name is Robert D. Clarke; reside in Peoria, Illinois; am in the distilling and cracker business; have resided in Peoria all my life; ever since I was of age I have been actively engaged in business; have been engaged in the distilling business off and on for 6 years; am at present associated with Clarke Bros. & Co., a corporation; am manager of the distillery for that company; have held that position 2½ years; have held various positions in the distillery of Clarke Bros., and was a director of the Clarke Distilling Co., for three years prior to the time I took the management of this house; am a director in the present corporation; the plant is in Peoria township, Peoria county, Illinois.

1. Do you know how long the Clarke Bros., to whom you refer, have been engaged in the distilling business in Peoria?

A. Well, off and on for 30 odd years.

2. When was the present company organized?

A. About 3 years ago.

3. And you became identified with it at once and have been ever since?

Ans. Yes sir.

4. Over what territory has the business of that company, since its organization, extended?

Ans. All over this country.

5. Does your company also do an export business?

A. Whenever the markets are right we do.

6. What are your duties and what do you do as manager of the distillery you have mentioned?

A. I attend to all the purchasing for the manufacturing department and all of the supplies and all the manufacturing in detail.

7. In other words you are an active [illegible]er, devoting your time to the business?

Ans. Yes sir.

853 8. State whether or not you have ever been actively engaged in any other business than the line to which you have already referred?

A. No, sir, except I might say farming.

9. Do you also, and have you for some time past, been an extensive operator of farms?

Ans. Yes.

10. In what territory generally are those farms located?

A. Principally in Illinois.

11. For how many years past have you been quite largely interested in farms?

A. I have actual charge of the farms I mentioned for about eight years.

12. In connection with the distilling business state whether or not you are also engaged in feeding cattle?

A. We are to a small extent.

13. Are you also engaged in the cattle feeding business as a separate and distinct line?

Ans. I am.

14. Is that extensively or on a small scale?

A. Rather extensively for an ordinary farmer but in the cattle raising business it would not be so much so.

15. For how many years has that been of a considerable magnitude as you have testified?

Ans. Very recently.

16. State whether or not you remember about the time of the organization of complainant company?

A. Yes, I remember about the time.

17. Were you one of the original subscribers to stock in that company?

Ans. I think so.

18. Prior to the time that you became interested in that company, what, if any, experience had you had in the gas industry either in Peoria or elsewhere?

Objected to as immaterial.

854 A. None whatever.

19. What knowledge, technical or otherwise, had you of the gas business as carried on in the United States at and prior to that time?

Objected to as immaterial.

A. None whatever.

20. At that time your connection with the distilling business, to which you have referred, was the same as it is at the present time was it?

A. I think not; I don't think we were organized at that time.

21. Do you remember in what year the gas company in question was organized?

Ans. No sir I do not.

22. If that company was organized in March 1899, are you able to state whether or not the distillery with which you are now connected had then been incorporated?

A. They were very close together.

23. Where was the old Clarke Brothers distilling plant located before the installation of the new plant?

A. At the foot of Persimmon street, about 3½ miles from our present location.

24. Since the completion of the new plant the business of your company has been entirely carried on at that place, has it not?

A. Well, we have two separate places of business, that is, the manufacturing end of the business is down at the distillery and the office work is done at the compounding house.

25. Your business is at the building 3½ miles from the old location?

A. Yes sir, and I have nothing to do with the other.

26. What relation exists between you and Sumner R. Clarke whose name has been mentioned in this testimony?

855 A. He is my father.

27. How long prior to the time you became a subscriber to the capital stock of the complainant corporation did you, if at all, commence any investigation with reference to the proposed organization and the business in which it was to engage?

Objected to as immaterial and irrelevant.

A. I don't remember.

28. Where were you during the early months of 1899?

A. I could not say as to that.

29. During the last three or four years where have you been most of the time?

Ans. In Peoria.

30. Who first, if you remember, called your attention to the proposed organization of the complainant company?

Objected to as immaterial and irrelevant.

A. C. C. Clarke.

31. He was one of the Clarke Brothers and is now deceased?

A. Yes sir.

32. What were the circumstances under which that subject was brought to your attention?

Objected to as immaterial and irrelevant.

A. I don't recall the place or time but it was in general conversation.

33. Do you remember at this time the nature of that conversation?

Objected to same grounds.

A. Not exactly, but it was general conversation about the gas business and what we knew from being close to the old gas company's plant for a good many years.

34. Did he or did he not at that time express himself as intending to become an interested party in the new organization?

Objected to same grounds.

856 A. I don't recall that.

35. Do you know whether or not at that time C. C. Clarke had already become a subscriber to that capital stock?

A. I do not.

36. He was a subscriber was he not?

A. My opinion is he was but I am not positive.

37. Was there any other Charles C. Clarke in Peoria at that time to your knowledge?

Ans. Not that I know of.

38. How long was that prior to the time you did make a subscription to the stock?

Objected to as immaterial and irrelevant.

A. I could not say as to that.

39. Did you ever have any further conversation with him relative to the subject of subscribing?

A. I might have had; undoubtedly I did.

40. Are you able to recall at this time anything that was said on any such occasion?

Ans. No sir.

41. What, if any, representation did C. C. Clarke make to you at that time with reference to the desirability or undesirability of the stock as an investment?

Objected to same grounds.

A. I don't recall that either.

42. Who, if anyone else of the several persons subsequently subscribing to the stock, did you confer with, or converse with, before becoming a subscriber?

Objected to same grounds.

A. Mr. C. D. Clarke, a brother of C. C. Clarke.

43. When was that with reference to your conversation with C. C. Clarke?

Objected to same grounds.

A. In a general way, along about the same time.

857 44. What was said at that time?

Objected to same grounds.

A. I don't recall the conversation.

45. Do you know whether or not C. D. Clarke was then a subscriber to this stock?

Ans. Not positively, no sir.

46. What was his full Christian name?

Ans. Chauncey D.

47. Was there any other Clarke in Peoria by that name at that time within your knowledge?

A. There was no other Chauncey D. Clarke to my knowledge but there was a C. D. Clark.

48. How does that C. D. Clark spell his name, with an "e" or without it?

A. Chauncey D. spells his with an "e" and I think the other Clark in the other family is spelled without the "e."

49. State whether or not, prior to the time you subscribed, you had any conversation with Sumner R. Clarke touching the advisability of becoming such a subscriber?

Objected to as incompetent and immaterial.

A. I most always talked with my father before doing anything in a business way.

50. When with reference to the other conversation, to which you have referred, did you talk with your father upon this subject?

Objected to same grounds.

A. I don't recall.

51. Up to that time what experience, if any, had your father had in the gas industry as an interested party?

Objected to as incompetent and immaterial.

A. I don't know sir.

52. Had he within your knowledge ever been interested in any gas company in the United States?

Ans. Not to my knowledge.

53. Do you know whether or not he was ever a stockholder
858 in *in* the old gas company in Peoria?

Objected to same grounds.

A. I don't know.

54. What, if any, technical education had your father upon the subject of the gas industry?

Objected to same grounds.

A. I don't know of his having any.

55. What has been your father's business within the time covered by your recollection?

A. He has been in a number of different businesses but principally distilling business.

56. He is not engaged in that line at present, is he?

A. Yes, sir, actively.

57. With what distillery is he at present identified?

A. Clarke Bros. & Co.

58. Is he an officer of that company?
Ans. Yes sir.
59. What is his official designation?
Ans. President.
60. How long has he occupied that position?
A. A few months.
61. When, with reference to the time Charles C. Clarke died, did he become its president?
Ans. A few months afterwards.
62. Was Charles C. Clarke its president in his lifetime?
A. Yes sir.
63. Up to the time your father was elected president of that company for some years, with what distilling company, if any, had he been actively engaged?

Objected to as incompetent and immaterial.

A. He had not been with any company for a number of years.
64. About how many years ago, if you remember, did he discontinue the distilling business?

Objected to as incompetent and immaterial.
859 *Objected to as incompetent and immaterial.*
The MASTER: I don't see the materiality of it.
Mr. TICHENOR: We think it has a bearing.

A. 10 or 12 years.
65. What, if any, general or technical education have you had in the gas industry?

Objected to as immaterial and irrelevant.

A. None whatever.
66. At whose solicitation did you become a subscriber to the stock in question?

Objected to same grounds as before.

A. I don't believe it was at anyone's solicitation in particular.
67. Who, if you remember, presented to you the subscription list which you signed?

Objected to same grounds.

A. I don't recall that now.
68. Where were you at the time you made your subscription?

Objected to same grounds.

A. I could not say as to that.
69. What, if any, representations were made to you by anyone with respect to the desirability of this stock as an investment in the event the company could procure a license or franchise from the city?

Objected to same grounds.

A. I did it on my own judgment.

70. On what did you base your judgment as to the desirability of this stock as an investment?

A. On the general consumption of gas in the city of Peoria.

71. Did you also at that time know the cost of delivering
860 gas to consumers under conditions similar to those existing in Peoria?

Objected to as immaterial and irrelevant.

A. I did not.

72. As I understand you, your judgment was based wholly upon the gas consumption?

A. Gas consumption and the value of gas stock in some places.

73. State whether or not at that time you knew the value of the stock of the Peoria Gas Light & Coke Co.?

Objected to same grounds.

A. I did not.

74. Did you or did you not know the total gas consumption per annum in Peoria at that time?

Objected to same grounds.

A. Not positively.

75. Do I understand you to mean by that answer you knew positively then or are not positive now?

A. I didn't know particularly, that is, I was not positive at that time.

76. What, if any, knowledge at that time did you have concerning the process of manufacture or the necessary mechanical appliances for the production of illuminating and fuel gas as it was then furnished in Peoria.

Objected to same grounds.

A. Nothing to speak of.

77. Did you then, and had you for some years, known the people prominently identified with the old gas company?

A. More by reputation than otherwise.

78. What was their reputation as to financial standing and responsibility?

Objected to same grounds.

A. They had the reputation of being very fair business
861 men; I could not say as to their financial standing.

79. Do you know how many of them, if any, were bankers of long standing in Peoria?

Objected to same grounds.

A. I do not know as any of them were interested in a bank positively.

80. Do you know William A. Herron of Peoria?
A. I know him by sight.
81. Do you know in what business he has been engaged for the last 30 or 40 years?

Objected to as immaterial and irrelevant.

A. I know he has been president of a savings bank.
82. Do you know what position he has occupied in that bank for a great many years?

Objected to same grounds.

A. I do not.
83. Do you know the financial standing of that bank?
A. No sir, I do not.
84. Do you know how long it is since it was organized?
A. I do not.
85. Has it not been in existence for 25 or 30 years?

Objected to as immaterial and irrelevant.

A. I know it has for 25 years, but further I could not say.
86. Do you know Matthew Henebery?
Ans. Slightly.
87. Do you know in what line of business he has been engaged for a number of years last past?
Ans. Whiskey business.
88. Do you not also know him as having been a banker for 30 years last past?
A. I have heard him spoken of in that connection but I could not say positively that I know he was a stockholder.
89. Have you known with what bank he has been asso-
862 ciated for many years?
A. I have heard him spoken of as being connected with the First National Bank of Peoria.
90. Did you or did you not know those gentlemen as being prominently identified with the old gas company and had you that knowledge at the time you made your subscription?

Objected to as immaterial and irrelevant.

A. I didn't know that Mr. Henebery was a stockholder in the old gas company or an officer of it.
91. Did you know Peter Coffey, Thomas Coffey, Matthew Farrelley, Leslie Robison and Matthew Griswold at any time as being associated with the Peoria Gas Light & Coke Co.?
A. Why, partly so.
92. Were they or not men engaged in other lines of business besides that of supplying gas in Peoria during the time you knew them or knew of them?

Objected to as immaterial and irrelevant.

A. I never heard of the Coffeys doing anything else but the others I have.

93. What has been Leslie Robison's business during the time you have known him or known of him?

Objected to as immaterial and irrelevant.

A. Brewery business.

94. Do you know whether he is or has been an officer in any brewing company during that time?

Objected to same grounds.

A. I have understood so.

95. Is it or not true that the brewery with which Mr. Robison is associated is one of the largest in Peoria and has been for 20 or 30 years past?

Objected to same grounds.

863 A. I don't think it is—not of recent years.

96. State whether or not a knowledge of the men whose names you have mentioned as being associated with the Peoria Gas Light & Coke Co. at the time of the organization of the complainant company and their financial standing and responsibility in any way influenced your judgment in determining to become a subscriber to the stock of complainant company?

Objected to as immaterial and incompetent

A. I would not say so; I don't think so.

97. Then that fact did not have anything to do with your becoming a subscriber?

Ans. I don't think it did.

98. Have you now stated ev-ry*ht*ing which contributed to making up your judgment as to the desirability of the stock of the People's Gas & Electric Co., now the Peoria Gas & Electric Co., as an investment at the time you became a subscriber?

Objected to as immaterial and irrelevant.

A. I rather think so.

99. Was there any man, either among the subscribers or outside, who brought any influence to bear upon you in determining to become a subscriber?

Objected to as incompetent, immaterial and irrelevant.

A. Not that I know of.

100. Did you take the stock which you subscribed at that time?

Objected to as immaterial and irrelevant.

A. At that time, yes sir.

101. Are you still a stockholder in the complainant company?

Objected to same grounds.

A. I am.

102. And have you been ever since the organization of the company?

Objected to same grounds.

864 A. I have.

103. What, if any, office have you held with that company at any time since its organization?

Ans. None whatever.

104. Were you ever at any time a member of its board of directors?

Ans. No sir.

105. Did you or did you not attend the meeting of the subscribers to the capital stock whoel convened for the purpose of completing the organization so far as the stockholders were concerned?

Ans. I don't recall attending any meetings.

106. State whether or not at any time before the articles of incorporation were issued you attended any meeting of the subscribers, or of persons proposing to becoming subscribers, or in any other manner associated with the complainant company.

Objected to as immaterial and incompetent.

A. It seems to me I have but I cannot recall it positively.

107. Have you any recollection at this time of the circumstances under which you attended any such meeting?

A. No, none whatever.

108. At the time you became a subscriber to this capital stock, di- you, or did you not, know the price of gas to consumers in Peoria?

Objected to as immaterial and irrelevant.

A. I believe I do remember as a subscriber but I would not state positively.

109. Did your knowledge of that fact in any way affect your judgment in deciding to become a stockholder in complainant company?

Ans. I think not.

110. Did you, or did you not, know that at that time there was a difference in price between gas used for fuel purposes and that used for illumination?

Objected to as immaterial and incompetent.

865 A. I could not say positively as to that except from what I heard in a general way.

111. State whether or not you know the price charged the consumer for gas delivered by complainant company when it first began its service?

Objected to as incompetent and immaterial.

A. Not when they started, no sir.

112. Do you know whether or not the price at which they were then furnishing gas was higher or lower than that charged by the old company for the same service?

Objected to same grounds.

A. I think it had always been a little lower.

113. Did you know that fact at the time?

A. I could not state that positively; that is just my recollection of it.

114. Do you know whether or not any changes were made in the prices charged by complainant company from that first adopted within the next year or year and one-half from the time it began to serve consumers?

Objected to as immaterial and irrelevant.

A. I think there was some change.

115. What, if anything, did you have to do with fixing those changes?

Ans. Nothing whatever.

116. What, if any, knowledge did you have prior to such changes being made that they were to take place?

A. None whatever.

117. Did you or did you not know of such changes about the time they were made?

A. Not unless I read it in the newspapers or saw it on my bill.

118. Is it your present recollection that you did or did not
866 know of such changes in any way?

A. None except those I have stated.

119. What were any of those changes to which you have referred?

Objected to as incompetent and immaterial.

A. I don't recall them.

120. Are you able to state at this time from recollection whether those changes consisted of an increase or decrease of the original price charged by complainant company?

Objected to same grounds.

A. It seems to me it has most always been a decrease.

121. What, if you know, was the lowest price charged consumers by complainant company for gas furnished by it?

Objected to same grounds.

A. I could not say as to that positively; I knew so little about that at the time that I am in no position to state it; I did not have time to pay any attention to it; it was a small matter with me.

122. How long have you personally been a consumer of gas in Peoria?

Ans. About six years.

123. From which company or companies during that time have you taken gas?

Objected to as immaterial and irrelevant.

The MASTER: I do not see the materiality of it but the witness may answer subject to the objection.

A. I started taking gas with the old company and then afterwards I took it from the new.

124. Have you been taking gas from the new company from about the time it began service?

A. When they got the service near my house I did.

125. Do you remember when that was with reference to the time they began to furnish gas for consumption?

867 Objected to as incompetent and immaterial, irrelevant.

A. No sir, I could not say.

126. On what street did you reside at the time you began to take gas from the new company?

Ans. Barker avenue.

127. Is not that one of the first streets furnished with gas by the new company?

A. I should not think so, it is so far out.

128. Do you know how many miles of pipe the new company had ready for service at the time it began to furnish gas?

A. No, I do not.

129. Do you know how remote from the gas works the pipe extended in any direction?

A. I could not say as to that positively either.

130. Look at the paper now shown you marked "Exhibit 19" and state if your genuine signature is affixed to it?

Ans. Yes sir.

131. How long, if at all, before that paper was presented for your signature did you know it was proposed to prepare and present such a paper to the city council of Peoria?

Objected to as immaterial and irrelevant.

A. I do not recall that now.

132. Who presented it to you?

Objected to same grounds.

A. I could not say positively; it seems to me I signed it when C. C. Clarke signed it at the distillery but I am not sure about that.

133. Do you remember at this time whether anybody else was present when you signed it besides yourself and C. C. Clarke?

A. Not that I remember of.

134. What, if any, conversation passed between you and C. C. Clarke or anybody else at that time with reference to the advisability of presenting the paper in question to the city council?

368 Objected to as immaterial, incompetent, irrelevant.

A. None that I recollect of; I don't remember the circumstances.

135. Did you see the paper before the time you affixed your signature?

A. I most assuredly did; when I signed it I read it over.

136. Before that time I mean?

A. No, not as I remember of now.

137. You read the paper over at that time did you?

Ans. I did.

138. This is the same paper you signed, is it not?

A. I should judge it is.

139. State whether or not at the time you signed this paper you believed the statements it contained were true?

A. I did, yes sir.

140. State whether or not when you signed that paper you believed that if a franchise was granted to the complainant company it would carry out in good faith those representations?

A. I most assuredly did.

141. State whether or not in your judgment you believed at that time that the company was able to carry out in good faith all of those representations?

A. I did or I don't think I would ever have associated myself with it.

142. Did you or did you not personally at that time believe that those representations could faithfully be carried out—I am speaking now of your own independent judgment at the time you signed the paper?

A. I most assuredly did think so.

143. Did you know about the time that the ordinance for a license to the complainant company was presented to the city council?

Ans. I think so, yes sir.

369 144. At the time you signed "Exhibit 19," did you or did you not know that ordinance was pending before the city council?

A. I don't believe I did positively know at that time that it was.

145. What, if any, active part did you take in securing the passage of the ordinance granting a license to complainant company?

A. I don't think I took any active part.

146. To the best of your recollection, you had nothing to do with it?

Ans. Nothing to speak of.

147. Well, what did you have to do with the passage of the ordinance either directly or indirectly?

A. I don't think I had anything to do with the passage of it but was present in the council when it was passed, as a spectator.

148. How many meetings of the city council did you attend during the pendency of that ordinance?

A. I could not recollect that now but it seems to me it was only one.

149. What was the occasion of your being present at that time?

Objected to as immaterial, irrelevant and incompetent.

A. I had a certain amount of interest in it.

150. State whether or not you went there of your own volition or upon the suggestion of some other person or persons?

Objected to same grounds.

A. I went there of my own accord.

151. How long was the ordinance pending before the council or some committee of the council, if you know?

Objected to same grounds.

A. I don't know.

152. Did you or did you not see the proposed ordinance before its presentation?

870 Objected to same grounds.

A. No sir, I did not.

153. Did you or did you not know what it contained?

Objected to same grounds.

A. No sir.

154. Had you or had you not seen what purported to be a copy of it in the public press or otherwise?

A. I don't recall that.

155. Through what channel did you receive advice to the effect that this ordinance was to be passed on the night you were there?

Objected to same grounds.

A. I didn't know it was going to be passed that night; I just went there as a spectator and it was passed.

156. How frequently, under ordinary circumstances in years past, have you attended the meetings of the city council?

Objected to as immaterial and irrelevant.

The MASTER: I don't think that is material

Mr. TICHENOR: I think it is for the reason the witness has testified he was present at that particular meeting and he has also testified that his investment there was of very small consequence and he gave no attention to it.

The MASTER: He may answer subject to the objection.

A. I will say that for one or two years I was at the council meeting pretty nearly every night when the council was in session waiting for it to adjourn.

157. You never sat in the council, did you?

Ans. No.

158. Was that the only council meeting you attended during the pendency of that ordinance?

Objected to as immaterial and irrelevant.

A. I told you that I thought I only attended one meeting at that time in reply to a former question.

871 Cross interrogatories by Mr. ABBOTT:

1. You are asked some questions on direct examination with reference to the representations in a paper marked "Exhibit 19." One of those representations is as follows: "The signers of this petition believe competition will reduce the price of gas and result in saving thousands of dollars yearly to the public of Peoria; that this view is correct is proven by the fact that the mere threat of competition has reduced the price of gas for light 20 per cent., and actual competition will do much more." Did you believe that to be true at the time you signed this paper?

A. Yes sir.

2. Is it not a fact that while the ordinance for the Peoples Gas & Electric Co. was pending before the council that the Peoria Gas Light & Coke Co. reduced its price for illuminating gas from $1.35 per 1,000 feet with 10 cents rebate for prompt payment, to the rate of $1.00 flat per 1,000 cubic feet?

A. My recollection is, it was reduced materially but just exactly what amount I cannot recall.

3. Is it not a fact that before this ordinance of the Peoples Gas & Electric Co. was before the city council, that the Peoria Gas Light & Coke Co. had made a practice of charging at the rate of $3.00 or $3.50 for the setting of meters used for illuminating gas and a charge of $2.50 for meter setting for meters used for fuel gas and that during the pendency of this ordinance before the city council, or about that time, it abandoned both those charges?

Objected to as immaterial and not proper cross examination.

A. I don't remember the prices exactly but I know I had to pay, and I raised quite a fuss, when I put in my two meters at the house, and afterward when I put in another meter in another house I did not have to pay for it nor for the service pipe going into
872 the house.

4. And had it not been the practice of the Peoria Gas Light & Coke Co. before that time to charge the consumer for the entire cost of the service pipe from the street main into his premises?

Objected to by defendant same grounds.

A. My understanding is, it was.

Defendant objects to the answer as improper and not responsive and moves the court to exclude it.

5. Is that understanding based on the general practice and rules of the Peoria Gas Light & Coke Co. as you understand them to be and existing in the city of Peoria about that time?

Objected to as incompetent and improper.

The MASTER: I don't think it competent but he may answer subject to the objection.

A. Yes, it was my understanding.

6. Another representation contained in this petition is as follows:—"Thousands of dollars are ready to be paid out to the Peoria workingmen, manufacturers and dealers in supplies." Is it not a fact that thousands of dollars were paid out to Peoria workmen, to manufacturers and dealers in supplies by the Peoples Gas & Electric Co. after the passage of this ordinance?

A. I positively know there was, for I saw the men paid off.

7. Another representation is as follows: "This application for the favorable action of your honorable body is made in absolute good faith and the rights, if granted to us, will not be for sale." State whether the rights granted by this ordinance, so far as you know, have ever been sold to any other company, or offered for sale to any other person, firm or corporation?

Objected to by defendant as incompetent, immaterial, not cross examination.

A. Not that I know of.

873 8. Did the company erect and has it continued to maintain, a plant for the purpose of the manufacture and distribution of gas in the city of Peoria?

Ans. Yes sir.

Adjourned by agreement until Thursday, February 20, 1902, at 10:30 o'clock a. m.

United States court room, Government building.

PEORIA, ILL., THURSDAY, *Feb'y* 20, 1902—10:30 a. m.

Parties met pursuant to adjournment.

Present: Judge I. C. Pinkney, special commissioner; Mr. W. T. Irwin and Mr. W. T. Abbott, appearing for complainant. Mr. F. H. Tichenor appearing for defendant.

THEODORE J. MILLER called on behalf of the defendant, being first duly sworn, deposes and says:—

Direct interrogatories by Mr. TICHENOR:

1. State your name and residence.

A. Theodore J. Miller; Peoria, Ill.

2. How long have you been a resident of Peoria?

A. A little over 44 years.

3. In what business are you engaged at the present time?

A. Real estate.

4. With what companies or firms are you at present associated?

A. I am connected with the Peoria Gas & Electric Co. and with the Peoria & Pekin terminal railway.

5. What official connection have you with the railway company to which you refer?

Ans. I am its president.

6. How long have you been its president?

A. Three years or more.

874 7. State whether or not that railway is in active operation, and if so, for what period of time has it been?

A. It was placed in active operation in April, 1900.

8. Did the company build its own line or lines previous to commencing operations in whole or in part?

Ans. Yes sir.

9. How long prior to the time it went into operation had the company been engaged in construction preparatory to the prosecution of its business as a common carrier?

A. I should say a couple of years.

10. You were its president during all that time, were you?

A. No—well, I was president of the company ever since it was formed but there was a lot of work to do before I got the company formed.

11. But it was all with reference to the ultimate operation of this road to which you have referred?

Ans. Yes sir.

12. What connection have you with the Peoria Gas & Electric Co.?

A. I am its secretary and a director in the company.

13. How long have you occupied those places?

A. Ever since its organization.

14. You were also one of the original subscribers to the capital stock, were you?

Ans. Yes sir.

15. How long prior to the time you became a subscriber did you undertake an investigation of the subject of becoming such subscriber, if at all?

A. Oh, probably 60 days.

16. What were the circumstances under which the question was brought to your attention or presented to you in the first instance?

Objected to as immaterial and irrelevant.

A. I suggested to Sumner R. Clarke that I thought it was a pretty good thing to get up a gas company here.

875 17. Who prior to that time, if anyone, had introduced the subject to you?

Objected to same grounds.

A. Mr. Clarke and I had talked about it.

18. Up to that time who, if anyone, outside of the city of Peoria had broached the subject to you?

Objected to same grounds.

A. I had talked with John R. Walsh of Chicago.

19. Is he the same person who has been interested in this company ever since its organization?

Objected to same grounds.

A. Yes sir.

20. Did you know at that time in what line of business Mr. Walsh was engaged?

Objected to same grounds.

A. Yes sir.

21. Did you then know to what extent, if at all, Mr. Walsh was then interested in gas companies, or ever had been, and also pertaining to his knowledge with respect to gas industries?

Objected to same grounds.

A. No, I didn't know much about that.

22. How long had you been acquainted with Mr. Walsh?

A. I never met him until I went to Chicago for the purpose of seeing him.

23. At whose instance did you go?

Objected to as immaterial and irrelevant.

A. I went with a letter of introduction from Sumner R. Clarke.

24. You interviewed Mr. Walsh on that occasion, did you?

A. I had a talk with him, yes sir.

25. Who introduced the subject of the formation of a gas
876 company in Peoria at the time you met Mr. Walsh?

Objected to as immaterial.

A. I did.

26. What conversation did you have with Mr. Walsh on that occasion so far as you remember at this time?

Objected to as incompetent and immaterial.

A. I told him I thought it would be an easy thing to get up a company and get frontage, get consent of property owners to build a gas works in Peoria; he thought the way the streets were paved it would be hard work to get a sufficient amount of frontage signed up; I assured him it would be a pudding to get it, that it was easy to do it because the old company was very unpopular; that I felt convinced I could get a sufficient amount of frontage; I believe I asked him about how much frontage we should have and he said we ought to have at least 10 miles; I told him I could easily get that.

27. What other subject matter with reference to the old company did you present to him at that time as a reason for believing it would be easy to obtain the requisite frontage as you have stated?

A. As I said before, I told him the old company was very unpopular; the people felt they would like to have somebody else engaged in the business.

28. Did you give him any other reason except the unpopularity of the old company?

A. I don't believe I did.

29. Was that your only reason for presenting the subject or taking up the subject—the unpopularity of the old company?

Objected to as immaterial and irrelevant.

A. No.

30. What further reason was there?

A. I thought it would be a good thing to get into the business.

877 31. Prior to that time what knowledge, if any, had you of the gas business?

Ans. None.

32. Had you ever been a stock holder in the old gas company in Peoria or in any other gas company?

A. No.

33. What, if any, technical knowledge had you concerning the manufacture and production of gas and its distribution to consumers in Peoria or elsewhere?

Ans. I did not have any.

34. You had been a consumer of the old gas company for a number of years, had you not?

Ans. Yes sir.

35. What, if any, differences had ever arisen between you and the old company?

A. Not much, if any.

36. For how long a period of time had you been a consumer of the old company?

Objected to as immaterial.

A. I should say 10 years or more.

37. How long had you been a resident of Peoria?

A. Forty odd years but I lived part of the time where I could not get gas.

38. During any of the time you were a gas consumer, for what purpose did you use it?

Objected to as immaterial.

A. I think we used it for illuminating and fuel both.

39. You personally paid the bills for gas furnished at your residence from time to time did you?

Ans. Yes sir.

40. And you knew the prices being charged at the time you first undertook the subject in question?

Objected to as immaterial.

A. Yes sir.

41. What if any representations did you make to Mr. Walsh
878 on that occasion with respect to the ability of a new organization to furnish gas at lower prices than those then charged in Peoria for fuel and illumination?

Objected to as incompetent and immaterial.

A. I don't recollect having made any statement of that kind.

42. What, if any, representations of like character did he then make to you?

Objected to same grounds.

A. I don't remember that he made any.

43. Was or was not the subject of prices at that time discussed in any form?

Objected to same grounds.

A. It may have been but I don't recollect it.

44. State if one of the topics most prominently considered between yourself and Mr. Walsh at that time was the fact that if a new company were organized it could sell gas profitably at a much lower price than that then charged by the old company and that an investment under those circumstances would be a good one?

Objected to as incompetent, immaterial and already answered.

A. No sir.

45. What was Mr. Walsh's business at that time?

A. President of the Chicago national bank.

46. Had he any other business so far as you know?

A. Yes, I think he was connected with the Indiana Stone Co. and Southern Indiana railroad.

47. What, if any experience, had he had in the gas business at that time, if you know?

Objected to as incompetent and immaterial.

A. I don't know.

48. What led you in the first instance to approach Mr. Walsh upon the subject you have mentioned?

879 Objected to as immaterial.

A. As I said, I had talked with Mr. Clarke and had a letter to Mr. Walsh and I was desirous of getting up a company.

49. What conversation passed between you and Mr. Clarke prior to that time with respect to the probability of interesting Mr. Walsh in the proposed enterprise?

Objected to as incompetent and immaterial.

A. Well, as I now recollect it, Mr. Clarke seemed to be of the opinion that if I could make Mr. Walsh feel it was possible to get sufficient frontage and a franchise that Mr. Walsh very likely would become financially interested in it.

50. Was Mr. Walsh a man of large or small means?

Objected to as immaterial.

A. My understanding was he was a man of large means.

51. At that time what, if you know, was Mr. Walsh's connection with the Peoria Gas Light and Coke Co. at Peoria?

Objected to as immaterial.

A. I don't think he had any interest there at all.

52. About what time was it when you interviewed him as you have testified?

Objected to as immaterial.

A. I think it was in February, 1899, or possibly January; it was in the winter.

53. Had you or had you not at that time any information whatever as to Mr. Walsh's interest, or absence of interest, in the Peoria Gas Light & Coke Co.?

Objected to as immaterial.

A. Yes sir, I had been informed he was sore at them.

Mr. IRWIN: Complainant objects to the foregoing answer as incompetent and moves the court to exclude it.

The MASTER: I think it ought to be stricken out.

880 54. (Int. 53 repeated to witness.)

A. No, I had not.

55. Had you any knowledge whatever upon the subject?

Objected to as immaterial.

The COURT: I think it already answered but he may answer again.

A. I had been informed he had had a row with Mr. Farrelly and Mr. Coffey.

56. Do you know what the foundation of the difficulty was?

Objected to as immaterial.

The MASTER: The previous question called for the interest or lack of interest he had in the other company and the witness answered he had been informed he had had a row with Farrelly and Coffey—Interrupted.

Mr. IRWIN: What the witness has been informed is not competent testimony and I move that it be stricken out.

The MASTER: The master considers simply the weight of the testimony, if it has no weight it will not be considered; I don't think the answer responsive to the question at all.

Mr. IRWIN: Yes, and it is something the witness knows nothing about. Now, Mr. Miller, answer the question, if you know.

The WITNESS: I only know what I have been told.

Mr. IRWIN: What you have been told is not evidence unless you know it as a fact.

57. What, if any statement, did Mr. Walsh make to you on the occasion to which you have referred with respect to his connection with the Peoria Gas Light & Coke Co., or any differences he had had with that company?

Objected to as incompetent and immaterial.

A. I don't remember whether it was at that first meeting, or at a subsequent one, but he expressed himself to me as not liking
881 Mr. Farrelly and Mr. Coffey, that he had trouble with them.

58. Did he explain to you, or state to you, the foundation for that trouble?

Objected to as incompetent and immaterial.

A. I think he did.

59. What was it?

Objected to same grounds.

A. He said he made a deal with them and they undertood to get the best of him by pinching out a lot of treasury holdings that should have gone with the property.

60. With reference to what property was he speaking at the time if you know?

Objected to same grounds.

A. The Peoria Gas Light and Coke Co.

61. Did he or did he not at that time inform you to what extent he was then interested in the then existing gas company in Peoria?

Objected to same grounds.

A. He certainly led me to believe from his talk that he was not interested in the company at all.

62. I understood from a former answer of yours that he referred to his deal respecting the old gas company property—was my understanding correct?

Ans. Yes sir.

Q. 63. What were the statements he made to you at that time with respect to the property of the old gas company so far as you remember them at this time?

Objected to as immaterial.

A. He told me he had bought the property and Farrelly and Coffey undertook to get the best of him in holding out a lot of stuff he should have had in and wanted to keep it themselves.

64. What, if any, bitterness at that time did he manifest
882 against the people you have mentioned?

Objected to as incompetent and immaterial.

The MASTER: That calls for a conclusion.

65. What did he state with reference to the position he occupied towards those people?

A. Well, he did not like them.

66. Did he say so?

Objected to as immaterial.

A. Yes, words to that effect.

67. State whether or not he gave that as a reason for desiring to become interested in the formation of a new company for the manufacturing and furnishing of gas in Peoria?

Objected to as immaterial.

A. I think it had some bearing on the case.

68. What did he say about it?

Objected to as immaterial.

A. I cannot quote his exact language, but my recollection is he expressed himself as satisfied to go in if I could get a sufficient amount of frontage and get a franchise or license as good as the old company had so as to be able to compete with them on the same basis they were doing business on.

69. What if anything did he say to you, or you to him, on that occasion with respect to the profits in a business of the character proposed to be inaugurated in Peoria?

Objected to as immaterial.

A. I don't remember that we talked of the profits of the business at all.

70. Up to that time, had anything concerning the probable profits of such an investment been considered by you in connection with anybody else?

Objected to as immaterial.

883 A. Yes, I think I had talked some with Sumner R. Clarke about it.

71. What was the conversation you had with him upon that question?

Objected to as immaterial.

A. I don't recollect all that was said but the purport of it was, he thought it was a good business.

72. Was that your judgment at the time?

Objected to as immaterial.

A. Yes sir.

73. And was it also Mr. Clarke's judgment?

Objected to as immaterial.

A. I think it was.

74. Upon what did you base your judgment that an investmen in a competing gas company in Peoria of the kind then in contem plation, would be a good investment?

Objected to as immaterial.

A. The gentlemen who were interested in the business all seeme to be satisfied with it, did not care to part with any of their interes in it, did not care to put any price on their holdings and it looke like it might be a good business.

75. As the proposition stood at that time, was it with reference t the organization of a new company for the purpose of entering int competition with the old company in the furnishing of gas for th purposes for which it was then used in Peoria?

Objected to as incompetent and immaterial.

A. Gas and electricity both.

76. Did you know at that time what territory was covered by the distributing mains of the old gas company?

Objected to same grounds.

A. I knew something about it.

884 77. What portion of Peoria and suburbs at that time were being served by the Peoria Gas Light and Coke Co.?

Objected to same grounds.

A. Parts of the city of Peoria and parts of the village of North Peoria.

78. Do you know what the gas consumption in Peoria was at that time?

A. No.

79. Had you any knowledge whatever in regard to it?

A. No.

80. What if any knowledge had you of the magnitude of the business then carried on by the old company?

Objected to as immaterial.

A. I did not know much if anything about the old company's business.

81. What, if anything, did you know about the cost of furnishing gas to consumers in Peoria at that time?

Objected to as immaterial.

A. I didn't know anything about it.

82. What if any information did you obtain from Sumner R. Clarke or John R. Walsh upon that question at about the time to which you have referred?

Objected to as immaterial.

A. I did not get any information.

83. Were these negotiations, to which you have referred, on your part, with reference to becoming an investor in the new company being organized, or were you look*ign* after the interests of others?

Objected to as immaterial.

A. I was looking after my own interests; was representing no one but myself.

84. How many times did you see John R. Walsh prior to
885 your becoming a subscriber to the capital stock of the complainant company?

Objected to as immaterial.

A. Possibly two or three times.

85. Where?

Ans. Chicago.

86. What induced you to go to Chicago to see him on the other occasions mentioned?

Objected to as immaterial.

A. As I stated, Mr. Walsh did not seem to be satisfied that frontage could be obtained; he seemed to express a fear that there could not be a sufficient amount of frontage secured to make it worth while to get up a company and I went to see him afterwards to talk the matter over and finally, I think, convinced him I was not overstating the matter.

87. What, if any, frontage had been procured prior to the time you became a subscriber?

Objected to as immaterial.

A. I had not secured any until the company was formed.

88. That is, until its organization was complete, I understand you to mean?

Ans. Yes sir.

89. What if anything did you have to do with securing the frontage?

Objected to as immaterial.

A. Everything; I had entire charge of the matter of securing frontage.

90. What, if any, representations were made by you, or by persons employed under you, to obtain the frontage which you did obtain?

Objected to as immaterial.

A. I told the property owners, that is, instructed the men I em-

ployed, to say to them, that if we could get a fair, liberal
886 franchise—of course we could not get it without they signed our frontage—that we would build a gas works and electric light plant in Peoria; then in some cases I did state to some people that Thomas Coffey, president of the old gas company, had said to me that if we built a works he would put the price of gas to 50 cents a thousand but we were going right ahead in face of that statement and build a works any way.

91. What, if any, representations did you make to those men at work under you, or to prospective consumers of your company, or otherwise, with respect to the prices at which you proposed to furnish gas if you procured a license?

Objected to as incompetent and immaterial.

A. I don't recollect that I stated any price whatever any more than Mr. Coffey had made this threat that if we built a works he would put the price at 50 cents a thousand and keep it there for two years.

92. What if any statement did you make to such prospective consumers, or to the men at work under you, by way of instruction with reference to the prices at which you would furnish gas as compared with those the old company was furnishing to its customers?

Objected to as immaterial and already answered.

A. I don't think I stated anything different from what I have stated here.

92. Then I understand from your several answers that in securing the frontage and making the preliminary arrangements for obtaining your license no representations were made with respect to the price at which gas would be furnished?

A. None.

94. Do you know whether or not those associated with you made any such representations?

Ans. I do not.

95. State whether or not that subject was ever discussed
887 between you and the others interested, or proposing to become interested, in the new company?

Objected to as immaterial.

A. Only in this way, if Mr. Coffey's word was good, of course, it meant lower prices if we built the works; of course, I looked over the papers brought in by the canvassers and if any one refused to sign I would find out the reasons why he had done so and sometimes I would go and see the parties myself; most of the refusals when I traced them down were from parties who were interested in the old company.

96. How many of the people signing for frontage did you actually see in person?

A. Very few; I had, I think, eight people at work and they got, I should say, probably 99 per cent. of the signatures.

97. Was there any one in charge of those eight men besides yourself, that is, to say, was there a sort of a foreman of those eight men?

A. No sir, I acted in that capacity.

98. Who were those eight men?

Objected to as incompetent and immaterial.

A. George W. Poole; James T. Wasson; Sam White, a brother of U. M. White, now deceased; A. J. Boylan; a man named Meinders—I don't know his initials; M. E. Fuller; Wm. F. Selby, and one other man whose name I don't recollect, but he is engaged in the coal business, his name was Woodford, I think, or Woolford.

99. You think those are all the men who had anything to do with procuring frontage?

Ans. No, Emil Auer.

100. Was not Mr. Newman also employed in that same service?

A. No sir.

101. How did these different people operate through the territory, jointly, or was it partitioned among them?

888 Objected to as immaterial.

A. I divided it out so as to get the best results—put them on different streets.

102. Where was that territory with reference to that in which the old company was then operating?

Objected to as immaterial.

A. Well, that in the heart of the city was in the same territory occupied by the old company and that in the outskirts were in some places where the old company did not have any pipe.

103. Are you able to state at this time what proportion of the territory you covered was then outside of that in which the old company was furnishing gas?

Objected to as immaterial.

A. I could not state definitely.

104. When with reference to your securing the frontage that you did, did Mr. Walsh consent to become a party interested in the new organization?

Objected to as immaterial.

A. He consented before I started to take frontage.

105. What was the primary reason for undertaking to interest him in the organization of the new company?

Objected to as immaterial.

A. As I stated before I thought it was a good thing to get up a company and wanted to interest him in it because I had been in-

formed he was a moneyed man who would go into things of that kind and also had an idea that he felt sore at Coffey and Farrelly of the old company.

106. From what source did you obtain your idea respecting his feelings toward Coffey and Farrelly? Had you learned it from him at Chicago on the occasion of your first interview?

889 A. No, I had heard it before.

107. Through what channel had that come to you?

Objected to as immaterial.

A. I think in my talks with Clarke.

108. State whether or not Mr. Clarke informed you that Mr. Walsh was already interested in the old company in some way?

Objected to as immaterial and incompetent.

A. I believe he did.

109. Did he tell you the extent of that interest or its nature?

Objected to same grounds.

A. Yes, he told me something about Mr. Walsh having made a deal with those people and their going back on their agreement with him and he was a little sore at them.

110. What, if anything, had Clarke to do with the handling of that deal on behalf of Walsh or otherwise?

Objected to same grounds.

A. Nothing that I know of.

111. What statement did Mr. Clarke make you with reference to it?

Objected to same grounds, and also because already asked and answered.

A. Well, as I have said, that Mr. Walsh felt sore at Mr. Coffey and Mr. Farrelly on account of the treatment he had received from them.

112. State whether or not at any of those interviews with Mr. Clarke, prior to the time you saw Mr. Walsh, Mr. Clarke informed you from what source he had obtained the information respecting this split between Walsh and Coffey and Farrelly?

Objected to same grounds as before.

A. I don't recollect that he said where he had learned it.

890 113. Did you know where it came from?

Ans. No sir.

114. What, if any, explanation did Mr. Clarke at any of those interviews give you with reference to this difficulty between Mr. Walsh and Mr. Coffey?

Objected to as incompetent and immaterial.

A. Nothing different from what I have stated, as I now recall it.

115. Within your knowledge, was Mr. Clarke at that time in any manner interested in the old gas company?

Objected to as immaterial.

A. I don't think he was interested in it.

116. Within your knowledge had he ever been interested in the old gas company?

Objected to as immaterial.

A. Not within my knowledge.

117. *Did* you know what knowledge Sumner R. Clarke at that time had regarding the gas business?

A. I do not.

118. What representations if any did he make to you respecting his knowledge of the business or the cost of construction, maintenance and operation and the profits generally?

Objected to as incompetent and immaterial?

A. I don't recollect that he made any statement on that.

119. What, if any statement, did Mr. Clarke make to you with reference to the desirability or undesirability of an investment in a gas company for the purpose of competing with the old company?

Objected to same grounds.

A. Why, he thought it would be a good thing to get up a company, that it was a good business.

120. State whether or not within your own knowledge Mr. Clarke at that time contemplated becoming an investor in it to a
891 considerable extent.

Objected to same grounds.

A. I think he did.

121. State whether or not he made known to you the extent to which he proposed to become interested?

Objected to same grounds.

A. He did not.

122. How many of the people, who became associated with you as stockholders or subscribers to stock in the new company, did you then know and how long had you known them?

A. I had known them all for a good many years.

123. Did you or did you not know of their financial standing and responsibility at that time?

A. I had an idea they were all responsible; they stood well in the community.

124. State whether those gentlemen in the main were men of large or small means?

A. Well, they would be mostly considered people of large means in a city like Peoria.

125. Where was your office at that time with reference to Summe R. Clarke's office?

A. I occupied the same office rooms with him at No. 211 Mai street.

126. And you had for some years before that, had you not?

A. 10 or 12 years.

127. And you still occupy the same offices?

Ans. Yes.

128. State whether or not when the subject of the proposed or ganization of the new company for the purpose in question came up and was discussed it was the intention and the expectation to make it a Peoria company?

A. Not entirely a Peoria company, no, but it was the inten
892 tion to have a number of Peoria people interested in it; I knew that John R. Walsh, at least, would be interested in it and he was not a Peorian.

129. What were the reasons you and your associates in Peoria sought to interest outside people in the organization?

Objected to as incompetent and immaterial.

A. Well, it was a deal of too much magnitude to expect to get people into that did not understand the business.

130. State whether or not there were any suscribers to the capital stock of the complainant company except those embodied in the articles of incorporation as shown by Exhibit 18?

Objected to as incompetent, immaterial, and not the best evidence.

Mr. TICHENOR: Of course, I am calling for your own knowledge, Mr. Miller.

A. (Witness referring to Exhibit "18.") These are all the subscribers.

131. State whether or not all of the subscribers to the capital stock of that company, as shown by Exhibit 18, were able to meet the stock subscriptions which they had made?

Objected to as incompetent and immaterial.

The MASTER: If he knows he may answer.

A. They were either able or had made arrangements so it would be taken care of for them.

132. My question is as to whether they were personally able to handle the stock subscriptions which they had made?

A. I don't know.

133. In making up the subscription list, shown by Exhibit "18," state whether or not any doubt was expressed as to the ability of any of those subscribers to respond to calls or assessments made upon them to the extent to which they had become liable?

893 Objected to as incompetent and immaterial.

A. I did not hear any expressions of doubt on the subject.

134. State what if anything you had to do with procuring the subscription list to the capital stock of complainant company?

Objected to same grounds.

A. I talked to some of the gentlemen before they subscribed about the matter.

135. Who were those gentlemen to whom you talked upon that subject?

Objected to same grounds.

A. I think I talked to Mr. O. J. Bailey; probably to Mr. Corning and to Philo B. Miles and Ben Warren, Jr.

136. What relations for some years had existed between you and the four gentlemen severally to whom you have just referred?

Objected to same grounds.

A. They were good friends.

137. What relations generally existed between you and all the other subscribers to the capital stock of this company?

Objected to same grounds.

A. They were all friendly.

138. Within your knowledge and present recollection, who was the first one to suggest the incorporation of a new company for this purpose?

Objected to same grounds.

A. I think Mr. F. W. Little suggested the formation of a company in this way.

139. Was that prior to the time any discussions had been had between you and Mr. Clarke, or any of the others, relative to the subject?

Objected to same grounds.

A. No, not prior to that.

894 140. My question was aimed at the initial point of the proceedings which ultimately resulted in the formation of the company?

A. My recollection is Mr. Clarke and I called on Mr. Irwin and talked this matter over.

141. Were you or was Mr. Clarke the prime mover?

Objected to as immaterial and irrelevant.

A. I advanced the idea of getting up a gas and electric company.

142. And was that the first thing that had arisen with respect to the advisability of the undertaking?

A. Yes sir.

143. Then it came from you and not from Clarke or anybody else?

A. Mr. Clarke, of course, could interest these people better than I could but I furnished the idea.

144. Upon what was that idea based and how did it originate with you?

Objected to same grounds.

A. There were two reasons for it. In the first place, I thought it was a good thing and I thought for me personally it would be a good thing because I naturally knew I would have the work to do and would get compensation for it. In fact, I thought it was a good thing for everybody.

145. To what extent were you instrumental in getting the other people, who later became associated with you as subscribers, interested in the projected new enterprise?

Objected to as incompetent and immaterial.

A. I talked to Ben Warren, Jr., considerably about it; I think I talked to Mr. Miles, Mr. Bailey and possibly Mr. Corning—I will not say sure about Mr. Corning.

146. How long were those conversations, or any of them, after the time when you first began to consider the advisability of the
895 formation of a new company?

Objected to same grounds.

A. I cannot tell exactly.

147. Did they follow pretty closely upon the beginning with you?

A. No.

148. How long was it before you took up the subject with any person and expressed your ideas with reference to the subject of forming a competing company?

Objected to as immaterial.
